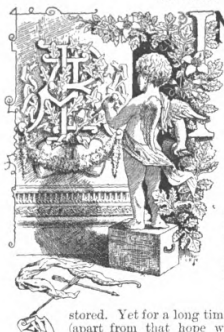
The Fat of the Land. By Mary Lester (Maria Soltera), author of "A Lady's Ride across Spanish Honduras." Three vols. (W. Blackwood and Sons).—In spite of laboured prolixity and formality of style, this novel is rather interesting, now and then, by its lively portraiture of manners and its fertility of incidents. Yet the prevalence of sordid motives among so many leading characters has a depressing effect, and there is a lack of consistency or probability in the fatal issues of their conduct. Why it should be called "The Fat of the Land" we fail to perceive; unless it be that the desire to get money, by catching well-endowed girls or rich men in the snare of matrimony, is represented as the mainspring of English social life. There are two good girls—Mary Leppell, daughter of the Hon. Colonel Leppell, a boisterous and reckless staff officer of pensioners, a younger son of Lord Hieover; and Willina Clavering, cousin and ward of Mr. Glascott, a retired Liverpool merchant or banker, living in Jersey. We like them so much that it is a sad disappointment, in the end, to leave the one extremely unhappy as a deserted wife; and the other, after losing her true lover, Stephen La Touche, by a dreadful death, married to a Peer fifty or sixty years of age, who is, though not unkind to her, none of Nature's noblemen. The best woman in the story, however, is Mrs. Leppell, an admirable lady severely tried by the faults of a rude and violent husband who is also dishonest, and by the misconduct of her eldest son; she lives to enjoy a brief gleam of domestic happiness, and then dies of a spasm of the heart. Tragedies do happen, but those of this tale are grievously ill-timed. Why should poor Stephen, the only good man of an odious family, some of whom are lunatics and idiots, others mean and spiteful rogues, perish by burning on the eve of his long-deferred union with Willina, for whom he has faithfully waited five years? As for the other men, though Mr. Glascott is magnanimous, it was very foolish of him, at his advanced time of life, to marry a heartless fortune-hunter like Miss Lillian Fanshawe; while Francis Clavering, an eminent professor of science, after marrying sweet Mary Leppell, and receiving from his guardian's bounty the gift of £2000 a year, perpetrates the vilest of crimes by running off with his guardian's wife; and Duke Leppell, who committed a forgery in his youth, being then an associate of blackguards, besides incurring a sentence of imprisonment for taking away a ward of the Court of Chancery, would not seem likely to become a man of principle. In these instances, one might think, the moral characteristics of individuals are not consistently maintained; persons do change, to be sure, in their sentiments and behaviour, yet not so abruptly and unaccountably, or without apparent cause in the effect of circumstances on their peculiar temperament. Francis Clavering and Lillian, though alike selfish, hard, and ambitious, are coldly prudent, and would scarcely be the slaves of a criminal passion excited by a common interest in scientific studies, and by the lady's ability to do service in classifying geological specimens. This is a singularly odd beginning of amorous mischief that ends in an intrigue not only involving their social ruin, but aggravated by the most hideous treachery and ingratitude towards their kind benefactor. On the other hand, we do not understand how Duke Leppell and his uncle Alexander, afterwards Lord Hieover, who had such cruel and wicked faces wonderfully alike, and the elder of whom had basely slandered Mr. Glascott, attain the respectable standard of virtue that is allowed them at a later period. And why should his Lordship obtain the hand of the noble Willina? Is it to reward him for saving her from being buried alive, by putting a redhot poker to the sole of her foot, when she has fallen into a trance and is supposed to be dead? The uncouth Scotch schoolmaster, Colin M'Taggart, might have done that just as well, and he at least is an honest man. The proceedings, moreover, by which the guilt of the Leppells is concealed from members of their family and their friends, are questionable in point of morality. It may be justifiable to prevent a criminal prosecution by paying a bill that somebody has forged, or making compensation for a pecuniary injury, and one may keep silence about it only so long as the offender has no further chance of swindling other people. But when Colonel Leppell has sold a case of diamonds entrusted to his care, substituting jewels of paste for the precious stones, the fraud being afterwards suspected, we cannot approve of shielding him from mere family disgrace by the trickery of replacing the real diamonds and falsely pretending that they had never been changed. This is not the action of a highly-conscientious person, or one that is justified by any degree of friendship. With all its confused and defective ethical conceptions, "The Fat of the Land" contains many scenes, both comic and pathetic, which have power to interest the ordinary reader; but its general effect is unsatisfactory, and it leaves a dismal impression that there are no longer any good men or women surviving in the world.

A MALAY RELIGIOUS CEREMONY, THE "KALIFA."



FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XIII.

ONE DAY.

IN TIMES of great sorrow the godly person ought to look forward to the never-ending joy and happiness that will follow this short life. Yet we still look backwards to the happy time that is past and can never come again. And then how happy does it seem to have been in comparison with present affliction!

It pleased Heaven after many trials to restore my earthly happiness—at least, in its principal part, which is earthly love. Some losses — grievous and lamentable—there were which could not be restored. Yet for a long time I had no other comfort (apart from that hope which I trust was never suffered to leave me) than the recollection of one single day in its course, too short, from dewy morn till dusky eve. I began that day with the sweetest joy that a girl can ever experience—namely, the return of her lover and the happiness of learning that he loves her more than ever, with the knowledge that her heart hath gone forth from her and is wholly his. To such a girl the woods and fields become the very Garden of Eden; the breath of the wind is as the voice of the Lord blessing another Eve; the very showers are the tears of gladness and gratitude; the birds sing hymns of praise; the leaves of the trees whisper words of love; the brook prattles of kisses; the flowers offer incense; the royal course of the sun in splendour, the glories of the sunrise and sunset, the twinkling stars of night, the shadows of the flying clouds, the pageant of the summer day—these are all prepared for that one happy girl and for her happy lover! Oh, Divine Gift of Love! which thus gives the whole world with its fruits in season to each pair in turn! Nay, doth it not create them anew? What was Adam without Eve? And Eve was created for no other purpose than to be a companion to the man.

I say, then, that the day when Robin took me in his arms and kissed me—not as he had done when we parted and I was still a child, but with the fervent kiss of a lover—was the happiest day in all my life. I say that I have never forgotten that day, but, by recalling any point of it, I remember all: how he held my hand and how he made me confess that I loved him; how we kissed and parted, to meet again. As for poor Humphrey, I hardly gave him so much as a thought of pity. Then, how we wandered along the brook hand in hand!

"Never to part again, my dear," said the fond lover. "Here will we love, and here we will die. Let Benjamin become, if he please, Lord Chancellor, and Humphrey a great physician: they will have to live among men in towns, where every other man is a rogue. We shall live in this sweet country place, where the people may be rude but they are not knaves. Why, in that great city of London, where the merchants congregate upon the Exchange and look so full of dignity and wisdom, each man is thinking all the time that, if he fail to overreach his neighbour, that neighbour will overreach him. Who would live such a life when he can pass it in the fields with such a companion as my Alice?"

The pleasures of London had only increased his thirst for the country life. Surely, never was seen a swain more truly rustic in all his thoughts! The fine ladies at the playhouse, with their painted fans, made him, he told me, think of one who wore a russet frock in Somersetshire, and did not paint her sweet face—this was the way he talked. The plays they acted could never even be read, much less witnessed, by that dear girl—so full of wickedness they were. At the assemblies the ladies were jealous of each other, and put on scornful looks when one seemed preferred; at the taverns the men drank and bellowed songs and quarrelled; in the streets they fought and took the wall and swaggered; there was nothing but fighting among the baser sort, with horrid imprecations; at the coffee-house the politicians argued and quarrelled. Nay, in the very churches the sermons were political arguments, and while the clergyman read his discourse the gallants ogled the ladies. All this and more he told me.

To hear my boy, one would think there was nothing in London but what was wicked and odious. No doubt it is a wicked place, where many men live together; those who are wicked easily find each other out, and are encouraged in their wickedness. Yet there must be many honest and God-fearing persons, otherwise the Judgment of Heaven would again fall upon that city as it did in the time of Plague and in the Great Fire.

"My pretty Puritan," said Robin, "I am now come away from that place, and I hope never to see it again. Oh! native hills, I salute you! Oh! woods and meadows, I have returned, to wander again in your delightful shade." Then, which was unusual in my boy and would have better become Mr. Boscorel or Humphrey, he began to repeat verses. I knew not that he had ever learned any:—

> "As I range these spacious fields,
> Feast on all that Nature yields;
> Everything inspires delight,
> Charms my smell, my taste, my sight;
> Every rural sound I hear
> Soothes my soul and tunes my ear."

I do not know where Robin found these verses, but as he repeated them, waving his arm around, I thought that Humphrey himself never made sweeter lines.

He then told me how Humphrey would certainly become the most learned physician of the time, and that he was already master of a polite and dignified manner which would procure him the patronage of the great and the confidence of all. It was pleasant to hear him praise his cousin without jealousy or envy. To be sure, he knew not then—though afterwards I told him—that Humphrey was his rival. Even had he known this, such was the candour of my Robin and the integrity of his soul that he would have praised him even more loudly.

One must not repeat more of the kind and lovely things that the dear boy said while we strolled together by the brook-side.

While thus abroad we walked—'t was in the forenoon, after Humphrey's visit—Sir Christopher, his grandfather, dressed in his best coat and his gold-laced hat, which he commonly kept for church, and accompanied by Madam, walked from the Manor House through the village till they came to our cottage. Then, with great ceremony, they entered, Sir Christopher bowing low and Madam dropping a deep courtesy to my mother, who sat humbly at her wheel.

"Madam," said Sir Christopher, "we would, with your permission, say a few words with the learned Dr. Eykin and yourself."

My father, who had now returned and was in his room, came forth when he was called. His face had recovered something of its serenity, but his eyes were still troubled. Madam sat down; but Sir Christopher and my father stood.

"Sir," said his Honour, "I will proceed straight to the point. My grandson desires to marry your daughter Alice. Robin is a good lad; not a scholar if you will; for his religion, the root of the matter is in him; for the goodness of his heart, I will answer; for his habit of life, he hath, so far as we can learn, acquired no vile vices of the city—he doth neither drink nor gamble, nor waste his health and strength in riotous living; and for his means, they are my own. All that I have will be his. 'T is no great estate, but 't will serve him as it hath served me. Sir, the boy's mother and I have come to ask your daughter in marriage. We know her worth, and we are right well satisfied that our boy hath made so good and wise a choice."

"They were marrying and giving in marriage when the Flood came; they will be marrying and giving in marriage in the great day of the Lord," said my father.

"Yes, gossip; but that is no reason why they should not now be marrying and giving in marriage."

"You ask my consent?" said my father. "This surprises me. The child is too young: she is not yet of marriageable age"——

"Husband, she is nigh upon her twentieth birthday!"

"I thought she had been but twelve or thereabouts! My consent? Why, Sir Christopher, in the eyes of the world this is great condescension on your part to take a penniless girl. I looked, I suppose, to the marriage of my daughter some time—perhaps to a farmer—yet—yet, we are told that a virtuous woman hath a price far above rubies; and that it is she who buildeth up the house, and we are nowhere told that she must bring her husband a purse of gold. Sir Christopher, it would be the blackest ingratitude in us to deny you, even if this thing were (which I say not) against the mind of our daughter."

"It is not—it is not," said my mother.

"Wherefore, seeing that the young man is a good man as youths go, though in the matter of the Latin syntax he hath yet much to learn; and that his heart is disposed towards religion, I am right glad that he should take our girl to wife."

"Bravely said!" cried Sir Christopher. "Hands upon it, man! And we will have a merry wedding. But to-day I bid you both to come and feast with us. We will have holiday and rejoicing."

"Yes," said my father, "we will feast; though to-morrow comes the Deluge." I know now what he meant, but at that time we knew not, and it seemed to his Honour a poor way of rejoicing at the return of the boys and the betrothal of his daughter thus to be foretelling woes. "The Vision of the Plumb-line is before mine eyes," my father went on. "Is the land able to bear all this? We talk of feasting and of marriages. Yet a few days, or perhaps already——But we will rejoice together, my old friend and benefactor—we will rejoice together." With these strange words he turned and went back to his room, and, after some tears with my mother, Madam went home and Sir Christopher with her. But in honour to the day he kept on his best coat.

Robin suffered me to go home, but only that I might put on my best frock (I had but two) and make my hair straight, which had been blown into curls, as was the way with my hair. And then, learning from my mother with the utmost satisfaction what had passed, he led me by the hand, as if I were already his bride, and so to the Manor House, where first Sir Christopher saluted me with great kindness, calling me his dear grand-daughter, and saying that next to Robin's safe return he asked for nothing more than to see me Robin's wife. And Madam kissed me, with tears in her eyes, and said that she could desire nothing better for her son, and that she was sure I should do my best endeavours to make the boy happy. Then Humphrey, as quietly as if he had not also asked me to be his wife, kissed my hand, and wished me joy; and Mr. Boscorel also kissed me, and declared that Robin ought to be the happiest dog on earth. And so we sat down to our feast.

The conversation at dinner was graver than the occasion demanded. For though our travellers continually answered questions about the foreign lands and peoples they had seen, yet the subject returned always to the condition of the country, and to what would happen.

After dinner we sat in the garden, and the gentlemen began to talk of Right Divine and of Non-Resistance, and here it seemed to me as if Mr. Boscorel was looking on as from an eminence apart. For when he had once stated the texts and arguments upon which the High Church party do most rely he retired and made no further objections, listening in silence while my father held forth upon the duty of rising against wicked Princes. At last, however, being challenged to reply by Humphrey, Mr. Boscorel thus made answer.

"The doctrine that subjects may or may not rebel against their Sovereign is one which I regard with interest so long as it remains a question of logic and argument only. Unfortunately, the times are such that we may be called upon to make a practical application of it: in which case there may follow once more civil war, with hard knocks on both sides, and much loss of things temporal. Wherefore to my learned brother's arguments, which I admit to be plausible, I will, for the present, offer no reply, except to pray Heaven that the occasion may not arise of converting a disputed doctrine into a rule of conduct."

Alas! even while he spoke the messenger was speeding swiftly towards us who was to call upon all present to take a side.

The question is now, I hope, decided for ever: but many men had first to die. It was not decided then, but three years later, when King William cut the knot, and, with the applause of the nation, pulled down his father-in-law and mounted the throne himself with his gracious consort. We are agreed, at last, that Kings, like judges, generals, and all great officers of State, are to hold their offices in good behaviour. If they enter into machinations against the liberty of the people and desert the national religion, they must descend, and let others take their place. But before that right could be established for the country, streams of blood must first flow.

While they talked, we—I mean Madam, my mother, and myself—sat and listened. But my mind was full of another subject, and I heard but little of what was said, noting chiefly the fiery ardour of my father and the careless grace of Mr. Boscorel.

Presently my father, who was never easy in the company of Mr. Boscorel—(so oil and water will not agree to fill a cup in friendship)—and, besides, being anxious to rejoin the society of his books, arose and went away, and with him my mother—he, in his ragged cassock, who was a learned scholar; she, in her plain home-spun, who was a gentlewoman by birth. Often had I thought of our poverty with bitterness. But now it was with a softened heart that I saw them walk side by side across the lawns. For now I understood plainly—and for the first time—how love can strengthen and console. My mother was poor, but she was not therefore unhappy.

Mr. Boscorel also rose and went away with Humphrey. They went to talk of things more interesting to the Rector than the doctrine of Non-Resistance: of painting, namely, and statuary and models. And when we presently walked from the Rectory gardens we heard a most gladsome scraping of fiddle-strings within, which showed that the worthy man was making the most of Humphrey's return.

When Sir Christopher had taken his pipe of tobacco he fell asleep. Robin and I walked in the garden and renewed our vows. Needs must that I should tell him all that I had done or thought since he went away. As if the simple thoughts of a country-maid should be of interest to a man! Yet he seemed pleased to question and to listen, and presently broke into a rapture, swearing that he was in love with an angel. Young lovers may, it is feared, fall into grievous sin by permitting themselves these extravagances of speech and thought; yet it is hard to keep them sober, and besides (because every sin in man meeteth with its correspondent in woman), if the lover be extravagant, the maiden takes pleasure in his extravagance. To call a mortal, full of imperfections, an angel, is little short of blasphemy. Yet I heard it with, I confess, a secret pleasure. We know ourselves and the truth concerning ourselves; we do not deceive ourselves as to our imperfections; yet we are pleased that our lovers should so speak and think of us as if we were angels indeed.

Robin told me, presently ceasing his extravagances for a while, that he was certain something violent was on foot. To be sure, everybody expected so much. He said, moreover, that he believed Humphrey had certain knowledge of what was going to happen; that before they left the Low Countries Humphrey had been present at a meeting of the exiles in Rotterdam, where it was well known that Lord Argyll's expedition was resolved upon; that he had been much engaged in London after their return, and had paid many visits, the nature of which he kept secret: and that on the road there was not a town and scarcely a village where Humphrey had not someone to visit.

"My dear," he said, "Humphrey is slight as to stature and strength, but he carries a stout heart. There is no man more bitter against the King than he, and none more able if his counsels were listened to. Monmouth, I am certain, purposes to head an expedition into England like that of Lord Argyll in Scotland. The history of England hath many instances of such successful attempts. King Stephen, King Henry IV., King Henry VII., are all examples. If Monmouth lands, Humphrey will join him, I am sure. And I, my dear"—— he paused.

"And you too, Robin? Oh! must you too go forth to fight? And yet, if the Duke doth head a rising all the world would follow. Oh! to drive away the Papist King and restore our liberty!"

"My dear, I will do what my grandfather approves. If it be my duty to go, he will send me forth."

I had almost forgotten to say that Madam took me to her own chamber, where she opened a box and pulled out a gold chain, very fine. This she hung about my neck and bade me sit down, and gave me some sound advice, reminding me that woman was the weaker vessel, and should look to her husband not only to love and cherish her, but also to prevent her from falling into certain grievous sins, as of temper, deceitfulness, vanity, and the like, to which the weaker nature is ever prone. Many other things she said, being a good and virtuous woman, but I pass them over.

After supper we went again into the garden, the weather being warm and fine. The sun went down, but the sky was full of light, though it was past nine o'clock and time for me to go home and to bed. Yet we lingered. The birds had gone to sleep; there was no whisper of the wind; the village was in silence. And Robin was whispering in my ear. I remember—I remember the very tones of his voice, which was low and sweet. I remember the words he said: "Sweet love! Sweet love! How could I live so long without thee?" I remember my swelling heart and my glowing cheeks. Oh! Robin—Robin! Oh! poor heart! poor maid! The memory of this one day was nearly all thou hadst to feed upon for so long—so long a time!

CHAPTER XIV.

THE VISION OF THE BASKET.

Suddenly we heard footsteps, as of those who are running, and my father's voice speaking loud.

"Sing, O daughter of Zion! Shout, O Israel! Be glad and rejoice with all the heart!"——

"Now, in the name of Heaven," cried Sir Christopher, "what meaneth this?"

"The Arm of the Lord! The Deliverance of Israel!"

He burst upon us, dragging a man with him by the arm. In the twilight I could only see, at first, that it was a broad, thick-set man. But my father's slender form looked taller as he waved his arms and cried aloud. Had he been clad in a sheepskin, he would have resembled one of those ancient Prophets whose words were always in his mouth.

"Good friend," said Sir Christopher, "what meaneth these cries? Whom have we here?"

Then the man with my father stepped forward and took off his hat. Why, I knew him at once; though it was ten years since I had seen him last! 'T was my brother Barnaby—none other—come home again. He was now a great strong man—a stouter have I never seen, though he was somewhat under the middle height, broad in the shoulders, and thick of chest. Beside him Robin, though reasonable in breadth, showed like a slender sapling. But he had still the same good-natured face, though now much broader. It needed no more than the first look to know my brother Barnaby again.

"Barnaby," I cried, "Barnaby, hast thou forgotten me?" I caught one of his great hands—never, surely, were there bigger hands than Barnaby's! "Hast thou forgotten me?"

"Why," he said slowly—'t was ever a boy slow of speech and of understanding—"belike, 't is Sister." He kissed my forehead. "It is Sister," he said, as if he were tasting a cup of ale and was pronouncing on its quality. "How dost thou, Sister? Bravely, I hope. Thou art grown, Sister. I have seen my mother, and—and—she does bravely, too; though I left her crying. 'T is their way, the happier they be."

"Barnaby?" said Sir Christopher, "is it thou, scapegrace? Where hast thou—— But first tell us what has happened. Briefly, man."

"In two words, Sir: the Duke of Monmouth landed the day before yesterday at Lyme-Regis with my Lord Grey and a company of a hundred—of whom I was one."

The Duke had landed! Then what Robin expected had come to pass! and my brother Barnaby was with the insurgents! My heart beat fast.

"The Duke of Monmouth hath landed!" Sir Christopher repeated, and sat down again, as one who knows not what may be the meaning of the news.

*All Rights Reserved.

DRAWN BY A. FORESTIER.

Then, with great ceremony, they entered, Sir Christopher bowing low and Madam dropping a deep courtesy to my mother, who sat humbly at her wheel.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

"Ay, Sir, the Duke hath landed. We left Holland on the 24th of May, and we made the coast at Lyme at daybreak on Thursday the 11th. 'T is now, I take it, Saturday. The Duke had with him on board ship Lord Grey, Mr. Andrew Fletcher of Saltoun, Mr. Heywood Dare of Taunton"——

"I know the man," said Sir Christopher, "for an impudent, loud-tongued fellow."

"Perhaps he was, Sir," said Barnaby, gravely. "Perhaps he was, but now"——

"How 'was'?"

"He was shot on Thursday evening by Mr. Fletcher for offering him violence with a cane, and is now dead."

"'T is a bad beginning. Go on, Barnaby."

"The Duke had also Mr. Ferguson, Colonel Venner, Mr. Chamberlain, and others whom I cannot remember. First we set Mr. Dare and Mr. Chamberlain ashore at Seatown, whence they were to carry intelligence of the rising to the Duke's friends. The Duke landed at seven o'clock with his company, in seven boats. First, he fell on his knees and prayed aloud. Then he drew his sword, and we all marched after to the market-place, where he raised his flag and caused the Declaration to be read. Here it is, your Honour." He lugged out a copy of the Declaration, which Sir Christopher put aside, saying that he would read it in the morning.

"Then we tossed our hats and shouted 'A Monmouth! A Monmouth!' Sixty stout young fellows listed on the spot. Then we divided our forces, and began to land the cannon—four pretty pieces as you could wish to see—and the arms, of which I doubt if we have enough, and the powder—two hundred and fifty barrels. The Duke lay on Thursday night at the George. Next day, before dawn, the country people began flocking in."

"What gentlemen have come in?"

"I know not, Sir—my duty was most of the day on board. In the evening I received leave to ride home, and indeed, Sir Christopher, had orders to carry the Duke's Declaration to yourself. And now we shall be well rid of the King, the Pope and the Devil!"

"Because," said my father, solemnly—"because with Lies ye have made the hearts of the righteous sad whom I have not made sad."

"And what doest thou among this goodly company, friend Barnaby?"

"I am to be a Captain in one of the regiments," said Barnaby, grinning with pride; "though a sailor, yet can I fight with the best. My Colonel is Mr. Holmes; and my Major, Mr. Parsons. On board the frigate I was master and navigated her."

"There will be knocks, Barnaby; knocks, I doubt."

"By your Honour's leave, I have been where knocks were flying for ten years, and I will take my share, remembering still the treatment of my father and the poverty of my mother."

"It is rebellion, Barnaby!—rebellion!"

"Why, Sir, Oliver Cromwell was a rebel. And your Honour fought in the army of the Earl of Essex—and what was he but a rebel?"

I wondered to hear my brother speak with so much boldness, who ten years before had bowed low and pulled his hair in presence of his Honour. Yet Sir Christopher seemed to take this boldness in good part.

"Barnaby," he said, "thou art a stout and proper lad, and I doubt not thy courage—nay, I see it in thy face, which hath resolution in it and yet is modest; no ruffler or boaster art thou, friend Barnaby. Yet—yet—if rebellion fail—even rebellion in a just cause—then those who rise lose their lives in vain, and the cause is lost, until better times." This he said as one who speaketh to himself. I saw him look upon his grandson. "The King is—a Papist," he said, "that is most true. A Papist should not be suffered to rule this country. Yet to rise in rebellion! Have a care, lad! What if the time be not yet ripe? How know we who will join the Duke?"

"The people are flocking to his standard by thousands," said Barnaby. "When I rode away last night the Duke's secretaries were writing down their names as fast as they could be entered; they were landing the arms and already exercising the recruits. And such a spirit they show, Sir, it would do your heart good only once to witness."

Now, as I looked at Barnaby, I became aware that he was not only changed in appearance, but that he was also very finely dressed—namely, in a scarlet coat and a sword with a silken sash, with laced ruffles, a gold-laced hat, a great wig, white breeches, and a flowered waistcoat. In the light of day, as I afterwards discovered, there were stains of wine visible upon the coat, and the ruffles were torn, and the waistcoat had marks upon it as of tar. One doth not, to be sure, expect in the sailing master of a frigate the same neatness as in a gallant of St. James's. Yet, our runaway lad must have prospered.

"What doth the Duke intend?" Sir Christopher asked him.

"Indeed, Sir, I know not. 'T is said by some that he will raise the West Country; and by some that he will march north into Cheshire, where he hath many friends; and by others that he will march upon London, and call upon all good Protestants to rise and join him. We look to have an army of twenty thousand within a week. As for the King, it is doubted whether he can raise a paltry five thousand to meet us. Courage, Dad"—he dared to call his father, the Rev. Comfort Eykin, Doctor of Divinity, "Dad"—and he clapped him lustily upon the shoulder; "thou shalt mount the pulpit yet, ay, of Westminster Abbey if it so please you!"

His father paid no heed to this conversation, being wrapt in his own thoughts.

"I know not," said Sir Christopher, "what to think. The news is sudden. And yet—and yet"——

"We waste time," cried my father, stamping his foot. "Oh! we waste the time talking. What helps it to talk? Every honest man must now be up and doing. Why, it is a plain duty laid upon us. The finger of Heaven is visible, I say, in this. Out of the very sins of Charles Stuart hath the instrument for the destruction of his race been forged. A plain duty, I say. As for me, I must preach and exhort. As for my son, who was dead and yet liveth"—he laid his hand upon Barnaby's shoulder—"time was when I prayed that he might become a godly minister of God's Word. Now I perceive clearly that the Lord hath ways of His own. My son shall fight and I shall preach. Perhaps he will rise and become another Cromwell?"—— Barnaby grinned.

"Sir," said my father, turning hotly upon his Honour, "I perceive that thou art lukewarm. If the cause be the Lord's, what matter for the chances? The issue is in the hands of the Lord. As for me and my household, we will serve the Lord. Yea, I freely offer myself, and my son, and my wife, and my daughter—even my tender daughter—to the cause of the Lord. Young men and maidens, old men and children, the Voice of the Lord calleth!"

Nobody made reply; my father looked before him, as if he saw in the twilight of the summer night a vision of what was to follow. His face, as he gazed, changed. His eyes, which were fierce and fiery, softened. His lips smiled. Then he turned his face and looked upon each of us in turn—upon his son and upon his wife and upon me, upon Robin and upon Sir Christopher. "It is, indeed," he said, "the Will of the Lord. Why, what though the end be violent death to me, and to all of us ruin and disaster? We do but share the afflictions foretold in the Vision of the Basket of Summer Fruit. What is death? What is the loss of earthly things compared with what shall follow to those who obey the Voice that calls? Children, let us up and be doing. As for me, I shall have a season of freedom before I die. For twenty-five years have I been muzzled or compelled to whisper and mutter in corners and hiding-places. I have been a dumb dog. I, whose heart was full and overflowing with the sweet and precious Word of God; I, to whom it is not life but death to sit in silence! Now, I shall deliver my soul before I die. Sirs, the Lord hath given to every man a weapon or two with which to fight. To me he hath given an eye and a tongue for discerning and proclaiming the word of sacred doctrine. I have been muzzled—a dumb dog, I say—though sometimes I have been forced to climb among the hills and speak to the bending tree-tops. Now I shall be free again, and I will speak, and all the ends of the earth shall hear."

His eyes gleamed, he panted and gasped, and waved his arms.

"As for sister, Dad," said Barnaby, "she and mother may bide at home."

"No; they shall go with me. I offer my wife, my son, my daughter, and myself to the cause of the Lord."

"A camp is but a rough place for a woman," said Barnaby.

"She is offered; she is dedicated; she shall go with us."

I know not what was in his mind, or why he wished that I should go with him, unless it was a desire to give everything that he had—to hold back nothing—to the Lord; therefore he would give his children as well as himself. As for me, my heart glowed to think that I was even worthy to join in such a cause. What could a woman do? But that I should find out.

"Robin," I whispered, "'tis Religion calls. If I am to be among the followers of the Duke, thou wilt not remain behind?"

"Child"—it was my mother who whispered to me; I had not seen her before—"Child, let us obey him. Perhaps it will be better for him if we are at his side. And there is Barnaby. But we must not be in their way. We shall find a place to sit aside and wait. Alas! that my son hath returned to us only to go fighting. We will go with them, daughter."

"We should be better without women," said Barnaby, grumbling; "I would as lief have a woman on shipboard as in a camp. To be sure, if Dad has set his heart upon it—and then he will not stay long in camp, where the cursing of the men is already loud enough to scare a preacher out of his cassock. Dad, I say"—— But my father was fallen again into a kind of rapture, and heard nothing.

"When doth the Duke begin his march?" he said suddenly.

"I know not. But we shall find him, never fear."

"I must have speech with him at the earliest possible time. Hours are precious, and we waste them—we waste them."

"Well, Sir, it is bedtime. To-morrow we can ride; unless, because it is the Sabbath, you would choose to wait till Monday. And as to the women, by your leave, it is madness to bring them to a camp."

"Wait till Monday? Art thou mad, Barnaby? Art thou mad? Why, I have things to tell the Duke. Shall we waste eight precious hours? Up! let us ride all night. To-morrow is the Sabbath, and I will preach. Yea—I will preach. My soul longeth—yea, even it fainteth, for the Courts of the Lord. Quick! quick! let us mount and ride all night!"

At this moment Humphrey joined us.

"Lads," said Sir Christopher, "you are fresh from Holland. Knew you aught of this?"

"Sir," said Humphrey, "I confess that I have already told Dr. Eykin what to expect. I knew that the Duke was coming. Robin did not know, because I would not drag him into the conspiracy. I knew that the Duke was coming, and that without delay. I have myself had speech in Amsterdam with his Grace, who comes to restore the Protestant religion and to give freedom of worship to all good Protestant people. His friends have promises of support everywhere. Indeed, Sir, I think that the expedition is well planned, and is certain of support. Success is in the hands of the Lord; but we do not expect that there will be any serious opposition. With submission, Sir, I am under promise to join the Duke. I came over in advance to warn his friends, as I rode from London, of his approach. Thousands are waiting in readiness for him. But, Sir, of all this, I repent, Robin knew nothing. I have been for three months in the councils of those who desire to drive forth the Popish King, but Robin have I kept in the dark."

"Humphrey," said Robin, reproachfully, "am not I, also, a Protestant?"

(To be continued.)

MR. RIDER HAGGARD'S NEW STORY,

"MR. MEESON'S WILL,"

FORMING THE

EXTRA SUMMER NUMBER

OF THE

ILLUSTRATED LONDON NEWS.

Fully Illustrated by A. FORESTIER and G. MONTBARD.

TWO PRESENTATION PICTURES

IN COLOURS,

"LOVE ME, LOVE ME NOT," AND "A TIFF."

ONE SHILLING. By Inland Parcel Post, 1s. 3d.

198, Strand, London; and of all Booksellers and Newsagents.

NOW READY.

VOL. 92, ILLUSTRATED LONDON NEWS.

JANUARY TO JUNE, 1888.

Elegantly bound, cloth gilt	20s. 0d.
In Paper Covers	15s. 0d.
CASES, for binding above	2s. 6d.
PORTFOLIOS, for holding Six Months' Numbers	4s. 6d.
READING-CASES (to hold One Number)	2s. 6d.

Can be obtained at the Office, 198, Strand; or of any Bookseller or Newsagent.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

AUGUST 18, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

News-papers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

THE LADIES' COLUMN.

The extraordinary weather of this summer has not been peculiar to our island, but has affected the whole Continent also. Lucerne flooded—the "Devil's Bridge," that Turner painted and that everybody knew, injured by continuous rain—and southern France itself cold and cheerless in July! We, with our proverbial bad climate, surely have to right to complain that Goodwood lawns were like a swamp, and that people had to walk about them on planks. For the Cowes yachting, however, the weather has improved; and at the French coast people have suddenly found it hot enough to spend their usual quantum of daily life in the sea. The Parisienne's bathing-gown is not the least carefully thought out of her toilettes. On the shingle in front of the Casino figures may be seen daintily descending from the bathing tents to the surf, clad in elaborate bifurcated garments of faille in light colours, with revers, parements, belts, &c., in contrasting tints, tennis flannels in bright stripes, or pretty cottons, fully trimmed with embroideries and laces. Shoes are a necessity on the stony shore; and Russian leather, or kid, or, at worst, canvas shoes, to precisely match the costume in colour, are necessary. Your true Parisienne, again, would never think of making her hair all rough and untidy by thoroughly wetting it in sea-water daily. Rumour says that the proper thing to do is to have a special coiffure to wear in the sea—a coiffure, that is, of course, that comes complete out of a hand-box. But whether this be so or not, certainly whatever splashes the tresses may receive are accidental, not intentional; for the heads are guarded by smart, big hats being worn in the water. The fashion is all (whether for bathing or walking hats) for the flat-crowned big-brimmed straw chapeaux called "La Tosca," after the costumes worn in her new play by the actress who fills the rôle of an Empress in the world of fashion for Paris. These Directoire hats are trimmed with much fine ribbon, silk gauze, and wreaths of the most natural-looking flowers; and a discreet wearer will bob about daily in the water here for the entire six weeks of her season without splashing one bow or one leaf!

They are so thorough, these Frenchwomen! It is in the same country where nearly every business establishment has its books kept and its finances managed by women, that the most amazing illustrations of feminine folly and frivolity are also found. The same vitality and eagerness that make Madame Bourgeoise so admirable a director of serious affairs make Madame Mondaine so perfect an illustration of waste and wild doings. A great lady wound up this season in Paris by giving a dogs' dinner-party and reception. Her invitations were sent out elaborately engraved in her own poodle's name: "Mdlle. Fanchette requested the honour of the company of Mdlle. Bébé at dinner at the house of Madame la Marquise de ——." The menu was printed on the card of invitation, and was, by way of being witty: "tripe à la mode, bœuf cheval sauté," and so on. This stupid prank was carried out to the end, the dogs being turned loose with quantities of food in a big hall, while their owners watched the proceedings from a high gallery; but a few free fights, as anybody will readily understand who has been in the kennels at feeding-time and seen the disciplinary precautions there found needful, soon put an end to the hilarity. Yet the women who are reduced to such depths as these in search of amusement are the fellow-countrywomen—I do not say of one of the greatest living painters, Rosa Bonheur, or of one of the greatest authors of the century, George Sand—I say merely, the countrywomen of thousands of most industrious and capable heads of businesses of their own sex!

The sad and early death of Mr. Frank Holl, removing one of the very best of our portrait-painters in the prime of his powers, reminds one of the curious fact that an artist so successful with men's portraits had never painted a strikingly fine likeness of a woman. This is, I think, fairly to be called a curious fact; but it is by no means a new one. Sir Joshua Reynolds painted many of the sterner sex, and some of these works are doubtless fine portraits; but in depicting women lay *his* special strength. When we hear of "a Sir Joshua," without further description, surely the image that comes before every mental eye is that of a fair dame with powdered hair and gracious face and flowing yet folded robes? With Romney, this is even more decidedly the case: who can recall a male portrait by Romney, and who cannot remember vividly the type of his female portraiture? There are other artists besides Frank Holl, too, who are essentially painters of men. For instance, there is Vandyke. He had female sitters, and made admirable pictures from them; but somehow they are not characteristic of the artist—"a Vandyke" is a man's portrait as surely as "a Sir Joshua" is a woman's.

It is so in literature, indeed, as well. Men's admired books are only in the rare cases of the masters of their art women's admired books also. All the world of taste is constrained to admit and delight in the truth of the portraiture of life and the perfect art of the workmanship in the writings of a Shakspeare or a Jane Austen—(I hold my breath as I make the daring conjunction, but still I dare; for have not Macaulay and Tennyson led the way for me?)—but, on the other hand, was not Fielding the man's novelist and Richardson the ladies'? Was not Thackeray the delight of clubs and critics, while Dickens made his fame and fortune out of the domestic circles where women give the tone? Doubtless many an author whose purse and whose pride flourished in his day under female approbation is forgotten; while Sterne and Swift and Smollett, disappointed in their lives, are remembered by posterity: for to an author the applause of women means to be in his own day bought, paid, and popularised; but it is men who have in all past times awarded permanent fame by their monopoly of criticism and their claim to superior judgment. Nay, at this very day there are men "written up" by other men in the columns of leading newspapers whom women can scarcely manage to read, and to whom, therefore, literature is but a poor profession, however they may hold their heads high and count themselves as the masters of their art—for it is mostly women who read, at all events, light literature. Yes; there are men's men and women, and women's men and women, in every art, as well as in that of portrait-painting!

People who are going out of town are respectfully admonished not to forget the domestic cat, but to put it on board wages. Few houses are simply shut up and left; but the caretaker, unless specially requested to look after pussy and provided with the meagre funds that mean everything to that poor dependant, may drive it out, and refuse to attend to the calls of its butcher. In those cases where the house is entirely closed, so that there is nobody to feed and shelter the humblest of the domestics of the house, then the only merciful course is to send the cat to the Dogs' Home at Battersea, to be either boarded or painlessly put to the last sleep in the lethal chamber. This latter service is performed for a payment of a shilling or two, and the animal, placed in a closet filled with slumberous vapours, simply sleeps away existence. The example of the Queen may be cited to those who are reckless about the fate of a cat. Her Majesty's fondness for dogs is well known; but cats share in the Royal regard. Whenever her Majesty moves the Court, all the animals of the household are taken also.

FLORENCE FENWICK-MILLER.

NEW BOOKS.

Correspondence of Wagner and Liszt. Translated by Francis Hueffer. Two vols. (H. Grevel and Co., King-street, Covent-garden).—The personal acquaintance, begun in 1840, between the eminent Hungarian musician and the great German composer, who afterwards married the daughter of Liszt, was an interesting example of mutual benefits from the frank and cordial association of two men of genius. This is well explained in the translator's preface to these volumes, which are filled with their letters—above three hundred—written to each other during twenty years, and containing, besides an immense variety of details of professional business and of private life, having much biographical interest, many expressions of thought and feeling with regard to musical, dramatic, and poetic art, and to the ideal harmony of imaginative creations, by which the mind of Wagner was haunted. It is Wagner, undoubtedly, who appears the more leading and commanding spirit in such discussions; and his apostolic, heroic, enthusiastic zeal for the exhibition of principles which most persons of mature æsthetic culture will admit to be theoretically true, displays itself forcibly in correspondence with his intimate ally. Liszt, though not two years his senior, had already gained high worldly celebrity when the author of "Tannhäuser" and "Lohengrin" was a disappointed exile; and his knowledge of the actual standard of taste and the prevailing mental habits of fashionable patrons and critics, especially in Paris and other European capitals, made him fear lest Wagner's genius, which he at once discerned, should be "super-ideal" in tendency, and should thereby fail of success. On the higher ground of seeking the "Wahre, Gute, Ganze," or the "Wahre, Gute, Schöne," whether or not it please the vulgar, these men could hardly differ; but their intellectual constitutions were so far dissimilar that Liszt cannot be supposed to have thoroughly penetrated into all Wagner's refined metaphysical conceptions, which he endeavoured to represent by artistic symbolism. The romantic impression, and also the religious significance, of some of Wagner's characteristic designs, appealed to the capacity of Liszt for enthusiastic adherence. He was earnest in the championship of a genuinely inspired, serious, and original kind of art, entirely German, which should be opposed to that of Meyerbeer's and Verdi's popular operas. He found this in Wagner, as he thought, and he became attached to the man, continuing frequent acts of kindness to him, and various friendly services in domestic affairs, while aiding the production of his works, and recommending them by occasional notices in the critical journals. The character of Liszt, as shown in these transactions, is really admirable: "How good, how prudent, how delicate and patient he is, that *I* know," says another of Wagner's correspondents. Wagner was duly grateful; and in his pecuniary straits, when living at Zurich, forbidden as an outlawed Republican of 1848 to re-enter Germany, and vexed by the bad performance and wretched money profits of his romantic operas, he accepted thankfully his friend's unwearied efforts on his behalf. The years 1854 and 1855, from the beginning of the second volume of these interesting letters, were a period of severe trial for Wagner; he was in the middle of his great work, the trilogy of the Nibelungen, having finished the "Rhinegold," and being engaged on the "Valkyrie." He felt that only for that work he cared at all to live; yet the chance of its ever being performed or published was very problematical; his "Tannhäuser" and "Lohengrin" had been abandoned to mean and sordid jobbers; and he was sorely in want of a modest income to go on with for a little while. Liszt, who was an excellent man of business, and was conductor of the Grand Duke's Court music at Weimar, though not rich, helped Wagner as much as he could, managed his affairs at Berlin for him, and led Princess Caroline, whose letters to Wagner are noble, womanly, and sweetly sympathetic, to use her influence on his behalf. Amidst many details that now seem trivial, but which were very important to poor Wagner at the time, we find some gems of thought and sentiment like this—speaking of the difficulty of creating a new idea, that of an original poetical or artistic conception, a new moral or religious truth, or a social or political reform, in the public mind:—"When a sculptor wants to make a beautiful statue, he takes granite or marble and wearies his strength in cutting it; but granite and marble are less hard than the heart of man. The sculptor, unless he dies, finishes his statue; when a noble thing has to be done, men are less pliable material." It is not Liszt or Wagner, but a woman, who says this fine thing; while Wagner cries, "If you can help me, you will be doing God's work; am I not worth a few thousand thalers for half a year to some German enthusiast!" His prolonged exclusion from his native country was doubtless a great hindrance to obtaining some adequate remuneration for his past labours. Yet, when advised to sue directly for his King's pardon, Wagner had the fortitude to reply, "The letter to the King of Saxony I shall leave alone; I should not know how to utter any *truth* in it that he would comprehend; and I do not care to tell *lies;* that is the only sin I know of." The spirit of Dante may be recognised in this rude sentence. By the way, readers of Dante, and readers of Goethe no less, will peruse Wagner's thoughtful comments on their most famous poems with some attention. Neither "Faust" nor the "Divina Commedia" is a good work of art; but in both these poems, to which Liszt furnished musical symphonies, the imaginative rendering of profound ethical conceptions will always command the reverent admiration of minds of a certain order. The mind of Richard Wagner, however, was essentially Protestant, of the Renaissance and of the modern humanist philosophy, despite his artistic choice of mediæval forms. Yet he had little sensuous enjoyment of life, and music, as well as scenery, romantic actions, and all outward beauty, became to him the subject of an intellectual creative passion. "We are what we are," he says, "only while we create; all the other functions of life have no meaning for us, and are at bottom only concessions to the vulgarity of ordinary human existence, which can give us no satisfaction." This is not far from a true statement of the doctrine of the artist's mission; it was often in the mind of Goethe, but Goethe never expressed it so precisely. Wagner, indeed, whatever may be the value of his particular theories, or of the forms and styles of musical and dramatic composition that he invented, was a very prophet and apostle of the genuine spirit of Art, and one of the greatest men of the age. He was not a philosopher; and his superficial adoption of the shallow and gloomy views of Schopenhauer, at a time when he often thought of suicide, was deserving only of pity. But he lived and toiled and suffered for a grand idea—that of the harmonious combination of artistic means of expression, which may be attainable in some other way, if not just in his own way, and may be *the* Art of the Future. This translation of his letters, and of the letters to him, is very welcome. It ought, in the second edition, to be furnished with a copious index, not to every little circumstance, but to every theme or question of abiding importance mentioned by the correspondents. English readers, too, might willingly turn, if so directed, to Wagner's letters from London, between January and July, 1855, when he conducted the concerts of the Old Philharmonic Society, got some of his works represented here, and was introduced to the Queen and Prince Albert. The last of the correspondence here published leaves this German Dante of modern music at Paris, still an exile from the Fatherland, still far from the happy incident of an invitation from the late King of Bavaria,

THE RIGHT REV. W. STUBBS, D.D.,
THE NEW BISHOP OF OXFORD.

calling him to Munich and Bayreuth, and to theatres specially erected for the representation of his works.

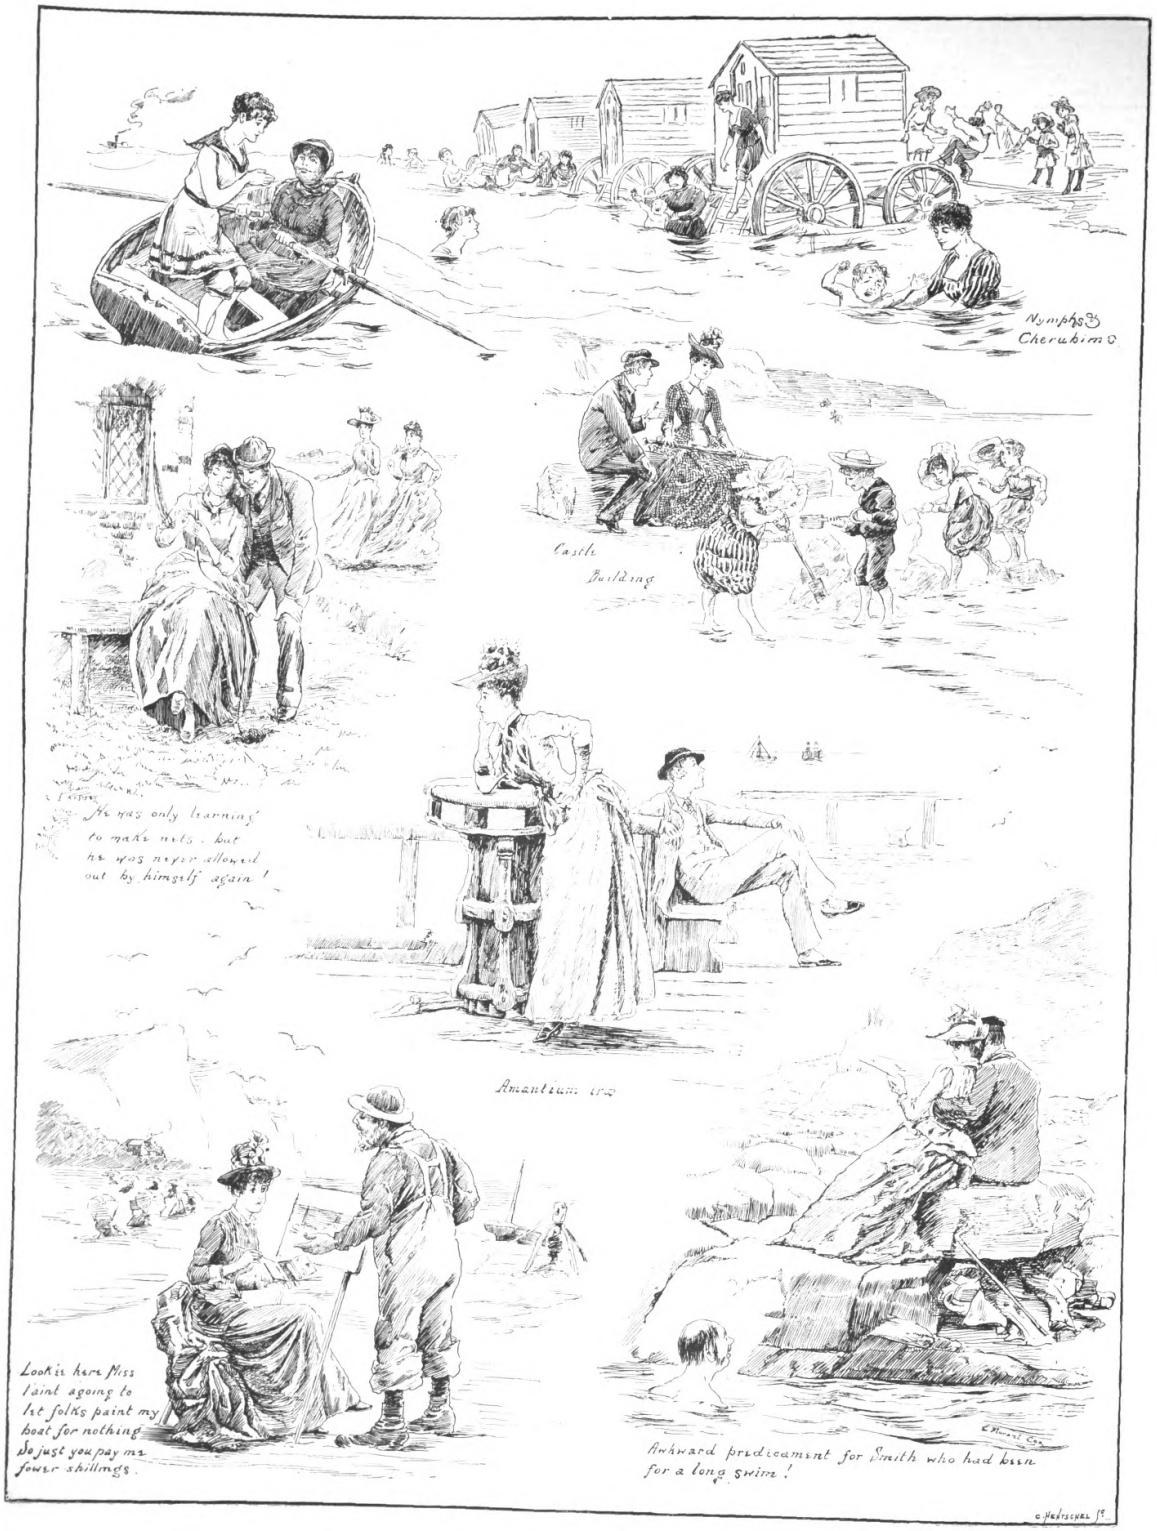
Bridewell Royal Hospital, Past and Present, as a Palace, Hospital, Prison, and School. By Alfred James Copeland, F.S.A. (Wells, Gardner, Darton, and Co.).—The author of this volume holds the office of Treasurer of the Royal Hospitals of Bridewell and Bethlehem, two of the most important charitable foundations in London, the management of both having always been vested in one body of governors, among whom the City Court of Aldermen and the Common Council of the City are officially represented. While the fame of Bethlehem, a name more usually written "Bethlem" in these days, and in former days pronounced "Bedlam," has been widely extended by its identification with the great lunatic asylum, which is now one of the best-managed institutions of its kind, we suspect that the present destination of "Bridewell" is not so generally known. This name, indeed, was for many generations typically associated with the idea of a prison, or house of penal correction; and such it was, indeed, from the Elizabethan age, though at first used specially for disorderly apprentices, and latterly again for the reformatory discipline of juvenile offenders, until the middle of the nineteenth century. Bridewell is now the headquarters establishment of a valuable educational institution called "King Edward's Schools," having nothing of a penal character; the Boys' School is established at Witley, near Godalming, in Surrey; and the Girls' School is in Southwark,

THE LATE VERY REV. J. W. BURGON, B.D.,
DEAN OF CHICHESTER.

adjacent to Bethlem Royal Hospital. The handsome building in New Bridge-street, Blackfriars, containing the offices and residences of the Treasurer and the Receiver and other apartments, stands on part of the ancient site of Bridewell, which has various interesting historical associations. Major Alfred Copeland's small volume, well arranged, concisely written, and presenting many curious and characteristic anecdotes, will preserve these associations in remembrance, and is an acceptable contribution to the antiquarian lore of London. Of the original Royal Palace or Castle of Bridewell, or "St. Bride's Well," taking its name from the Danish Church of St. Bride and from a holy spring of water, or well, believed to have miraculous healing powers, we cannot learn so much as might be desired. It may probably have been founded earlier than the Norman Conquest, in times when the Fleet river, or its tidal estuary at Blackfriars, was a pleasant open piece of water, and its western bank, with all the ground adjacent up the Thames, was a verdant paradise of meadow and woodland. The King's Castle there is mentioned in the reign of William I., and again in that of Henry I., and King Henry III. and King John appear to have sometimes resided at Bridewell. Coming down to King Henry VIII., the palace seems to have been repaired by that monarch for occasional Royal use; as when the Emperor Charles V., visiting London in 1522, was lodged in the Blackfriars monastery, a covered gallery from Bridewell was constructed across the Fleet; and again, in 1528 and 1529, when the Papal Legate came to the conference on the lawfulness of the King's marriage with Queen Catherine, this palace was the abode of the King and Queen. A Parliament was held at Bridewell in 1525, and the King held his Court here to create several new Peers. His Majesty, not unnaturally, took a dislike to the place, after the affair of his divorce, and it ceased to be a Royal dwelling. The young King Edward VI., being moved to religious charity by the preaching of Bishop Ridley, consented, by the advice of Alderman Sir Richard Dobbs, Lord Mayor of London, to bestow the house of Bridewell for what we should now call an "industrial training-school" and "reformatory school," to the cost of which liberal contributions were made by the City. It was part of a grand series of measures for the remedy of ignorance, vagrancy, and vice, and for the relief of the diseased, the infirm, the destitute, and the orphan in London; the foundation of Christ's Hospital, St. Bartholomew's, St. Thomas's, and Bethlehem, about the same time, went hand in hand with that of Bridewell. The readers of Mr. Copeland's book, which from this point gains in anecdotic interest, will observe that a complete perversion of the original design, with many abuses of prison administration, and especially with much cruel treatment of women, got into the management of Bridewell, prevailing in the seventeenth and eighteenth centuries to a shameful degree. Girls and women, for instance, were stripped partly naked to be flogged by a man, in the presence of the men and boys. The present state of things affords a gratifying contrast; and the ancient name of Bridewell is connected only with the efficient administration of an eminently philanthropic institution. This volume, which also contains an account of the Fleet river and the great changes in its condition, is adorned with several portraits and views of places and buildings.

THE NEW BISHOP OF OXFORD.

The Right Rev. William Stubbs, D.D., who has been translated from the See of Chester to that of Oxford, is the son of Mr. W. Morley Stubbs, of Knaresborough, and was born in that town on June 21, 1825. He graduated at Christ Church, Oxford, obtaining first-class classical honours in 1848, and was elected Fellow of Trinity in the same year. He obtained many other University distinctions, and the honorary degree of LL.D. of Cambridge in 1879, and of Edinburgh in 1880. In 1886 the University of Heidelberg gave him the honorary degree of Doctor *in utroque jure*. He was ordained deacon in 1848, priest in 1850, and consecrated Bishop of Chester in 1884. Dr. Stubbs was Vicar of Navestock from 1850 to 1867, and Rector of Cholderton, Wilts, from 1875 to 1879. He was a Canon residentiary of St. Paul's from 1879 to 1884, is a trustee of the National Portrait Gallery, and a member of the Royal Commission on Historical Manuscripts. Dr. Stubbs filled for several years with great distinction the office of Regius Professor of Modern History at Oxford, and has published many valuable works, marked by great learning and research, illustrative of English constitutional history from the earliest times. Bishop Stubbs is honorary member of many foreign scientific and literary societies. He married, in 1859, Catharine, daughter of Mr. John Dellon, of Navestock.



THE LATE DEAN OF CHICHESTER.

The Very Rev. John William Burgon, B.D., Dean of Chichester, who died on Aug. 5, was an able theological and ecclesiastical controversialist, and a learned scholar, whose career in those branches of study began later in life than is usual with clergymen. He was born in 1816, the son of a London City merchant having business at Smyrna, and early gained an acquaintance with the history of Greece, Syria, and the ancient Eastern Churches. He preferred literary to commercial pursuits, wrote several treatises, and a "Life of Sir Thomas Gresham," in 1839, and became a student of Worcester College, Oxford, where he took his degree in 1845, with second-class honours; he gained also the Newdigate prize for a poem on the ruins of Petra, the Denyer Theological Essay prize and the Ellerton Theological prize, and was elected to a Fellowship of Oriel College. He was admitted into holy orders by Bishop Wilberforce in 1849 and the following year. He held one of the Select Preacherships in the University in 1860-61, and from 1863 down to 1875 he was Vicar of St. Mary's, Oxford. He also delivered lectures in Divinity at Gresham College, London. His activity in religious and political discussions, as a Conservative High Churchman not of the Tractarian or Ritualist school, and his literary productions, made him a man of mark; and in 1875, on the death of Dr. Hook, he was appointed Dean of Chichester. He was author of many pamphlets, reviews, and memoirs, written with much force and ability; also of volumes of sermons, an "Historical Account of the Colleges of Oxford," "Codices Sacri, at Home and Abroad," and "Evangelia Manuscripta in Foreign Libraries," these being works of high merit.

MESSRS. PHILIP'S MINIATURE ATLASES.

A Handy-Volume Atlas of Australasia has just been published by Messrs. George Philip and Son, of 32, Fleet-street, uniform with their admirable Atlases of the World and the British Empire. It contains thirty maps and plans of Queensland, New South Wales, Victoria, South Australia, West Australia, Tasmania, New Zealand, British New Guinea, and Fiji. The same publishers have issued a Handy-Volume Atlas of British America, containing thirty maps and plans of Canada, Newfoundland, British West Indies, British Honduras, British Guiana, and the Falkland Islands. All these compact and clearly-printed miniature works, suitable for pocket or desk, and rightly named "Handy Volumes," are supplied with indexes, and geographical, statistical, and historical notes, carefully gathered by Mr. J. Francon Williams, F.R.G.S.

The Society of Arts offer prizes to art-workmen for the session 1888-89 in pottery, stone-carving, wrought-iron work, and goldsmiths' and silversmiths' work. The prizes in the last class are presented by the Goldsmiths' Company, and are offered for a cup or sugar-basin of beaten silver, chased or otherwise. Nineteen prizes are offered in the class of pottery, four in the class of stone-carving for the capital of a column, and three for a wrought-iron grille. All articles for competition must be sent in to the society's house on or before Tuesday, April 23, 1889. The conditions under which these prizes are offered can be obtained on application to the secretary of the society.

SEASIDE SKETCHES.

BIRTHDAY CONGRATULATIONS.

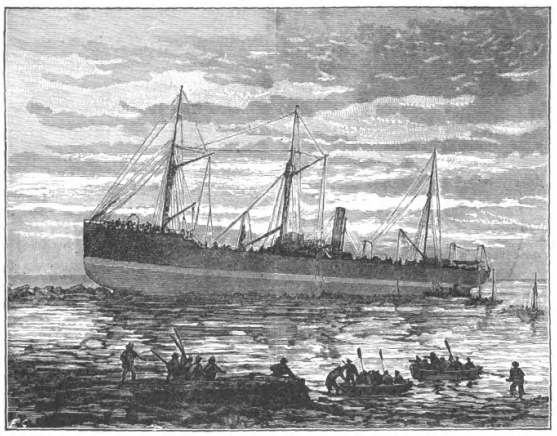
AFTER THE PAINTING BY TH. VON DER BEEK.

From a Photograph by A. Schönen, Düsseldorf.

THE WRECK OF THE COPELAND.

BY H. RIDER HAGGARD.

The steamer Copeland, of about 1000 tons register, bound for Leith, sailed from Reykjavik, Iceland, on the morning of Friday, July 20, with a cargo of 480 ponies and eleven passengers—namely, Major-General Bevan Edwards, C.B., Captain Miles, Messrs. Williams (two), Ross, Warner, Rider Haggard, two servants, and an Icelandic lady and baby. The ponies, rough hardy creatures, averaging thirteen hands, were shipped from the beach in large boats, about ten to a boat, and then hoisted on board with the donkey engine. It may be doubted if any other breed of horses could have borne such rough-and-ready treatment as is meted out to these unfortunate animals without breaking their limbs or dashing themselves to pieces with fright. Once on board they were stowed in the holds, between decks, and, to the number of about fifty, on the deck itself—being packed as closely as herrings in a barrel.



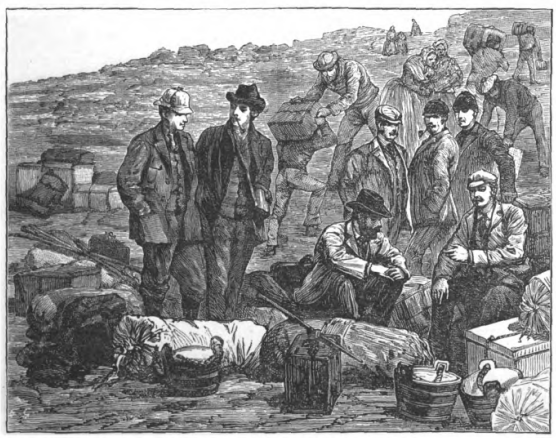
The Copeland left harbour in a dead calm, but by breakfast time she was labouring through a head sea and half a gale of wind from the north-east. This gale blew with ever-increasing strength, and with the steadiness of a monsoon, for four days. On July 23 it became so violent that the vessel could no longer plunge through it at half-speed, and Captain Thompson was forced to lay her head on to the seas, merely keeping enough way to hold her in that position. The situation now had the charm of uncertainty. Owing to the presence of the ponies it was impossible to batten down the holds, for to do so would have been to suffocate them. On the other hand, the risk of riding out such a gale in a ship of which the spar deck ceased forward at the bridge, with three yawning hatchways ready to receive the water, was obvious to the most inexperienced observer. So long as the vessel's head could be kept to the seas she was fairly safe; for although she shipped water, it did not reach the holds in any quantity. But in the event of anything happening to her steering gear—which, to judge from the precautions taken to strengthen the chain, did not appear to be in the soundest condition—or, worse still, to the machinery—and either event might well have happened in so severe and prolonged a gale—it would certainly seem that she must have come broadside on to the seas, to fill and sink before her hatches could have been closed. The truth is that if they can possibly avoid it, passengers should never travel in vessels laden with the most dangerous of cargoes, live stock, unless they are specially built and fitted for the trade.

During the afternoon and night of the 23rd the weather grew still worse than it had been, and the discomfort of the voyage, even to those who were not sea-sick, was a thing to be remembered. It is reported that Mr. Oscar Wilde does not think much of the Atlantic. Had he been on board the Copeland it is probable that he would have changed his opinion. It became impossible to stand upon the wet decks without support; and to cling to a rail or rope with the spray whipping one's face and watch the great grey seas rush down upon the ship in an endless succession, breaking over her bow with a cloud of foam, as one by one she climbed their mountainous steeps, is an occupation that in course of time affects the spirits even to the point of prolonged reflection upon one's testamentary arrangements. Below, matters were scarcely better. The only thing to do was to eat and drink, and everybody knows what that means in a heavy gale; and, when this became impossible, to lie upon the stern sofas and try to read. But who can read when every few minutes a black mass surges up over the screwed port-holes, through which, tight as they are, the water squirts, and then as the vessel settles falls upon the poop above with a heavy thud that shakes her from stem to stern, and rushes to and fro across the decks with a long dreary wash? I believe that when a ship goes through this performance, it is known in nautical language as "dipping her tail." Certainly the Copeland dipped hers with such vigour that we began almost to think it would fall off altogether.

But if the lot of the passengers was bad, and that of the unfortunate, overworked, and sodden crew worse, the ponies were, after all, the most to be pitied. For days those on the deck were soaked hour after hour by the seas, pierced by the wind, frightened by the turmoil, and dashed backwards and forwards by the violent unceasing motion. One by one the weaker animals succumbed, fell, and after some hours of misery, died. Anything more pitiful than the sight of these dead and dying ponies I never saw. It certainly does not seem right that the owners of vessels should be allowed to carry live-stock upon the upper deck without providing them with some shelter from the weather. Their terror alone must be very great. I saw one poor animal, when a big sea came among them, make a most determined effort to spring over the railing of the hatch down into the hold. It would have succeeded had not a sailor who was by caught it by the tail and dragged it back. We lost about fifteen ponies from exposure, and it speaks well for their constitutions that we did not lose many more.

About four o'clock on the morning of the 24th the gale lulled a little, and the Captain tried to drive ahead, with the result that we were all nearly shaken out of our berths. Very soon, however, he abandoned the attempt, the strain on the ship and machinery being too great. As it was, the man steering was, on two or three occasions, thrown right over the wheel. About eleven in the forenoon, however, the weather suddenly cleared, and we pursued our voyage without further interruption. Next morning at breakfast time we found ourselves slowly steaming through the Pentland Firth, and enveloped in a soft white mist. There are, as the reader may be aware, few more dangerous waters to navigate in foggy weather than this Firth, with its violent current running at twelve knots an hour. About ten o'clock we arrived off Thurso, every few minutes loudly blowing our steam fog-horn, which was answered by some invisible vessel in our vicinity. Here, as usual, a boat came off to take telegrams, its owner assuring us, as he departed, that the fog would lift with the turn of the tide.

It would have been well for us if we had stopped here, but the question of the ponies again came in. I understand that owing to the length of our voyage, which would in ordinary circumstances have been accomplished in three days and a half, only enough hay was left to provide the unfortunate animals with one more feed, whereas we could not, at the best, reach Leith in less than twenty hours. I believe it was this question of hay that forced the Captain to take the risk and push on. All went well for nearly an hour and a half. The mist was still thick, but the sea was quite calm, and the passengers, who had ceased to be sea-sick, were standing about the deck talking of Iceland and salmon rivers. Presently, glancing over the stern, I saw by the track in the water that the ship's course had been altered two points. Had that alteration never been made the Copeland would not have been at the bottom of the sea to-day. The Captain, believing that we had passed the rocky island of Stroma, was standing in two minutes too soon. All of a sudden the curtain of the mist seemed to be drawn up before our eyes, and there—not more than a hundred yards in front of us—we saw a field of breakers, and the current boiling over the rocks; while right ahead something huge loomed up through the heavy air. We looked at each other, but I do not remember that anybody spoke. For my part, I knew what was coming, and concentrated my attention on the development of the drama. The Captain and, I think, the first mate, were on the bridge. The engine-bell rang loudly, and the screw stopped: again the bell rang, and the engines began to go full-steam astern. But, although we were only running half-speed, the way we had on and the tide overpowered the screw, and we glided quickly through the deep, quiet water towards the lip of the breakers. Another few seconds and we were in them. Then with a succession of long and grinding, but comparatively gentle, shocks, the end came, and the Copeland stopped for the last time.



THE COPELAND ASHORE.—PHOTOGRAPHED AT LOW WATER.

In an instant all was confusion—the escaping steam began to roar, the crew bustled along the decks, and the firemen tumbled up through the hatches, presently to be sent down to rake out the fires before the water reached the boilers. As for the passengers, having remarked to each other it was "a case," they went below to try and save their gear. Fortunately, with the exception of the Icelandic lady and the stewardess, there were no women on board. What would have happened if the Copeland had been carrying five hundred emigrants, as on previous voyages, it is difficult to say. There was no panic, for the ponies could not demonstrate against death by drowning. Personally, having bundled my things into a bag, I was, in common with my fellow-passengers, preparing myself for the privations of shipwreck by filling my flask and drinking a bottle of beer, when I felt the ship slip and give a sickening quiver that caused me to finish the beer and leave the saloon with more haste than dignity. On deck the sailors were trying to get out the boats, but, as somebody remarked, they almost seemed to be "screwed down," and when at last they were lifted off their supports, to have a strange propensity to go into the water any way except on a level keel; indeed, one of the passengers heard a sailor asking the steward for caulks to stop the holes by which the bilge water is allowed to escape: so altogether the prospect of rescue by means of the boats in the event of the sudden foundering of the ship was not bright. We had, however, been observed from the shore, for the dark mass that we had seen beyond the breakers proved to be the island of Stroma, the southernmost of the Orkneys, and in a few minutes, to our comfort, several good boats were lying close to us. Presently a Stroma man from one of them boarded the ship, and as we stood wondering what was going to happen next, and watching the boiling of the water about our sides, he came running aft. He was a handsome-looking man, with wild eyes and flying hair, and as he came he spoke words of weight: "Get off of this," he said. "There's five feet of water in her hold, and sixty fathom under her stern. She's only hanging on the rocks; she'll slip off presently and go down by the stern, and drown every man of you!"

Then we began to think that it was time to make a move, and I will confess that during a somewhat varied career I never spent a more unpleasant quarter of an hour than I did between the arrival of the gentleman with warning in his voice and our final escape. It is irritating to be sucked down and drowned in the wake of a sinking ship; and in calm weather, within sight of shore, it seems unnecessary. So we called to the men in one of the boats—for our own were still dangling—and asked if they could take us off? They answered that they could if we could come down to them. This, having obtained the Captain's sanction, and, what was even more necessary, a rope-ladder, we went on to do decently and in order, but still without unnecessary delay. When we were descending, Captain Miles suddenly remembered the Icelandic lady and her baby. She had vanished into the smoking-room four days before, and been quite forgotten. Not even shipwreck had brought her out. He fetched her, and she came down into the boat, baby and all. To judge from the happy expression on her face, she did not in the least understand the position—probably, indeed, she thought the ships usually unloaded themselves after this fashion. When once I was in the boat my first care was to get up to the bow and loosen the rope by which she was made fast to the vessel, so that I could slip it at any moment. This I did because I remembered that when the Teuton foundered under somewhat similar circumstances on the coast of South Africa, a boat containing thirty women and children was dragged down with her. The rope was fast and nobody had a knife to cut it. Happily, in our case, this emergency did not arise.

At length everybody was embarked, including the islander who had warned us, and with some relief we got away from the ill-fated vessel. It was no more than a hundred yards to the shore, but even in that weather it was not too easy to get there. A sunken reef over which the tide was boiling had to be avoided, and the landing place consisted of sheer hard rocks that it would be impossible to attempt in unfavourable circumstances. In short, as we went we realised clearly enough that had there been any sea on, or even an ocean swell remaining from the gale we had experienced, our escape would have been practically impossible. No boats could live in it; to swim would not, I think, be feasible; and even supposing that the ship had held together and remained on the rocks for sufficient time to allow of its being used, there is *no rocket apparatus in Stroma*; nor, for the matter of that, is there a life-boat, a fog-horn, or a lighthouse. Thus, had the state of the weather been different, in the absence of a rocket apparatus, every soul on board the Copeland must, humanly speaking, have been drowned. Some of the islanders begged us to make this want of apparatus known in the proper quarters, and, in the interest of those who may in the future find themselves in the same uncertain position, I do what I can to that end.

We landed at last, and, having saved ourselves, began to think about our luggage. It had all been dragged up on deck with really remarkable promptitude as soon as the ship struck, and now the sailors, who were still aboard, threw it into boats alongside. So that in the end we saved it all, and even a basket of food. Meanwhile, as the vessel seemed to be fixed, and gave no further signs of slipping backwards into the deep water under her stern, great efforts were made to rescue some of the ponies. About a hundred of the poor creatures in the lower hold were drowned soon after the vessel struck; and it was said to be a pitiful sight to see them scrambling on to each other's backs and trying to swim for their lives as the water rushed in. Those on the upper decks, however, had a better chance. It was only necessary to throw them into the sea, and allow them to swim to a rock that at low water projects from the shore; and in this way a hundred-and-twenty ponies were saved before the rising of the tide made it unsafe to continue operations. Gathering confidence from the apparent stability of the ship upon her rock, two of our number who had ponies on her, Mr. Ross and Mr. Williams, determined, very much against the advice of those who had none, to return aboard and see if they could save them. We watched them get on to the ship, and before they had been there long we heard a noise something like the report of a gun, and saw her bow lift two feet or more out of the water. "She's going!" said someone; but most happily she did not go. The great rocks that pierced her amidships sunk more deeply into her vitals and held her. In doing so it pressed up the mainmast several feet with such tremendous force that the wire ropes cracked and slipped, and the mast was shivered. Our friends and the others aboard rushed forward, intending to throw themselves into the water by the ship's bow, taking their chance of being picked up or getting to shore, which, in the state of the tide, would have been possible if she had not rolled over upon them. But, fortunately, the rock checked her, and this did not become necessary.

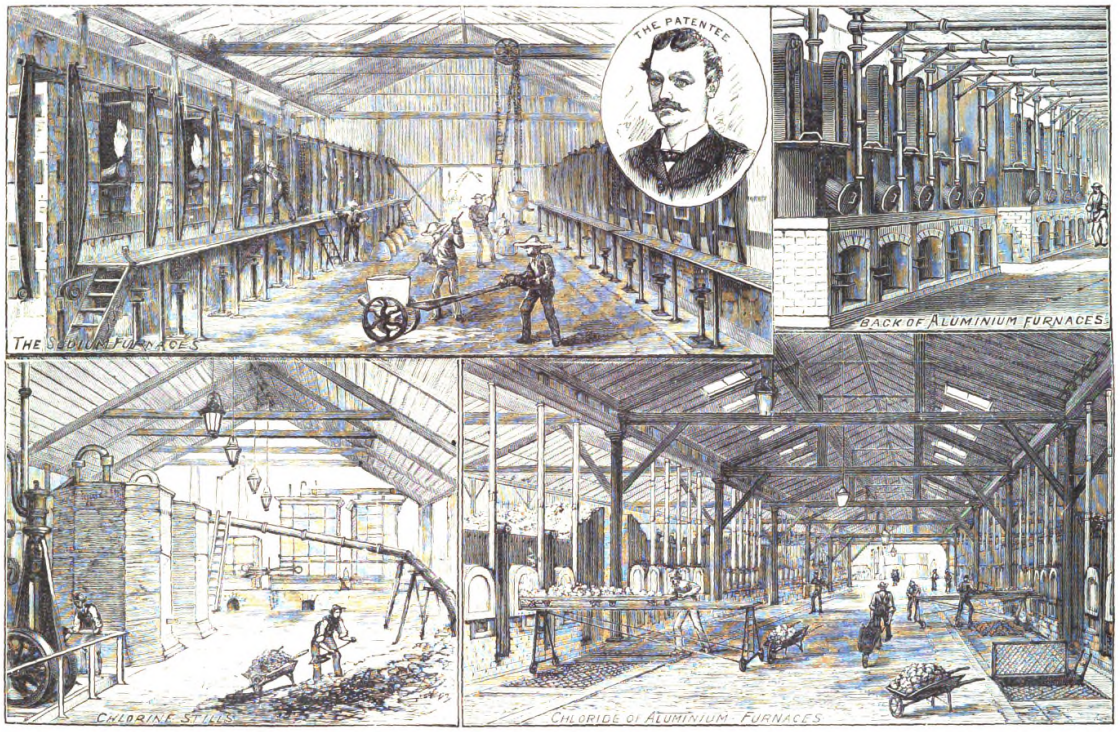
ON STROMA, ORKNEY ISLANDS: COLLECTING BAGGAGE.

If the wreck of the Copeland had been designed by Mr. Augustus Harris for the boards of Drury-Lane its surroundings could not have been more theatrically appropriate. The peculiar character of the rocks and the piles of baggage on them suggested a stage effect; so did the picnic luncheon; the picturesque islanders in the background; and, more than all, the camera, produced in the nick of time by Captain Miles from among the baggage, to the presence of which I am indebted for the photographs that are reproduced here. It shows how true melodrama is to life! But it was a melodrama with a serious side to it, and we were all glad enough when at length, after about six hours' stay, we succeeded in obtaining three boats to take us and our baggage across the Firth to the hotel near John-o'-Groat's, which is about seventeen miles from Wick, the terminus of the Highland Railway. On getting into our boat we were a little

disturbed by one of the crew violently protesting against our putting out without food or water. We asked why food and water were necessary for a two miles' row? and it then transpired that we were liable to be carried out to the open ocean, where we might possibly drift for days. However, we started.

Our course lay under the stern of the Copeland, round which the full tide was now again sweeping in its strength, causing the water-logged vessel to move ominously. Some time before this the Captain and the remainder of the crew had, as we thought, abandoned the ship, leaving more than 300 ponies to their fate. As we passed under the stern, however, we became aware that there were still three men on board, who shouted to us to come and take them off. This, as there seemed to be nobody else to do it, we were forced to undertake. We got to the ladder and hooked on—and a very disagreeable position it was, for in that flood tide it was obvious that the ship might come off the rock at any moment, and involve us in her utter loss. What made it worse was that a petty officer of the ship, who was one of the three men left aboard, and in whom shipwreck seemed to have induced a certain confusion of mind, would insist, in the most leisurely and deliberate manner, in letting down an apparently endless coil of rope into our boat. In vain did we abjure him, in the most vigorous and appropriate language that we could command, to leave his rope and come down. He forcibly refused, and, as we could not abandon him, we had to submit and take our chance. At length he condescended to follow the rope. We got him and his companions ashore, and started again, and very thankful we were when, an hour and a half afterwards, we found ourselves on the mainland. The last, and one of the most painful sights that we saw, in connection with the unlucky Copeland, was that of a pony, whose leg had been broken as it was thrown overboard, standing on a rock with the water gradually rising over it. Let us hope that it was soon drowned! And so ended the story of the Copeland, now, doubtless, at the bottom of the sea, together with her freight of ponies. In conclusion, I wish to bear witness—and I am sure all the other passengers will indorse what I say—to the unfailing courtesy and kindness which we met with at the hands of Captain Thompson, to the skill with which he managed the ship during the serious and prolonged gale that we encountered, and to his complete calmness and self-control in the hour of disaster. If a landsman may express an opinion, the loss of the vessel was entirely owing to the density of the fog, on one of the most dangerous coasts of Great Britain, and to the want of fodder, that forced him to press onward to port.

NOTE.—Many years ago, another vessel struck on the same rock. There was a sea on that washed her over the rock, and she foundered with all hands. While we were on Stroma, a second steamer—the same, I believe, that had answered our fog-horn—went ashore on the mainland. She got off, however, having injured her bottom; and I do not know what became of her.



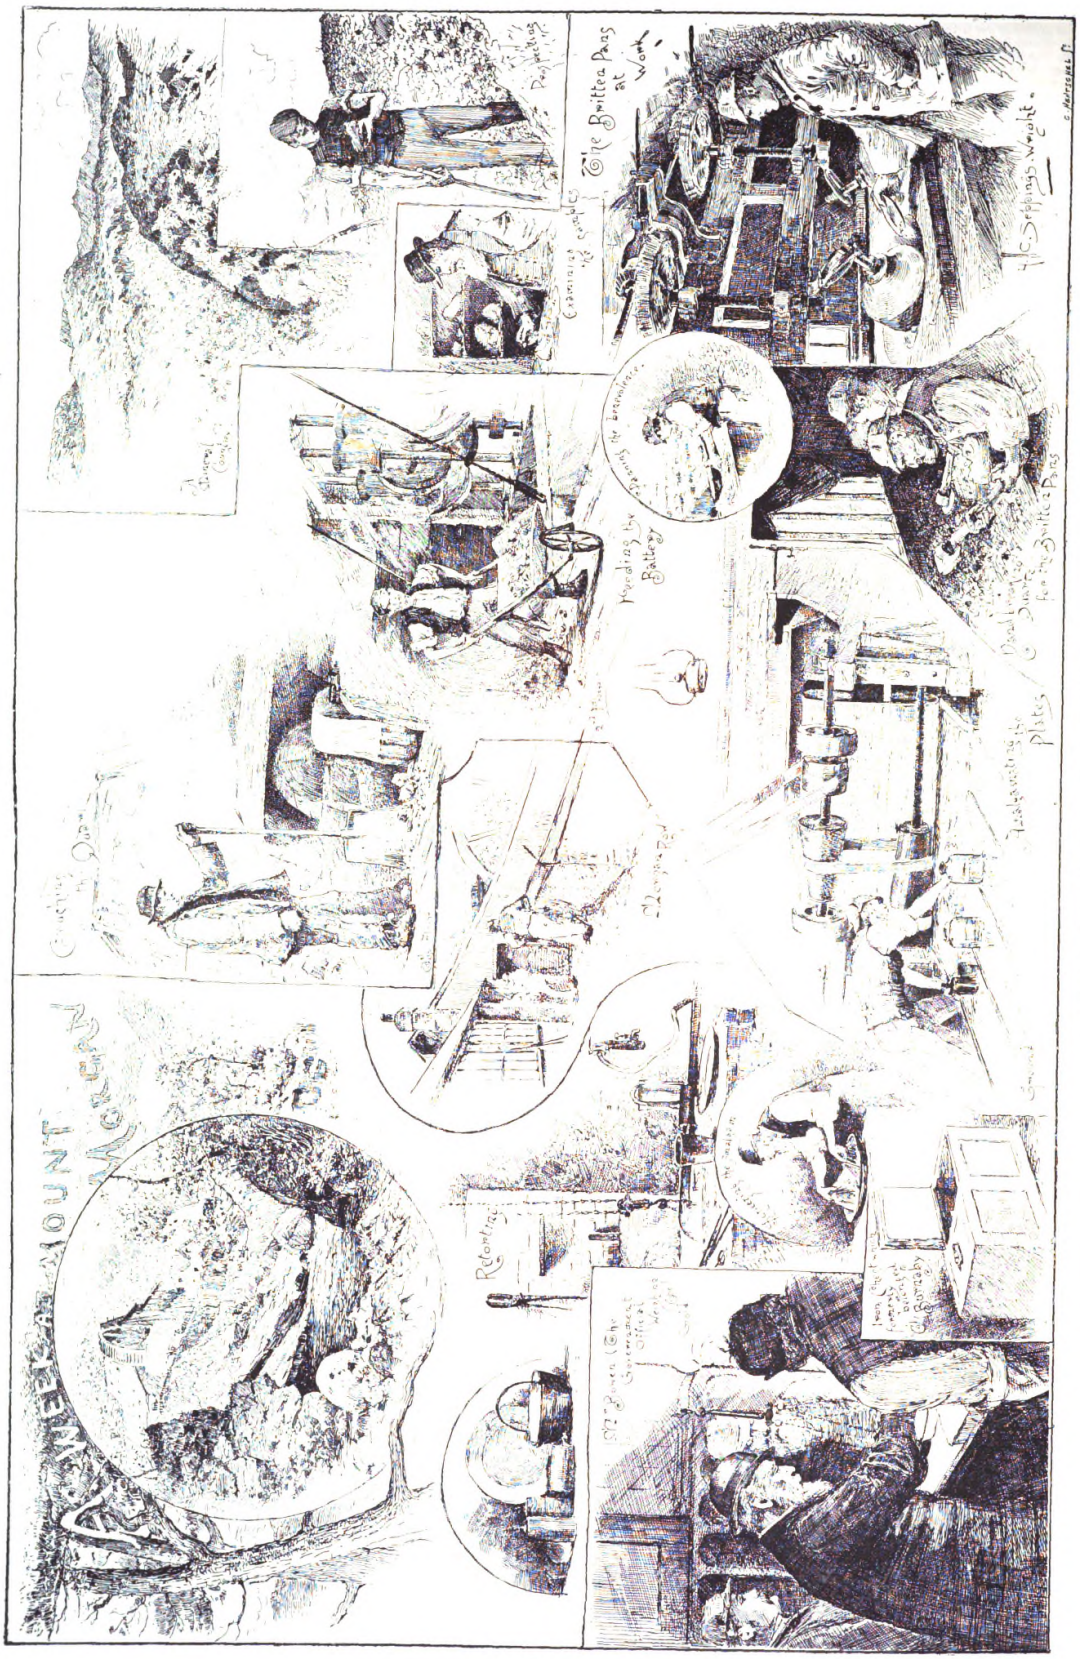
Major-General Dunne, commanding the Chatham district, received the sanction of the Commander-in-Chief for a Royal salute of twenty-one guns to be fired from Tilbury Fort on Aug. 8 at noon, in commemoration of the three-hundredth anniversary of Queen Elizabeth's visit to Tilbury, on Aug. 8, 1588, for the purpose of reviewing her troops assembled there for the defence of the Kingdom, in the event of a Spanish invasion.

"BIRTHDAY CONGRATULATIONS."

The young Fräulein with the luxuriant mass of black hair—she is, perhaps, more likely a native of the Walloon provinces of Belgium than a North German—depicted by M. Von Der Beek in a picture at Düsseldorf, which is reproduced in our Engraving, has her friends, and will have more ardent admirers when she grows a few years older. It is her birthday—you may guess the thirteenth—and her friends, or the members of her own family, have presented her with a collection of fine fruit, amidst which, piled on the dish that she has lifted with both hands, lies a paper with German writing addressed to herself, containing an expression, in prose or verse, of their affectionate good wishes, and their fond hopes, which we trust may be realised, for the happiness of her future life. Sympathy with the bright visions of imaginative youth will be denied by no kindly-disposed observer; and the indications of an amiable character in this maiden's face allow us to think that she will, if rightly guided, confirm in advancing womanhood the best anticipations of those who feel most concerned in her welfare.

The report of the Select Committee on Town Holdings has been issued. The report recommends the reappointment of the Committee next Session, for the purpose of taking further evidence.

At a meeting of the council of the Royal Academy it has been unanimously agreed that a principal feature of the next winter exhibition at Burlington House shall consist of a representative selection of the works of the late Mr. Frank Holl, R.A.



WORKS OF THE ALUMINIUM COMPANY (LIMITED), AT OLDBURY, NEAR BIRMINGHAM.

THE MANUFACTURE OF ALUMINIUM.

The usefulness of this metal, if a large supply of it could have been procured at a reasonable cost, has long been recognised. It has great strength and ductility, weighs only a third of the weight of iron or steel, and does not rust. As an alloy with other metals, it serves to impart tenacity and malleability to them, and has been thus used to some extent. There was a demand for it, but the supply, chiefly in France by the Deville process, has been very small. The problem of its economic production has been solved by the ingenuity of Mr. H. Y. Castner, who is an American, about thirty years of age. At the School of Mines, Columbia College, under the special guidance of Professor C. T. Chandler, he pursued a course in chemistry from 1875 to 1878. During the next four years, he practised as a public analyst in New York; but in 1882, having erected one of the finest laboratories in that city, he gave up active business, and devoted his time exclusively to the study of aluminium, and the methods of producing it. In the early part of 1886, having invented the now celebrated sodium process, Mr. Castner came to England, and erected a small experimental plant in London. This having proved successful, the "Aluminium Company (Limited)" was founded last year, and Mr. Castner was appointed managing director. The works have been established at Oldbury, near Birmingham, for the manufacture both of aluminium and sodium on a large commercial scale. On Saturday, July 28, they were visited by a distinguished party of scientific men, among whom were Sir Henry Roscoe, Sir Frederick Abel, Lord Rayleigh, Professor C. Roberts-Austen of the Mint, Dr. Crookes, Professor Dewar, and Professor Huntingdon, with practical manufacturers and other business men. The works occupy an area of almost five acres, and have a capacity of producing 1500 lb. of sodium and 6000 lb. of double chloride daily, which will allow of an output of 5 cwt. to 6 cwt. of aluminium per day. The visitors expressed their surprise and admiration at the magnitude of the operations, and the entire novelty both of the processes and of the various appliances employed to carry them into effect. Mr. Castner received the highest compliments on the evident care and thought bestowed on every detail; and the directors, who were present during the visit, were congratulated on the apparent success of the undertaking, and the possession of what must be considered one of the finest chemical works in the country. It is impossible to foretell the future of this most interesting metal, which is daily becoming more known and sought after. The Oldbury works are the first and only establishment of the kind in the world at the present time; but there is little doubt that others will quickly be erected on the same plans, to carry on the company's processes, now that their success is assured.

The works, of which we give a few Illustrations, are divided into four departments—namely, (1) the manufacture of sodium under the Castner patents; (2) the manufacture of chlorine by the Weldon process; (3) the manufacture of the double chloride of aluminium and sodium by the Castner process; and (4) the reduction of the double chloride by sodium. The plant for the production of sodium consists of twenty furnaces, of large size, each capable of producing 50 lb. to 75 lb. of sodium per day, which is just about twenty times as much as the total quantity of sodium hitherto produced in this country. The materials employed are caustic soda and carbide of iron, which are melted at a temperature of about 800 deg. Centigrade for about an hour and a half, during which time the sodium is distilled into small iron condensers, whence it is cast into blocks of about 2 lb. each. About 6 lb. of caustic soda and 5 lb. of carbonate are used per pound of sodium produced. In the next section of the works is the manufacture of the double chloride of aluminium, by the process of passing chlorine gas over a mixture of alumina and charcoal in large retorts of special construction, heated to a high temperature, the resulting chloride being distilled and caught in condensers at the back of the retorts. The Aluminium Company receive from the adjacent alkali works of Messrs. Chance, of Birmingham, an ample supply of muriatic acid, which is employed in the manufacture of chlorine, and return to the Messrs Chance, in exchange, the residual carbonate of soda, which is utilised by Messrs. Chance in their special industry. Thus in both cases the residual and otherwise waste products become the valuable raw materials of subsequent manufactures. There are sixty retorts for the production of the double chloride, which have a united capacity of about 6000 lb. per day. The double chloride contains about 12 per cent of aluminium, and under treatment with sodium yields about 10 per cent of that quantity. There are two special designs of furnaces for producing aluminium; and the company are at present using both, pending the determination by experiment of the one best suited for the purpose. They differ mainly in the mode of taking off the aluminium. Into each of these furnaces the charge introduced consists of 80 lb. of chloride, 25 lb. of sodium, and 30 lb. of cryolite, which answers as a flux. This charge, after being reduced for about two hours at a temperature of about 1000 deg. Centigrade, gives about 8 lb. of aluminium, which is within 2 per cent of being absolutely pure. The total production of aluminium is expected to reach about 500 lb. per day, while the production of sodium will be about 1500 lb. daily. It is in respect of the latter product that the Castner process claims its chief economy. Hitherto sodium has cost about 6s. per lb., whereas the Castner process enables it to be produced at 9d.; this means that in the production of a pound of aluminium the cost of the sodium required has been reduced from 18s. to 2s. 3d. The essential feature of the Castner sodium process is that a temperature of about 800 deg. Centigrade and steel vessels are employed, instead of a temperature of about 1500 deg. Centigrade and a small wrought-iron tube in the old process. A great saving of wear and tear and of materials is the result. Although the Castner process reduces the cost of the metal from between 40s. and 45s. to about 15s. or less per lb.—or, in other words, from £4500 or £5000 to about £1680 or less per ton—these prices are still high; but aluminium is likely to displace some of the existing alloys used in engineering and manufacturing operations generally. There is also a large field for its use in a variety of minor ways; so that this newest British manufacturing enterprise has prospects of much commercial importance.

An excellent "Miniature Cyclopædia," compiled by Mr. W. L. Clowes, has been published by Messrs. Cassell and Co. It contains information upon almost every subject.

"IT MAY BE FOR YEARS."

FROM A PAINTING BY JULIUS M. PRICE.

"IT MAY BE FOR YEARS!"

A parting of lovers has evidently preceded this scene of pathetic loneliness on the seashore, where she who has been left, while he is sailing far away, still gazes in the direction of the vessel that has disappeared out of her sight. Only the faithful dog remains with her—a dumb but sympathising witness of her sorrow. The occasion, indeed, is frequent enough in the common experience of mankind—including so many sad farewells to departing friends, and separations of parents and children, brothers and sisters, not less than of man and woman pledged to a mutual affection, which to young people—especially to girls—may seem the main concern of their lives. It is apt to recall that mournful line of a beautiful song, in which the Irish lover of "Mavourneen" says to Kathleen, his darling—

This day we must part—
It may be for years—or it may be for ever—

words very touching, as every human heart must feel, and rendered more so by the music to which they are sung. This depressing sentiment, with a throng of tender recollections of the past, will haunt the young lady's mind as she turns from the sad seabeach to walk home. But the purpose of constancy may bring her some consolation.

Lord St. Oswald has remitted 20 per cent of the rent to his tenants, and the Earl of Yarborough and the Earl of Zetland have made a reduction of 15 per cent.

A human skeleton, which was buried in the second century of the Christian era, has been discovered in one of the chalk pits on Portsdown-hill. The bones were in a good state of preservation and the teeth intact. In the left hand were twenty-two Roman coins. The skeleton, which was six feet in length, was found a few feet beneath the surface.

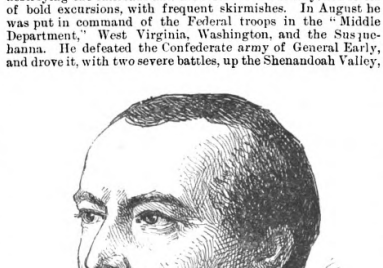
JELLY-FISHES.

A lovely morning this in Oban Bay. The smooth surface of the sea is literally without a ripple to mark the course of the wind. Yachts lie to right of one, and to left as well; and a white-winged schooner is endeavouring in vain to clear the Tail of Kerrera, by way of making tracks for Mull or Morven, whose purple hills loom on the near horizon. Steam is the only solace on this August day, and the boats which are wont to flit to and fro on the blue waters of the bay are imitating the "painted ships" of the "Ancient Mariner" in their stillness and quiescence. Yet the sea invites one by its very calmness; and so I hie forth to the beach, where an obliging Gael offers to row me round the bay for a small consideration of a pecuniary nature. I close with the Highlandman's offer, and in a few moments I am being rowed past the yachts, and out in the fair gulf around the shores of which nestles the fair

town of Oban. To-day the water is as clear as crystal. As we float leisurely along, crowds of jelly-fishes pass our craft. Last night I noted hundreds of these lovely but frail beings stranded and done to death on the beach. It seemed as though the shore were strewn with scores of crystal plates, so marvellously clear were their bells, until the inevitable process of decay set in. But in the sea to-day you behold them in all the beauty of loveliness. Here is a clear, glassy bell, half a foot or more in diameter, tinted with hues which imitate the choicest shades of the rainbow in their iridescence. Watch its movements, and learn therefrom something of the manner in which lower life lives out its appointed end. It pulsates with life; and forces its way gently, yet strongly, through the yielding waters. The top of the bell is marked by four pink canals, while round its margin you can see the delicate tentacles or "feelers" which exercise the sense of touch. The bell first spreads itself to its full dimensions; then, in a second pulsation, it contracts its disc to half its former extent, and in this way propels itself through the sea. For your jelly-fish is really an hydraulic engine in its way. Water is drawn into the bell when it expands; then, by the sharp contraction of the body, the water is expelled, and the jelly-fish sails along by aid of this alternate expansion and narrowing of its bulk.

There is more in jelly-fish philosophy than meets the eye. True, the same remark holds good of wellnigh every other living structure. But you may look through and through the jelly-fish and yet, from a scientific standpoint, fail to understand it, unless you are armed mentally with a modest modicum of science-lore and of anatomical wisdom. The jelly-fish is a "bell," it is true; and the "clapper" or tongue of the bell is represented by the prolongation at the extremity of which we find the animal's mouth. As to its food, we may assume that into this central mouth are drawn myriads of the floating specks of the ocean, which illustrate in the course of their fate Dean Swift's lines about the little fleas that are preyed upon by "lesser fleas, and so *ad infinitum*." Indeed, in some jelly-fishes there exist special means for paralysing the prey on which they subsist. In certain species, when you touch the bell, the mouth on its stalk moves over to indicate the part touched, as unerringly as the telegraph-needle obeys the behest of the operator. At the mouth in such cases, we find a stinging apparatus; so that when food is swept into the "bell," the central mouth with its stings can swoop down upon the particles, and, by paralysing them, place them at the mercy of the jelly-fish. The whole tribe of jelly-fishes "sting," it is true; but in these parts, it is only your tawny-coloured species, with their tentacles in festoons, that can pierce the epidermis, and make the human organism to smart and wince. A jelly-fish "sting" is, in its way, a perfect triumph of natural ingenuity. It consists of a microscopic bag or sac filled with fluid, and containing a minute thread or filament. Under the slightest pressure, this bag ruptures and bursts; the thread is thrown out on to the offending body, and the fluid at the same time escapes. There is little doubt that these "thread-cells," as they are named, constitute a veritable poison-apparatus. The thread is the dart or sting, and the fluid is the poison; and thus it comes about that the tender-skinned bather, with hundreds of these darts playing upon his epidermis, rises from the waves a sore and aching, and blistered mortal.

That there are jelly-fishes and jelly-fishes, however, is a very trite axiom of natural history science. Most of those clear glassy bells which you see floating in myriads past the boat are, in one sense, not true jelly-fishes at all. They are masquerading in the guise of jelly-fishes, and can only claim the title by courtesy. Their history is peculiar enough in its way. Let us try to unravel it as best we can. Growing on oyster-shells and on rocks and tangle, you find the curious animals which are known familiarly to everybody as "zoophytes." They grow rooted and fixed; they increase by budding; and their stems and branches often recall to mind the fir-trees of the forest. By-and-by, in the history of the plant-like zoophyte, you find its developmental epoch to set in. You see growing on the branches "buds" which are unlike those of the colony. Watch them carefully, and in due time you may note that these "buds" grow into the likeness of jelly-fishes. Then arrives the further stage of their history. Breaking contact with its plant-like parent, each jelly-fish bud detaches itself, and swims freely as an independent being in the sea. It is kith and kin to the zoophyte, but in the free-swimming glassy bells, that exist by hundreds in Oban Bay this morning, you could recognise no kinship with the plant-like growth of the oyster-shell. Yet, wait and watch. Sooner or later the free, floating jelly-fish bud will produce eggs. You can see the eggs developed in the specimens that float past our boat, looking like great brown masses depending beneath the jelly-fish frame. From each egg, in due season, there comes forth a little oval living speck, which, at first, swims as freely in the sea as did its parent. Then, after sundry changes of form, it settles down, and from its simple body is developed a single animal which we recognise as one of the zoophyte buds of the oyster-shell. By-and-by the process of budding begins. One bud produces another, and, as all remain connected, we find in due time the tree-like zoophyte to be produced. Thus, you observe, your zoophyte on the oyster-shell gives origin to a jelly-fish bud, which, in its own turn, develops eggs, each of the latter becoming a zoophyte again.



Yet the whole process is only one of complicated development, after all. Our jelly-fishes are only free floating buds of a parent stem. They are not independent animals, but are linked to the parent zoophyte by those mystic ties of blood relationship which make up not a small part of even human connections themselves. There are jelly-fishes also, one must admit, which have no such connection with the plant-like zoophytes; but of these we need not speak to-day. Suffice it that you have learned to read aright at least one sentence in the fair volume of Nature that is spread out before your view in Oban Bay. When the sun goes down over the hills of Mull, and Morven grows purple under its setting rays, our jelly-fishes will vanish away into the depths, to be recalled therefrom by to-morrow's light. Perchance this chat about jelly-fishes may resemble the features of the landscape, in that after to-day you may for a while forget these plain teachings of science, but may revive them in some mental to-morrow for profit and pleasure. ANDREW WILSON.

The Long Vacation began on Aug. 13, and the first sitting in court took place on the 15th, before Mr. Justice Denman, in Chancery Court II. The courts and the Central Hall of the Royal Courts of Justice will not be open to the public during the vacation.

Memorial windows to General Gordon, hero of Khartoum, to the officers and men of the Royal Engineers who were killed or died from their wounds or disease in the Egyptian and Soudan Campaigns of 1881 to 1885, and to the officers who served and were killed in the Peninsula and at Waterloo, were unveiled, on Aug. 9, in Rochester Cathedral, by General Viscount Wolseley, in the presence of a crowded congregation of the principal officers and ladies of the garrison, all the local clergy, the élite of the district, and a battalion of the Royal Engineers, besides a large body of the general public.

THE LATE GENERAL P. H. SHERIDAN, U.S.

The death, on Aug. 5, in Massachusetts, of General Philip Henry Sheridan, Commander-in-Chief of the Army of the United States, has removed the last of the eminently distinguished military officers who won important victories in the great Civil War of America from 1861 to 1865. He was born at Somerset, Ohio, in 1831, and was educated at the West Point Military Academy on the Hudson; in 1853, he entered the active service, and was six years on the Indian frontier stations in Washington Territory and Oregon, where he behaved with much gallantry in a conflict with the hostile Indians at the Cascades, in April, 1856. At the outbreak of the Civil War, Sheridan was appointed first a Captain of the 13th Infantry, but in May, 1862, obtained the commission of Colonel of the 2nd Michigan Cavalry, with which he performed brilliant actions at Booneville, and was made a Brigadier-General of Cavalry. In the autumn of that year, he received command of the 11th Division of the Army of the Ohio, under General Buell. At the battle of Perryville, near Louisville, on Oct. 8, he manœuvred his division with skill and effect; and at that of Murfreesborough, holding the most essential point in the action, he withstood four desperate assaults, showing great tactical skill as well as bravery. Sheridan was then promoted to the rank of Major-General; but little that is notable was achieved by him in the field until September, 1863, when, at the battle of Chickamanga, his division successfully maintained a perilous position. In capturing the Missionary Ridge, near Chattanooga, on Nov. 25, he was foremost to attack, and most persistent in the pursuit of the enemy. When General Grant, in March, 1864, began the campaign of Virginia, he chose Sheridan for Commander of the Cavalry Corps, with which he performed great services; covering the front and flanks of the army during the long "Battle of the Wilderness," cutting off the enemy's communications with Richmond, and destroying the railroads and the stores of the enemy, in a series of bold excursions, with frequent skirmishes. In August he was put in command of the Federal troops in the "Middle Department," West Virginia, Washington, and the Susquehanna. He defeated the Confederate army of General Early, and drove it, with two severe battles, up the Shenandoah Valley,

THE LATE UNITED STATES GENERAL PHILIP H. SHERIDAN.

which he devastated and made untenable for the enemy. By these measures, harsh as they seemed, Maryland and Pennsylvania were relieved from fear of invasion, while Grant obtained free use of the Baltimore and Ohio Railroad and of the Chesapeake and Ohio Canal. Sheridan, on Oct. 19, engaged the enemy's forces at Cedar Creek, and won a great victory, decisive of that campaign, capturing twenty-four guns, with many waggons and quantities of stores. He was further promoted for this achievement. In 1865, he again swept up the Shenandoah Valley, completing his work there, and wiping out the Southern army; joined General Grant, and took an important part in all the main operations of the Virginia Campaign, routing Pickett's and Johnson's forces at Five Forks, by which General Lee was compelled to abandon Petersburg and Richmond. He afterwards conducted the pursuit of General Lee, capturing guns, waggons, and thousands of prisoners, till the final surrender of Lee, on April 9, at the village of Appomattox. When the Civil War was ended, General Sheridan was appointed to command the Fifth Military District, Louisiana and Texas, from which he was removed to that of Missouri, with the rank of Lieutenant-General. He visited Europe in 1870, and was spectator of some of the great German victories in France. In March, 1884, he succeeded General Sherman in the office of Commander-in-Chief. Sheridan was undoubtedly one of the best of American soldiers, and perhaps as good a soldier as any in Europe.

We are indebted to the courtesy of the proprietors of the *New York Herald* for enabling us to publish the Portrait of General Sheridan which appears this week.

Her Majesty in Council has approved of the granting of a charter of incorporation for the town of Chelmsford. It will come into operation on Sept. 7.

About 4000 Volunteers assembled in London on Aug. 11, in compliance with orders issued from the War Office on Aug. 10, and left for Aldershott.—A match between teams representing the South London Rifle Club and the Berks Rifle Association was shot on Aug. 11 at Churn, on the Berkshire Downs, one of the proposed sites for the New Wimbledon. Lord Wantage was present. The total scores were—Berkshire, 1036; South London, 1021. Berkshire, therefore, repeated the victory which they obtained a few weeks since over the North London Rifle Club on the same range.—The Queen has approved of the 4th, 6th, 7th, 16th, 20th, and 22nd Lancashire Rifle Volunteers bearing in future the designation of the 1st, 2nd, 3rd, 4th, 5th (Ardwick), and 6th Volunteer Battalion of the Manchester Regiment. Four of the battalions have their head-quarters in the city, and the two others belong to Ashton and Oldham.

THE FLOODS.

One of the most inclement summer months that England has ever experienced was the July of this year, 1888. From the beginning of the month until its close there was an almost entire absence of real summer weather, and it ended with frequent and remarkably heavy falls of rain and severe local thunderstorms. The south and south-east of England suffered more from cold and wet than either North Britain or the Atlantic coast of Ireland. Finally, on July 30 and July 31, and Aug. 1, the neighbourhood of London and the Home Counties were visited by heavy storms, with thunder, and for hours, on each occasion, with a copious and continuous downpour of rain. In the eastern suburbs of London—in Poplar, the Isle of Dogs, and Canning Town, near the Victoria Docks—the poor inhabitants suffered great misery, and many of the very poorest lost everything in the floods. When the storm burst, the sewage rapidly rushed up through the drains into the dwellings to a depth in some cases of over six feet. There was no time to save anything; bedding, furniture, food, and clothing were in a few moments floating about in a sea of filthy sewage matter, and were utterly spoilt. The subsidence of the flood also left in their homes a horrible black evil-smelling deposit. Along the river Thames by the Essex marshes, at Barking, about Dagenham, and in the Rainham and Purfleet districts, on the way to Tilbury, the land was flooded, sheep and cattle were drowned, and vast quantities of hay and other crops were destroyed. On the main high road from Stratford through Essex, and along the Colchester line of the Great Eastern Railway, there were inundations occasioned by torrents of storm-water that rushed down the hillside from Woodford into the low-lying valley of the Thames, between Ilford and Chadwell-heath. The street of Romford was six feet under water. The railway was four feet under water, so that for some hours through-traffic on the main line was suspended, and passengers had to proceed by circuitous routes to their destinations. The stoppage of traffic was a source of great inconvenience to business men who daily travel from the eastern suburbs to the city. Extensive damage was also done to property around Enfield by the floods. Several bridges were washed away and traffic in the district was stopped. In St. Mary's Church, Ilford, the water was several feet deep up to the altar steps. The storm had done much damage in West Kent. At Erith, the railway embankment gave way, and threw the last train from London off the metals. Fortunately, no one was injured, beyond receiving a shaking; but traffic was stopped on the North Kent line and on the South-Eastern Railway. The local accounts of disaster are too numerous for repetition.

THE GOLD MINE IN WALES.

The discovery, by Mr. W. Pritchard Morgan, of gold-bearing quartz on his estate of Bryntirion, in the valley of the Mawdach, not far from Dolgelly, in Merionethshire, excited public curiosity last year; we then gave some account of it, with views of the place, heretofore known as Gwynfynnid, and of the external appearance of his workings at the new gold-mine. These were published in *The Illustrated London News* of Dec. 17, 1887. Our Artist, who recently visited the "Mount Morgan" mine, to inspect and delineate what is to be seen of its operations, which have made considerable progress, furnishes sketches of the gold-quartz crushing-mill, now in perfect working order. It is situated within a hundred yards of the Mawdach falls, having the advantage of an incessant water supply. The building is of a singular aspect, its several floors rising behind each other like terraces or steps. The ground floor is occupied by the various "ripples"; the second floor, by the stamps and the feeding arrangements; and the third or top floor by the crusher, with the quartz as it is brought from the mine.

The "crusher" is a machine for reducing the blocks of quartz to a certain size, to enable the stamps to work them. There is a sort of fascination in watching this monster mouth crunching great blocks of stone bigger than a man's head. They are reduced by the crusher to something about the size of the fist. We forget exactly how much this hungry monster swallows in the course of the week. The next operation is simply that of feeding the battery of stamps: a boy with a wheel-barrow can keep fifteen stamps going. These continue pounding away until the quartz is reduced to a pulp. Water is constantly pouring in; and, as the pulp gets washed away, it flows down over a series of steps, or "ripples": on each ripple is laid a sheet of copper coated with mercury. At any minute, specks of gold become amalgamated with the mercury; and when the ripples, instead of looking smooth, appear granulated, it is time to scrape the amalgam to one side, preparatory to removing it to the retort.

In order that the least possible amount of gold may be lost, it is after being first pounded up in the battery, inclosed with mercurialised plates, that the pulp is allowed to pass over the ripples. Thence it flows on to a large gutta-percha band, or belt, which is kept revolving over rollers in a direction against the flow of the pulp from the ripples, and is thus made to deposit any small grains that may have escaped the mercury in the centre of the band. The pulp further passes over an inclined plane of copper, likewise mercurialised; and, lastly, it runs over blanket ripples, which retain the smaller specks of gold. Parts of this apparatus, with the gutta-percha revolving band, are shown in our Illustration of the interior of the mill on the ground floor.

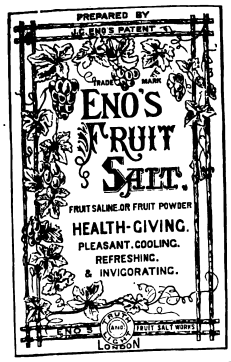
The "Britten" pans are used for the richest ore. The ore, in this instance, has first to be pounded up by hand, and then to be ground up in the pans, by large pestles.

On Saturdays, the whole of the amalgam is gathered off the plates, and is taken to the retort. The processes here were explained by Mr. Crookes, the assayer. The amalgam is first put into a cloth, very like an ordinary pudding-cloth, and is then squeezed or wrung, so that a great portion of the mercury escapes through the cloth. This process is continued, until nearly all the mercury is got out; the amalgam then becomes quite solid, and is put into the retort, where what mercury remains is distilled away from the gold.

On opening the retort a heavy yellow substance like sponge is seen. This, when cooled, has to be broken up and smelted in a crucible. It is afterwards poured into a mould and left to cool. Our Artist was permitted to cast one, which weighed nearly 4 lb., being the result of one and a half tons of quartz. The most beautiful feature in the casting was the lovely liquid emerald colour which the gold presented whilst cooling. Our Artist's Sketches show the processes of retorting and squeezing the amalgam.

The gold is weighed by the Government Inspector, Mr. Bowen, as the question of royalty has not yet been decided; but we understand that Government intends to treat this question in a liberal spirit, considering the public advantage of supporting a new industry.

Prospecting parties are out in all directions, and one constantly hears of new discoveries. There is quite sufficient "colour" in various parts of Wales to encourage the hopes of the gold-seekers, and we may soon hear of fresh results in that part of Great Britain.



THE FLOODS IN ESSEX.

RAMBLING SKETCHES: HEADCORN, KENT.

IMPORTANT TO ALL LEAVING HOME FOR A CHANGE.

"Among the most useful medicines that have been introduced within the last century is **ENO'S 'FRUIT SALT.'** There is no doubt that where it has been taken in the earliest stage of a disease, it has, in many instances, prevented what would otherwise have been a severe illness. The effect of **ENO'S 'FRUIT SALT'** upon a disordered and feverish condition of the system is marvellous. As a nursery medicine the **'FRUIT SALT'** is invaluable; instead of children disliking it, they look upon it rather in the light of a luxury. As a gentle aperient and a corrective in cases of any sort of over-indulgence in eating or drinking, **ENO'S 'FRUIT SALT'** is all that is needful to restore freshness and vigour. In cases of Nervous Headache and Debility it is especially useful, and should be taken in all cases where persons suffer from a sluggish condition of the Liver."—*Young Lady's Journal.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

MUSICAL PUBLICATIONS.

"After the Play," and "We 'll keep the Old Grey Mare, John," are songs by J. L. Molloy. The first appears to promise a touch of quaint humour, but in reality discloses a pathetic little episode of real life in the last parting of two affectionate hearts. The several phases of sentiment are well reflected in some changes of the musical rhythm. The other song above named is replete with quaint homely sentiment, and also has some effective rhythmical changes. "The Old Wherry," song by A. H. Behrend, is flowingly melodious, in waltz rhythm, with effective alternations of the minor and major modes. "Daydawn," by Florence Aylward, is a setting of lines adapted by Alice K. Sawyer from Victor Hugo. The sentimental tone of the verses is well reflected in the music, which is tuneful in its vocal melody and includes an effective accompaniment, partly of a cantabile kind, and partly consisting of broken chords. "Among the Passion-Flowers" is a setting of some pleasing lines from the practised pen of Mr. F. E. Weatherly, whose verses are always smoothly written, and lend themselves readily to musical treatment. This the lines in question have received from Mr. F. L. Moir, who has associated them with a melody of simple yet pleasing character, well fitted for vocal expression, and (like the songs previously referred to) lying within a moderate compass of voice. All the publications above ref rred to are from the firm of Boosey and Co., who also issue a very bright and spirited "Danse Humoresque," by Frances Allitsen, for the pianoforte. It is one of the pieces that have lately been played by the string band of the Royal Artillery. The same publishers have issued the 108th number of their popular series of the "Cavendish Music Books," containing eight modern pianoforte pieces (constituting the eighth "Pianoforte Album"). These publications—issued at one shilling per number—are well engraved and printed, on good paper, full music size.

"April" ("Chanson d'Avril") is a setting, by Mr. A. Goring Thomas, of lines by Remy Belleau, the original of which is given, together with an English version by William Hardinge. Mr. Thomas's music is both piquant and graceful; there is just an indication of French style suitable to the original text, while yet not being at variance with the translated version. Messrs. Metzler and Co. are the publishers, as also of "Time will Show," a very characteristic duet, the words by Marion Chappell, the music by J. M. Coward. The musical setting (for a mezzo-soprano and a baritone) is very effective, the alternate queries and replies between the two voices, and their occasional association, affording good contrasts. "Our Volunteers" (also from Messrs. Metzler and Co.) is a march, for the pianoforte, on the song composed and dedicated to the Queen by Lady Arthur Hill. It is a spirited piece in genuine martial style, and has been played with great effect by various military and volunteer bands. The same publishers have just issued "The Rose Queen" waltz, produced with such success at the recent opening Promenade Concert at Covent-Garden Theatre. The composer, Mr. A. Gwyllym Crowe, has judiciously arranged it so that it can be used merely as a pianoforte solo, or with voices to the text which is given. The titlepage comprises a very pretty chromo-lithograph of a group of graceful children in picturesque costumes.

"The Borderers" is a song by C. H. Lloyd, to some stirring words by Mr. F. E. Weatherly, in which a plundering excursion is announced in vigorous lines. Mr. Lloyd's music accords well with its subject, and affords good opportunities for effective vocal declamation, a well-written figurative accompaniment being an important feature. The song is published by Mr. Joseph Williams, of Berners-street; from whom we have also "A Lover's Lay"—a song by H. T. Tiltman, in which there are some striking phrases, chiefly of a declamatory kind, several changes of tempo and rhythm giving a welcome variety. Mr. Williams also sends some instrumental pieces. A "Gavotte" for violin and piano, by Benjamin Godard, has much of the quaint character of the old dance-form implied by the title, and is so easy as to be within the reach of most amateurs. Other pieces in an antiquated dance form are a "Gigue" and a "Bourrée" for piano solo, by W. W. Hedgcock. In these also the antique grace of an old style is well preserved; as is the case with a "Gavotte" by H. T. Tiltman, whose "Air de Ballet" is a pleasing dance piece of a more modern kind.

In London 2228 births and 1476 deaths were registered in the week ending Aug. 11. Allowing for increase of population the births were 454, and the deaths 203, below the average numbers in the corresponding weeks of the last ten years. The deaths included 51 from measles, 17 from scarlet fever, 25 from diphtheria, 27 from whooping-cough, 6 from enteric fever, 1 from an ill-defined form of continued fever, 138 from diarrhœa and dysentery, 5 from cholera and choleraic diarrhœa, and not one from smallpox or typhus. The deaths referred to diseases of the respiratory organs, which had been 160 and 167 in the two preceding weeks, further rose to 183. Different forms of violence caused 56 deaths; 50 were the result of negligence or accident, among which were 20 from fractures and contusions, 3 from burns and scalds, 12 from drowning, and 9 of infants under one year of age from suffocation. Five cases of suicide were registered.

The Lords of the Committee of Council for Agriculture have awarded the following sums out of the £5000 granted by the Government for the present financial year in aid of agricultural and dairy schools:—The Cheshire County Dairy School, £150; Aspatria (Agricultural) School, £250; Edinburgh University, £300; Glasgow and West of Scotland Technical College, £200; Kirkcudbright Dairy Association, £70; Ayrshire Dairy Association, £125; Wigtownshire Dairy Association, £101 10s.; and to Dumfriesshire Dairy Association, £28 10s.—The applications from the Norfolk Chamber of Agriculture, Suffolk Dairy Institute, Sussex Association, British Dairy Farmers' Association, Darlington Chamber of Agriculture, Leicester Dairy Company, Ludlow Grammar School, Aberdeenshire Association, Forfarshire and Kincardineshire Dairy School, and Kilmarnock Dairy School were deferred for further consideration.

The first match in the Canterbury cricket week finished on Aug. 8 in a victory of the Australians over Kent by eighty-one runs.—Surrey won the match with Notts at the Oval by seventy-eight runs: Middlesex defeated Yorkshire at Sheffield by six wickets, and Gloucestershire won the match with Sussex at Clifton by seven wickets.—At Canterbury, on the 10th, Kent beat Lancashire by six wickets.—At Kennington Oval, on the 11th, the Surrey cricket team followed up an unexampled score completed on the previous day by bowling down the Sussex wickets in the second innings for a total of ninety-nine, thus securing a victory by an innings and 485 runs.—At Clifton the Australians were beaten by Gloucestershire by 257 runs: Middlesex defeated Derbyshire at Derby by seven wickets, and at Lord's, Somerset beat the M.C.C. by five wickets.—The match at the Oval on the 14th ended in a victory for England over Australia by an innings and 137 runs.—Sussex defeated Lancashire, at Brighton, by nine wickets; and at Derby Yorkshire were beaten by Derbyshire by seven wickets.

BIRTHS.

On Aug. 7, at 20, Kildare-terrace, Bayswater, W., Kathleen, the wife of Francis Edward Paynter, Esq., of a daughter.

On Aug. 12, at 45, Chester-square, Mrs. Dodsworth, of a son.

DEATH.

On June 28, at Myingyan, Burmah, by drowning, Lieutenant James Ireland Henderson, Adjutant 10th Madras Infantry, eldest son of the late Colonel J. R. S. Henderson, M.S.C. Deeply regretted by his brother officers and all who knew him.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

RAMBLING SKETCHES: HEADCORN.

In the centre of the agricultural districts of Mid Kent, on the railway from Tunbridge to Ashford, and ten miles from Maidstone to the south-east—in a fair country of meadows, cornfields, and woodlands, and with purple hills in the distance, over which sunlight and shadow pass alternately in the momentary changes of a breezy summer day—lies the pleasant rural village of Headcorn, a thriving place with a growing population, yet with picturesque features of antiquity noted by the rambling Artist. His sketches of the Old George Inn, which was probably the first object of his quest—since a long walk had lawfully entitled him to a glass of ale and a moderate luncheon—of the Old Church, built by one of the Colepepers in the reign of Edward IV., in the churchyard of which is a venerable old oak, with its trunk 40 ft. in girth, and with its boughs half withered—and of the Old Hall, some time belonging to the Clothworkers' Company of London—testify that centuries have spared Headcorn some characteristic architectural relics of the olden time. Headcorn history, if we had leisure to study it, would no doubt present facts worthy of note, though but a small number of our readers, not being men of Kent, or travellers on the South Eastern line, have probably ever heard the name of the village, except as a railway station. It thrives, nevertheless, and makes good malt, we believe, with native hops grown thereabouts to complete the preparation of its beer; and the two-peaked "oast-houses," which are seen in many other Kentish villages, are a sign of promise to those who like a sound quality of the good old English drink. Field-paths in the neighbourhood lead to the grassy margin of the rippling Beult, and to Smarden, in one direction, or in another to the rustic hamlet of Mottenden, where stood the famous house of Crutched or Crossed Friars, founded in 1224 by Sir Richard de Roksesley, noted for their performance of miracle plays on Trinity Sunday. In this weald of Kent, in a ramble through Sutton Valence, Boughton Malherbe, and Chart, the memories of ancient life, its manners and customs and institutions, of the Plantagenet, the Norman, and the Saxon periods, are suggested by local names; though it was a great forest, covered with trees and frequented by wild beasts, or by herds of swine near the habitations of men, at the date of the Norman Conquest.

The Royal Commission appointed to inquire into the alleged irregularities in connection with the Metropolitan Board of Works have adjourned *sine die*, having taken all the evidence which was deemed material.

The City and Guilds of London Institute for the advancement of technical education has held its summer examinations, and has published its report of the results. These, on the whole, must be pronounced highly satisfactory.

Nine steamers arrived at Liverpool in the week ending Aug. 11 with live stock and fresh meat from American and Canadian ports, the total arrivals being 2137 cattle, 1647 sheep, and 6082 quarters of beef.

The Class-list of the higher local examinations, recently held at various centres by the University of Cambridge, was published on Aug. 14. There were 973 candidates, and the success or failure of each is shown by supplementary tables.

The names of the following students of the London School of Medicine for Women appeared in the pass list of the Intermediate Examination in Medicine of the University of London:—Miss Berthon, 1st Division; Miss Dove, 2nd Division; Miss Tribe, 2nd Division; Miss Staley and Miss Pace, excluding physiology. In the Honours List.—Anatomy: Miss Longbottom, 1st Class; Miss Sturge, 2nd Class; Miss Benson, 3rd Class. Physiology and Histology: Miss Benson, 2nd Class; Miss M'Laren, Miss Madgshon, and Miss Williams, 3rd Class. Materia Medica and Pharmaceutical Chemistry: Miss Benson, 1st Class; Miss Farrer, 2nd Class; Miss M'Laren, 3rd Class.

This day is published,
Seventh Edition, in One Volume,
THE MOOR AND THE LOCH.
Containing minute Instructions in all Highland Sports, with Wanderings over Crag and Corrie, Flood and Fell.
By JOHN COLQUHOUN.
New and Cheaper Edition, with Illustrations, 8vo, 21s.

Some Opinions of the Press on Former Editions:—
"A complete encyclopædia, embracing all recognised sports, with hints innumerable, and suggestions drawn from a rich experience, that the young sportsman will do well to lay to heart. . . . A book that is worth reading again and again."—Saturday Review.
"He presents all lovers of Scotland with the completest details of every Highland sport, on all of which he is an unexceptionable authority; and with what many will value even more, a series of lifelike sketches of the rarer and more interesting animals of the country. . . . Henceforth it must necessarily find a place in the knapsack of every Northern tourist who is fond of our wild creatures; and is simply indispensable in every Scotch shooting-lodge."—Academy.
"The book is one written by a gentleman for gentlemen, healthy in tone, earnest in purpose, and as fresh, breezy, and life giving as the mountain air of the hills amongst which the sport it chronicles is carried on."—The World.
"In short, it is a delightful book, which ought to be on the shelf and often in the hands of every healthy-minded man."—Scotsman.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all impurities or living animalcules, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke; being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of MRS. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure to ask for MRS. WINSLOW'S SOOTHING SYRUP, and see that the name "Edwards and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers in the [illegible]

LUNHAM, Commander, will be despatched from Tilbury Dock Aug. 30, for 30 days' cruise to the Baltic, and Dec. 15 for six weeks' cruise to the Mediterranean. The VICTORIA is always on view between her cruises, has the Electric Light, Lifts, and all modern improvements. Apply to MANAGER, Steam-Yacht Victoria Office, Carlton-chambers, 4, Regent-st., London, S.W.

THE HIGHLANDS OF BRAZIL
SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing 2,340 ft. above seaLevel, just within the Southern Temperate Zone; good summer and winter alike; no change of residence forced on the invalid by the advance of the seasons. English service in English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. 6d. per diem. Treatment, with further particulars, from CHARLES WILLIAM JONES, Esq., Surgeon-Dentist, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea breeze. The beach is covered with the finest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments replete with all the comforts of an English home. Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Continental Spas in the interior of the country. Concerts, Theatre, Concerts.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its surrounding fascinations and attractions, and nowhere has favoured climate been so enhanced by the picturesque scenery, but also by the forethought of man, to provide every kind of relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-board, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocracy of the world. Nice and Monte Carlo enjoy a perfect climate in Europe; in short, Monaco is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY,
SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. VIÂ LUCERNE, through the Tunnel of the St. Gothard. Excursions to the Rigi by Vitznau or Arth. Station of the Lombard line. MAPLE & CO.

TABLE LINENS.

TABLE LINENS.
During the long-continued depression in trade, many of the best Irish manufacturers have still kept their most skilful weavers employed, with the result that stocks have accumulated, till of necessity they must be realised, even at a serious sacrifice.

TABLE LINENS.—MAPLE and CO. having been consulted by several manufacturers so situated, immediate assortment of pure hand-made, soft-finish CLOTHS and NAPKINS, which they are now offering at a very large percentage under value.

TABLE LINENS.—The cases are now being opened out, and comprise a large variety of CLOTHS which, being pure flax, will wear well and retain their natural bloom till the last. The Cloths are mostly of medium size—2 yards by 2½ yards, from 3s. 11d.; latter quality, 8s. 11d.; extra quality, 10s. 9d.

TABLE LINENS.

TABLE LINENS.

TABLE LINENS.—Amongst the stocks are a number of CLOTHS, in both medium and large sizes, of altogether exceptional quality; in fact, some of the finest and most beautiful productions of the Irish looms. These certainly be seen. The prices will be found but little more than usually asked for goods of ordinary character.

TABLE LINENS.—Included in the stocks are also to be found a large variety of both CLOTHS and NAPKINS, suitable for clubs, Cities, Boarding-houses, &c., and proprietors contemplating renewing these articles should certainly make an early inspection, or write for samples or quotations. A great saving may be effected by purchasing at once.

TABLE LINENS.—The Stocks also include pieces upon pieces of DAMASK NAPKINS, as follows: Fish Napkins, from 2s. 3d. per dozen; Breakfast ditto, from 4s. 6d. per dozen; Dinner Napkins, all fine flax, from 6s. 11d. per dozen; extra large Dinner Napkins, from 9s. 3d. These goods will be found of remarkably good value, and are sure to please in use.

SHEETINGS.

SHEETINGS.

SHEETINGS.
MAPLE and CO.'S Stock of pure-flush and hand-made Irish, Scotch, and other SHEETINGS, as well as plain and twilled COTTON SHEETINGS, are more complete, would therefore do well to replenish their stores. Patterns and Prices sent free on application.

NAUTICAL TRAINING COLLEGE.—The THAMES NAUTICAL TRAINING COLLEGE, H.M.S. WORCESTER, moored off Greenhithe, Kent, is managed by a Committee of London shipowners, Merchants, and Captains. Chairman—Captain C. E. MORRIS, 4, Mincing-lane, E.C. Youths from eleven to fifteen-and-a-half years of age, intended for sea, are received on board and specially educated for a seafaring life.
The annual terms in the Upper School for Cadets from thirteen to fifteen-and-a-half, are 30 guineas, and in the Lower School, for Cadets from eleven to thirteen, 25 guineas, with a charge to each of 10 guineas for uniforms, medical attendance, washing, &c. The Board of Trade allow that two years passed on board ships ship shall count as one year's service. The Admiralty annually offer Cadetships in the Royal Naval Reserve.
The College will RE-OPEN MONDAY, Sept. 10, 1888, after Midsummer Vacation. Forms and Prospectuses may be obtained on application to
W. M. BELLIVANT, Hon. Secretary, 72, Mark-lane, London.

WALKER'S CRYSTAL CASE WATCHES.
An Illustrated Catalogue of Watches and Clocks at reduced prices sent free on application to
JOHN WALKER, 77, Cornhill; and 230, Regent-street.

BY THE WATERS OF THE WEST.

Her Majesty's approaching visit to Blythswood House adds another link to the long chain of Royal memories woven about Strathclyde. Though little be remembered now of the fact, the cradle of the Stuart race was by the side of those western waters; and the Queen, under the roof of Sir Archibald Campbell, rests within a mile of the early seat of her ancestors. For on the slight rising-ground called the Castle Hill, between Renfrew and the Clyde, stood the ancient home of the High Stewards of Scotland.

Many a Royal visitor, since the days of the iron-crowned Vikings, has sailed upon those swelling reaches of river and firth, and scarcely a province in the land is richer in historic memories than the fair valley of Strathclyde. The Royal Lady of to-day, who is borne in her floating palace between these green river shores and out among the tidal narrows of the islanded Firth below, is but returning to the old pleasure-waters of long-illustrious Kings. Here, in the last days of the hero, nigh six hundred years ago, drifted the bannered galleys of The Bruce. On the north bank of Clyde, at what is now the farm of Castle Hill, below the fortress rock of Dumbarton, stood the residence to which King Robert, his patriot task accomplished, retired to spend the evening of his life. Much gay pipe-music then, songs and pleasant laughter, drifted about silver reaches as they were visited by the parties from the Court. The King himself may be imagined, grey-bearded and somewhat worn with sickness, but fiery-eyed yet and huge-framed as when he slew De Bohun; sitting with some old friend like The Douglas in his galley's stern, as, with trailing draperies and rhythmic plash of oars, it sped by silver-sanded bay and bosky islet, and disappeared. The roar of battle, too, alas! and the ring of steel, have more than once been the music brought to these shores by their Royal visitors. Further out along the shores of the Firth, above the shallows of Fairlie it was, that Alexander III., the last of Scotland's Celtic Kings, closed in conflict with the invading hosts of Norway. Dark must have been the foreboding of many a heart for Scotland, as the mists rose on that far-off October morning, and revealed the countless soldiery landing from Haco's fleet there on the beach below. And fierce must have been the conflict when the Scottish host, led by their King, rushed along those hill slopes into battle. Marks of that carnage remain to this day, not, as at Hastings, in the rise of a conquering aristocracy, but, more grimly, in the cairn-tombs of the dead invader.

Other Royal memories, earlier as well as later than these, linger in the valley of the Clyde. Dumbarton, the Celtic Balclutha, old even in Ossian's time, was the capital of the British kingdom of Strathclyde. Between these ownerships was heard there the tramp of the Roman legions, who made it their naval station of Theodosia; and more than once since then has the fate of a kingly house hung upon possession of that fortress-rock. About Rothesay Castle, too, survives many a tale of the Scottish Kings. There Robert III. died of grief upon hearing that his son James, afterwards first of that name, had been taken at sea by the English. And there a curious thing once happened to one of his descendants. On a summer day in 1536, James V. set sail for France to marry a daughter of the Duke of Vendôme. But the nobles who were with him, caring little for the match, took the slight liberty of altering the ship's course during the night; and the surprise and wrath of the King may be imagined when next morning he found himself quietly anchored in Rothesay Bay. The closeness of the Stuart connection with Strathclyde in bygone times even appears in some of the most ancient of the Royal titles. As heir to the Scottish throne, the Prince of Wales remains to this day Duke of Rothesay and Baron of Renfrew.

The aspect of river and firth, however, has mightily changed since Rothesay was a Royal residence, and Stuart Queens were buried in Paisley Abbey. Instead of the wildfowl which the young Wallace once doubtless shot by the river's edge below Elderslie, there come now up the estuary Atlantic liners of six thousand tons; and where the pipe-music of The Bruce's galleys once floated gaily out upon the water, is to be heard to-day the myriad clinking hammers of the rivetters building new iron steamships in Dumbarton yards. But most signal, perhaps, of the changes that have taken place is the object of the Royal visitor of to-day. The Kings of bygone times came here to make war or to rest from it; their descendant at the present hour comes altogether in the interest of the arts of peace.

And it seems altogether appropriate that, when perhaps the most important part of the Industrial Exhibition to be patronised concerns the problem of women's work, the Royal patron should be of the gentler sex.

There can be little doubt that at the present moment one of the chief social problems regards the employment of women. It is a sad fact, but none the less true, that marriage is every year becoming impossible to a larger number of girls. There are already in the United Kingdom several hundred thousand more women than men. Every year, besides, owing to the growing competition and difficulty of making a livelihood, the number of young men unable to marry is steadily increasing. Every year, therefore, it is becoming necessary for a larger number of women to trust to their own efforts for provision in life. The fear only is that they may choose unwisely in selecting fields for their energies. In most of the callings, such as clerkship, in which they compete with male labour, women, by decreasing the employment of men, are lessening the chances of marriage open to their sex. Such a result is undesirable for political reasons as well as morally, and it is to prevent such misdirection of energy that attention may most profitably be turned. This end may be largely served by the Women's Industry Section of the Glasgow International Exhibition about to be visited by her Majesty. There suggestions are to be had of employments which, remaining distinctly feminine and in no way interfering with male labour, avoid the undesired results pointed out above. There are several employments, it is true, such as that of drapers' assistants, at present filled by men, which seem better fitted for women; but even here the substitution is causing some hardship. Besides such occupations, however, and others, like the teaching of infants'-schools, peculiarly within woman's province, there are many, both of the decorative and useful arts, in which female labour may quite safely find a sphere. These arts the Glasgow Exhibition should largely help to make known; and the present Royal visit, happily, is likely to draw increased attention to them.

Her Majesty's sojourn, now, by the Clyde, must recall many memories of her former visit to it, in 1847, accompanied by the late Prince Consort; and it will not be forgotten that many changes, great and various—some of them, alas! full of sadness—have occurred since then. G. E.-T.

Another addition has been made to the strength of the Navy by the launch, from Chatham Dockyard, of the war-cruiser Medusa, a sister ship to the Medea, recently completed at Chatham. She is intended to be employed as a swift cruiser, steaming at twenty knots an hour.

FASHIONABLE MARRIAGES.

The marriage of the Hon. Alwyne Greville, second son of the Earl and Countess of Warwick, with Miss Mabel Elizabeth Georgina Smith, only daughter of the late Mr. Ernald Smith, of Selsdon Park, Croydon, was celebrated on Aug. 8, at St. Paul's, Knightsbridge. The officiating clergy were the Bishop of Rochester, assisted by the Rev. B. Bayly, Curate of St. Paul's. The bride entered the church with her uncle, Colonel Murray, of Polmaise Castle, and was subsequently given away by her mother. The bridal dress was white satin striped brocade train and bodice, with white embroidered crêpe de Chine in front, and festooned at the side with white satin ribbon and orange-blossom. She wore a tiara of diamonds, the gift of the bridegroom; and necklace of pearls, the gift of her mother. The six bridesmaids—Lady Eva Greville, sister of the bridegroom, Miss Hilda Smith, Miss Charteris, Miss Hall, Miss Seymour, and Miss Heseltine—were dressed in white crêpe de Chine, in Empire style, with broad yellow moiré sashes. They also wore yellow poppy bonnets, and carried large bouquets of clove carnations. Their ornaments were a "sprag of May" brooch in diamonds, the gift of the bridegroom. The bridegroom's brother, the Hon. Sidney Greville, was best man. Among the presents were a handsome pair of silver candelabra from the Prince and Princess of Wales. Princes Albert Victor and George of Wales also sent presents. The bride's going-away dress was grey cashmere with white moiré petticoat, and lily-of-the-valley bonnet.

The marriage of Mr. Edmund R. Turton, son of Captain and Lady Cecilia Turton, of Upsall Castle, Yorkshire, with Miss Clementina Ponsonby, daughter of the Hon. Sir S. and Lady Ponsonby Fane, took place on Aug. 9 at Brympton Church, near Yeovil, Somersetshire, in the presence of a large number of relations and friends. The bridegroom was attended by his brother (Mr. R. B. Turton) as best man; and the bridesmaids were Miss and Miss Cecilia Turton (sisters of the bridegroom), and Misses V. Ponsonby, M. Phelips, and C. Phelips (nieces of the bride). The bride was given away by her father, the Hon. Sir S. Ponsonby Fane.

The marriage of Mr. Whistler and Mrs. Godwin took place on Aug. 11 at St. Mary Abbott's, Kensington. Mr. Labouchere, M.P., gave the bride away.

Mr. Charles Mathews, of the Western Circuit, was married on Aug. 11 at St. Peter's Church, Onslow-gardens, to Miss Sloper, the eldest daughter of the late well-known musician, Mr. Lindsay Sloper.

Mr. W. H. Clay and Mr. W. E. Mirehouse have been appointed revising barristers on the Oxford circuit in the place of Mr. Bros and Mr. Plowden, who have been appointed police Magistrates.

In their final report, the Commissioners on the Elementary Education Acts state that, while they desire to secure for the children in the public elementary schools the most thorough instruction in secular subjects, they are unanimously of opinion that their religious and moral training is of still higher importance.

A Parliamentary paper contains a Treasury minute adopting and carrying out several of the recommendations of the Committee on Perpetual Pensions. These are—1. That pensions, allowances, and payments ought not in future to be granted in perpetuity; 2. That offices with salaries and without duties, or with merely nominal duties, ought to be abolished; 3. That all existing Perpetual Pensions, allowances, and payments should be determined and abolished.

THE MANUFACTURING

GOLDSMITHS' & SILVERSMITHS' COMPANY,

Show-Rooms: 112, REGENT-STREET, LONDON, W. (Adjoining Stereoscopic Company)

Supply the Public direct at Manufacturers' Cash Prices, saving Purchasers from 25 to 50 per Cent.

SOLID SILVER.—The largest and choicest Stock in London. Many of the designs are reproductions of the antique, at about one-third the cost of the original, whilst others are the Company's special designs, and cannot be obtained elsewhere.

WEDDING PRESENTS.—Special attention is devoted to the production of elegant and inexpensive novelties, which are arranged in special cases for the convenience of customers. Every article is marked in plain figures for cash without discount. Intending purchasers should pay a visit of inspection before deciding elsewhere, and are assured of not being importuned to purchase.

CHRISTENING PRESENTS.

BIRTHDAY PRESENTS.

MESS PLATE, of a Military character, specially designed to order. Figures or groups introducing the uniform of any regiment modelled in the highest style of art. Regiments returning from abroad supplied with complete outfits of table plate. Old plate done up as new.

PRESENTATION PLATE.—A magnificent stock of high-class plate, comprising Tea and Coffee Services, Centre-Pieces, Dessert-Stands, Candelabra, Race Cups, Bowls, Tankards, Beakers, Jugs, &c., at prices from £1 to £1000. Special and original designs by the Company's own artists prepared free of charge for committees and others.

CAUTION.—The Company regret to find that many of their Designs are being copied in a very inferior quality, charged at higher prices, and inserted in a similar form of advertisement, which is calculated to mislead the public.

They beg to notify that their only London retail address is 112, REGENT-STREET, W.

"A SUCCESSFUL BUSINESS.

We know of no enterprise of recent years which has been crowned with greater success than the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, who, just seven years ago, opened their show-rooms to place the productions of their workshops direct before the public, thus saving purchasers the numerous intermediate profits which are obtained by 'middle-men' on high-class goods. Such has been the appreciation by the public that the Company have now the largest business in England, and are quite supplanting the old-fashioned houses that pride themselves upon having been established so many decades, but have utterly failed to keep pace with the times, and find it impossible to depart from their long-credit system, entailing bad debts, for which cash buyers have to compensate."—Court Journal.

Four Solid Silver Salts and Spoons, in best Morocco Case, lined Velvet, price £3 10s.

Solid Silver Bayonet Top Hunting Flask, in case complete, price £2 5s. 6d.

Solid Silver Two-Handle Challenge Cup, beautifully fluted, complete, with plinth, £12, £15, £20, £25, £30.

THE QUEEN ANNE SERVICE.

Solid Silver Tea and Coffee Service, four pieces, £23 15s.; Jug, 155s.
Best Electro " " " £9 10s.; " 65s.

Solid Silver Flask, to hold quarter of a pint, price £4.

Solid Silver Kings Pattern Fish Eating Knives, £12 0s. per dozen.
Best Electro-Plated " " " £3 2s. "

ELECTRO-PLATE.—The Goods Manufactured by the Company are trebly plated with pure Silver on the finest Nickel Silver, are unsurpassed for durability, and are equal in design and finish to Solid Silver.

Although the prices in this Department are lower than charged by Stores and Furnishing Ironmongers, the quality is immeasurably superior.

SPOONS AND FORKS.—Trebly plated with pure Silver on the finest hard white Nickel Silver. Specially recommended for hard wear. Thousands of testimonials received from customers who have thoroughly tested their durability and excellence. Solid SILVER SPOONS and FORKS, 6s. 3d. per ounce.

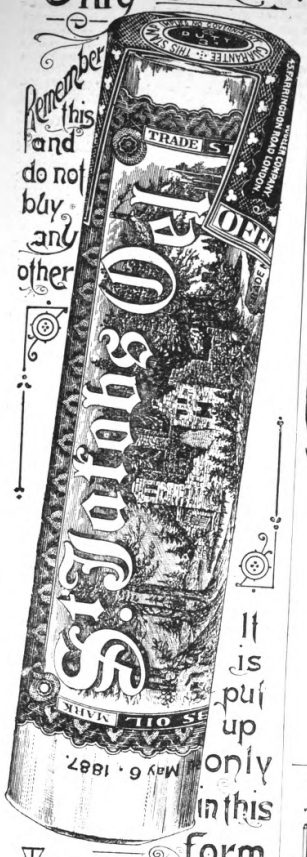
TABLE CUTLERY.—With best double refined Shear Steel Blades and fine African Ivory Handles. Best Electro-plated Fish Knives and Forks, Dessert Knives and Forks, Cake Knives and Forks, Salad Spoons and Forks, Asparagus Servers, Tart Servers, &c.

APPROBATION.—Selected parcels of goods forwarded to the country on approval when desired. Correspondents not being customers should send a London reference or deposit.

COUNTRY CUSTOMERS have through this means the advantage of being supplied *direct* from an immense London stock, containing all the latest novelties, and which are not obtainable in provincial towns.

COLONIAL AND FOREIGN Orders executed with the utmost care and faithfulness under the immediate supervision of a member of the Company. Where the selection is left to the firm, customers may rely upon good taste and discretion being used, and the prices being exactly the same as if a personal selection were made.

TESTIMONIALS.—The numerous recommendations with which the Goldsmiths' Company have been favoured by customers who have used their plate for years, is a pleasing testimony to the excellence and durability of their manufactures.



OLD PLATE taken in Exchange or Bought for Cash.

MEDALS.—Awarded Seven Gold and Prize Medals and the Legion of Honour, a special distinction conferred on this Firm for the excellence of their manufactures.

THE ST. JACOBS OIL BOTTLE IS ROUND.

Look also for the Signature of The Charles A. Vogeler Co.

The great success and popularity of St. Jacobs Oil has become the subject of comment by almost the entire press of the country; in many instances the leading articles of large and influential papers have been devoted to the details of what seem to be almost magical cures effected by the use of St. Jacobs Oil in local cases, coming under the immediate attention of the publishers. St. Jacobs Oil is endorsed by Statesmen, Judges, the Clergy, the Medical Profession, as well as by people in every walk of life.

The curative powers of St. Jacobs Oil are simply marvellous. It is wholly an outward application. It conquers pain quickly and surely. It acts like magic. It penetrates to the seat of the disease. It cures even when everything else has failed. It has cured thousands of cases of rheumatism and neuralgia which had resisted treatment for the greater part of a lifetime. It has cured people who have been crippled with pain for more than twenty years. After the most thorough and practical test, St. Jacobs Oil has received Six Gold Medals at different International Exhibitions for its marvellous power to conquer pain. It is used extensively in the leading Hospitals and Dispensaries of the metropolis and provincial cities, and also on board her Majesty's Troopships and the Cunard Steam-ship Company's Fleet. Put up in white wrappers for human use (the Oil is also sold in yellow wrappers with such ingredients added as are particularly adapted for use on horses, cattle, and dogs), price 2s. 6d. per Bottle, of all dealers in Medicine throughout the world; or sent, post-free, by the Proprietors, The Charles A. Vogeler Company, 45, Farringdon-road, London, E.C.

The medicine he prescribes *does not lower but builds up and tones the system.*" Book, 116 pages (8 stamps).

F. C. RUSSELL, Woburn House, 27, Store-street, Bedford-square, London, W.C.

THE ROYAL ARCHÆOLOGICAL SOCIETY.

The annual congress of the Royal Archæological Institute was opened in the Townhall, Leamington, on Aug. 7, under the presidency of Lord Leigh, Lord Lieutenant of the county. At noon the members of the institute and of the Warwickshire Archæological and Natural History Society were publicly welcomed and received by the Mayor of Leamington, Earl Percy having vacated the presidential chair in favour of his temporary successor.

Lord Leigh gave his presidential address in which he welcomed the institute on their second visit to that county; their former visit having been made nearly a quarter of a century ago under Lord Talbot's presidency. He gave a brief outline of the objects of interest which they were about to inspect, and warned them that Warwickshire men would not regard with greater favour the man who attempted to remove their belief in Shakspeare than those who would remove his bones. At one o'clock there was an adjournment for luncheon; and soon after two o'clock the members went by train to Stratford-on-Avon, to inspect the scenes of Shakspeare's infancy, education, and after-life, visiting his birthplace in Henley-street, the grammar-school which he attended as a boy, the Guild Chapel in Chapel-street, the garden and site of New Place, where he lived after his retirement, the Memorial Theatre and market fountain, lately erected in his honour, and the parish church, which contains his ashes and his tomb. The return journey to Leamington was made in ample time for dinner, and for the opening of the antiquarian section, in the great room at the Townhall, by the Rev. J. Hirst, in the evening.

The 8th was a busy day, and the party paid visits to Broughton Castle, Lord Saye and Sele's fine place on the borders of Oxfordshire, and to Compton Wynyates, the once moated home of the Comptons, Lords Northampton. At four o'clock the bugle sounded for retreat, and the party drove back to Banbury, taking on their way the beautiful church of Adderbury, renowned for its fine Decorated windows, Perpendicular chancel, and graceful tower and spire. Here they were entertained at tea by Dr. Thorne on the lawn of his hospitable house. The chief features of the church having been hastily explained by Canon Venables, of Lincoln, the party returned by train to Leamington in time for the evening meetings of the several sections.

The members visited Beauchamp Chapel, Leycester Hospital, and the castle at Warwick on the 9th. At Warwick Museum, a vase which had been dug up during the construction of the Suez Canal was opened by Mr. Hirst, president of the archæological section, and found to contain a number of human bones, evidently those of a child. The vase is of exquisite workmanship, and in excellent preservation, and was pronounced to be Etruscan and of great antiquity. The members were entertained at the castle by Lord Warwick, and in the evening they attended a conversazione given by the Mayor of Leamington at the Townhall.

The archæologists made an early start on the 10th, as they had a long and busy day before them, and their journey was to be made entirely by road. Their first halt was at Baginton church, where Mr. W. G. Fretton acted as their guide and interpreter over the church and the site of the ancient castle. From Baginton the party, reinforced by a large local contingent, made their way on to Stoneleigh, where the ruins and remains of the ancient abbey were explained and commented upon by Mr. Fretton. They then inspected the modern mansion of Lord Leigh, and the pictures and other treasures belonging to the family. They also were shown the interior of Stoneleigh church, with its fine Norman doorway, chancel arch, and curious font, and other decorations and monuments, including that to the Duchess of Dudley, who was a daughter of the noble House of Leigh. At two o'clock they sat down to luncheon in the abbey cloister, and on leaving passed a vote of thanks to their noble president. Their next halt was at Kenilworth, where Mr. Hartshorne acted as their guide and interpreter, showing them the ground-plan of the castle as it was in the days of Elizabeth, almost surrounded by the lake, now dry. Leaving Kenilworth, they went on to Guy's Cliff, where they took tea with Miss Bertie Percy, and were conducted through the little chapel and hermitage by Mr. Hartshorne.

On Saturday, the 11th, the proceedings of the members were directed to the ancient city of Coventry, so rich in mediæval buildings and events. They travelled thither, a hundred strong, by railway soon after breakfast, and were received on their arrival by Mr. Fretton, who acted as their guide and interpreter as they visited the ancient structures to which he had already introduced them in a paper which he read in the historical section on Friday evening. Among the places specially visited were St. Mary's Hall, St. Michael's and Trinity Churches, the Benedictine Priory, and the site of the ancient Cathedral Church of Coventry and the Hospitium adjoining. They next inspected the remains of the ancient walls and gates of the city. St. John's Hospital, so long used as a free grammar school, the Collegiate Church of St. John, and the Bablake Hospital. The party then proceeded to lunch at the Craven Arms Hotel, after which they were led by Mr. Fretton over the Palace Yard, the buildings of the White Friars or Carmelites (now used as the Coventry Union), St. Anne's (formerly the Carthusian Monastery), the Park Walls, the Manor House of Cheylesmore, the Grey Friars (now Christ Church), and Ford's Hospital. The return journey was made in time for the party to dine and afterwards to hear the papers read in the antiquarian and architectural sections.

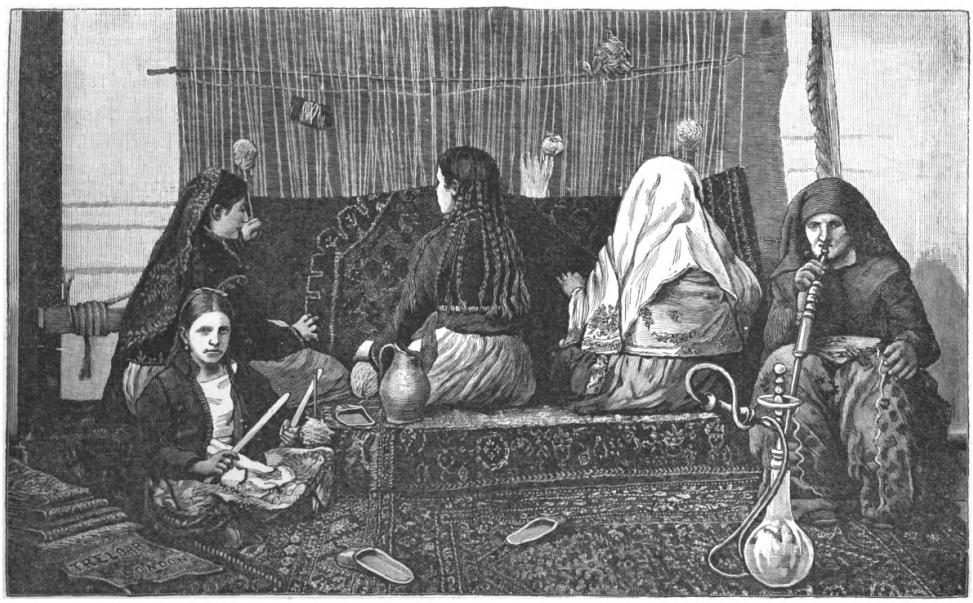
The members of the institute attended Divine service at the parish church of Leamington on Sunday, the 12th, when the sermon was preached by the Rev. Dr. Cox.

Monday, the 13th, was a busy day. The members visited Baddesley Clinton, one of the finest of the old Warwickshire mansions, where the Rev. Mr. Norris acted as their guide. They afterwards proceeded to Knowle, where they inspected the church, a fine structure of the type so common in Norfolk. They reached Solihull soon after noon and lunched, after which they were shown the church and the curious chantry chapel of St. Alphage. They next visited Meriden and Berkeswell churches, which were described to them by Mr. W. G. Fretton, who drew special attention to the Norman crypt and parvis at the latter place, and the well which gives its name to the parish. They quitted Berkeswell by train for Leamington in time for the concluding evening meeting at the Townhall, where votes of thanks were passed to Lord Leigh, Lord Percy, the Mayors of the towns which the members had visited, and those persons who had either hospitably received them or had read papers.

Tuesday and Wednesday were two extra days, devoted to an exploration of the abbeys and churches of Leicester, and of the many fine parish churches of the county, ending by a visit to Ratcliffe College and its library.

The Queen has consented to be the patron of the British Archæological Association's Congress at Glasgow, which will commence on Aug. 27. The Prince of Wales has also consented to be patron in his capacity as Duke of Rothesay, Earl of Carrick, and Baron Renfrew.

The forty-third annual meetings of the Cambrian Archæological Association were opened on Aug. 13 at Cowbridge, and continued for six days. There was a large gathering of members from all parts of the Principality and many parts of England. The presidential address was delivered before a large audience in the Townhall by the Bishop of Llandaff, the president-elect.



The August nights have presented beautiful sights to those who look skywards, with the flashing of meteors across the sky. The earth began to pass through the meteoric stream on Aug. 7, and these jewels of the darkness continued until the 13th. The next dates for meteors are Sept. 1 and 6. The same dates in November are set down for these beautiful visitants, and from the 11th to the 15th, and again on the 19th and 27th.

The forty-ninth annual general meeting of the Royal Botanic Society was held on Aug. 10. Mr. J. P. Gassiot (Vice-President) being in the chair. The council and auditors' reports showed the society to be in a fairly satisfactory state, though the recent cold wet season had proved very unfortunate for some of the floral exhibitions. In the ordinary scientific work of the society a general improvement was noticeable, the collections of plants and flowers having received numerous additions of great economic and general interest. The efforts of the society for the furtherance of technical education by the privileges it offers to students had also been highly appreciated.

An improved system of shoeing horses has been introduced by Mr. William South, of New Bond-street. The great fault in ordinary shoes is that they do not allow the feet to touch the ground in the natural manner. The "Rational" shoe, however, enables the frog and heel to be brought into natural healthy play, the hoof being put down flat on the sole. The shoe is made of specially prepared steel bars, and fits the front half of the hoof only. A groove is cut in the edge of the hoof to the shape of the shoe, but slightly less in depth, so that the plate fits in flush with the wall or crust, and almost flush with the sole. The horse is thus able to place the foot down flat, in the natural way, the front rim of the hoof being protected by the shoe against the friction of the road, and the whole of the natural pad or frog and the sole is brought into proper play. The footing thus secured is stated to be absolutely safe on the most slippery surface.

The great annual meeting of archers from all parts of the kingdom has been held in York. The champion honours were won by Mr. C. E. Nesham and Miss Legh. The leading score prizes fell to Mr. C. E. Nesham, 820, and Miss Legh, 732; second to Mr. H. H. Palairet, 781, and Mrs. W. Yates Foot, 665; third to Mr. E. C. Gedge, 759, and Mrs. Eyre Hussey, 643; fourth to Mr. E. N. Snow, 757, and Miss B. Bagnall Oakeley, 622; fifth to Mr. F. A. Govett, 714, and Miss B. M. Legh, 590; and sixth to Mr. F. L. Govett, 696, and Miss M. A. Winwood, 599. Mr. Nesham took the Spedding memorial cup for first gross score. The county challenge prizes were won by the Middlesex team (Messrs. Govett, Messrs. Longman, Mr. L. R. Erskine, and Colonel Lewin), 3636; and by the Gloucestershire team (Miss Legh, Miss Oakeley, the Rev. B. M. Legh, Mrs. Piers Legh, Miss Cholmondeley, and Miss Carnegy), 3252. The greatest number of golds were:—Mr. G. Knowles, 13, and Miss F. Bardswell, 15; and the best golds, Mr. F. R. Preston and Mrs. George Bird. Of the associated club prizes, the first gross scores were Mr. L. R. Erskine, 637, and Mrs. H. Clarke, 516; the second ditto, Major Fisher, 631, and Miss E. Palmer, 515; the most golds, Captain Garnett and Mr. Gregson (prize divided), 11; and Mrs. R. Berens, 14; best golds, Mr. C. H. Everett and Mrs. C. E. Nesham. Major Fisher has succeeded Sir R. Temple as president of the National Society.

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM
KNIGHT OF THE LEGION OF HONOUR

LIGHT-BROWN COD LIVER OIL

Incontestably proved by thirty years' medical experience to be

THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS

IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D.,
Physician in Ordinary to the Queen in Ireland.

"I consider DR. DE JONGH'S Light-Brown Cod-Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod-Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

Sir G. DUNCAN GIBB, Bart., M.D.,
Physician to the Westminster Hospital.

"The value of DR. DE JONGH'S Light-Brown Cod-Liver Oil as a therapeutic agent in a number of diseases, chiefly of an exhaustive character, has been admitted by the world of medicine."

Dr. SINCLAIR COGHILL,
Physician to the Hospital for Consumption, Ventnor.

"In Tubercular and the various forms of Strumous Disease, DR. DE JONGH'S Light-Brown Oil possesses greater therapeutic efficacy than any other Cod-Liver Oil with which I am acquainted."

Sold ONLY in Capsuled Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; by all Chemists and Druggists.

Sole Consignees—ANSAR, HARFORD, & CO., 210, High Holborn, London, W.C.

CAUTION.—Resist mercenary attempts to recommend or substitute inferior kinds.

The "WHIPPET" CYCLES.

In designing our Cycles for this season, we have devoted our attention to perfecting those styles which have been so successful in the past. We have also added several new designs which we have thoroughly tested ourselves before placing them on the Market, and we are able, therefore, to submit them to the approval of our patrons without hesitation.

We removed the one great inconvenience which interfered with the pleasures of cycling—viz., the vibration communicated by every inequality of the road through handle, saddle, and pedals to the rider. This great inconvenience has long been patiently submitted to, because it was supposed to be inevitable.

The success of the "WHIPPET" Spring Frame has caused nearly the whole of the Cycle Trade to imitate our specialty—**NON-VIBRATING CYCLES**. Intending purchasers should remember that **"THE WHIPPET"** stands out clearly as **THE ONLY MACHINE** upon which **THE RIDER IS COMPLETELY INSULATED FROM ALL VIBRATION.**

THE INFANT KING OF SPAIN, ALFONSO XIII.

FROM A PICTURE BY PROFESSOR KOPPAY, NOW ON EXHIBITION AT THE FRENCH GALLERY, PALL-MALL.

CUR NOTE BOOK.

BY JAMES PAYN.

The notion of modelling our public men in wax, fitting them with the Edison phonograph, and sending them round the country, so that, unlike Sir Boyle Roche, they can be in two places (or even twenty) at once, and address their adherents in "manifold," reflects the greatest credit on its originator. Shakspeare himself only imagined a limited number of Richmonds in the field; but this gentleman has discovered a method of multiplying them indefinitely, and deserves the thanks of a grateful country. It is much easier to hit upon an improvement than to originate an idea; and it is with great humility that I venture to suggest that these duplicated orators should be moulded in some other substance than wax. In the crowded assemblies which they would, without doubt, address, they would be apt to melt, and not only in moments of pathos. It would be a serious blow to the effect of an "indignation speech" to see the orator's ears drop or his nose drop off. He would also be much too subject to impressions—perhaps even from the other side. Hot weather, too, would have an injurious effect upon him, and a torchlight procession might be his ruin. No; it would be much better to cast him in metal, at once "more attractive" and more durable. An "iron frame" is often spoken of with approbation, and the material is just now exceptionally cheap. Where money was no object, his substance might be of white marble (typifying the gentleman's innocence and integrity) with just a vein of two (of sarcasm or something) to show he was human after all. It would also be not impossible for political opponents, if he happened to be one of our many turn-coats, to carry him about in brass, with a phonograph inside him speaking the speeches he used to speak when he belonged to their side.

When the sage of old exclaimed "Oh! that my enemy would write a book!" newspapers and serials had not been invented, or he would certainly have substituted for "a book" the words "in a popular periodical." The cabbage stalks and dead cats that greet the book-writer from the critics are mere mignonette and sweet-briar compared with the missiles that are thrown at the journalist when he is caught tripping—which has, alas, been my case. The arrows of my accusers darken the air; many of them are not at all of the barbed kind, but are winged with wit, and are shot from the bow of good nature; but the point of each of them goes home, because I am not fenced about (as I usually am) with the armour of innocence and accuracy. "Sir, 'A quick brown fox jumps over the lazy dog,' *does* contain the letter h, as well as all the other letters of the alphabet, and some of them twice and even more." Oh, yes, I know it now; young men and maidens, old men and children—nay, almost babes and sucklings (for one of them writes: "I am only six, but I know better than *that*") have all written to tell me so. About a hundred of them cruelly write, "Be so good as to explain this in your next issue." When a similar demand was made of erring Dr. Johnson, he coolly answered, "Pure *ignorance*, Madam." My excuse is even less valid than his, for it is "Pure laziness." I, unhappily, took the word of another person for the fact without verifying it for myself. But the number of foxes of all colours that have jumped, not over the lazy dog, but *on* him, in consequence, is beyond belief. I positively dare not open a letter with the handwriting of which I am not familiar. The punishment seems out of all proportion to the offence; I try, however, to console myself with reflecting how many worse offences I have committed which have never been found out by anybody.

The Greek Judge who has been doing such wonderful walking in the hot season in his own country has come over here to astonish the natives with similar feats: unfortunately, he finds himself in the position—or, rather, in exactly the reverse of it—of the ship Captain who arrived on the Gold Coast with a cargo of fire rugs. There is no opportunity for the appreciation of his gift. He has come to a country without a summer, or with a summer without heat in it. He is no doubt an admirable administrator of justice, but he is not a good judge of climate. What on earth is to be done with him! Persons who have been accustomed to much sunshine, and find fog instead, are apt to get out of temper. Years ago, a Vice-Chancellor of Oxford had to entertain a distinguished Parsee, and complained that he was very rude. "I observed to him," he narrated ("by way of saying something, you know"), "we have not seen the sun, Sir Jamsetjee, for three days"; whereupon he replied (looking uncommonly black, I assure you), "What's that to *you*?" To me it is really of some consequence, because the Sun is my Deity."

The papers, I see, are full of notices of the late popular American novelist whom Matthew Arnold rather curtly described as "a native author called Roe." I have read none of this gentleman's works myself and make no pretence to judge of their merits, but there is certainly something wrong in the estimate formed of their "unrivalled circulation." An American paper tells us it is computed that "a million and a half of people" have read one or more of his novels. This is nothing surprising, and happens to many English novelists. The popular novel is now generally published by syndicate; in the case of a favourite writer, perhaps, by ten provincial papers at the same time; they are penny papers, and the best of them, which give the best prices, and therefore command the best authors, have very large circulations, say 30,000. The same novel is simultaneously published in one or more American serials, and in Australian and other colonial journals. This gives a total issue of above 400,000, or, to keep clear of exaggeration, let us say 300,000. Now, it is calculated, and I think with justice, that, taking into consideration the clubs, the mechanics' institutes, and the family, that every periodical has six readers to each buyer. This gives the popular English novel no less than 1,800,000 readers, *in serial*. Then comes the book itself, from its (nominal) 31s. 6d. edition down to its two shilling, or even shilling form; its authorised and pirated American editions; its translation into certainly two or three languages; and its Tauchnitz edition. Well may the Bishop of Ripon talk of the "responsibility" of the British novelist, if it is to be measured by the extent of his public.

It is no wonder in these days of worry and overwork that panaceas for obtaining sleep should receive a little more attention perhaps than they deserve. The last one, which is, however, only a revival, is the keeping the head due north, or south. "Everyone knows," writes an eminent physician, "that the human system has magnetic poles—one positive and one negative. Some persons, however, have the negative pole in the feet and the positive in the head, and vice versâ." (I have known persons with very positive polls, but was not aware of this alternate method of carrying them.) "The person sleeping should be in perfect harmony with the magnetic phenomena of the earth." By all means; when I lay me down to rest, I wish to be at peace with everything and everybody; but I may have annoyed the magnetic phenomena without knowing it. "The positive pole should always lie opposite to the magnetic centre of the continent, and thus maintain a magnetic equilibrium." Very good; only I have not the slightest idea how to discover this position. That "everybody knows" is one of the "airs and graces" that puts one out of patience with Science. She knows she is lying when she writes it; but just as the man who has been cramming up something classical or mathematical for a fortnight brings in his "fourth-form boy" to enhance his information, so she delights to indulge in this contemptible swagger. Why can't she say what she means in a plain way when she addresses plain people? This affectation of wisdom—in persons not particularly intelligent out of their own line—is the vulgarest kind of cant. What is the use of a savant telling a poor fellow who wants to go to sleep that he "must become magnetically *en rapport* with the earth"? He wants to know whether he ought to move his bed into the window or the fireplace, and not to get the vertigo from long words. There is one piece of plain advice, by-the-by, to those who are in seaside lodgings, and suffer (as many do) from sleeplessness in consequence of the morning "glare," that is more worth their attention than both the poles: let them buy a few yards of green union, and pin them round their windows at night.

It is curious that among the many correspondents who are hastening to give their opinions, and even their experience, as to the failure or success of marriage, no one seems to have referred to that most fertile cause of women's unhappiness in matrimony—their confidence in themselves to reclaim a rake. Almost every girl who falls in love with a vagabond imagines that in her hands he can be moulded into something good. Of course, she does not know how "advanced" his case may be; for though her friends are willing enough to inform her upon this point, she refuses to believe them; but however "broken" he may be, in a moral sense, she thinks she has the cement to mend him. He has never known (poor fellow), she says to herself, what it is to be really loved (which is possibly true); but if he could find a wife who was devoted to him he would turn out to be another man. The same woman will smile to hear the Salvationist bawl out at the street-corner, "I had once a 'orrible temper, but now I have a beautiful one: Alleluyah!" yet his case is precisely that of her proposed husband's, save for the very serious difference that his conversion has not yet been effected. How *can* she know anything about reclaiming a man from weaknesses (to put it mildly) of the very nature of which she is ignorant! A well-known philanthropist, touched by the simplicity of her sex in this matter, has eloquently argued—and written an excellent novel ("Janet Doncaster"), in illustration of the case—that a girl who marries a confirmed drunkard, not knowing him to be such, has the right to be divorced from him. But even the knowledge of that fact would not deter some young women. They loathe the sin, but do not understand its power, and enormously overrate their own. Of course, they are headstrong—in the eyes of their belongings they are "obstinate as a mule"—but they are, nevertheless, often admirable examples of their sex, and calculated to make the best of wives, as, indeed, they do even to the scoundrel they have fixed their hearts on. These missionaries of matrimony—who would fain convert the heathen—have the most miserable lot that can fall to wedded woman. It is they, above all, who, if they answered truly (and things are so bad with them that they will sometimes even do so), would reply "Yes" to the question, "Is marriage a failure?" If I were a mother, the strongest word of advice I should give to my daughter about matters matrimonial would be, "No proselytising; no missionary enterprise: no conversion. Pray for him, my dear, as much as you like, but don't marry him."

The "Champion Frog-Relisher" of Basel—who seems really to stand at the head of his profession—has been making a great sensation by swallowing three dozen live frogs at a sitting for a bet of 5*f.* (about 1½*d.* a frog) and a bottle of brandy. It sounds cheap, and especially since he had to consume the brandy afterwards for medicinal purposes; for the frogs disagreed with him (or perhaps with one another), and he passed the rest of the day at the chemist's. But, after all, the British schoolboy has often done as much—though not so many—without producing any sensation at all, even in his interior. I well remember a young gentleman who, for a wager of 6*d.* sterling, was always ready to perform this feat—much more ready than the frog was to be swallowed. The spectacle was generally much appreciated; but some boys would say, "What a beast you are, Jones!" Then he would innocently reply, "Why? The French eat frogs." "Yes, Sir; but not live frogs." "What have you got to say about oysters?" was his triumphant rejoinder. Nobody, of course, should ever argue with a boy; but least of all with a logical boy, full of frogs, and "flown" with sixpences.

What makes a seaside holiday hideous to quiet people is the peripatetic music. The bands, the organs, the negro melodists, destroy half the benefits which the rest-seeking visitors hope to find. I am quite aware that the taste of the general public is for "the tongs and the bones;" but there is surely a sufficiently large minority to make it worth the while of some marine corporation to consult their wishes. To call a place a "health resort" which is infested by brass bands and hurdy-gurdies is a mockery. Instead of "the town band plays three times a day," suppose at least one watering-place should advertise "Freedom from street music; no brass band permitted within the boundaries of the town." Philanthropy in a Town Council one doesn't expect, but I feel sure this would *pay*.

THE INFANT KING OF SPAIN.

The picture represented in our Engraving is now on view at the French Gallery in Pall-mall. It was painted for the Queen Regent of Spain by Professor Koppay, an artist scarcely yet known to the English world. On the Continent he enjoys, according to the *Kölnische Zeitung*, a reputation as one of the first portrait painters in Germany. He is only thirty-one years of age, but has already painted the portraits of many of the Royal personages of Europe, and members of the aristocratic families of Berlin. He is a Hungarian by birth, and was a pupil of the celebrated portrait painter Hans Canon, and of Hans Makart, at Vienna. This year he received a distinction at the Paris Salon. His picture "Die Reise in's Leben," representing a stork with a child, is well known on the Continent from innumerable published photographs. Among the portraits he has painted during the last five years are those of the Emperor of Germany, the Queen of Spain, the late King of Bavaria (lying in State), the Grand Duke of Mecklenburg, Prince Bismarck, the Princes of Hohenzollern, Anhalt, and Thurn und Taxis, &c. Not long ago he was commissioned by the Queen of Spain to paint the infant King, a child two years and a half old. The young King is mounted upon a rocking-horse, the skin of which, as we understand, was once that of a live pony, and has been stuffed and mounted in splendid style. King Alfonso sits like a "Caballero," quite at his ease on the gallant steed, on which he daily takes exercise in the Royal nursery. The eyes of his Majesty are dark and bright, and his features those of a lively and intelligent child. Our Engraving is from a photograph by Mr. Lombardi, from the original painting.

THE COURT.

Princess Louise, Marchioness of Lorne, and the Marquis of Lorne dined with her Majesty on Aug. 16. The Right Hon. Henry Matthews, M.P., arrived at Osborne, and had the honour of dining with the Queen and the Royal family. Colonel Wernher had also the honour of being invited. Prince and Princess Henry of Battenberg, and the Hereditary Grand Duke of Hesse, dined with the Empress Eugénie at Osborne Cottage. Princess Louise and the Marquis of Lorne visited the Queen on the 17th and took leave. Her Majesty's dinner-party included the Empress Eugénie, the Grand Duke of Hesse, Prince and Princess Henry of Battenberg, the Hereditary Grand Duke of Hesse, Lady Southampton, the Prince de Poix, Mrs. Vaughan (in attendance upon the Empress Eugénie), Baron Von Grancy, and Sir Fleetwood Edwards, K.C.B. Commander Osborne, commanding the coastguard at Cowes, dined at Osborne, and had the honour of being received by her Majesty in the evening. Prince Henry of Battenberg went on board her Majesty's yacht Victoria and Albert. Prince Adolphus of Teck visited her Majesty on the 18th, and remained to luncheon, after which he took leave, on his departure for India to join the 17th (Duke of Cambridge's Own) Lancers. General Sir Henry and the Hon. Lady Ponsonby, and Mr. and Mrs. Standish had the honour of dining with the Queen and the Royal family. Captain Mockler Ferryman and Lieutenant Fairtlough, of the Oxfordshire Light Infantry detachment at East Cowes, dined at Osborne, and had the honour of being received by the Queen in the evening. On Sunday morning, the 19th, her Majesty and the Royal family and the members of the Royal household attended Divine service at Osborne. The Rev. Arthur Peile, M.A., Chaplain-in-Ordinary to her Majesty, officiated. The Empress Eugénie visited the Queen on the 20th and remained to luncheon. The Queen left the Isle of Wight on the 21st for Glasgow and Balmoral. In crossing the Solent her Majesty inspected the ships which had just returned from the manœuvres. Her Majesty was accompanied by Princess Beatrice and the rest of the Royal family at Osborne, Prince Henry of Battenberg having previously gone by sea. The children of the Duke and Duchess of Connaught and Prince and Princess Henry of Battenberg left Osborne for Balmoral, where they arrived in advance of the Queen.

The Prince of Wales arrived on Aug. 15 at Frankfort-on-Main, and proceeded thence by road to Homburg, where he arrived in the evening of the same day. On the 16th the Prince went to Wiesbaden on a visit to the King of Denmark, subsequently returning to Homburg; and on the 20th his Royal Highness left Frankfort-on-Main on his return to Homburg. The Princess of Wales, accompanied by her daughters, arrived at Wiesbaden on the 15th, and was received at the railway-station by the King of Denmark and his brother, Prince John. On the evening of the 19th the Princess, accompanied by her daughters, left, viâ Frankfort-on-Main, for Gmunden. The King of Denmark accompanied their Royal Highnesses as far as Frankfort, where they dined with the Prince of Wales, who had come from Homburg to meet them.

The King of the Belgians, who has been travelling in the Scottish Highlands, visited places of interest in Inverness on Aug. 17. His Majesty left Inverness for Oban on the 18th, travelling viâ the Royal route through the Caledonian Canal in the saloon-steamer Glengarry. On arrival at Banavie, in full view of Ben Nevis, his Majesty proceeded on board Mr. Mackinnon of Ballimakill's steam-yacht Cornelia, which steamed away down Loch Linnhe. The vessel touched at Ballachulish, and the Royal party landed, and drove for a considerable distance up Glencoe to the scene of the massacre. Returning on board, Oban was reached about 10.30 p.m. On Sunday morning, the 19th, the King landed, and proceeded on foot to the Catholic pro-Cathedral, where mass was performed by the Bishop of Argyll and the Isles, assisted by the Rev. Angus M'Donald. His Majesty also attended the mid-day service. The King arrived in Glasgow on the 20th, from Oban, and visited the Exhibition.

The police have recovered the whole of the £10,800 in bonds stolen in October from a youth in the employment of Messrs. Wilson and Sons, stock and share dealers, in Cornhill, and captured one Casey who has confessed to the theft.

FOREIGN NEWS.

The Imperialists of France celebrated their annual fête on Aug. 15 by banquets in the capital and the Departments.—The Ministry of Agriculture has decreed that a grand universal breeding exhibition of cattle, sheep, pigs, and poultry shall be held in Paris in 1889. It will be opened on May 11, and remain open until May 20. It is open to animals of all countries, for which there are special and liberal prizes offered, together with medals.—The August Session of the Councils-General in all the Departments of France was opened on Aug. 20, and almost all the former officers were re-elected.—General Boulanger has been returned in each of the three Departments in which he was a candidate—namely, the Nord, the Somme, and the Charente Inférieure. The total of the votes given for him was 263,512, and for his opponents, 181,186. In the Nord, however, his majority was 97,000 last April, and at the last election only 20,000.—The navvies' strike, after lasting twenty-five days, is at an end, for the strike fund is exhausted and the leaders have seen their men gradually abandoning them.

The Emperor Wilhelm was present on Aug. 16 at the unveiling of a memorial to the late Prince Frederick Charles, and at a luncheon after the ceremony made a speech, in the course of which he declared that Germany would never relinquish a stone of the territory gained by her in the Franco-German War. The Empress Frederick arrived at Gotha on Aug. 14, and proceeded immediately to Castle Tenneberg, near Waltershausen, on a visit to Duke Ernst of Saxe-Coburg, who returned with her Majesty to Gotha. Somewhat extensive manœuvres of troops between Potsdam and Spandau began on the 21st under the personal direction of the Emperor.—The Empress dined at the Ducal Palace in the evening, and next morning returned to Potsdam. Her Majesty recently paid a visit to Count Münster, the former popular Ambassador of Germany at the Court of St. James's, at his country seat of Derneburg, in Hanover.—The unveiling of the memorial of the victories of 1870-71 took place at Leipsic on the 18th, in the presence of the King and Queen of Saxony, Prince George, Princess Matilda, and Prince Friedrich August, assisted by Count Von Moltke.—The third International Congress on Inland Navigation was opened at Frankfort-on-Main, on the 20th. There were present seven hundred delegates, representative of all the Great European Powers.

The Austrian Emperor's birthday was on Saturday, Aug. 18, celebrated with enthusiasm throughout the Austro-Hungarian Monarchy, as well as in Bosnia and Herzegovina. Both in Berlin and St. Petersburg the event was marked by celebrations at the respective Courts. In some places, however, the fêtes were postponed owing to heavy rain. The Empress and Archduchess Marie Valerie left Ischl on the 18th for Bayreuth. Next day her Majesty called on Madame Wagner, Richard Wagner's widow, at Bayreuth, and visited the tombs of Liszt and Jean Paul in the cemetery. Her Majesty went to Munich, and on the 26th was to repair to Tegernsee, where she would be joined by the Emperor, on a visit to the Empress's venerable parents on the occasion of their diamond wedding. The Duke and Duchess Maximilian of Bavaria were married in 1828.—The King and Queen of Portugal, with their son Prince Alfonso, arrived at Ischl on the 16th from Prague. They were the guests of the Imperial family until the end of the week. Their Majesties, with Prince Alfonso, arrived in Vienna on the 18th, and alighted at the Hofburg. They spent next morning in sightseeing, and in the afternoon received visits from the members of the Imperial family, and from Count Kalnoky. In the evening the Royal party went to the opera. Next day they dined with the Crown Prince Rudolph and the Crown Princess Stephanie at the palace at Laxenburg.—Several parts of Upper Austria and Hungary have been inundated, owing to storms and waterspouts, which have done much damage, and caused the loss of many lives.

The eleventh World's Conference of the Young Men's Christian Association was opened in Stockholm on Aug. 15. The delegates were entertained on the 20th at luncheon by the King and Queen of Sweden at Drottningholm Castle. The Crown Prince received the guests. The principal representatives and the secretaries were introduced. The Crown Prince said he wished God's blessing on their work.

The United States Senate have refused to ratify the Fisheries Treaty, the majority against it being three. The Democrats voted for it and the Republicans against it.

In the Capetown House of Assembly on Aug. 15 Sir Gordon Sprigg, the Premier, announced that in consequence of the rejection by the Legislative Council of the South African Customs Union Bill, the Governor had been advised to prorogue Parliament, and to summon a special Session in a week's time to reconsider the measure.—We hear from Durban that the Free State Volksraad have nominated Chief Justice Reitz as President of the Republic by a large majority, and, having voted a handsome provision for Lady Brand, an adjournment was carried until Jan. 10.

The Japanese Government have decided to expend ten millions sterling during the next five years in the purchase of ironclads. With this sum it is estimated that fifteen ironclads and thirty torpedo-boats can be obtained.

In reopening the Queensland Parliament the Governor in his speech recommended for consideration Ministerialist proposals for remedying the unsatisfactory state of the finances, for effecting a radical change in the building and management of railways, and for extirpating the rabbit pest, the success of the fence system being doubtful.

The Hon. T. Playford, Premier and Treasurer, made his financial statement in the South Australian House of Assembly on Aug. 16. He estimated the revenue for the coming year at £2,400,000, and the expenditure at £2,280,000, including £30,000 for the redemption of bonds. The Premier proposed no fresh taxation, but said that the conclusion of a loan of from £500,000 to £1,000,000 was contemplated for reproductive public works. The prospects of the season are good, owing to the fine rains which have fallen.

The celebrated copy of the Portland vase by Josiah Wedgwood, known as the "Purnell" vase, recently sold among the effects of the late Sir William Tite at Christie's, has been added to the collection of Wedgwood's ceramic art in the Castle Museum, at Nottingham.

Mr. Augustus Harris intends opening an exhibition of arms, pictures, and other relics, relating to the Armada and its contemporary history, in the Grand Saloon of Drury-Lane Theatre on Oct. 22 next. He has secured the services of a powerful committee, on which several of the descendants of the Elizabethan heroes have consented to serve, and Mr. W. H. K. Wright, whose exertions contributed so much to the success of the recent celebration at Plymouth, will again act as secretary. Mr. Harris will be grateful if any person who may be able and willing to assist him by the loan of objects for exhibition or otherwise will communicate either with him directly, with Mr. Pridham Whippell (secretary of the London Armada Tercentenary Celebration Committee), Goldsmith's-buildings, Temple; or with Mr. W. H. K. Wright, Drake-chambers, Guildhall, Plymouth.

MARRIAGE OF LADY BLOSSOM TSENG.

The youngest daughter of the Marquis Tseng, late Chinese Ambassador in London, was married at Pekin on May 6. Three months previously the betrothal took place. On such an occasion, it is customary for the family of the gentleman to send a goose and gander, emblems of conjugal fidelity, wine, marriage costumes, head-ornaments, the sceptre-like *Ju i* (or "As You Like It"), and a piece of jade signifying connubial happiness and longevity, with nuts, and other fruit, all which have their significance. The go-betweens bring these gifts, with two red cards, on which they inscribe the year, month, and day, and the time of birth of the fiancée. They return to the gentleman's family, taking back the cards, with the presents provided for the gentleman by the lady's family. These are about the same as in the other case, while hats, shoes, boots, and such useful articles, are included. The friends then come to congratulate both parties. The trousseau is according to the means of the girl's parents. In the present case, a hundred tables were covered with the presents to the bride, not including such heavy articles as furniture, beds, and cupboards, which are usually carried in the procession along the streets. A temporary canopy is put in the compound, usually covering in the courts, under which the feast is provided. The friends and guests make presents in goods or in money. On the marriage-day, the gentleman sends the sedan-chair, covered with red silk and broadcloth, with the retinue of bearers, accompanied by music. The bride takes her seat in the chair, and the entire company parade the streets, taking the longest possible route, to the home of the bridegroom's family. There are many curious and interesting ceremonies which would not be understood by Europeans. Everything is in pairs, with much display of lavishness.

We give a Portrait of Lady Blossom Tseng, from a photograph taken by Mr. Child, of Pekin, and kindly forwarded

LADY BLOSSOM TSENG IN HER BRIDAL DRESS.

with the above note by Dr. Dudgeon, private secretary to the Marquis Tseng. The wedding will long be remembered at Pekin. We wish Mr. and Lady Blossom Woo much happiness; her Ladyship has many friends in England.

The Queen has presented to General Viscount Wolseley, for his lifetime, the house and grounds of the Ranger of Greenwich Park.

At the general meeting of Guinness's Brewery Company on Aug. 20, Sir E. C. Guinness presiding, the report, which recommended a dividend of 8 per cent, making, with the interim dividend, 15 per cent for the year, was adopted.

Official notification has been given of the selection of Rear-Admiral St. George Caulfield D'Arcy-Irvine, C.B., for the post of second in command of the Channel Squadron, in the room of Rear-Admiral Charles John Rowley, whose term of service is about to expire.

The admissions to the Glasgow Exhibition on Aug. 18 were 56,751, making a total since the opening of 2,832,016. In fine weather, the first trial of evening illumination was made at dusk on Saturday. Fully 10,000 coloured lamps and Chinese lanterns were lighted in positions fronting the buildings, as well as amongst the trees and terraces of Kelvin-grove Park and the University slopes of Gilmore-hill.

The annual meeting of the Iron and Steel Institute commenced in Edinburgh on Aug. 21, when a large number of members attended. Mr. D. Adamson, president, and the members were welcomed by Lord Provost Clark, Principal Sir William Muir, and others of the reception committee. Afterwards the president informed the members that Sir James Kitson, of Leeds, had been chosen president for two years. Some papers were afterwards read, and in the evening the Lord Provost gave a conversazione in the Museum of Science and Art.

In London 2604 births and 1330 deaths were registered in the week ending Aug. 18. Allowance made for increase of population, the births were 187, and the deaths 310, below the average numbers in the corresponding weeks of the last ten years. The deaths included 33 from measles, 17 from scarlet fever, 13 from diphtheria, 20 from whooping-cough, 2 from typhus fever, 2 from enteric fever, 1 from an ill-defined form of continued fever, 162 from diarrhœa and dysentery, 4 from cholera and choleraic diarrhœa, and not one from smallpox. The deaths referred to diseases of the respiratory organs, which had been 160, 167, and 183 in the three preceding weeks, declined again last week to 167, and were 19 below the corrected average. Different forms of violence caused 47 deaths; 37 were the result of negligence or accident, among which were 19 from fractures and contusions, 10 from drowning, 1 from poison, and 5 of infants from suffocation

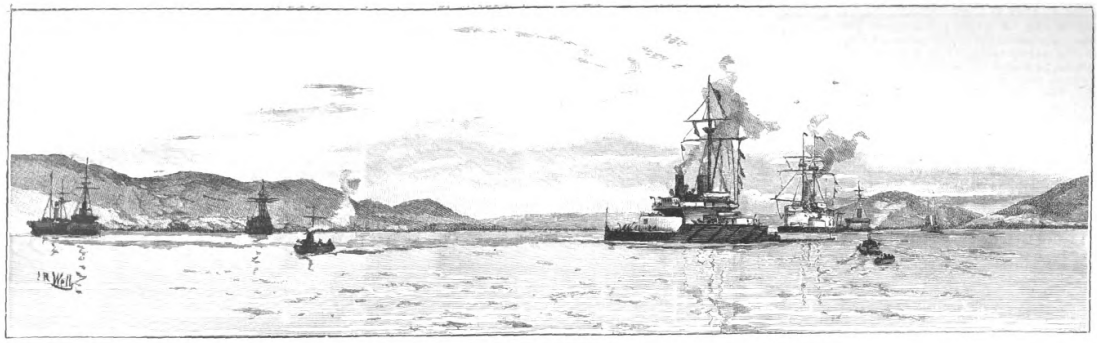
THE RECESS.

There should have been some sugar as well as bitter in the political cup of Lord Salisbury ere he fled to the Continent. At least, that is said to have been the quip on the tongue of Baron Henry De Worms (who will have his little joke) as this courtly representative of the Board of Trade entertained the Premier and the Sugar Bounties Commissioners at a bountiful banquet. Whether dancing attendance on the Sugar Bounties Conference was sweetened for him or not, the Marquis of Salisbury, with Lord and Lady Cranborne, left London on the Eighteenth of August for Royat-les-Bains, one of the most delightful and salubrious of French health-resorts. To an English statesman who doubles the supremely important parts of Prime Minister and Foreign Secretary, it is an unquestionable advantage to study the field of Continental politics, still of a brimstone nature, in so reposeful a nook of France as Royat-les-Bains. The principal colleague of the noble Marquis is not far off. Three days after Lord Salisbury departed from Arlington-street, Mr. W. H. Smith forsook the pleasant riverside retreat of Greenlands for Aix-les-Bains. But it is to be hoped the right hon. gentleman (whose imminent elevation to the Peerage is rumoured) has not been driven to drink the thermal waters of Aix to remove the excruciating aches that torment many of the visitors to the Eden of Savoy. Still, it would not be a matter of wonderment if the Parliamentary waiting of Mr. Smith had developed gouty symptoms, which, if they exist, we trust Aix-les-Bains will cure.

The legendary playfulness of mice when "the cat's away" would have been recalled by the extraordinary outburst of Recess oratory were the issue harped on not so grave. Ireland's grievances still monopolise the minds of Mr. Gladstone and Mr. John Morley. There is something inspiring in the whole-hearted energy with which Mr. John Morley has devoted himself to the championship of Home Rule for Ireland. He is in the full freshness of his political youth; his convictions are deeply-rooted; he has a sublime contempt for the Parliamentary arts and combinations to which Governments have had recourse to maintain their power; and he has complete faith in the sufficiency of the panacea he advocates. These characteristics of Mr. John Morley evidently swayed the vast gathering of Lincolnshire Liberals drawn together in the Marquis of Ripon's country seat, Nocton Park, near Lincoln, on Saturday, the Eighteenth of August. In his pithy, incisive style, Mr. Morley smote Mr. Henease hip and thigh, doubled up Mr. Goschen, answered Mr. Chamberlain out of his own mouth, parenthetically demolished "the giant of the Sleaford division," and wielded the shillelah for Mr. Parnell and Mr. Dillon with the vigour of Pat. In fine, Mr. Morley gave an indubitable stimulus to the Gladstonian Liberal cause in Lincolnshire, where it is the object of the Liberals to repeat Mr. Halley Stewart's victory at Spalding, and wrest from the Conservatives the seats they won in 1886. Thus, Mr. J. W. Mellor, Q.C., will strive to regain Grantham, and Mr. William Ingram, Boston, which constituency he represented for several years; and Mr. W. H. S. Aubrey, Mr. Francis Otter, and Mr. Arthur Priestley will have the courage to contest the seats held by Mr. Edward Stanhope, Mr. Henry Chaplin, and Dr. Henry Lawrance, Q.C. The Liberal banner has clearly been unfurled with a will in this great eastern county; and Lincolnshire Liberals are full of buoyant hope as to the result.

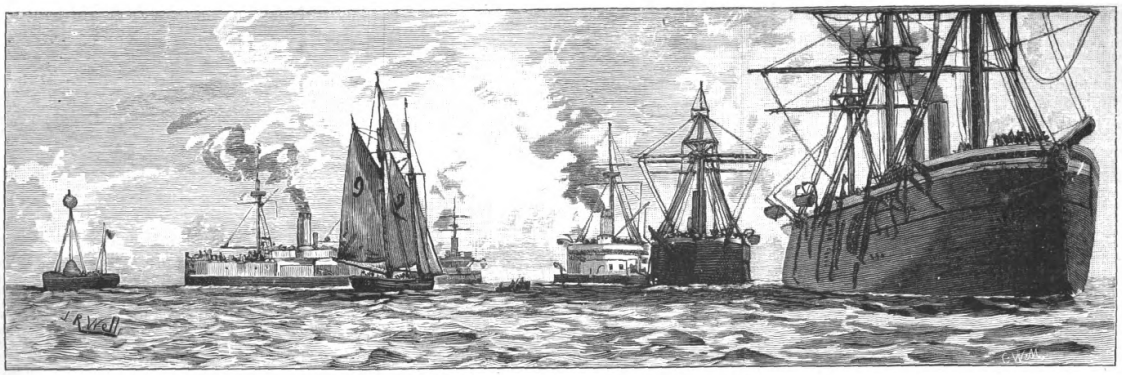
There is something heroic in the picture called up of the still hale and erect figure of Mr. Gladstone—upright as a dart, albeit close upon seventy-nine winters have silvered his hair—raising his clarion-voice in Hawarden Park against what he holds to be the iniquities of the Ministerial treatment of Irish Home-Rule members. His great speech to the deputation and excursionists from the Staffordshire Potteries in his park on the Twentieth of August was prefaced by a neat address in the library of Hawarden Castle, in the course of which, thanking Mr. Woodall, M.P., for the beautiful Gladstone Vase presented to him, he paid an elegant tribute to "the great Wedgwood." In the freer air of the park Mr. Gladstone gave himself freer scope. His vigorous oration was a trumpet-call to Liberals all over the country to uprouse themselves to put an end at the ballot-box to the existing alliance of Conservatives and "Dissentient Liberals," which combination he roundly declared to be responsible for the subjection of Ireland to a rule harsher and harder than that of Poland, and also responsible for the alleged unfair treatment of Mr. Parnell, in giving his adversaries undue advantages on the Parnell Commission of judicial inquiry. Mr. Gladstone similarly condemned the cruel imprisonment of Irish members, culminating thus far in the death of Mr. Mandeville. Altogether, this was one of the most effective political addresses Mr. Gladstone has ever delivered.

The image of a venerable Welsh bard, Mr. Henry Richard, has been for many years so prominent a figure in the House of Commons that the hon. member for Merthyr-Tydvil will be sorely missed from the ranks of Welsh members. Mr. Richard died on the Twenty-first of August, at the age of seventy-six, at Treborth, Bangor, the seat of the Lord Lieutenant of Anglesey.



Lady Crossley on Aug. 21 started a new clock which has been placed in the tower of St. John's Church, Lowestoft, as a memorial of the Queen's Jubilee.

The Queen has approved the appointment of Mr. Philip P. Hutchins, C.S.I., to be a member of the Council of the Viceroy and Governor-General of India, in succession to Sir Charles Aitchison, K.C.S.I., resigned.



The Southern Division of Artillery Volunteers, who were in camp at Shoeburyness during the week ending Aug. 18, were inspected by Colonel Nicholson, R.A., Commandant of the School of Gunnery, preparatory to their leaving to make room for the men of the second division. The gallant Colonel made some encouraging remarks, and said that with the aid of the force, and that of the Militia and Volunteers, it was most improbable that England would ever be effectually invaded by any foreign foe.—The Northern Division began their competition on Monday, Aug. 20.

Some important cricket matches were concluded on Aug. 18. At Kennington Oval, Surrey, for the only time this season, suffered defeat in a first-class county match, being beaten by Lancashire by nine wickets. Eccles scored 184 for the winning team. The Australians were defeated by the Nottinghamshire county team by an innings and 191 runs to the good. The Gloucester and Yorkshire match, noticeable for heavy scoring, ended in a draw, much in favour of Yorkshire. Mr. W. G. Grace made 148 and 153 in the two innings of the Western team, and Hall scored 129, not out, for Yorkshire. At Lord's, M.C.C. won the match against Norfolk by an innings and 23 runs. The match at Birmingham between Warwickshire and Staffordshire ended in a draw, greatly in favour of the former. The Parsees were beaten at Leyton by Twelve of the Public Schools by seven wickets. At Gravesend on Aug. 21 Middlesex was defeated by Kent by an innings and 41 runs; At Derby, Lancashire defeated Derbyshire by four wickets; and at Lord's the Parsees were beaten by M.C.C. by ten wickets.

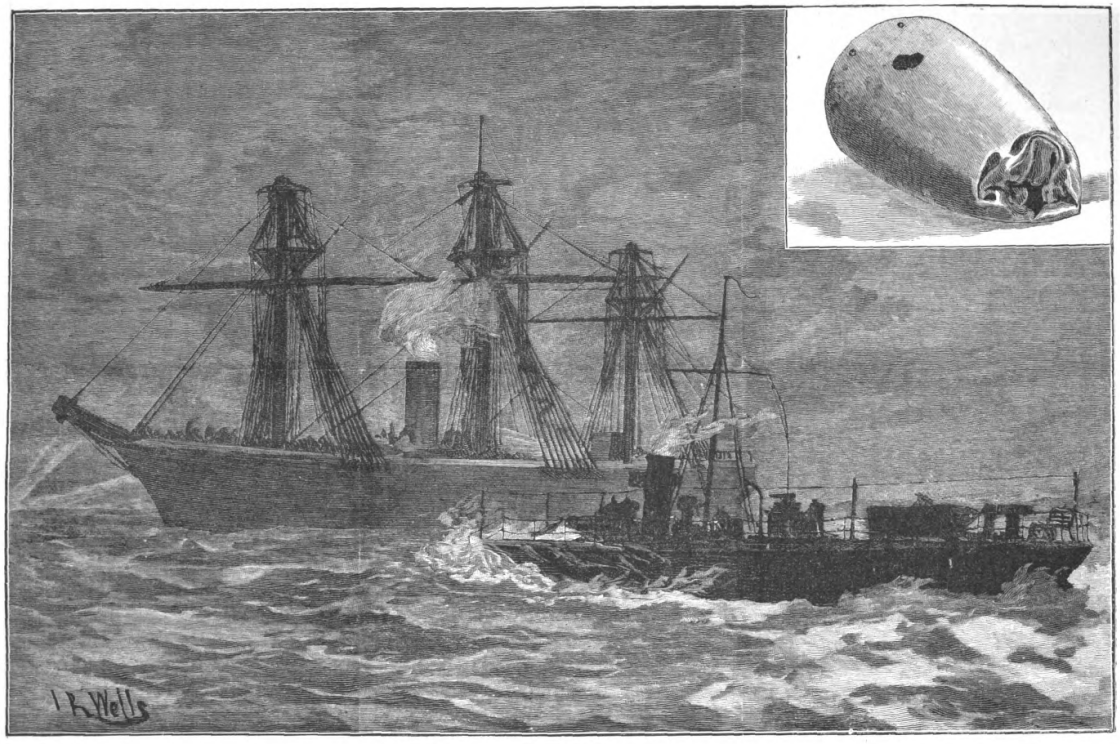
TORPEDO-BOAT No. 76, DISCHARGING A WHITEHEAD TORPEDO AT H.M.S. HERCULES.



THE NAVAL MANŒUVRES.

On Monday, Aug. 20, the period of time expired for the manœuvres of feigned naval warfare between the "A Squadron," commanded by Admiral Baird, with Admiral Rowley second in command, defending the shores and ports and mercantile vessels of Great Britain, and the "B Squadron," of which Admiral Sir George Tryon was commander-in-chief, while Admiral Fitzroy commanded a separate division. These operations were briefly described from week to week. Our Special Artists, Mr. W. H. Overend and Mr. J. R. Wells, furnish some additional Illustrations. The former was on board H.M.S. Northumberland, the flag-ship of Admiral Baird; and the latter was on board H.M.S. Hercules, the flag-ship of Admiral Sir George Tryon. The first division of each squadron, under the immediate command of these two officers, had been engaged from July 24 to Aug. 4 in mutually endeavouring to outmanœuvre one another in Bantry Bay, where Sir George Tryon occupied the harbour of Berehaven, fortified with booms and submarine mines. At the same time, Admiral Fitzroy was blockaded in Lough Swilly, on the coast of Donegal, by Admiral Rowley. Both the blockades were successfully eluded by the "B Squadron" on Aug. 4, or during the previous night; and the shores of Scotland, the Clyde, Oban, Inverness, and the Firth of Forth were in the next few days visited by ships representing an enemy; after which Sir George Tryon, having come round the north of Ireland, entered the Mersey, bombarding the North Fort, levied contributions on Liverpool, and paid a hostile visit to Holyhead; while several steam-ships of the Cunard, Inman, and other Atlantic lines underwent the form of capture in the Irish Sea. In the meantime, Admiral Baird, with the "A Squadron," after looking in vain for the enemy as far as the Mull of Galloway, where he was joined by Admiral Rowley, returned up the British Channel to the Downs, and formed in line of battle, on Aug. 18, at the entrance to the Thames, ready for the defence of London. The "B Squadron," however, having no intention of seeking an unequal combat off the shores of England, reassembled in Bantry Bay, except five ships going to Plymouth, the Ajax, Black Prince, and others. The operations terminated by lapse of time, leaving the umpires to sum up the value of the exploits performed respectively by the opposed squadrons, including all captures, and all manœuvres scored as points won in the game of tactics, and to pronounce the verdict accordingly, guided by a scale before fixed and understood in the Admiralty regulations.

Some of our present Illustrations refer to the time of the blockade in Bantry Bay. A Sketch by Mr. Wells represents the torpedo-boat No. 76, commanded by Lieutenant Campbell, of the "B Squadron," going outside and attacking H.M.S. Active, one of the blockading squadron, which ship was cleverly struck with a torpedo. For this harmless mimic warfare the torpedo-heads were specially manufactured of soft metal, which would not penetrate the side of the ship; but the head would be flattened by the stroke, indicating, when the torpedo was fished up afterwards out of the water, that the blow had been correctly aimed. On the other hand, in a Sketch by Mr. Overend, the "A Squadron" torpedo-boat No. 76 is seen discharging a Whitehead torpedo at H.M.S. Hercules, the enemy's flag-ship, on the night of Friday, Aug. 3, and it was claimed on behalf of the "A Squadron" that the Hercules was thereby put out of action. This and other points were referred to the decision of the umpires. The Hercules nevertheless persisted in forcing her way out, through the blockade, followed by the other ships of the "B Squadron," which left their anchorage in the Berehaven strait by the western entrance, under cover of a feigned intention to go out at the eastern entrance. One of Mr. Wells' Sketches is that of the Hercules performing this feat at night. Mr. Overend, on board H.M.S. Northumberland, contributes the Sketch "On the Look-out," and that of two seamen firing a gun as a fog-signal, when the "A Squadron" was enveloped in mist in the Irish Sea.

A View of Lough Swilly, on the north coast of Ireland, where Admiral Fitzroy's division of the "B Squadron" lay beleaguered by Admiral Rowley, but whence the former escaped without much difficulty, is also presented in this week's paper. The first division of that squadron, under Admiral Sir George Tryon, having followed its course round the north of Ireland, entered the upper channel of the Irish Sea, and proceeded to the Mersey. We gave, last week, an Illustration of H.M.S. Invincible and H.M.S. Hercules attacking the North Fort at the entrance to the Mersey. After virtually effecting the capture of Liverpool and Birkenhead, the squadron lay off the Crosby Light-house, on the Lancashire coast, sending ashore, in the pilot-boat, as shown in a Sketch by Mr. Wells, the pilots who had been engaged to guide these ships to the Mersey. The "B Squadron," having exhibited all the mischief that an enemy could and would do in the Irish Sea and St. George's Channel, without being overtaken by Admiral Baird, returned to Lough Swilly for coaling purposes, and was in no danger of pursuit. Admiral Rowley's division, after striking terror into the commercial ports of Greenock and Glasgow, and insulting every Scottish town on the coast of the German Ocean from Wick down to Berwick-on-Tweed, besides threatening Leith and Edinburgh, returned likewise, with perfect impunity, repassing the Pentland Frith, gained the Irish Coast, and rejoined the squadron of Sir George Tryon. If these manœuvres prove anything, it is the utter incapacity of an ordinary Channel Squadron, which has to guard all the south coasts of England and Ireland, from the Downs, or even from Harwich, to the extreme west of the county of Cork, affording the slightest protection

SKETCH BY OUR SPECIAL ARTIST WITH THE "B SQUADRON."

to Liverpool and Glasgow, and to their immense maritime commerce. A separate Irish Sea squadron, cruising between Milford Haven and the Clyde, with ships detached to watch the northern shores of Ireland, would be absolutely needful in time of war; and the entrances both to the Mersey and to the Firth of Clyde should be strongly fortified. The small rocky Cumbraes, opposite the Isle of Bute, commanding a narrow channel, could be armed with batteries that would effectually prevent hostile access to the Clyde; while Lamlash Bay, in the Isle of Arran, would afford anchorage to the defending squadron.

For the defence of the Thames and Medway, which to Londoners is a nearer consideration, the display of force made by Admiral Baird, at the close of these operations, may have been an acceptable spectacle. The long line of battle-ships looked very imposing, while the cruisers formed another line to the starboard. But the North of England and Scotland may feel less satisfied about their safety in actual war. Admiral Baird, on Aug. 20, issued a general order commenting on the result of the operations. He states that "the only object considered by him possible, under the conditions, was maintaining the Channel Squadron and the defence of the Thames and London." Under these conditions, it is now quite evident that our great commercial ports, the Mersey, the Clyde, the Tyne, and the Humber, and all the shores of North Britain, lie at the mercy of a naval enemy passing westward of Ireland and from the Atlantic to the North Sea.

A new edition has opportunely been issued of the official guide to "Summer Tours in Scotland—Glasgow to the Highlands," being a handbook to the royal route, viâ the Crinan and Caledonian canals, by Mr. David Macbrayne's mail-steamers. It is embellished with coloured illustrations and contains interesting descriptive details of the principal points of interest on the route, with other useful information.

THE PLAYHOUSES.

London—at least, all that is left of it—manages to amuse itself in the tourist season. As a refreshing change, some few fine evenings have been vouchsafed us in August; and, as a consequence, the open-air performances and illuminations in the gardens of the London Exhibitions, and the Summer displays in the principal suburban Pleasure Palaces, have been in vogue. The Crystal Palace has proved especially attractive. Its interesting Co-operative Exhibition has been of social value. Sydenham has shone mainly, however, by reason of Brock's exceedingly grotesque pyrotechnic spectacle for children on Thursday nights, illustrating in a diverting manner the "Blondin Donkey" and "The House that Jack Built"; and has likewise won renown with its beautiful realisation of Fairyland on the lamp-lit stage in the tastefully illuminated Palace Gardens.

"Baldwin in Cloudland" has been the most potent attraction of all. The slopes of Muswell-hill have formed an admirable natural theatre for the thousands of sightseers who have trooped to the Alexandra Palace to witness the extraordinary parachute descent from a balloon of the daring American aeronaut named J. S. Baldwin. Larger and larger have the gatherings grown since Baldwin first astonished London in "northern latitudes" on the Twenty-eighth of July. Over twenty thousand persons must have assembled on Saturday evening, the Eighteenth of August, to gaze at the aerial performance. All classes were represented. Among the closest observers were a few Chinese gentlemen in their native silk attire. Baldwin is an Illinois man. He is compactly built, and looks about thirty years of age. Undeniably dangerous as his venture is, it is equally undeniable that Baldwin inspires perfect confidence. He superintends what may be termed the final toilet of the balloon with businesslike briskness and thoroughness; sees that his trusty parachute is safely ensconced within reach in the cordage; and, gripping the ropes of the balloon, ascends in so debonair a fashion from the inclosure that he is regarded without an atom of fear. He is a master at the game. Quite as skilful in his way as Léotard was on the trapèze, and as the veteran Blondin continues to be on the high rope, Baldwin may be legitimately regarded as the premier aerial acrobat of the period. On the occasion of the ascent in question, he had reached the altitude of about a thousand feet when he grasped the handle of the parachute, which instantly became disengaged from the more or less collapsed balloon, but did not expand for a few seconds. When the parachute was fully distended, the descent of Baldwin became more gradual, and the sight of his coolness elicited a burst of applause from the multitudes looking on. Baldwin alighted in safety; and then had to endure the discomfort of heroworship as he proceeded through the thick crowd to the Palace, to be cheered anew when he appeared on the stage with his partner, Mr. Farini. The Saturday evening entertainment was crowned by a vivid firework pageant, the "Fall of Pompeii."

Returning to town, no one seeing the vehicular bustle of the western end of the Strand about eleven o'clock would think the dead season had set in for the theatres. The Lyceum, Gaiety, Strand, Adelphi, and Terry's bills of fares, however, draw many playgoers Strandwards. Though the Vaudeville has closed for a few weeks, the Royalty has been reopened by Mr. Lionel Brough with the laughter-moving comedy of "The Paper Chase," in which he is himself so well fitted with a humorous part. Yet another new farcical comedy, "Uncles and Aunts," has taken the place of "Arabian Nights" at the Comedy, and shall be noticed next week. The Avenue reopens with comedy and burlesque: "Gladys" and "Don Juan, Junior." Mr. H. Beerbohm Tree has returned to conduct the final rehearsals of the drama of "Captain Swift," presently to take its place in the evening bill of the Haymarket, very strongly cast.

THE YOUNG POETS.

There are no young poets.

There are none whom our eyes expectantly watch as the "coming men" of poetry, who have given promise of great things, to whose song the young men listen, turning away from the song of their elders. There is not now, I believe, one singer under thirty who makes his older critics excessively angry; and this is a fatal sign. Listen as we may, what voices of the poets do we hear now-a-days? From his solitude Tennyson speaks now and again to tell us of all that is gone by—

The fires of youth, the follies, furies, curses, passionate tears,
Gone like fires and floods and earthquakes of the planet's dawning years:
Fires that shook me once, but now to silent ashes fall'n away,
Cold upon the dead volcano sleeps the gleam of dying day.

Browning, too, has his yearly or bi-yearly volume of verse; but alack! I fear that nobody marks him—except, of course, the Browning Society, whom I take to be people of much leisure. Morris, no more the idle singer of an empty day, has turned preacher, and addresses himself to a wholly new congregation. Swinburne—we ask where is Swinburne, and the very echo is silent; and if the voice of another, who might have sung sweetly—Buchanan—is heard at all, it is not heard in song.

The rest is silence. One hears, I believe, of no new school arising, to follow the Tennysonian, which has lived, or the Swinburnian—which has not. Across the Atlantic there comes indeed a voice strange, but rudely majestic; but it is the voice of a white-haired man. Walt Whitman must be almost old enough to have stood for the ambitious National Poet in Longfellow's delightful story, Kavanagh; and though that poet was a caricature, Whitman is anything but unlike him.

Otherwise, young America seems as voiceless as young England—gives us, at best, a ballade or so, but not to the purpose. Such a dearth has not been known in English poetry since Blake, a century ago, asked the Muses what they were about, wandering unemployed in "the blue regions of the air, where the melodious winds have birth"; and gently reproached them—

How have you left the ancient love
The bards of old enjoyed in you!
The languid strings do scarcely move,
The sound is forced, the notes are few!

This was written on the very eve of the greatest burst of poetry, I suppose, that the world has ever known or will ever know. *Sit omen.* Yet one cannot but remember that the earth had then lain fallow for a very long while, and that it has been tilled unceasingly ever since. A real new poet has always had a new style—a style of his own, fresh words in which to speak his new thoughts; but such a variety of styles has been used up this century—by Wordsworth, Shelley, and Keats, by Byron, and by Tennyson, by Longfellow, and the ultra-modern Browning, Swinburne, and Whitman—that it is hard to imagine that anything new can come yet a while.

A commercial economist—though they are foolish people, these—would no doubt say that the present outburst of old poetry had for a while checked the new. It would be a silly comment, though made upon a most noticeable fact. Never was a more delightful blossoming than that which this year has burdened all the booksellers' shelves with pretty little books in red, or dark grey-green, or creamy white. Never were shop-windows such pleasurable reading as now, when before all of us is spread out our fill of the masterpieces of all times—not in grimy and repulsive Cheap Editions, like school-books, but prettily printed and daintily bound—at no more than a shilling apiece! (Which, indeed, many obliging booksellers of London, of their generosity, reduce to ninepence—what a pocketful of fairy gold for ninepence!)

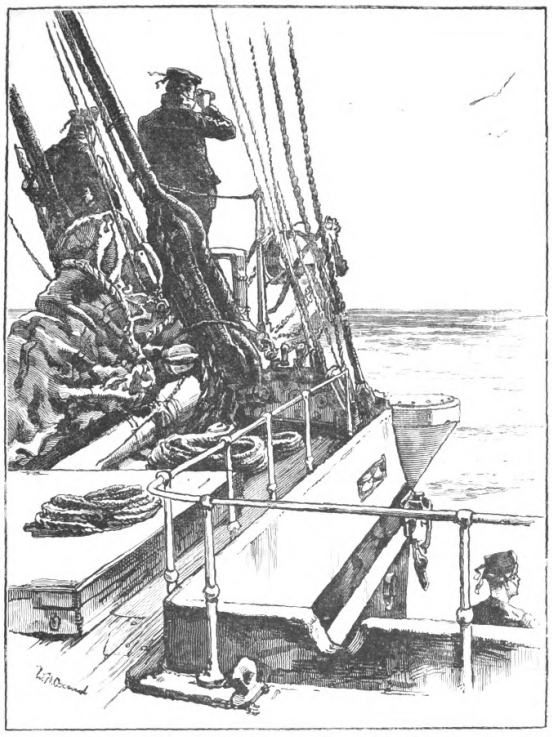
When I see Chapman's Homer thus attired (and thus priced)—a book in which I have revelled long in imagination; from which splendid extracts loom upon one now and then, especially that concerning the "sea-shouldering whale"; which (for that is the main thing, after all) gave us Keats's sonnet—I declare that I am very nearly in the mind to read it!

Among these little books one has been published lately, to which, I think, many eyes have turned, to see if therein might be found an answer to our question, "Where are the young poets?" It is a volume of Australian verse—the first batch of melodies, I believe, from the Young England over the seas. Hence—from the new continent—a new thing, one hopes, might surely arise. From the strong man who crickets and boats so mightily should come forth sweetness! A delightful, a memorable, little book should this one be.

But I am sorry to say that it is not; one is inclined in one's disappointment to call it a very bad little book. It is difficult not to think that poems of more worth might be found—scarcely is there more than one in the whole book that you would not very willingly let die.

It was no doubt unreasonable to expect one's young poet from so young a land. Early youth is too busy feeding and growing to cultivate a productive imagination — the children that have any poetry live it instead of writing it. America was very much older than Australia now is before it had brought forth any literature at all—I mean white America, of course. Of the literature of the olive and copper-coloured people who were murdered, robbed, and driven out by civilised and Christian Europeans I know nothing; I fear it was as inferior to our own as their morals must have been.

So the Australian native, if he produced poetry, did not preserve it for us; and his white successors have been too busy getting rid of him to celebrate in verse of the undying order his simple virtues.



To be sure, there was Mr. Domett, who wrote Ranolf and Amohia, the epic of the Maori: Domett, of whom Browning wrote as "Waring." Longfellow spoke highly of Ranolf and Amohia; for which reason the reader of "Australian Ballads" can but think that the Maori Iliad is not to be judged in extracts, or that the extracts are not well extracted. They do not strike one as—shall we say, epoch-making?

As it is, a lady who signs herself "Austral" (Mrs. J. G. Wilson) would seem to be by a good deal the sweetest of the singers of her native land: among whom there is certainly an undue proportion of mocking-birds. There is a great charm for English readers in her descriptions of the new home of Englishmen half a world away. This is of Spring in New Zealand:—

We rode in the shadowy place of pines,
The wind went whispering here and there
Like whispers in a house of prayer.
The sunshine stole in narrow lines,
And sweet was the resinous atmosphere.
The shrill cicada, far and near,
Piped on his high exultant third.
"Summer! Summer!" he seems to say—
"Summer!" He knows no other word,
But trills on it the livelong day;
The little hawker of the green,
Who calls his wares through all the solemn forest scene.

But, if again one asks the question, "Where are the young poets?" Echo only sends back the query from Greater Britain, as from Paternoster-row—"*Poets?*" And one has to turn to Chaucer or to Tennyson, and console oneself with the reflection that poets are ever young.

SKETCH BY OUR SPECIAL ARTIST.

MR. THOMSON'S EXPEDITION TO MOROCCO.

From communications received from Mr. Joseph Thomson, dated from the city of Morocco, July 22, it is evident that he has been able to accomplish even more than might have been expected of him under the circumstances. He writes in the highest spirits and with evident satisfaction at the results which he has so far attained; for it should be remembered that much of the country through which he has had to pass is in a state of rebellion, and the local authorities have done more to hinder than to help him.

Mr. Thomson sailed from Tangier to Casablanca, and thence travelled overland to Mogador. After three weeks' preparation there he made his final start, and, as he states, soon discovered that the greatest danger to his success would not be the mountaineers nor even the opposition of the Government officials, but the half-dozen men who formed the *personnel* of his small party. Mr. Thomson's past experience in Africa enabled him to deal effectively with this difficulty, and, although he has evidently been more or less troubled during the whole of his journey in this respect, he has, as in the past, been able to conquer all difficulties. He was fortunate enough to meet with a Jew of Demnat who spoke remarkably good English, and who has evidently been of great assistance to Mr. Thomson. By a series of surprises and cleverly planned excursions he has been able to enter the mountain fastnesses of Morocco, and do more than any previous traveller has done. From Demnat he made two extremely interesting trips into the lower ranges, visiting some remarkable caves and equally remarkable ruins, and one of the most wonderful natural bridge-aqueducts in the world. Geologically and geographically these trips are alike important. This was followed by what may be called a grand *coup de force*—a dart across the main axis of the Atlas to the district of Tilhuit, which lies in the basin of the Draa. Here he spent a very delightful ten days, though virtually a prisoner. As the tribes further west on the southern slope were in revolt, Mr. Thomson was compelled to return to the northern plains.

Starting once more, he crossed the mountains by a pass a little south of Jebel Tizah, ascended by Hooker, and reached Gindafy safely. He was able to make a trip up a wonderful cañon, which he declares rivals those of America for depth and grandeur, and ascended a mountain, where he and his party were confined to their tents until it suited them to go back to their starting-point. Here, unfortunately, Mr. Thomson's young companion, Mr. Crichton Browne, was stung by a scorpion, and they were compelled to return, happily by a new route. Though laid up for a period, fortunately, in time, Mr. Crichton Browne recovered. From his previous starting-point Mr. Thomson scored another great triumph. He crossed the mountains once more, and ascended with no small danger and difficulty the highest peak of the Atlas range north of Amsiviz, a height of 12,500 ft.—the highest peak by 1500 ft. ever attained. This he describes as the most interesting of all his trips, and he enjoyed it thoroughly, though he had to sleep on the ground, and was glad to make a meal on walnuts. On his return, Mr. Thomson deemed it advisable to go into the town of Morocco to recruit and wait the arrival of further supplies from the coast.

THE NAVAL MANŒUVRES: A FOG—FIRING SIGNAL GUNS.
SKETCH BY OUR SPECIAL ARTIST.

Mr. L. N. Peregrine, barrister-at-law, of the Middle Temple and South-Eastern Circuit, has been appointed District Commissioner of the Gold Coast.

Resolutions were unanimously adopted by an influential meeting at Stafford, on Aug. 18, urging the National Rifle Association to adopt Cannock Chase as the New Wimbledon, and enumerating the various advantages of that site. The claims of the Staines site for the New Wimbledon have been formally brought before the council of the National Rifle Association by the local board of the district.

The forty-first annual exhibition in connection with the Staffordshire Agricultural Society began on Aug. 21 in fields adjoining the Derby Turn, Burton-on-Trent, under most favourable auspices. Prizes amounting to £1600 were offered, including special prizes, value £138, for horses and stock the property of tenant-farmers residing within the society's limits, and £72 special prizes for horses and stock the property of tenant-farmers within the limits of the Meynell and North Staffordshire Hunts.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XV.

A NIGHT AND MORNING.

When I read of men possessed by some Spirit—that is to say, compelled to go hither and thither where, but for the Spirit, they would not go, and to say things which they would not otherwise have said—I think of our midnight ride to Lyme, and of my father there, and of the three weeks' madness which followed. It was some Spirit—whether of good or evil, I cannot say, and I dare not so much as to question—which seized him. That he hurried away to join the Duke on the first news of his landing, without counting the cost or weighing the chances, is easy to be understood. Like Humphrey, he was led by his knowledge of the great numbers who hated the Catholic religion to believe that they, like himself, would rise with one accord. He also remembered the successful rebellion against the first Charles, and expected nothing less than a repetition of that success. This, I know, was what the exiles in Holland thought and believed. The Duke, they said, was the darling of the people; he was the Protestant champion: who would not press forward when he should draw the sword? But what other man—what man in his sober senses would have dragged his wife and daughter with him to the godless riot of a camp? Perhaps he wanted them to share his triumph, to listen while he moved the soldiers, as that ancient hermit Peter moved the people to the Holy Wars? But I know not. He said that I was to be, like Jephthah's daughter, consecrated to the Cause of the Lord; and what he meant by that I never understood.

He was so eager to start upon the journey that he would not wait a moment. The horses must be saddled; we must mount and away. Mark that they were Sir Christopher's horses which we borrowed; this also was noted afterwards for the ruin of that good old man, with other particulars; as that Monmouth's Declaration was found in the house (Barnaby brought it); one of Monmouth's Captains, Barnaby Eykin by name, had ridden from Lyme to Bradford in order to see him; he was a friend of the preacher Dr. Eykin; he was grandfather to one of the rebels and grand-uncle to another; with many other things. But these were enough.

"Surely; surely, friend," said Sir Christopher, "thou wilt not take wife and daughter? They cannot help the Cause; they have no place in a camp?"

"Young men and maidens: one with another. Quick! we waste the time."

"And to ride all night? Consider, man—all night long;"

"What is a night? They will have all eternity for rest."

"He hath set his heart upon it," said my mother. "Let us go—a night's weariness will not do much harm. Let us go, Sir Christopher, without further parley."

"Go then, in the name of God," said the old man. "Child, give me a kiss." He took me in his arms and kissed me on the forehead. "Thou art, then," he said tenderly, "devoted to the Protestant Cause. Why, thou art already promised to a Protestant since this morning: forget not that promise, child. Humphrey and Barnaby will protect thee—and"——

"Sir," cried Robin quickly, "by your leave, I alone have the right to go with her and to protect her."

"Nay, Robin," I said, "stay here until Sir Christopher himself bids thee go. That will perhaps be very soon. Remember thy promise. We did not know, Robin, an hour ago, that the promise would be claimed so soon. Robin"—for he murmured—"I charge thee, remain at home until"——

"I promise thee, Sweetheart." But he hung his head and looked ashamed.

Sir Christopher, holding my hand, stepped forth upon the grass and looked upwards into the clear sky, where in the transparent twilight we could see a few stars twinkling.

"This, friend Eykin—this, Humphrey," he said, gravely, "is a solemn night for all. No more fateful night hath ever fallen upon any of us; no! not that day when I joined Hampden's new regiment and followed with the army of Lord Essex. Granted that we have a righteous cause, we know not that our leader hath in him the root of the matter. To rise against the King is a most weighty matter—fatal if it fail, a dangerous precedent if it succeed. Civil war is, of all wars, the most grievous: to fight under a leader who doth not live after the Laws of God is, methinks, most dangerous. The Duke hath lit a torch which will spread flames everywhere"——

"It is the voice of the Lord which calleth us!" my father interrupted. "To-morrow I shall speak again to God's Elect."

"Sir," said Humphrey, very seriously, "I pray you think not that this enterprise hath been rashly entered upon, nor that we depend upon the judgment of the Duke alone. It is, most unhappily, true that his life is sinful, and so is that of Lord Grey, who hath deserted his own lawful wife for her sister. But those who have pushed on the enterprise consider that the Duke is, at least, a true Protestant. They have, moreover, received solid assurances of support from every quarter. You have been kept in the dark from the beginning at my own earnest request, because, though I knew ful lwell your opinion, I would not trouble your peace or endanger your person. Suffer us, then, to depart, and, for yourself, do nothing; and keep—oh! Sir, I entreat you—keep Robin at home until our success leaves no room for doubt."

"Go, then, go," said Sir Christopher; "I have grievous misgivings that all is not well. But go, and Heaven bless the Cause!"

Robin kissed me, whispering that he would follow, and that before many days; and so we mounted and rode forth. In such hot haste did we depart that we took with us no change of raiment or any provision for the journey at all, save that Barnaby, who, as I afterwards found, never forgot the provisions, found time to get together a small parcel of bread and meat, and a flask of Canary, with which to refresh our spirits later on. We even rode away without any money.

My father rode one horse and my mother sat behind him; then I followed, Barnaby marching manfully beside me, and Humphrey rode last. The ways are rough, so that those who ride, even by daylight, go but slowly; and we, riding between high hedges, went much too slowly for my father, who, if he spoke at all, cried out impatiently, "Quicker! Quicker! we lose the time."

He sat bending over the horse's head, with rounded shoulders, his feet sticking out on either side, his long white hair and his ragged cassock floating in the wind. In his left hand he carried his Bible as a soldier carries his sword; on his head he wore the black silk cap in which he daily sat at work. He was praying and meditating; he was preparing the sermon which he would deliver in the morning.

Barnaby plodded on beside me: night or day made no difference to him. He slept when he could, and worked when he must. Sailors keep their watch day and night without any difference.

"It was Sir Christopher that I came after," he told me presently. "Mr. Dare—who hath since been killed by Mr. Fletcher—told the Duke that if Sir Christopher Challis would only come into camp, old as he is, the country gentlemen of his opinions would follow to a man, so respected is he. Well, he will not. But we have his grandnephew, Humphrey; and, if I mistake not, we shall have his grandson—if kisses mean anything. So Robin is thy Sweetheart, Sister: thou art a lucky girl. And we shall have Dad to preach to us. Well, I know not what will happen, but some will be knocked o' the head, and if Dad goes in the way of knocks——But whatever happens, he will get his tongue again—and so he will be happy."

"As for preaching," he went on, speaking with due pauses, because there was no hurry in these dark lanes, and he was never one of those whose words flow easily, "if he thinks to preach daily, as they say was done in Cromwell's time, I doubt if he will find many to listen, for by the look of the fellows who are crowding into camp they will love the clinking of the can better than the division of the text. But if he cause his friends to join he will be welcomed; and for devoting his wife and daughter to the Cause, that, Sister, with submission, is rank nonsense, and the sooner you get out of the camp, if you must go there, the better. Women aboard ship are bad enough, but in camp they are the very devil."

"Barnaby, speak not lightly of the Evil One."

"Where shall we bestow you when the fighting comes? Well, it shall be in some safe place."

"Oh, Barnaby! will there be fighting?"

"Good luck, child! what else will there be?"

"As the walls of Jericho fell down at the blast of the trumpet so the King's armies will be dispersed at the approach of the Lord's soldiers."

"That was a vast long time ago, Sister. There is now no such trumpet-work employed in war, and no priests on the march; but plenty of fighting to be done before anything is accomplished. But have no fear. The country is rising. They are sick at heart already of a Popish King. I say not that it will be easy work; but it can be done, and it will be done, before we all sit down again."

"And what will happen when it is done?"

"Truly, I know not. When one King is sent a-packing they must needs put up another, I suppose. My father shall have the biggest church in the country to preach in; Humphrey shall be made physician to the new King—nothing less; you shall marry Robin, and he shall be made a Duke or a Lord at least; and I shall have command of the biggest ship in the King's navy, and go to fight the Spaniards, or to trade for negroes on the Guinea Coast."

"But suppose the Duke should be defeated?"

"Well, Sister, if he is defeated it will go hard with all of us. Those who are caught will be stabbed with a Bridport dagger, as they say. Ask not such a question; as well ask a sailor what will happen to him if his ship is cast away. Some may escape in boats and some by swimming, and some are drowned, and some are cast upon savage shores. Every man must take his chance. Never again ask such a question. Nevertheless, I fear my father will get his neck as far in the noose as I myself. But remember, Sister Alice, do you and my mother keep snug. Let others carry on the rebellion; do you keep snug. For, d'ye see, a man takes his chance, and if there should happen (as there may) a defeat and the rout of these country lads, I could e'en scud by myself before the gale and maybe get to a seaport and so aboard and away while the chase was hot. But for a woman! Keep snug, I say, therefore."

The night, happily, was clear and fine. A slight breeze was blowing from the north-west, which made one shiver, yet it was not too cold. I heard the screech-owl once or twice, which caused me to tremble more than the cold. The road, when we left the highway, which is not often mended in these parts, became a narrow lane full of holes and deep ruts, or else a track across open country. But Barnaby knew the way.

It was about ten of the clock when we began our journey, and it was six in the morning when we finished it. I suppose there are few women who can boast of having taken so long a ride and in the night. Yet, strange to say, I felt no desire to sleep; nor was I wearied with the jogging of the horse, but was sustained by something of the spirit of my father. A wonderful thing it seemed to me that a simple country maid, such as myself, should help in putting down the Catholic King; women there have been who have played great parts in history—Jael, Deborah, Judith, and Esther, for example; but that I should be called (since then I have discovered that I was not called), this, indeed, seemed truly wonderful. Then I was going forth to witness the array of a gallant army about to fight for freedom and for religion, just as they were arrayed forty years before, when Sir Christopher was a young man and rode among them.

My brother, this stout Barnaby, was one of them; my father was one of them; Humphrey was one of them; and in a little while I was very sure (because Robin would feel no peace of mind if I was with the insurgents and he was still at home) my lover would be with them too. And I pictured to myself a holy and serious camp, filled with godly sober soldiers listening to sermons and reading the Bible, going forth to battle with hymns upon their lips; and withal so valiant that at their very first onset the battalions of the King would be shattered. Alas! anyone may guess the foolish thoughts of a girl who had no knowledge of the world nor any experience. Yet all my life I had been taught that Resistance was at times a sacred duty, and that the Divine Right of the (so-called) Lord's Anointed was a vain superstition. So far, therefore, was I better prepared than most women for the work in hand.

When we rode through Sherborne all the folk were a-bed and the streets were empty. From Sherborne our way lay through Yetminster and Evershott to Beaminster, where we watered and rested the horses, and took some of Barnaby's provisions. The country through which we rode was full of memories of the last great war. The castle of Sherborne was twice besieged; once by Lord Bedford, when the Marquis of Hertford held it for the King. That siege was raised; but it was afterwards taken by Fairfax, with its garrison of six hundred soldiers, and was then destroyed, so that it is now a heap of ruins; and as for Beaminster, the town hath never recovered from the great fire when Prince Maurice held it, and it is still half in ruins, though the ivy hath grown over the blackened walls of the burned houses. The last great war, of which I had heard so much! And now, perhaps, we were about to begin another.

It was two o'clock in the morning when we dismounted at Beaminster. My mother sat down upon a bench and fell instantly asleep. My father walked up and down impatiently, as grudging every minute. Barnaby, for his part, made a leisurely and comfortable meal, eating his bread and meat—of which I had some—and drinking his Canary with relish, as if we were on a journey of pleasure and there was plenty of time for leisurely feeding. Presently he arose with a sigh (the food and wine being all gone), and said that the horses, being now rested, we might proceed. So he lifted my mother into her seat and we went on with the journey, the day now breaking.

The way, I say, was never tedious to me, for I was sustained by the novelty and the strangeness of the thing. Although I had a thousand things to ask Barnaby, it must be confessed that for one who had travelled so far he had marvellous little to tell. I daresay that the deck and cabins of a ship are much the same whether she be on the Spanish Main or in the Bristol Channel, and sailors, even in port, are never an observant race, except of weather and so forth. It was strange, however, only to look upon him and to mark how stout a man he was grown and how strong, and yet how he still spoke like the old Barnaby, so good-natured and so dull with his book, who was daily flogged for his Latin grammar, and bore no malice, but prepared himself to enjoy the present when the flogging was over, and not to anticipate the certain repetition of the flogging on the morrow. He spoke in the same slow way, as if speech were a thing too precious to be poured out quickly; and there was always sense in what he said (Barnaby was only stupid in the matter of syntax), though he gave me not such answers as I could have wished. However, he confessed, little by little, something of his history and adventures. When he ran away, it was, as we thought, to the port of Bristol, where he presently found a berth as cabin-boy on board a West Indiaman. In this truly enviable post—everybody on board has a cuff or a kick or a rope's-end for the boy—he continued for some time. "But," said Barnaby, "you are not to think that the rope's-end was half so bad as my father's rod; nor the captain's oath so bad as my father's rebuke; nor the rough work and hard fare so bad as the Latin syntax." Being so strong, and a hearty, willing lad to boot, he was quickly promoted to be an able seaman, when there were no more rope's-endings for him. Then, having an ambition above his station, and not liking his rude and ignorant companions of the fo'k'sle (which is the fore-part of a ship, where the common sailors sleep and eat), and being so fortunate as to win the good graces of the supercargo first and of the captain next, he applied his leisure time (when he had any leisure) to the method of taking observations, of calculating longitudes and latitudes, his knowledge of arithmetic having fortunately stuck in his mind longer than that of Latin. These things, I understand, are of the greatest use to a sailor and necessary to an officer. Armed with this knowledge, and the recommendation of his superiors, Barnaby was promoted from before the mast and became what they call a mate, and so rose by degrees until he was at last second captain. But by this time he had made many voyages to the West Indies, to New York and Baltimore, and to the West Coast of Africa in the service of his owners, and, I dare say, had procured much wealth for them, though but little for himself. And being at Rotterdam upon his owners' business, he was easily persuaded—being always a stout Protestant, and desirous to strike a blow in revenge for the ejection of his father—to engage as sailing Master on board the frigate which brought over the Duke of Monmouth and his company, and then to join him on his landing. This was the sum of what he had to tell me. He had seen many strange people, wonderful things, and monsters of the deep; Indians, whom the cruelty and avarice of the Spaniards have wellnigh destroyed, the sugar plantations in the islands, negro slaves, negroes free in their own country, sharks and calamaries (of which I had read and heard)—he had seen all these things, and still remained (in his mind, I mean) as if he had seen nothing. So wonderfully made are some men that whatever they see they are in no way moved.

I say, then, that Barnaby answered my questions, as we rode along, briefly, and as if such matters troubled him not. When I asked him, for example, how the poor miserable slaves liked being captured and sold and put on board ship crowded together for so long a voyage, Barnaby replied that he did not know, his business being to buy them and carry them across the water, and if they rebelled on board ship to shoot them down or flog them; and when they got to Jamaica to sell them: where, if they would not work, they would be flogged until they came to a better mind. If a man was born a negro, what else, he asked, could he expect?

There was one question which I greatly desired to ask him, but dared not. It concerned the welfare of his soul. Presently, however, Barnaby answered that question before I put it.

"Sister," he said, "my mother's constant affliction concerning me, before I ran away, was as to the salvation of my soul. And truly, that formerly seemed to me so difficult a thing to compass (like navigation to an unknown port over an unknown sea set everywhere with hidden rocks and liable to sudden gusts) that I could not understand how a plain man could ever succeed in it. Wherefore it comforted me mightily after I got to sea to learn on good authority that there is another way, which, compared with my father's, is light and easy. In short, sister, though he knows it not, there is one religion for landsfolk and another for sailor-folk. A sailor (everybody knows) cannot get so much as a sail bent without cursing and swearing—this, which is desperately wicked ashore, counts for nothing at all afloat: and so with many other things; and the long and the short of it is that if a sailor does his duty, fights his ship like a man, is true to his owners and faithful to his messmates, it matters not one straw whether he hath daily sworn great oaths, drunk himself (whenever he went ashore) as helpless as a log, and kissed a pretty girl whenever his good luck gave him the chance—which does, indeed, seldom come to most sailors"—he added this with a deep sigh—"I say, sister, that for such a sailor, when his ship goes down with him, or when he gets a grapeshot through his vitals, or when he dies of fever, as happens often enough in the hot climates, there is no question as to the safety of his soul, but he goes straight to heaven. What he is ordered to do when he gets there," said Barnaby, "I cannot say; but it will be something. I doubt not, that a sailor will like to do. No catechism or Latin syntax. Wherefore, Sister, you can set my mother's heart—poor soul!—quite at rest on this important matter. You can tell her that you have conversed with me, and that I have that very same inward assurance of which my father speaks so much and at such length. The very same assurance it is—tell her that. And beg her to ask me no questions upon the matter."

"Well, Barnaby; but art thou sure"——

"It is a heavenly comfort," he replied, before I had time

DRAWN BY A. FORESTIER.

As we drew near Bridport, there stood a man in the road armed with a halbert.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

to finish, "to have such an assurance. For why? A man that hath it doth never more trouble himself about what shall happen to him after he is dead. Therefore he goes about his duty with an easy mind; and so, Sister, no more upon this head, if you love me and desire peace of mind for my mother."

So nothing more was said upon that subject then or afterwards. A sailor to be exempted by right of his calling from the religion of the landsman! 'Tis a strange and dangerous doctrine. But if all sailors believe it, yet how can it be? This question, I confess, is too high for me. And as for my mother, I gave her Barnaby's message, begging her at the same time not to question him further. And she sighed, but obeyed.

Presently Barnaby asked me if we had any money.

I had none, and I knew that my mother could have but little. Of course, my father never had any. I doubt if he had possessed a single penny since his ejection.

"Well," said Barnaby, "I thought to give my money to mother. But I now perceive that if she has it she will give it to Dad; and if he has it, he will give it all to the Duke for the Cause—wherefore, Sister, do you take it and keep it, not for me, but to be expended as seemeth you best." He lugged out of his pocket a heavy bag. "Here is all the money I have saved in ten years. Nay—I am not as some sailors, one that cannot keep a penny in purse, but must needs fling all away. Here are two hundred and fifty gold pieces. Take them, Alice. Hang the bag round thy neck, and never part with it, day or night. And say nothing about the money either to mother or to Dad, for he will assuredly do with it as I have said. A time may come when thou wilt want it."

Two hundred and fifty gold pieces! Was it possible that Barnaby could be so rich? I took the bag and hung it round my waist—not my neck—by the string which he had tied above the neck, and, as it was covered by my mantle, nobody ever suspected that I had this treasure. In the end, as you shall hear, it seemed to be useful.

It was now broad daylight, and the sun was up. As we drew near Bridport there stood a man in the road armed with a halbert.

"Whither go ye, good people?" he asked. "What is your business?"

"Friend," said Barnaby, flourishing his oaken staff, "we ride upon our own business. Stand aside, or thou mayest henceforth have no more business to do upon this earth!"

"Ride on then—ride on," he replied, standing aside with great meekness. This was one of the guards whom they posted everywhere upon the roads in order to stop the people who were flocking to the camp. In this way many were sent back, and many were arrested on their way to join Monmouth.

Now, as we drew near to Bridport, the time being about four o'clock, we heard the firing of guns and a great shouting.

"They have begun the fighting," said Barnaby. "I knew it would not be long a-coming."

It was, in fact, the first engagement, when the Dorsetshire Militia were driven out of Bridport by the Duke's troops, and there would have been a signal victory at the very outset but for the cowardice of Lord Grey, who ran away with the horse.

Well, it was a strange and a wonderful thing to think that close at hand were men killing each other on the Sabbath; yea, and some lying wounded on the roads; and that civil war had again begun.

"Let us push on," said Humphrey, "out of the way of these troops. They are but country lads all of them. If they retreat, they will run; and if they run, they will be seized with a panic, and will run all the way back to Lyme trampling on everything that is in the road."

This was sound advice, which we followed, taking an upper track which brought us into the high road a mile or so nearer Charmouth.

I do not think there can be anywhere a finer road than that which runs from Charmouth to Lyme. It runneth over high hills sometimes above the sea which rolls far below, and sometimes above a great level inland plain, the name of which I have forgotten. The highest of the hills is called Golden Cap; the reason why was plainly shown this morning when the sky was clear and the sun was shining from the south-east full upon this tall pico. When we got into this road we found it full of young fellows, lusty and well conditioned, all marching, running, walking, shouting, and singing on their way to join Monmouth. Some were adorned with flowers, some wore the blue favour of the Duke, some had cockades in their hats, and some again were armed with musket or with sword; some carried pikes, some knives tied on to long poles, some had nothing but thick cudgels, which they brandished valiantly. At sight of these brave fellows my father lifted his head and waved his hand, crying "A Monmouth! a Monmouth! Follow me, brave lads!" just as if he had been a captain encouraging his men to charge.

The church of Lyme standeth high upon the cliff which faces the sea: it is on the eastern side of the town, and before you get to the church, on the way from Charmouth, there is a broad field also on the edge of the cliff. It was this field that was the first camp of Monmouth's men. There were no tents for the men to lie in, but there were waggons filled, I suppose, with munitions of war: there were booths where things were sold, such as hot sausages fried over a charcoal fire, fried fish, lobsters and periwinkles, cold bacon and pork, bread, cheese, and such like, and barrels of beer and cider on wooden trestles. The men were haggling for the food and drink, and already one or two seemed fuddled. Some were exercising in the use of arms; some were dancing, and some singing. And no thought or respect paid at all to the Sabbath. Oh! was this the pious and godly camp which I had expected?

"Sister," said Barnaby, "this is a godly and religious place to which the wisdom of Dad hath brought thee. Perhaps he meaneth thee to lie in the open like the lads."

"Where is the Duke?" asked my father, looking wrathfully at these revellers and Sabbath-breakers.

"The Duke lies at the George Inn," said Barnaby. "I will show the way."

In the blue parlour of the George the Duke was at that time holding a council. There were different reports as to the Bridport affair. Already it was said that Lord Grey was unfit to lead the horse, having been the first to run away; and some said that the Militia were driven out of the town in a panic, and some that they made a stand and that our men had died. I know not what was the truth, and now it matters little, except that the first action of our men brought them little honour. When the council was finished, the Duke sent word that he would receive Dr. Challis (that was Humphrey) and Dr. Comfort Eykin.

So they were introduced to the presence of his Grace, and first my father—as Humphrey told me—fell into a kind of ecstacy, praising God for the landing of the Duke, and foretelling such speedy victory as would lay the enemies of the country at his feet. He then drew forth a roll of paper in which he had set down, for the information of the Duke, the estimated number of the disaffected in every town of the south and west of England, with the names of such as could be trusted not only to risk their own bodies and estates in the Cause but would stir up and encourage their friends. There were so many on these lists that the Duke's eyes brightened as he read them.

"Sir," he said, "if these reports can be depended upon we are indeed made men. What is your opinion, Dr. Challis?"

"My opinion, Sir, is that these are the names of friends and well-wishers; if they see your Grace well supported at the outset they will flock in; if not, many of them will stand aloof."

"Will Sir Christopher join me?" asked the Duke.

"No, Sir; he is now seventy-five years of age."

The Duke turned away. Presently he returned to the lists and asked many more questions.

"Sir," said my father, at length, "I have given you the names of all that I know who are well affected to the Protestant cause; they are those who have remained faithful to the ejected Ministers. Many a time have I secretly preached to them. One thing is wanting: the assurance that your Grace will bestow upon us liberty of conscience and freedom of worship. Else will not one of them move hand or foot."

"Why," said the Duke, "for what other purpose am I come? Assure them, good friend, assure them in my name; make the most solemn pledge that is in your power and in mine."

"In that case, Sir," said my father, "I will at once write letters with my own hand to the brethren everywhere. There are many honest country lads who will carry the letters by ways where they are not likely to be arrested and searched. And now, Sir, I pray your leave to preach to these your soldiers. They are at present drinking, swearing, and breaking the Sabbath. The campaign which should be begun with prayer and humiliation for the sins of the country hath been begun with many deadly sins, with merriment, and with fooling. Suffer me, then, to preach to them."

"Preach, by all means," said the Duke. "You shall have the parish church. I fear, Sir, that my business will not suffer me to have the edification of your sermon, but I hope that it will tend to the soberness and earnestness of my men. Forgive them, Sir, for their lightness of heart. They are for the most part young. Encourage them by promises rather than by rebuke. And so, Sir, for this occasion, farewell!"

In this way my father obtained the wish of his heart, and preached once more in a church before the people who were the young soldiers of Monmouth's army.

I did not hear that sermon, because I was asleep. It was in tones of thunder that my father preached to them. He spoke of the old war, and the brave deeds that their fathers had done under Cromwell: theirs was the victory. Now, as then, the victory should be theirs, if they carried the spirit of faithfulness into battle. He warned them of their sins, sparing none; and, in the end, he concluded with such a denunciation of the King as made all who heard it, and had been taught to regard the King's Majesty as sacred, open their mouths and gape upon each other; for then, for the first time, they truly understood what it was that they were engaged to do.

While my father waited to see the Duke, Barnaby went about looking for a lodging. The town is small, and the houses were all filled, but he presently found a cottage (call it rather a hut) on the shore beside the Cobb, where, on promise of an extravagant payment, the fisherman's wife consented to give up her bed to my mother and myself. Before the bargain was concluded, I had laid myself down upon it and was sound asleep.

So I slept the whole day; though outside there was such a trampling on the beach, such a landing of stores and creaking of chains as might have awakened the seven sleepers. But me nothing could awaken.

In the evening I woke up refreshed. My mother was already awake, but for weariness could not move out of her chair. The good woman of the cottage, a kindly soul, brought me rough food of some kind with a drink of water—the army had drunk up all the milk, eaten all the cheese, the butter, the eggs, and the pork, beef, and mutton in the place. And then Humphrey came and asked if I would go with him into the town to see the soldiers. So I went, and glad I was to see the sight. But, Lord! to think that it was the Sabbath evening! For the main street of Lyme was full of men, swaggering with long swords at their sides and some with spears—feathers in their hats and pistols stuck in their belts, all were talking loud, as I am told is the custom in a camp of soldiers. Outside the George there was a barrel on a stand, and vendors and drawers ran about with cans, fetching and carrying the liquor for which the men continually called. Then at the door of the George there appeared the Duke himself with his following of gentlemen. All rose and huzzaed while the Duke came down the steps and turned towards the camp outside the town.

I saw his face very well as he passed. Indeed, I saw him many times afterwards, but I declare that my heart sank when first I gazed upon him as he stood upon the steps of the George Inn. For on his face, plain to read, was the sadness of coming ruin. I say I knew from that moment what would be his end. Nay, I am no prophetess, nor am I a witch to know beforehand the counsels of the Almighty; yet the Lord hath permitted by certain signs the future to become apparent to those who know how to read them. In the Duke of Monmouth the signs were a restless and uneasy eye, an air of preoccupation, a trembling mouth, and a hesitating manner. There was in him nothing of the confidence of one who knows that fortune is about to smile upon him. This, I say, was my first thought about the Duke, and the first thought is prophecy.

There sat beside the benches a secretary, or clerk, who took down the names of recruits. The Duke stopped and looked on. A young man in a sober suit of brown, in appearance different from the country lads, was giving in his name.

"Daniel Foe, your Grace," said the clerk, looking up. "He is from London."

"From London," the Duke repeated. "I have many friends in London. I expect them shortly. Thou art a worthy lad and deservest encouragement." So he passed on his way.

(To be continued.)

Lord and Lady Hastings will leave England soon for Australia, in the Orient line steamer Austral, on a visit to Lord Carrington at Sydney.

The Special Commission appointed to inquire into the charges against Mr. Parnell have appointed October 16 for the opening of their inquiry.—The proprietors of the *Times* have taken their first step in defending the action brought against that newspaper by Mr. Parnell in the Scotch Courts, by instructing Edinburgh law-agents to represent them.

The Lord Lieutenant of Ireland and the Chief Secretary visited the Royal Irish Constabulary Dépôt, Phœnix Park, Dublin, on Aug. 15, and expressed their high admiration of the services rendered by the force to their Queen and country. The Queen has contributed £50 to the Royal Irish Constabulary Fund.

The Drapers' Company have granted £105 towards the £19,000 which is being raised by the committee of which the Duke of Westminster is chairman for the acquisition of the North Woolwich Gardens as a public park for the dreary district near the Victoria and Royal Albert Docks and Beckton Gas Works. This makes the seventh City Company which has contributed to this object. The agreement to purchase the gardens has been signed, but a sum of about £2300 has still to be raised.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

AUGUST 25, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny;* THIN EDITION, *One Penny.* To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence;* THIN EDITION, *One Penny.* To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny;* THIN EDITION, *Three-halfpence.*

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

ASTRONOMICAL OCCURRENCES FOR SEPTEMBER.

The MOON will be near, and to the left of, Saturn during the morning hours of the 4th; she is near both Mercury and Venus on the morning of the 7th; and she is near both Jupiter and Mars during the evening hours of the 11th, being a little to the left of both planets, Mars being farther from the Moon than Jupiter by about 2 deg., and she will be to the right of Saturn on the morning of the 30th. Her phases or times of change are:—

New Moon on the	6th at 56 minutes after 4 in the	morning.			
First Quarter	„ 12th „ 9	„	10	„	afternoon.
Full Moon	„ 20th „ 24	„	5	„	morning.
Last Quarter	„ 28th „ 30	„	8	„	„

She is nearest the Earth on the 9th, and most distant from it on the 25th.

MERCURY is an evening star, setting on the 5th at 7h 0m p.m., or 24 minutes after sunset; on the 11th at 6h 49m p.m., or 26 minutes after the Sun sets; on the 16th at 6h 42m p.m., or 30 minutes after sunset; on the 20th at 6h 29m p.m., or 27 minutes after the Sun sets; on the 25th at 6h 18m p.m., or 26 minutes after sunset; and on the 30th at 6h 7m p.m., or 28 minutes after sunset. He is near the Moon and Venus on the 7th; is in descending node on the 13th; near Venus again on the 19th; and at greatest distance from the Earth on the 23rd.

VENUS sets on the 1st at 7h 17m p.m., or 33 minutes after sunset; on the 10th at 6h 58m p.m., or 33 minutes after the Sun sets; on the 19th at 6h 40m p.m., or 35 minutes after sunset; and on the 30th at 6h 20m p.m., or 41 minutes after sunset. She is near the Moon on the 7th.

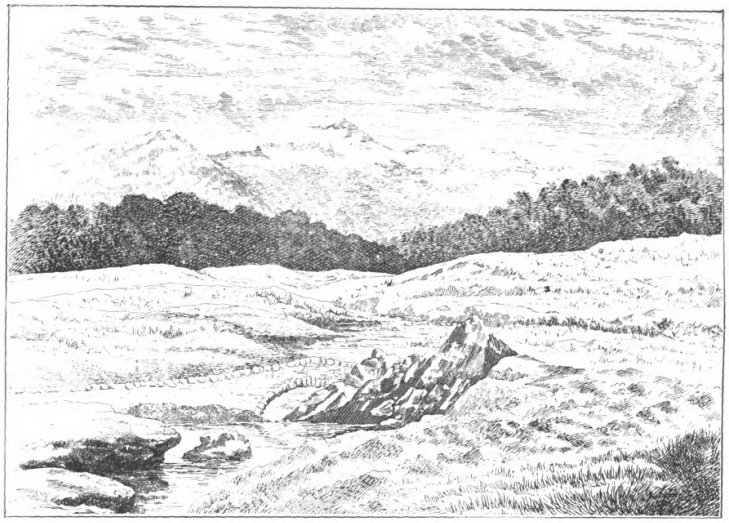
MARS sets on the 1st at 8h 56m p.m., on the 10th at 8h 34m p.m., on the 20th at 8h 14m p.m., and on the 30th at 7h 58m p.m. He is near the Moon and Jupiter on the 11th.

JUPITER sets on the 1st at 9h 23m p.m., on the 8th at 8h 57m p.m., on the 18th at 8h 21m p.m., and on the 28th at 7h 45m p.m. He is near the Moon and Mars on the 11th.

SATURN rises on the 1st at 2h 46m a.m., on the 9th at 2h 20m a.m., on the 19th at 1h 47m a.m., and on the 29th at 1h 14m a.m. He is near the Moon on the 4th.

MOOR, MOUNTAIN, AND LOCH.

The clearness and briskness of the air gives the pedestrian a feeling of rapt enjoyment and a sense of abnormal vigour which seem to diminish distances — almost to annihilate space —and he strides across the moors for miles without perceptible fatigue. It is true that he has ample opportunities for rest. The day is his own; the moorland lies all before him where to choose; the sky glows with the fine splendour of the summer; while the hot rays of the August sun are tempered by the light breeze which rises, one knows not whence, and blows, one knows not whither. He can halt where and as often as he pleases; and, if he have eyes to see, his halting-places will be numerous. For, as he follows the faint foot-track until it disappears among the purple heather, and then goes forward into what is for him the unknown, the unexplored—the world of mystery and awe—new things of beauty occur at almost every step, and he feels that he must pause to examine them. He starts, perhaps, a blackcock in his home among the stony places; or a ptarmigan mounts out of the midst of the stunted coppice; or he catches sight, on a far-off hill, of a red-deer, standing alone, expectant, free, and beautiful. Perhaps a hare scurries timidly in front of him; or a peaseweep, with green back and white breast, flutters to and fro, crying dolefully, and betraying, what she is fain to hide, the abiding-place of her young brood. The ringing song that floats in the amber air is that of an aspiring lintie; in yonder clump of brushwood a mavis is pouring out its full heart of melody. Then, as our pilgrim loiters onward with the slow, easy step of a man who is making the most of the happy hours, he comes suddenly upon a brimming pool, cool and translucent, in which the blue heaven is so faithfully mirrored that the gazer feels as if he hovered between two firmaments, one above and one below, and each of the same deep, soft, sapphire blueness—each with the same warm radiance in its hidden depths. Mayhap he falls in with a little patch of broom, where the yellow blossom still lingers kindly, and he catches the solitary hum of some vagrom bee; or a hollow filled with gorse and bramble; or a bright-green bit of quagmire, ringed round with firmer sward, and edged with wild cresses, among which oozes silently an apparently inexhaustible spring. Such halting-places as these are plentiful "as blackberries"—on the moors.



At length the wayfarer turns from these objects at his feet to survey the panorama that spreads around him; and 't is then that he becomes conscious of the glory of the moors. For, piled up against the horizon tower the forms of the great mountains, as if to shut out the world beyond and keep it free from the intrusion of the stranger; and there, in the warm noon, rests upon their sides a swathe of luminous mist, through which the waterfalls shine like glancing splendours; and the rocky precipices—the haunt and eyrie of the eagle—are veiled with manifold-tinted draperies. The sunlight, streaming full upon their rugged, serrated tops, adorns them with spires and pinnacles, and pyramids and minarets of molten gold; while deep shadows and gulfs even of blackness lie in the ravines which break up the mountain-mass into separate and individual heights. It is difficult, surely, to conceive of a grander spectacle than yonder "rampire" of granite, with all those lights shivering and splintering, like darts from angel-hands, against each projecting ledge and crag; while clouds of silvery vapour roll down towards its steadfast base in the deep, dark, distant waters. But to see it aright you should see it when the full-orbed sun is sinking majestically below the rim of day—when the mountain-summits gleam and glisten with changing shades and hues of purple, emerald, and amethyst—when a soft, mysterious violet steals into every hollow—when serried ranks of burning and glowing clouds gather all around them in a kind of Titanic pomp, unimaginable and indescribable — when the sky reflects upon the heights, and the heights throw back upon the sky, such a combination of ethereal colours as no painter ever dared to dream of—and the fancy, spell-bound by the wonder of the scene, loses itself in strange visions of adamantine palace-towers, and kindling domes of crystal, and cathedral interiors blazing with sacred fires—until, at last, the dazed eye refusing to look further upon a magnificence that appals and almost blinds it, one turns away, awe-struck and shrinking, as Moses may have done from the Presence in the Burning Bush!

One feels as if one had stood for a moment at the gates of heaven, and had had revealed to one the glories of the Infinite! God! how beautiful, how majestic is Thy sunset among the eternal mountains! Is it possible to gaze upon all that vast stretch of light and shadow, of purpling depths of sky, of lonely, awful mountain-peaks soaring far up into the azure spaces, without owning in one's heart of hearts the boundlessness of Thy power, the grandeur of Thy being? Can it be possible among the mountains to disbelieve in Thee and Thy work? Can it be possible among the mountains to disbelieve in the immortality of the spirit which Thou hast given to man—the spirit that has the capacity and the power to feel, and know, and comprehend the majesty of the mountains, and the beauty and the marvel of the sunset?

One of the most impressive features of the moors is their *silence*. I have read of the silence of the virgin forests of the Amazons, and of its strange effect upon the traveller; but sure am I that it cannot be more eerie than that of the lonely moors, when the pedestrian is well up into their solitudes, with only the sky and the mountains for his companions, away from the whirr of wings and the hum of insects, and the bell-like note of the red-deer—alone, alone in the deepest, sacredest hush of Nature. One feels afraid to lift up one's voice, lest it should start some weird reverberation or perhaps some awful response: for who knows what uncanny creatures may not haunt this wide heathery waste so seldom trodden by mortal feet? One turns to the mountains—they are silent; or, at least, their voices cannot travel hither. One turns to the sky—it gives no answer; not a bird is near to cheer one with its fluent melodies. The visible earth and heavens are given over to a conspiracy of silence; and the pilgrim presses onward with quickened step, almost scared by the awesomeness of a soundless world. Such silence as here prevails is impossible in the sweet pastoral regions of the South, where the air is always full of the plash of streams, or the low of kine, or the hum of villages, or of echoes of the roar of great busy cities. It is impossible, too, among the mountains; for there, even on windless days, the air is astir, and the thunder of the cataracts never ceases. It is impossible in the valleys which open seaward, and drink up into their furthest depths the murmur of the ceaseless tide. But on the moors—in the very heart of the wilderness—one feels a silence that is like that of the grave.

But in time the wayfarer reaches the brink of the moorland, and, as the long declivity opens before him, the welcome sound of water breaks upon his ears—welcome? yes, as the voice of a friend whom, after long absence, you clasp by the hand once more! Almost at his feet a tiny rill issues from a patch of greenest moss. He follows it, and soon the rill marks out clearly its path among the sweet-smelling heather. He follows it, and other rills soon mingle with it, until the rill swells into a stream, and the stream deepens and broadens in its rocky channel. He follows it, and still the channel grows wider and deeper, and the burn laughs aloud, and tumbles joyously over edges of sandstone, and babbles in the shade of bracken and fern and wild-brier; and, as it pursues its rapid downward course, falls now and again into a wild impetuosity, and leaps in a rush of perpendicular foam some twelve to twenty feet or more, then rattles along beneath the drooping rowans, and sinks again, deeper and deeper, into a leafy glen; takes another headlong bound from rocky steep, to glide under the mossy trunk of an old tree that has fallen athwart it, and past the crevice where the water-pyet hides her nest. The wayfarer follows it, and behold! it eddies among stones and pebbles and bits of rock, or washes the lustrous leaves of cresses and other aquatic plants, and dimples into still pools among more bracken and broom. He follows it, and soon becomes aware of the slow surging wash of the waters of a great loch upon the silvery strand. Then, looking around, he sees that the moorland is sliding down into a vast basin, on the further side of which the storm-blasted mountains rear their dark fronts precipitously. There on the moorland side the descent is gradual, and at the bottom runs a road, sprinkled with a few white cottages, which passes at both ends into romantic, savage-looking glens, and through these glens extends to other lochs and mountains, and so into Highland regions dear to legend and song. But, oh! the beauty of this loch—this ample, glorious loch!—its shining surface relieved by green wooded isles, and its circuit broken by tiny headland and peninsula, by curve and crescent cove, into which the moorland streams empty their tribute! One might spend a summer's day in telling over all its gracious features and radiant aspects, and then want another—and yet another—to complete the tale!

W. H. D.-A.

MOOR, MOUNTAIN, AND LOCH.

ELEMENTARY EDUCATION.

REPORT OF THE COMMISSIONERS.

The final report of the Commissioners on the Elementary Education Acts has been published. The leading conclusions to which the Commissioners have arrived are that, on the whole, the demand for school accommodation has been fairly met; that the power of deciding on the claims of schools to be supported out of the Parliamentary grant can hardly be placed in other hands than those of the Department to which it has been committed by statute, and should not be placed in the hands of a local body; that the remedy for the grievance felt in the case of certain schools pronounced by the Department to be unnecessary seems to be in a more liberal interpretation of the term "snitability," and in a close adherence to the spirit of the provisions of the Act of 1870; that in any fresh educational legislation it should be enacted that no transfer of a school held under trust should take place without the consent of a majority of the trustees, and that the Department should not sanction such terms of transfer as interfere with the original trust beyond what is required for the purposes of the Education Acts. It is further declared that provision should be made that no structural expenses involving a loan be incurred without the consent of the trustees who lease the building; that there is no reason why voluntary effort should not be entitled to work *pari passu* with a school board in providing accommodation to meet any increase of population, subsequent to the determination of the necessary schools supply arrived at by the Department after the first inquiry of 1871; and that the time has come when the State may be more exacting in requiring for all children a proper amount of air, light, and space, suitable premises, and a reasonable extent of playground. There are further recommendations as to school management, the inspection of school-teachers, and staff training-colleges. Though there are undoubtedly very considerable local shortcomings calling for amendment, the vast increase in the school population receiving regular instruction, obtained in the short period of seventeen years, gives results of a very satisfactory nature. The absence of any serious opposition on the part of the wage-earning classes to compulsion, notwithstanding its grave interference with their homes, is largely owing to the gradual steps by which it had been introduced. While the Commissioners desire to secure for the children in the public elementary schools the best and most thorough instruction in secular subjects, they are unanimously of opinion that their religious and moral training is a matter of still higher importance, and all the evidence is practically unanimous as to the desire of parents for the religious and moral training of their children. The Commissioners enforce the value of manual and technical instruction. The present large annual outlay, as now distributed, does not secure for the nation commensurate results, and various modifications are suggested to secure this.

The report contains certain reservations by Cardinal Manning.

THE BRITISH ASSOCIATION.

This Association will shortly meet at Bath, and, according to an article in the *Times*, evidently written from official information, old Associationists are looking forward to the meeting with the confident expectation that they will spend a pleasant week. Sir Frederick Bramwell is one of the most popular members of the Association, and under his auspices the social aspects of the meeting are likely to be unusually pleasant and prominent. Great preparations are being made by the citizens of Bath for the entertainment of both the older and the younger visitors, and the latter especially will have no reason to complain of the attentions that will be lavished upon them. The local committee, assisted by the experienced assistant local secretary, are doing all they can to make the meeting a pleasant one, and to make everything work smoothly for the visitors. Bath is eminently a city of hotels and comfortable lodging-houses, and, to judge from the lists that have been drawn up, the prices to be charged can hardly be considered exorbitant. Bristol, which is so close at hand, will, no doubt, do its share in the way of entertainment, and, with Cardiff and other large towns in the west, will certainly furnish a considerable contingent of visitors, so that it will not be surprising if the attendance at the meeting comes up to 2500.

Already a very fair number of excursions have been arranged for, and the Bath neighbourhood abounds with places of interest. A considerable number have been arranged for on the Saturday, but the most interesting are those for the second Thursday. None of these are gratis, and few of them can be considered cheap. Among the places included in the Saturday excursions are Cirencester, Berkeley, the Severn Tunnel, Bradford-on-Avon, Box and Corsham Quarries, Stanton-bury and neighbourhood. In the Thursday's list are included Stonehenge, Salisbury, and Wilton; Sidbury, Avebury, and neighbourhood; Wells and Glastonbury; Ebbw Gorge, Wookey Hole, and Cheddar; Chepstow and Tintern. No doubt there will also be the usual proportion of afternoon receptions and visits to places in the immediate neighbourhood.

As to the real proceedings of the Association, even if nothing particularly brilliant is to be expected, in several of the sections really useful work will be done, mainly through the medium of discussions on prearranged subjects—a feature which is rightly becoming more and more prominent every year. In his presidential address, Sir Frederick Bramwell is sure to deal pretty largely with progress in the department with which his name is so eminently connected.

GERMAN COLONIES IN ASIA MINOR.

The United States Consul at Sivas, in Asia Minor, in a recent report states that during the past year an immigration movement from Germany to Asia Minor has taken place. There are now about 100 German families at Amasia, a city on the river Iris, about 100 miles north-west of Sivas. This is due to the efforts of the German Consul there, who has largely interested himself in the movement. Most of the colonists are mechanics and men of moderate means. They have engaged in milling, waggon-making, farming, and other industries. Several flour mills with improved European machinery have been erected, and this branch of business, for which Amasia is well adapted, owing to its water-power and the surrounding grain district, was to have been largely extended during the present year. It is expected that large additions will be made to the colony during this year, and that several other colonies will be established in Anatolia. The immigration is at present small, but "it is of importance as indicating the commencement of a movement which will undoubtedly turn a part of the stream of German emigration in a new direction, and it cannot but be of great advantage in developing resources which are now, owing to the character of the population, wholly unused."

The Professorship of Commerce and Commercial Law at King's College, London, vacant by the death of Dr. Leone Levi, has been conferred on Mr. James Gault, barrister, of the Middle Temple.

The Orders in Council for the holding of the Winter Assizes appear in the *Gazette*. By a separate order it is directed that the Winter Assizes for the county of Wilts shall hereafter be held at Salisbury and Devizes alternately; for the county of Somerset, at Taunton and Wells alternately; for the county of Suffolk, at Ipswich and Bury St. Edmunds alternately; for the county of Glamorgan, at Swansea and Cardiff alternately.

A handsome stained-glass window, introducing figures of Faith, Hope, and Charity, by Messrs. Warrington and Co., of Fitzroy-square, has been placed in Sandford church, Devon.

Cardinal Lavigerie gave an address on Aug. 15, in the Cathedral at Brussels, on slavery in Africa. He advocated the formation of a corps of about 100 men, composed exclusively of Belgians, to be stationed on the borders of Lake Tanganyika, in order to bar the way to the slave-dealers. The expenses he estimated at a million francs.

GLASGOW & THE CLYDE
Past & Present.

GLASGOW IN THE TIME OF CHARLES II.—FROM AN OLD ENGRAVING.

THESE names of Glasgow and the Clyde are inseparably associated. The second, in amount of population, among the cities of Great Britain, the social and commercial capital of Western Scotland, Glasgow, which is to that part of the country what Liverpool and Manchester, compounded together, with some of the neighbour manufacturing towns, would be to England, owes a great deal to its river. Yet it is not more true that the Clyde has made Glasgow, looking to the "Past and Present" of both, than it is true that Glasgow has made the Clyde. It is by the skill and enterprise of the citizens, the engineers, the shipbuilders and shipowners, and all interested in maritime traffic, that this river, an offspring of the moorlands and mountains of upper Lanarkshire, has been converted, in its lower course, into a harbour and highway of great ocean steamers, ranking with the Mersey and the Thames as one of the main portals of our trade at sea. The domestic history of British industrial and social progress has no chapter more remarkable than this, the results of which are displayed in the Glasgow Exhibition of 1888, now visited by her Majesty the Queen. Of that Exhibition, when it was opened by their Royal Highnesses the Prince and Princess of Wales, some general account, with various Illustrations, appeared in this Journal. There is more to be said of it now; but of Glasgow and the Clyde, with the origin and increase of their productive and mercantile activity, manifested on the present occasion, a retrospective view will be found interesting, and we shall indulge in it at moderate length. Historical particulars concerning only those things which have passed away—the ancient kingdom of Scotland, with all its feudal institutions, is no exception—do not much engage the minds of ordinary readers. "Let the dead bury their dead"; most of us can find studies more agreeable and profitable than the "treasons, stratagems, and spoils," the ferocious brawls, the plots and conspiracies of barons and chieftains, and of courtiers, lawyers, and churchmen, in the reigns of rash and foolish monarchs before the two Crowns were set on one Royal head. The excellent work of the learned Dr. Hill Burton, and Sir Walter Scott's entertaining "Tales of a Grandfather," besides Scott's romances and poems, are at the service of English readers who care to know the affairs of the Scottish Kings of the House of Stuart, and the manifold troubles brought on that country by the most factious set of noblemen, the most inveterate plotters and intriguers, whoever pursued schemes of criminal ambition. But it is different with those facts of historical or antiquarian research that concern the real welfare of the land and of the people, from the earliest age of native barbarism, from the civilising advent of a great missionary Christian Bishop, through the protecting and educating guardianship of his successors, to the rise of municipal self-government, and to the development of civic and local public spirit, by which modern Glasgow has grown like the wealthy and powerful free cities of Flanders, of Germany, and of Italy in the Middle Ages. Such works in the past, and the fruits of such lives and labours, belong to the history of that which is not dead, but is still living and flourishing in prosperous growth, to the benefit of the whole nation at the present time, and of generations hereafter, also to the spread of many benefits wherever British influence shall extend all over the globe. In this way, it seems to us, the annals of progress at Glasgow and on the Clyde, beginning as far back as we know, would seem worthy of attention.

Rivers are much older than towns, and have witnessed much greater changes: if one of them could speak articulately,

instead of the solemn murmuring voice that ceases not a moment, by day and by night, as it flows perpetually on during hundreds and thousands of years, what might it not tell of the ages of human toil and strife, the doings, the enjoyments, the sufferings of mankind dwelling on its banks! Could but the Thames or the Tiber narrate what its fabled Genius must have seen from a period before the building of London or Rome! The Clyde has a story to relate which may be read by the eye, and its beginning is romantic enough

VIEW OF GLASGOW, ABOUT 1760.—FROM AN OLD ENGRAVING.

as a matter of topography: far up in the hills near Moffat, oozing out of a peaty moor which also gives birth to the Tweed, the little "burn" presently falls in with two larger infant streams, the Daer and the Powtrail, 900 ft. above the sea-level, and they agree to run and play together in one channel. They do not say to each other, "Let us go down and make the great city of Glasgow." Old "Tintock Tap," the famous hill of a droll song, looking down on them from his summit of 2335 ft., is pleased to see the Clyde coming his way, joined by the Elvan, the Camps and Medlock, the Glengonar and Duneaton Waters, but asks no questions about its further business. "The river wanders at its own sweet will," and in a sweet way, among heathery hills, verdant level holms, woodland parks, and glens leading to deserted mines of metal, with a little gold in them; a ruined baronial tower of the Lindsays; another, "The Bower of Wandel," perched on its rock almost surrounded by the stream; and by the Devonshaw and Startup Heights, to the pretty village of Lamington. Here the Clyde assumes a more important demeanour, quite unconsciously, we believe; the character of a river, in fact, depends on geology. Its course, so far, has been through hard Silurian rock, its allies and tributaries were originally mountain torrents; but now it enters the Old Red Sandstone, and must be graver, as it will be deeper and broader in these strata of the earth's crust; it is also now within twelve miles of Lanark, the county town, and therefore has to make a respectable appearance. Farewell to its sportive infancy! But as the course of adult youth is often devious and tumultuous, so with the Clyde. Winding uncertainly through a flat valley, and leaving old Tinto Hill behind like a tutor of school-days, it passes Symington in a north-easterly direction, till it almost meets the Tweed. "Hallo!" says the Tweed, "you're not to go my way! I'm going east to the German Ocean; you go *that* way," pointing west: "you flow into the Irish sea." So the Clyde obeys its brother's advice, makes a sudden bend to the north-west at Biggar, again curves to the west at Carnwath and Carstairs, delighting itself amid broad meadows and corn-fields, and the parks and mansions of Earls. It seems inclined to run into Ayrshire, the Land of Burns, till it is brought up sharply to a sense of its proper

THE CLYDE, NEAR ITS SOURCE.

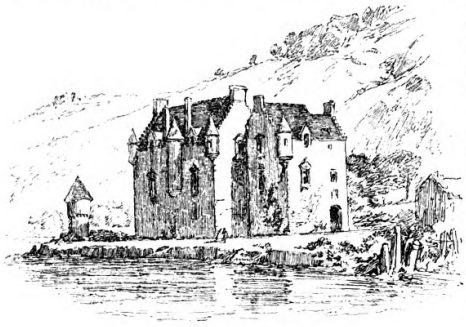
duty by a junction with Douglas Water. Here is a new partner not to be trifled with, bent on flowing north—a strong and full stream rising at a height of 1500 ft., and acquainted with the Castle of the Douglas Lords, who were apt to have their own way. The Clyde is henceforth not allowed to amuse itself with erratic vagaries, but must run a tolerably straight course. It has to make a grand exhibition of itself, and to win a classic renown for its noble waterfalls, as it approaches Lanark town. Its rocky bed is here of a nature to form terraces adapted to this performance. Through a deep gorge in the hills, between high wooded banks, it reaches Bonnington Linn, where it leaps a precipice of 30 ft., with a projecting rock midstream dividing the mass of water. The channel below narrows and deepens, and the river is overhung by trees, for about half a mile; here is Corra or Cora Linn, one of the most beautiful of British cataracts—for a descent of water by three successive bounds, twice caught by steps or ledges of rock, situated obliquely to each other, is more picturesque than would be a single perpendicular fall of 84 ft., as it presents more various combinations of the forms of flowing water. The ancient ruin of Corra Castle, the stronghold of the Bannatynes, stands on the cliff overhead; and there is a rock-hole, with a small brook cascade, said to have once harboured William Wallace. The river, traversing a softer and more open valley, passes Lanark town, Cartland Crags, and Telford's grand viaduct, below which it goes through another splendid performance, the Falls of Stonebyres, again descending 70 ft. in three leaps. It is joined at Crossford by the lovely Nethan, to enter the pleasant lands of Clydesdale, a district including the remnants of Cadzow Forest, Hamilton, Motherwell, and Bothwell, which is scarcely surpassed in beauty, or in legendary and historic interest, by the vales of the Tweed, Ettrick, and Teviotdale.

This is a fine orchard and fruit-growing district, and much of it, the soil being very fertile, is occupied by corn-fields, with which are interspersed many pieces of woodland. Of the ancient Forest of Cadzow, formerly covering the whole plain and neighbouring hills, there are some remains on the banks of the Avon, within the demesnes of the Duke of Hamilton. The oaks are of vast antiquity, most of them decaying, and their short trunks are enormous in girth, some measuring 27 ft. round. In this forest is kept the famous breed of wild cattle, pure white all over, saving the muzzle, hoofs, and tips of the ears, which are black, as well as the eyes. They resemble the rare Chillingham breed of Northumberland and Berwickshire; and it is probable that they are not of a native Caledonian stock, but were imported, centuries ago, as a fancy breed. Sir Walter Scott's description of this fine animal, in his ballad of "Cadzow Castle," is somewhat exaggerated. The subject of that poem is the sudden return home of Hamilton of Bothwellhaugh, after murdering the Regent Murray at Linlithgow. Cadzow Castle, the ruins of which are in the woods above the Avon, two miles from the Clyde, was a Royal residence of the Bruces, who gave it to the Hamiltons. The Palace of Hamilton, a magnificent ducal mansion, is comparatively modern; the Knight of Cadzow, Sir James Hamilton, was ennobled in 1445, and married Princess Mary, daughter of a King of Scotland, whose grandson, the Earl of Arran, became Regent for Queen Mary Stuart, and his son was a sort of pretender to the throne. The Duke of Hamilton has also a French title, Duke of Chatelherault, and there is a château on this estate, named from that of Chatelherault in France. The park and mansion have been described on former occasions; the art collections, library, and furniture were sold in London, for nearly £400,000, six years ago. The town of Hamilton, which has nearly 20,000 inhabitants, owes its prosperity to the coal and ironworks in its vicinity, and is also the quarters of military forces, but is not otherwise interesting. Motherwell is a similar thriving town, a junction station on the Caledonian Railway, with Dalzell House, the seat of another branch of the noble family of Hamilton. The village of Bothwell, within nine miles of Glasgow, has a name unhappily more celebrated. "Were you at the battle of Bothwell Brig?" was the question put to Ephraim Macbriar, the tortured Cameronian martyr, when the wedge was driven into the iron "boot," crushing his knee-bone, horrible to imagine, by order of the Duke of York, afterwards King James II., and of the Earl of Lauderdale and others of the Council, in a dreadful scene of "Old Mortality." The battle fought on June 22, 1679, in which four thousand Covenanters were defeated by Claverhouse and Dalziel, is described by Scott.

From Bothwell down to Glasgow, the Clyde loses its romantic aspects and associations for a space, though Bothwell Castle and Blantyre Priory are sufficiently picturesque. The manufacturing town of Blantyre is notable as the birthplace of David Livingstone. The Clyde has received large accessions to its volume from the South and North Calder, rivers flowing from the east, and the Rotten Calder, from the south, by which it is rendered capable of becoming, with the aid of the engineers, a navigable river. Its course is now almost due west; on its left or south bank is Rutherglen, a small town which had once more trade than its neighbour Glasgow, and which is of some note in Scottish history, both in the wars of Wallace and Bruce against the English, and in the civil wars of the Covenanters. It was here that Sir John Menteith betrayed Wallace to the vengeance of King Edward. It was at Langside, close by, that Queen Mary saw her army defeated, and fled in despair. Being now within sight of Glasgow, we shall interrupt our description of the Clyde, to speak of the origin, rise, and progress of the great commercial city.

Here, then, on the right bank of the river, between the Molendinar and the Kelvin, streams that flow down to it from the Campsie Fells on the north side, let us look yet farther back by the assistance of Mr. Andrew Macgeorge, whose treatise on "Old Glasgow, the Place and the People, from the Roman Occupation to the Eighteenth Century," has already been noticed. O times past! O places wonderfully altered! O people changing their name, their language, their creeds, their habits and manners, abiding in these places, from the Celtic heathen savage with his bare body tattooed, wielding his stone-pointed lance in front of his rude home, a mere pit roofed with boughs and fern or heather, to the rich Glasgow Bailie, merchant or banker, the dignified Lord Provost, a member of Parliament, a respectable Elder of the Presbyterian Kirk! Two thousand years ago, when the Caledonians were about as civilised as the natives of Masai Land in East Africa or those of New Guinea are now, Bailie Nicol Jarvie's ancestors, paddling on the Clyde, or prowling in the woods and marshes, never dreamt of his civic importance. It required centuries of experiment, invention, and practice, for them to make their little canoes, scooped out of the trunks of oaks with stone hatchets helped by burning, and fitted, perhaps, with a stern of boards, two or three of which have been found buried in the earth, in the midst of the city streets. This was the commencement of Clyde shipbuilding! The Romans came and went in North Britain; under Agricola they built a rampart, twenty-seven miles long, across from the Forth to the Clyde. The whole country between this and the Wall of Hadrian, or of Severus, from the Tyne to the Solway, was afterwards abandoned by its Roman garrison, without having obtained Roman civilisation. Its eastern part became the Saxon kingdom of Northumbria, and Edinburgh was a Saxon

DUMBARTON CASTLE, ON THE CLYDE.

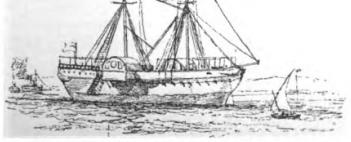


city. The western part, including all the south-west region of Scotland, with Westmorland, Cumberland, and the North Lancashire peninsula to Morecambe Bay, was the British kingdom of Alcluith, sometimes named Strathclyde. Its population were nearly akin to those of Gwynneth or North Wales, with some emigrants from Cornwall and Devon. The chief fortress and capital of this Principality was Dumbarton, the Castle on the Rock, fifteen miles below Glasgow. In the latter part of the sixth century of Christendom, when Britons, Scots, Picts, and Saxons were still tugging against each other for the possession of different parts of North Britain, a reverend man of peace, a man of faith and charity, the British apostle Kentigern, called "Mun-gu," which means in Welsh "Kind Friend," came to reside on the sylvan banks of the brook Molendinar. From the heart and brain of this good "St. Mungo," surely a messenger of God's grace, sprang the germ of Christian civilisation in Glasgow. Episcopacy or Presbyterianism, what matter for the title of office? this man was both "Overseer" and "Elder"; founder, pastor, and first Bishop, of the local church. The place had, indeed, been visited, towards the end of the fourth century, by St. Ninian, a missionary to the Picts; and Kentigern also found an aged hermit, one Fergus, dying in his cell on the banks of the Clyde, whose grave he made on the site of the present Cathedral.

Under the protection of King Rhydderch, who was a Christian, Kentigern organised his monastic college of preachers and teachers, instructing the natives in religion and morality, in agriculture, building, making furniture and clothing, and other useful arts. It is likely that he taught them how to construct a better kind of boats, and to make fishing-nets, thinking of the sons of Zebedee on the Galilæan lake. Honour and gratitude are due to St. Mungo, as well as to "Wallace wight" and "weel-skilled Bruce," and all the fighting Scottish patriots of later ages! The victories of humane benevolence are slow, but ultimately certain, and infinitely blessed. Did Livingstone think of Kentigern's example, when he joined Robert Moffat in the Bechuana Mission? A few generations—and what are a few centuries to mankind?—will, perhaps, show the fruits of their work in a prosperous native African world. There was cruelty, slavery, robbery, and murder enough, the darkest ignorance and the foulest vice, among that noble race of Britons, admired for their beauty and strength by Roman writers, who dwelt near the Caledonian wall. The Saxon Kings of Northumbria, using the arms of Anglian, Danish, and Norman adventurers, invaded Strathclyde, and subdued its Celtic people. Feudal rule of the utmost strictness was imposed on the conquered nation; but the Bishops of Glasgow were the protectors of a little commonwealth, enjoying more security and civil freedom than any other parts of Scotland. These recollections, whatever theological objections, since the Protestant Reformation, may prevail against the institution of prelacy in the Scottish Church, entitle the old Bishop's Castle to some respect. It stood near the west door of the cathedral till a hundred years ago, as represented in one of our Illustrations; and there is a model of it forming a temporary museum of historical relics, in the Exhibition grounds. The Castle is mentioned in a charter of 1290; it was a building of Norman style, but was much enlarged in the fifteenth century, and became a "Palace," with fair courts and flower-gardens. It is worthy of remark that the Glasgow Town Council, regarding the Bishop as their official patron, held their meetings in a special hall of his Castle until the sixteenth century.

The Cathedral Church, internally, is a beautiful Early Gothic edifice, with a fine crypt of grand pillared arches under the nave and choir, but not underground, as the east end of the building is on a steep slope to the Molendinar. Its construction was begun in the latter part of the twelfth century, by

Bishop Jocelyn, and was advanced by Bishop Bodington, seventy or eighty years later. The grand tower and the consistory-house were unfortunately pulled down by Government order in our own times, and the exterior of the Cathedral is not imposing. The interior has been "restored" with extreme neatness and elegance, and the stained-glass windows are as good as modern artificers can make. The aspect of antiquity has departed; yet the visitor cannot—except when Divine service is going on—help calling to mind that scene of "Rob Roy," where somebody is beckoned to from behind a pillar, to receive a whispered secret affecting the safety of persons in the story. The old painted windows, the sculptured images, and the altars, were destroyed at the Reformation. The Blackfriars Monastery, in High-street, was an ecclesiastical abode of much pomp; and the English King Edward I. sojourned there when he came to conquer Scotland. In 1488, the Bishops of Glasgow became Archbishops.



The city, however, was but a small and poor town until after the seventeenth century, when, like most provincial towns of Scotland, it gained immensely by the effects of the legislative Union with England—as Belfast and Cork have gained prosperity by the Irish Act of Union. It was originally the Bishop's Burgh, under feudal patronage, but with municipal privileges, secured by a Royal charter in 1189; the Bishop, however, was the Baron of Glasgow, appointed the Provosts, Bailies, and Sergeants, and nominated his representatives in the Scottish Parliament. This constitution naturally became unpopular after the Reformation, of which Archbishop Beaton, nephew of Cardinal Beaton, was an obstinate adversary; the Castle was besieged three times, in 1543, in 1560, and in 1570, by the Hamiltons of Arran and other Protestant Lords; and the rule of the Prelates was brought to an end. At the same time, when the manorial powers of local government rule passed into the hands of laymen, the effect on the interests of the townsfolk was prejudicial. Glasgow, nevertheless, by the industry and thrift of its inhabitants, gained a moderate share of trade; set up weaving in 1638; exported coarse woollen cloths, friezes and tartans, linens, hides and tallow; imported goods from Ireland, the Highlands, France, Spain, and Norway, and sugar from Barbadoes, though no Clyde vessel yet crossed the Atlantic. A View of the town in the reign of Charles II., when it had about 4000 inhabitants, is among our present Illustrations. Defoe, in 1727, called Glasgow "a large, stately, and well-built city," commending the breadth of its five best streets—High-street, the Trongate, the Saltmarket, Gallowgate, and Drygate being probably those intended. George-street, Argyle-street, and all to the west did not then exist. There was not a hackney-coach, a stage-coach, or a post-chaise in the town. One grave-digger sufficed to dispose of the whole

NEWARK CASTLE, PORT GLASGOW.

population, as fast as they chose to die. The living might be reckoned then at 13,000. Further details of Glasgow life more than a century ago may be gathered from "Rob Roy"; and Bailie Nicol Jarvie is one of the truest characters that its author ever drew. Glasgow society was strictly observant of the distinctions of classes. The merchants who imported tobacco, called the "tobacco lords," had a privileged walk at the Cross, on the "plane-stanes" in front of the Tontine, where they strutted to and fro, arrayed in long scarlet cloaks and bushy periwigs, and nobody dared speak to them, as they looked on the "wabster bodies" with an air of aristocratic scorn.

The time came at last for that grander development of Glasgow commerce which attended a series of persevering efforts to make the Clyde a harbour of sea-going ships. There is a story of an American passenger to Glasgow, in modern times, saying to the captain of a steam-ship: "You call this ditch a river? You should see our rivers, the Hudson, the Mississippi, the Ohio, and the Missouri!" Said the Scotchman in reply, "Don't you brag of the rivers that Providence made for ye; I tell ye, we Glasgow bodies made this river for oorsels!" And so it was; it is by local management, with no aid either from Government grants, that the shallow, sprawling stream, which boys could wade across, has been converted into a deep and straight navigable waterway, capable of floating the largest steamers in the merchant navy. In old times, Dumbuck Ford, twelve miles below Glasgow, was the shallowest

The First Steamer of the P. and O. Company.

part, and the great obstacle to navigation. Some inhabitants of Glasgow, Renfrew, and Dumbarton made periodical attempts to remove the great sandbank which formed the obstruction. Little good resulted from these efforts; up to 1658 the shipping port for Glasgow was as far away as Irvine, in Ayrshire, and all goods had to be brought from there either by expensive land carriage or tedious lightering. In that year, the Magistrates of Glasgow approached their brethren of Dumbarton with the view of purchasing ground there for the construction of a harbour. The Dumbarton Magistrates, however, refused to sell the ground, and the Glasgow Magistrates purchased thirteen acres further down on the south side of the river, where they built harbours, constructed the first graving-

JAMES WATT'S HOUSE, GLASGOW, IN 1817.

dock in Scotland, and founded the town of Port Glasgow. But they still had a strong desire to have the trade brought up to their own town. Accordingly, in 1755, they employed Smeaton to report to them on the possibility of accomplishing it. There was then, at the western boundary of the present harbour, 1 ft. 3 in. of water at low tide, and 3 ft. 8 in. at high tide. At the same point, to-day, there is 14 ft. and 24 ft. at low and high water respectively. The plan proposed by Smeaton, however, showed he had little idea of Glasgow ever becoming much of a seaport. He recommended the erection of a dam and lock four miles below the bridge, the lock to be "18 ft. in the clear, and to take in a vessel of 70 ft. long, or to let pass a sloop or brig of above 100 tons when there is water in the river to admit it." Under an Act of Parliament passed in 1759, power was given to the Magistrates and City Council of Glasgow to cleanse, scour, straighten, and improve the river Clyde from Dumbuck Ford to the Bridge of Glasgow, and to make locks, which fortunately were never constructed. For in 1768 Mr. John Golborne, of Chester, came upon the scene; and it is to his skill and ingenuity that Glasgow owes the first real improvement in the river. He found the depth at low water within the harbour to be 1 ft., and at Dumbuck Ford it was 2 ft. His plan, as he himself expressed it, was "to assist Nature by removing the stones and hard gravel from the bottom of the river where it is shallow, and by contracting the channel where it is worn too wide." In 1770 another Act was obtained, which declared that the Magistrates and Council were now advised "that by contracting the channel of the said river Clyde, and building and erecting jetties, banks, walls, works, and fences in and upon the said river, and dredging the same in proper places between the lower end of Dumbuck Ford and the Bridge of Glasgow, the said river Clyde may be further deepened, and the navigation thereof more effectually improved than by any lock or dam." This was done, and, thirteen years later, the Glasgow Magistrates again consulted Mr. Golborne about the means of getting a depth of water at the Broomielaw quay, to receive vessels trading to England and Ireland. Mr. Golborne found that, by the operation of his plans, a great deal had been effected in the improvement of the channel. The jetties which he had constructed had concentrated the current, so that, aided by dredging, it had worn away Dumbuck Ford to a depth of 14 ft. at low water, and at other parts of its course as much as 20 ft. and 22 ft. of water were to be found. He therefore recommended perseverance in the tactics which had already proved so successful; and, under his auspices and those of his successor, Rennie, more than two hundred jetties were erected between Glasgow and Bowling. To make the system still more complete, walls were built connecting the ends of the jetties, and confining the stream within strict limits. In 1807, Rennie made a very satisfactory report of the condition of the river; but at that time it was proposed to give the channel at the mouth of the Kelvin, the lower boundary of Glasgow harbour, only a width of 180 ft., with a width of 135½ ft. for the harbour itself; whereas the present dimensions are 370 ft. and 450 ft. The present depth of the harbour is 18 ft. to 20 ft. at low water. By a third Act, obtained in 1809, the Magistrates and Council were for the first time appointed trustees of the Clyde navigation. In 1825, by a fourth Act, the Trustees' jurisdiction was extended to Port Glasgow, and power was given to deepen the river to 13 ft., and the constitution of the Trust was widened by the addition as trustees of "five other persons interested in the trade and navigation of the river and firth of Clyde," to be appointed by the Magistrates and Council. In 1840 a further Act was obtained, providing for the deepening to 17 ft. at neaps; and, between 1846 and 1884, various Acts were obtained, arranging for the construction of docks, and the borrowing of money, for the provision of harbour tramways, and for the construction of graving-docks. One of these, obtained in 1858, and known as the Consolidation Act, fixed the number of Trustees at twenty-five, consisting of the Lord Provost and nine members of the Town Council, two of the matriculated members of the Merchants' House, two chosen by the members of the Trades' House of Glasgow, two by the Chamber of Commerce of Glasgow, and nine by the shipowners and ratepayers; the qualification of the latter members of the Trust being ownership to the extent of at least 250 tons of shipping, or payment of rates to at least the extent of £25 per annum; and the qualification of those who elect them, ownership to the extent of at least 100 tons of shipping, or payment of £10 of rates or upwards. The offices of the Trust are situated in Robertson-street, near the Broomielaw.

The harbour, the docks, the shipbuilding, and the maritime trade of Glasgow will claim more particular description after that of the modern city, which is the mistress of so many arts, trades, works of improvement, and manufacturing industries. Our topic, combining diverse views of "Glasgow and the Clyde, Past and Present," has so far been topographical and historical; it presents, like the scenes in our Illustrations, many striking contrasts. From the reputed "Source of the Clyde," in "the peace that is among the lonely hills," and from the cataracts of Cora Linn, and the Heart of the Forest, where the shy deer come to drink of still fresh waters among the trees of romantic Cadzow, what a change it is to the Broomielaw, where two miles of quays are crowded with shipping, and to the bustle of Argyle-street and Union-street, and to the cotton-spinning, weaving, bleaching, and calico-printing factories, to the iron and steel foundries, the mechanical engineers' works, the collieries, the chemical works of the industrial suburbs, and to the iron shipbuilding yards of Govan, and to the mansions of commercial and manufacturing aristocracy at the West-End, and finally to the Glasgow Exhibition! Here are things old and new, the soothing charms of rural Nature, the solitudes of mountain, forest, and moorland, the sweet aspects of a fertile plain, the ruined castles on crags that have echoed the shouts of ancient warfare, the traces of turbulent feudal chieftainship, the haunts of Wallace and Bruce, the battlefields of stern historical conflicts, of the partisans of Mary Stuart and those of the Covenant, of Claverhouse and the Duke of Monmouth with the stern Cameronians—all these, within a short journey up the Clyde, near enough to the huge town of varied and incessant labours, of increasing riches, of immense capital, science, skill, credit, and enterprise, where the ghost of Bailie Nicol Jarvie, walking the new streets in the silence of night, may stand amazed at the prosperity of his civic successors! And the spirit of St. Mungo, of the saintly Kentigern, whose lowly dwelling was on the banks of the Molendinar, when "Love had he sought in huts where poor men lie," bearing his message of Christian faith and duty to the wild heathen of Strathclyde, may look on his cathedral—and with equal approval, no doubt, on Norman Macleod's church hard by, a centre of the truest Christian teaching—whence the ancient Celtic title, "Kind Friend," the original designation of the Glasgow Pastorate, ought ever to speak to the hearts of the people.

Glasgow is a handsome and substantially built city, and the streets are, for the most part, laid out with great regularity, running either parallel with or at right angles to the river. The principal thoroughfare is Argyle-street, running east and west, nearly parallel to, and about 500 yards from the river. The point at which it is met by Jamaica-street and Union-street may be considered the centre of Glasgow. Here nearly all the tramway lines running east and west, north and south, intersect; the two principal railway stations, St. Enoch and the Central, are within two minutes' walk; while Queen-street station, Bridge-street station, and the Broomielaw steam-boat wharf may be reached in a few minutes. Argyle-street is the main industrial artery of the city, and, with its continuations Main-street and Dumbarton-road to the west and Trongate and Gallowgate to the east, connects the two extremities of the city by an unbroken line of street above five miles in length. Other important thoroughfares parallel to Argyle-street are George-street, passing through George-square, connecting with Duke-street, and forming the main roadway to the north-eastern district, Dennistoun. From the central point already mentioned, Union-street, with its continuations Renfield-street and Port Dundas-road, runs north as far as the industrial suburb of Port Dundas; and with Jamaica-street, Bridge-street, and Eglinton-street on the south forms the principal north and south route for the immense traffic over Glasgow Bridge. Buchanan-street, to the east of Union-street, is the principal outlet from St. Enoch station to the north, and is considered the best shopping street in Glasgow, though Sauchiehall-street, running west from the

THE FINGAL, ONE OF THE EARLY STEAMBOATS ON THE CLYDE.

head of Buchanan-street, vies with it for shopping, and is the principal approach to Kelvingrove Park. The New City-road, with its continuation, the Great Western-road, is one of the longest and straightest of Glasgow thoroughfares. The Great Western-road passes through the fashionable suburbs of Hillhead and Kelvinside. On the south side of the river, Paisley-road, with its continuation Govan-road, follows the course of the Clyde, passing through the populous and modern district of Tradeston and Kingston on to the burgh of Govan; this forms the main east and west thoroughfare. Main-street, in line with the Victoria Bridge, and Crown-street, opposite the Albert Bridge, are other important streets on the south side, all at right angles to the river, and parallel to Eglinton-street. The city districts of Sandyford, Kelvinhaugh, and Woodside, Anderston, Finnieston, Gorbals, Hutchesontown, Tradeston, and Kingston were, until comparatively recent times, almost country villages. The older quarters of the city, about Drygate, High-street, Gallowgate, Bridgeton, Saltmarket, Bridgegate, Trongate, the Wynds, Gorbals, and Calton, have been much altered between 1866 and the present time. The operations of the City of Glasgow Union Railway, and still more of the City Improvement Trust, acting under an Act obtained in 1866, have removed many narrow dirty courts, lanes, and streets. High-street, Rotten-row, and Drygate retain few signs of their former importance. Adjacent to Drygate is Duke's-place, which contained an ancient house at one time belonging to the Earl of Lennox, and afterwards to the Duke of Montrose, where Darnley's illness took place, and where Queen Mary visited him. It was removed in 1853. Its connection with the Duke gave its name to Duke-street. The suburban villages and burghs connected with the city by rows of houses or by partly-open roads are:—Maryhill and Keppoch-hill to the N.W., Springburn to the N., Shettleston, East Muir, Hogganfield, Provanhall, Tollcross, and Parkhead to the E.; Crosshill, Strathbungo, and Pollokshields, to the S.; Kinning Park, Govan, Govan-hill, to the W.S.W.; and Hillhead, Partick, and Whiteinch to the west.

The architectural and monumental grandeurs of the city—apart from the Cathedral and the University—are to be found in George-square, a place which was the rough playground of Glasgow boys now become sober elderly men. On the east side of it has arisen a magnificent public edifice in the Italian style, with abundant ornament, which has been built since 1883 at a cost of half a million sterling—the New Municipal Building, occupied by the Lord Provost, Bailies, and Town Council, with their Town Clerk and Chamberlain and other municipal officers, for the business of the Corporation, which in the olden time was transacted in the Tolbooth, and before that, in the Bishop's Castle. The square is adorned with bronze equestrian statues of the Queen and the late Prince Consort; a Doric fluted column 80 ft. high, on top of which is Sir Walter

Scott; sitting bronze statues of James Watt, the practical inventor of the steam-engine, and Dr. Graham, Master of the Mint; and statues of Robert Burns, the Ayrshire poet; General Sir John Moore, Field-Marshal Lord Clyde, and Thomas Campbell, three natives of Glasgow; Sir Robert Peel, Dr. Livingstone, and Sir James Oswald, the first M.P. for Glasgow. In Queen-street, in front of the Royal Exchange, which has a Corinthian pillared portico and a tall clock-tower, is a fine bronze equestrian statue of the Duke of Wellington. There is an equestrian statue of King William III. in the Trongate; while the Nelson Column on Glasgow-green, the column and statue erected in the Necropolis to the memory of John Knox—more honoured here than at Edinburgh—and the statue of Dr. Norman Macleod, near the Barony Church, show the disposition of Glasgow to perpetuate, by such monuments, the fame of great and good men.

Among the public buildings worthy of notice are the Royal Infirmary, near the Cathedral; and, the finest of all modern edifices in Glasgow, that of the University, on Gilmour Hill, on the west bank of the Kelvin. The University and College buildings have been erected, within the past twenty years, at an expense of above £500,000, and are unequalled in stateliness. They are in the Early Pointed or Gothic style, with a mixture of the style of baronial domestic architecture borrowed by Scotland from France. They form an imposing rectangular pile, 532 ft. in length and 295 ft. in breadth. The main front faces to the south, and from the centre rises a lofty tower 150 ft. high, terminating in a spire rising about 100 ft. from the top of the tower, in which are a clock and bells to strike the hours and quarters. The principal entrance, with a deeply moulded Gothic arch, is in the centre of the tower; and two smaller entrances of similar design, placed midway between the central and corner towers, lead to the eastern and western quadrangles. The building was designed by Sir George Gilbert Scott.

The Glasgow public parks and recreation grounds are favoured by their situation; that of Kelvin Grove, or the West End Park, close to the present Exhibition, is very pretty, and is laid out as a pleasure-garden; the old mansion-house is now a Natural History Museum. Queen's Park, on the south side of the city, is on high ground, commanding very fine views in all directions; there is also Alexandra Park to the north-east. The Botanic Gardens are the resort of persons of taste and fashion; while Glasgow-green, up the river, is still a popular play-ground.

Glasgow chiefly owes its prosperity to the enormous engineering and shipbuilding concerns in and around the city; and these are supplied by the immense deposits of iron and coal adjacent to, and even underlying the manufacturing establishments. Shipbuilding and marine engineering on the Clyde employ about 50,000 men; while iron and steel making, iron-founding, boiler-making, locomotive engine-building, and general engineering, give occupation to as many thousand more. The steel now extensively used for shipbuilding is made partly from Spanish ores by the Siemens process, and partly from native ores by the Thomas-Gilchrist process, in about a dozen large steel-works in the neighbourhood. The application of steam-power to cotton-spinning, and the operations of bleaching and calico-printing, contributed greatly to advance the wealth of Glasgow; silk and woollen goods, including carpets, are also made to a considerable extent. Altogether the textile factories give employment to one-eighth of the population of the city.

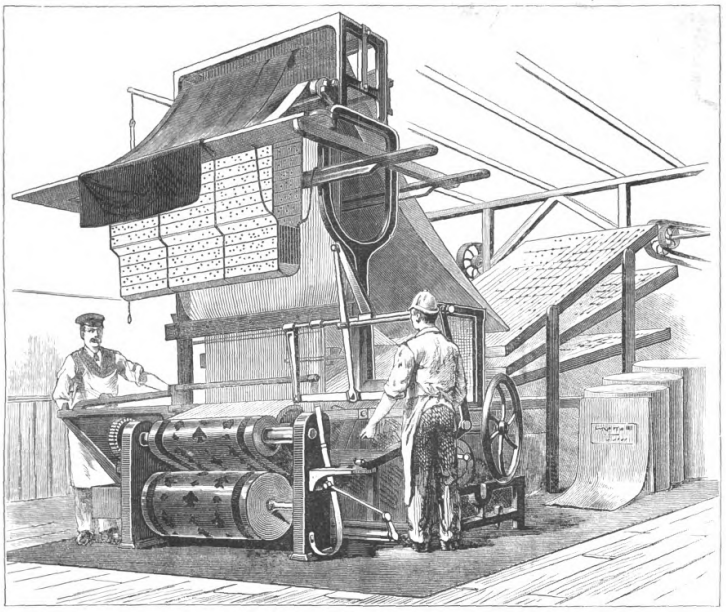
Chemical manufactures have been extensively carried on, especially in the sugar-of-lead making process, the manufacture of dry chloride of lime (bleaching-powder), and the Mackintosh invention for producing waterproof cloths. The St. Rollox Chemical Works of Messrs. Tennant, Knox, and Co. are the largest in the world; they annually transform about 80,000 tons of raw material into soda, bleaching-powder, and sulphuric acid. Their "monster chimney" rises 455½ ft. in height, and is one of the sights of the city. Another important industry is the manufacture of glass, glass bottles, pottery and earthenware, commenced in 1730, and now carried on extensively in various parts of the city. These glass-blowing establishments contrast greatly with the old "Bottle-house Lum"—a reminiscence of the boyhood of our Artist, Mr. William Simpson, who is a native of Glasgow. A "lum" is Scotch for a "chimney." He has also supplied us with a sketch of James Watt's house, which was taken down, about 1847, to make a new street, now called "James Watt-street," from Argyle-street to the Broomielaw. It was here that Watt is said to have resided at the time when he made the improvements in the steam engine. Mr. Simpson's sketch of the riverside at Govan, with the mouth of the Kelvin, as it was in 1842, is another graphic testimony of local changes in his lifetime. At this very spot, the great newly-built steel or iron ships are frequently launched from the Govan yards; the river widens so, at the junction of the Kelvin with it, as to allow ample space for the launching.

We have deferred, so far, an account of the docks, the shipping, and the ship-building and marine-engine making, which belong, with the improvement of the river navigation, above described, to the great achievements of science and skill that have gained for Glasgow the rank of third commercial port in the United Kingdom, and which belong also to the history of the Clyde. James Watt, born at Greenock in 1736, apprenticed to an instrument-maker at Glasgow, working at that trade and keeping his shop in the Saltmarket, studying mathematics and mechanics, had a little model of Newcomen's steam-engine, the property of the University, put into his hands for repair. In 1764 he solved the problem of condensing the steam without loss of power; instead of alternately heating and cooling the cylinder, at each stroke of the piston, he devised an apparatus which made steam-power really available for the working of machinery. Ten years later, Boulton and Watt, having patented the invention, set up their great factory of steam-engines at Birmingham. It was not till 1788, in the experiments of Mr. Patrick Miller, with his assistants, James Taylor and William Symington, in a new method of propelling boats, that the steam-engine was applied to that purpose. Symington, who persevered, was afterwards, in 1802, employed by Lord Dundas in further experiments on the Forth and Clyde Canal. He invented the crank connection between the beam lifted by the piston-rod and the paddle-wheel, giving a rotatory action to the latter. This is the origin of the practical use of the steam-engine for locomotion, both on water and on land. In 1811, Henry Bell, of Torphichen, who owned a bathing establishment at Helensburgh frequented by Glasgow citizens, resolved to build a steam-boat to carry them to and fro. The "fly-boats," using sails or oars, or towed by horses, required ten or twelve hours to reach Greenock, a distance of twenty-seven miles. Mr. Bell engaged John Wood, of Port Glasgow, to build for him the Comet, a boat 42 ft. long, 11 ft. broad, and 5 ft. 6 in. deep; which had *two* pairs of paddle-wheels—that is to say, two paddles close together on each side of the boat, necessarily impeding their action on the water. This arrangement was disapproved by Robertson, the Glasgow engineer, who constructed the steam-engines for the Comet; but Mr. Bell had his own notions. The Comet, nevertheless, was able to steam to Greenock in three or four hours, and at a cost so much reduced that the first-class passenger fare was only five shillings. She was followed, in 1813, by the Elizabeth, a boat also built by John Wood, with engines made by James Cook, of Glasgow, and by five or six other vessels of increasing power, one of which, the Industry, built in 1814, is still in existence, and her first engines are in the Glasgow Museum. It was several years before anybody ventured to navigate the open part of the Firth of Forth with a steamer; and the Rob Roy, built in 1818 by William Denny at Dumbarton, with a thirty-horse power engine made by David Napier, was the first to cross the sea to Belfast. Wood and Napier then took up the construction of sea-going steamers, plying to Liverpool, Holyhead, and Dublin; in 1820, the Clyde possessed nine such vessels, and in 1828 there were twenty-five. Mr. Robert Napier was associated thus early with the firm of Messrs. G. and J. Burns in steam-navigation. In 1838, the steam-boats Sirius and Great Western crossed the Atlantic, and the Cunard Company started in 1840, with four wooden paddle-boats, each of about 1100 tons burden. David Elder and his son, the late Mr. John Elder, were builders of some of the finest Cunard liners; and the firms established by the Napiers and the Elders have always maintained their high reputation.

THE PICTURE GALLERY.

Such were the early efforts of Clyde steam-navigation; and many Glasgow people will remember the Trusty and the Industry, two old tubs which paddled up and down with goods to Greenock up to a few years ago. They were good specimens of the type of vessel which first was conceived. They were scarcely as large as the penny boats on the Thames, with round, bluff bows, and with the small paddle-boxes placed well forward. The Fingal, of which we give an Illustration from a sketch as the old hulk lay in Greenock in 1857, was built in 1819, and she was a great advance upon the model of the Trusty and the Industry, in her lines and in her size; still she represents very rude ideas of what the type of a steam-boat might be. The Precursor, which was built in the Clyde over half a century ago, shows the advance that had

then been made. Ocean steam navigation had then begun; this ship was built for the Peninsular and Oriental Company, being their first vessel, and, as the name implies, she was the "Precursor" of their now magnificent fleet of steam-ships. She was a wonder at the time as she lay at the Broomielaw getting in her engines, and crowds of people went to look at her. Our Artist, Mr. Simpson, remembers seeing her there when a boy; and in 1868, when on his way to Abyssinia, to take part in the campaign there, he found her lying as an old hulk at Suez, where she was used as a store for the various articles required by the P. and O. steamers on what was known as the "other side"—a term in vogue, before the Suez Canal was made, for the lines of traffic on the Indian Ocean. He then made a Sketch of her, which is here given, and he reports that she has since disappeared. The screw propeller was unknown when the Precursor was built. She was a link in the series of progressive improvements which have been made to the construction of the magnificent ocean-going steam-ships of the present day. The first iron steam-vessel plying on the Clyde was the Fairy Queen, built at Glasgow in 1831; the first iron screw-steamer from Glasgow was the Fire Queen, in 1845, two years later than the Great Britain, which was constructed at Bristol.



There are, on the Clyde, including Dumbarton and Greenock as well as Glasgow, perhaps thirty-five or forty separate ship-building yards, mostly for the construction of steel and iron ships. In the single year 1883, which was one of exceptional activity, they built ships to the enormous aggregate size of 419,600 tons burden, which fell to 296,800 tons in 1884. The steel ships alone built in 1887 amounted to 148,600 tonnage. Many of the largest works have engine factories in connection with the ship-building. The total number of workpeople employed, altogether, in building ships and making engines for them, and in the preparation of iron and steel for them, has been variously estimated from 120,000 to 150,000. They construct ironclad war-ships, for the British and foreign navies, mail-packet and passenger ships, the finest in the world, swift cruisers and gun-boats, cargo-carrying merchant-steamers, crack yachts and sailing clippers, coasters, powerful tugs and dredgers, vessels of great variety owned by many ports and nations. All this vast industry has grown up from Henry Bell's simple Comet in the present century.

The Lancefield Works, still carried on, with undiminished energy, under the name of Messrs. R. Napier and Sons, but of which Mr. Alexander Kirk, an eminent marine engineer, is now the head, while Mr. James Hamilton, also a managing partner, directs the ship-building, claim particular notice. In giving precedence to this establishment, it may be observed that the Elders, Randolph, Pearce, Thomson, Brock, and other marine architects and engineers on the Clyde, were trained in the service of Robert Napier. The works of the Napiers have been going on about fifty years, and have produced nearly five hundred ships. The Lancefield yard, employing 2500 men when in full operation, can build, engine, and fit out six of the largest ships at once. The ship-building department is situate on the south side of the Clyde, just beyond the entrance to the Graving Dock, the engine-works being on the north side, nearly opposite. The offices at the shipyard are of a substantial character, including the designing-office, where a number of young-lady tracers are employed. The principal building where the general shipwork in iron is carried out is replete with machinery and appliances necessary for work of the heaviest or the lightest description. These include plate-rollers, plate-planers, punching and sheering presses for plates and angle irons, vertical drills, and other appliances, including furnaces, bending blocks, and scrieve boards. The saw-mill and joiners'-shop are in one range of buildings, the one on the ground floor, the other above. Both are fitted with a large number of wood-working tools of the best British and American make. The smithy has five steam-hammers, besides a large number of fires and the usual appliances. Adjoining this is the machine-shop, with lathes and other machine-tools for finishing the smiths' work. Beyond are the iron stores and the angle-iron smiths' shop, where there are a number of fires and a steam-hammer. A noteworthy tool here is a large hot-iron saw, used for cutting beam-ends and angles for frames in the special work required for ironclad construction. We need not describe the engineering works. Throughout the various sections, forge, smithy, turning-shop, erecting-shop, pattern-shop, and boiler-building works, are many powerful and ingenious machine-tools, some of the firm's own design. The erecting-shop recently built is a fine lofty section of the works, and contains several powerful travelling-cranes.

The resources of Messrs. Napier and Sons' establishment have been particularly applied to the production of naval ships. When the Government, in April, 1885, invited private builders to tender for the five belted cruisers of the Australia and Galatea class, Messrs. Napier got the order to construct two of the five—the two named. The engines for these vessels were at first to be of the ordinary compound type of 7500-horse power, but Messrs. Napier proposed to fit triple expansion engines, undertaking to develop 8500-horse power, without taking up any more space in the vessel, or increasing the collective weight of machinery and coal. The result was most successful. The remarkable advance, of late years, in the speed of steam-ships, together with great economy of fuel and of space formerly required for coal on long voyages, is due to the principle of admitting the steam, at a very high initial pressure, successively into two or three or even four cylinders; its expansive force naturally diminishing, but this being compensated by an increasing diameter of the second and third cylinders, and of the pistons in them. Since 1874, when Mr. A. C. Kirk, then of the firm of Messrs. John Elder and Co., introduced this principle, it has gained such favour as to be likely to supersede the former compound engine, which came into use twenty years before. A speed of twenty knots an hour, equivalent to over twenty-four miles an hour on land, is now attained by some of our swift cruisers.

The Fairfield Shipbuilding and Engineering Company (Limited), of which Sir William Pearce, Bart., is head director, carries on the great business long known as that of Randolph, Elder, and Co., and John Elder and Co., more especially renowned for ocean steam-ships carrying mails and passengers with speed unsurpassed by such vessels. The works are much larger than those of Messrs. Napier and Sons, employing in busy times 7000 men; the wages paid in one year have amounted to £375,000. Fairfield is at Govan, on the south bank of the river, where seventy acres of land are occupied by these works. Mr. John Elder, who was born in 1824, son of Mr. David Elder, the manager of Mr. Robert Napier's works, and was educated at the Glasgow High School and Glasgow College, was a great scientific and practical improver of marine engines. His invention, in 1854, of the compound high and low pressure was of great value in the economy of coal, and perhaps secured the commercial victory of steam-ships in the competition with sailing-ships. A statue of this eminent shipbuilder and engineer, who died in 1869, has been erected at Govan, where his widow has given a public park.

In mentioning the Clyde shipyards, besides those at Glasgow, it is just to notice that of Messrs. William Denny Brothers, at Dumbarton, with Mr. Walter Brock, managing partner, whose works have greatly contributed to the mercantile fleets of the companies that carry traffic to the East Indies and to the British Colonies. Their name is almost a household word in New Zealand; and one or two, of the Shaw, Savill, and Albion line of steam-ships, built by them, have distinguished themselves greatly in voyages from that distant colony. The British India Steam Navigation Company, the Peninsular and Oriental, the Allan Line to Canada, and others, have been largely indebted to these Dumbarton builders. At Greenock, between the Albert Harbour and the West Harbour is the important establishment of Messrs. Caird and Co., which stands in the first rank for work of the same class as that of Messrs. Denny. The Clydebank yard of Messrs. J. and G. Thomson, at Glasgow, has achieved notable successes; and, with its eight building slips, vast iron-working sheds and smitheries, engineering, and boiler-making, brass-casting and finishing, and other departments, can give work to four thousand hands. Messrs. D. and W. Henderson, of Partick, have turned out very fine vessels. A professorship of the science of shipbuilding has been founded in the University of Glasgow.

THE GLASGOW EXHIBITION: CARPET-WEAVING.

The port of Glasgow, in 1887, owned 1487 ships on its register, with an aggregate tonnage of 1,141,037 tons, showing 767 tons as the average capacity of its ships. It holds, in this respect, the third place in the United Kingdom and in the world. The list includes those of the Cunard Company, the Allan Company, and the Anchor Line, Atlantic steam-ships, others running to the Mediterranean, to the East Indies, and to South America, and to many ports of Great Britain and Ireland, and the Continent of Europe. The quays at Glasgow, of which the Broomielaw is the ancient part, extend two miles and a half along the river; besides which there are two tidal docks on the north shore, the Queen's Dock, with its three basins, 20 ft. deep at low water, being the largest in Scotland; and two large public graving-docks, in addition to which there is Messrs. Henderson's graving-dock; and other docks are being constructed on the south shore at Govan. There is already dock accommodation for a million tons of shipping. At Greenock there are the Victoria Harbour, the Albert Harbour, and the immense James Watt Dock, which is 2000 ft. long, 300 ft. wide, and has an entrance 75 ft. wide, with a depth of 32 ft. at low water; the Garvel Graving Dock is one of the finest in existence. At Dumbarton there is a commodious dry dock belonging to Messrs. M'Millan, shipbuilders.

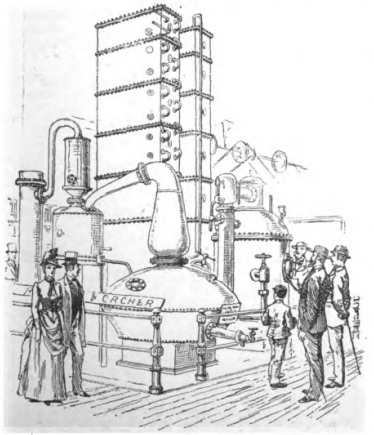
Leaving Glasgow, the city of immense commerce and industry, with a population of 731,117, including the suburbs and suburban burghs—passing down the Clyde in one of the beautiful steam-boats running to the lochs, coasts, and isles of the West Highlands, which start from the Broomielaw every morning—the shores of the river, widening into the Firth, soon become attractive and interesting. To the left is the old town of Renfrew, beyond which rises a cloud of smoke from the Paisley factories. Below Renfrew is Blythswood House, where the Queen is the guest of Sir Archibald Campbell, Bart., M.P., the President of the Glasgow Exhibition. A few miles lower down, to the right, the Rock of Dumbarton, the ancient stronghold of Alclnith, with its Castle, famed in the wars of Bruce and Wallace, and in the Scottish civil wars, is seen lifting its stern head 400 ft. high, guarding the gate of Western Scotland. On the southern shore, at Port Glasgow, is the old baronial fortress of Newark Castle, in a ruinous state, yet still bearing, inscribed over its door, the monogram of Sir Patrick Maxwell and his pious motto, "The Blessingis of God be Herein, Anno 1597." The view to the north, presently, is up the Gareloch, with Roseneath and Helensburgh at its entrance, and to the hills of Dumbartonshire and the Argyllshire mountains. Greenock, which is a minor Glasgow, sitting amid grander waters, is then reached for a brief halt on the voyage. After rounding the next piece of the south shore, to Gourock, a favourite yachting-station, with the pleasant neighbouring hamlet of Ashton, a charming view is enjoyed, in fine weather, up the Holy Loch to the grand Hill of Kilmun, and to the sublime summits of Ben More and Ben Beg, over Loch Eck; or, a little to the east of these, up Loch Long, to Ben Arthur and the other mountains around the head of Loch Goil. Anyone who has chanced to see them very early on a summer morning, with their shapes and hues of colour just softened by a delicate veil of the thinnest aerial mist, that lets them appear on the horizon as it melts in the sun's rays, will remember it as one of the loveliest visions of earth.

Dunoon, which may be considered a seaside place, looking down the last reach of the Firth of Clyde, is known to many English as well as Scottish visitors. Five or six miles below, opposite to Rothsay in the fair Isle of Bute, is Wemyss Bay, where the Ayrshire coast begins; and this also is a very pleasant place. Passing through the Kyles or Straits of Bute, or descending by the main channel, past the Cumbrae Isles, and rounding Garroch Head, to enter Loch Fyne, for the Crinan Canal or for Inverary, it is a voyage of continual delight. The Lord Provost of Glasgow, a much more douce and amiable dignitary than the Doge of Venice, and presiding over a city which is better entitled than Venice ever was to be styled the Queen of the Sea, might have one of these Clyde steam-boats for his Bucentaur, and yearly come out to drop a golden wedding-ring in the sea, as the Doges used to do, but somewhere in sight of Goatfell or of Ailsa Crag. We conclude, in the spirit of patriotism, with the earnest prayer of an insular Scottish pastor: "Lord save the Great and Little Cumbraes, and the adjacent islands of Great Britain and Ireland!"

THE GLASGOW EXHIBITION.

The International Exhibition at Glasgow, opened by the Prince and Princess of Wales on May 8, is the largest that has been held in the United Kingdom since the London International Exhibition of 1862. The buildings and grounds occupy sixty-six acres, in the Kelvin-grove Park, the main entrance, facing north-east, being nearly opposite the Glasgow University buildings, which are on Gilmore-hill, on the other side of the stream. From that direction, the grounds are reached by a broad esplanade from a gateway in Bank-street, Hillhead; but the Exhibition Palace can be entered immediately either on its east side, in Gray-street, or from Sandyford-street, in the centre of its south side. The building is 1300 ft. long and 265 ft. wide, comprising a nave and transepts, with an iron dome, 170 ft. high and 80 ft. in diameter, and with ten towers, which are 200 ft. high, and are partly of brick; the remainder of the building is chiefly wooden. It is in the Saracenic or Moorish style of architecture, with arches of horse-shoe form, polygonal domes or cupolas, minarets and pinnacles, and appropriate decoration, painted internally with a rich cream-colour, relieved by deep red and rich dark brown, except the dome, which is painted red, blue, yellow, and green, and its framework apparently gilt. The main avenue, from east to west, is more than a quarter of a mile long, 60 ft. wide, and 43 ft. high; the transepts, from the grand entrance to the south entrance, are 215 ft., and of the same width as the nave. The dome, rising from four substantial towers, is well proportioned. Its converging arches are adorned with the armorial bearings of Great Britain, France, Germany, the United States, Canada, Australia, South Africa, and India, and on circular panels below are four allegorical figures, Science, Art, Industry, and Agriculture. Scripture texts, speaking of the manifold works of God, and acknowledging that the manifold works of man are the gift of God, are inscribed over the four great arches under the dome. In the centre is a fountain, with a circular promenade around it; a chandelier with eight electric lamps gives it light in the evening. At the east end of the main avenue is the grand hall, 200 ft. long, 96 ft. wide, and 60 ft. high, with side galleries, an orchestra, and a fine organ, built by Messrs. J. W. Walker and Sons, of London. The decoration is in red and yellow, with festoons of red and blue cloth, fringed, heraldic shields and trophies, and canvas panels, filled with coloured ornamentation of Moorish patterns. To the south of the grand hall is the Fine Arts Section; the Picture Gallery and the Sculpture Gallery occupying a substantial brick-walled part of the building, made fireproof, and which may be permanent. At the west end of the main avenue, beyond the principal building, and north of the line of its front, is the Machinery Annexe, 330 ft. long and 286 ft. wide. The buildings altogether cover a space of 474,000 square feet, of which 268,000 ft. are devoted to general exhibits of the various classes (manufacturing and commercial and articles of produce), 27,500 ft. to the Fine Arts, 16,000 ft. to the grand hall, 23,000 ft. to dining and refreshment rooms, and 140,000 ft. to machinery, boiler-sheds, and the like. Messrs. Campbell, Douglas, and Sellars, architects, of Glasgow, and Mr. James Barr, C.E., furnished the design for these buildings; Messrs. W. Shaw and Sons, of Glasgow, were the contractors. The arrangement and construction are highly approved. The grounds outside, sloping to the banks of the Kelvin, which are grassy and adorned with trees, and merging in the Kelvin-grove Park, contain many objects of interest. One of the most attractive is the Fairy

Fountain, constructed by Messrs. W. and J. Galloway, of Manchester. Its basin is 120 ft. in diameter; its machinery throws the jets of water 150 ft. high; and these, in the evening display, are splendidly illuminated and coloured, internally, by a system of electric lights, in a circular chamber beneath the centre of the fountain, with glass slides of different colours. The Doulton Fountain, of artistic terra-cotta work, 60 ft. in diameter, is of beautiful design, in the Renaissance style, with a statue of the Queen, wearing her crown and holding the orb



THE GLASGOW EXHIBITION: CIGARETTE MAKING.

and sceptre, four decorative figures pouring water from vases, and groups representing India and the Colonies, and the Army and Navy. Messrs. Doulton, of Lambeth, have munificently presented this noble work to the city of Glasgow. The building in imitation of the ancient Bishop's Castle of Glasgow, which we have described on a former occasion, contains several interesting collections of historical and antiquarian relics; some relating to the early Christian Church in Scotland, some to King Robert Bruce, some to the Stuarts and to Queen Mary, some to Knox and the Reformation, or to the Covenanters, and to the Jacobites, besides memorials of Robert Burns and Sir Walter Scott. The Queen's Jubilee gifts, lent by her Majesty to the Exhibition, are placed on view in the Kelvin-grove Park Museum.

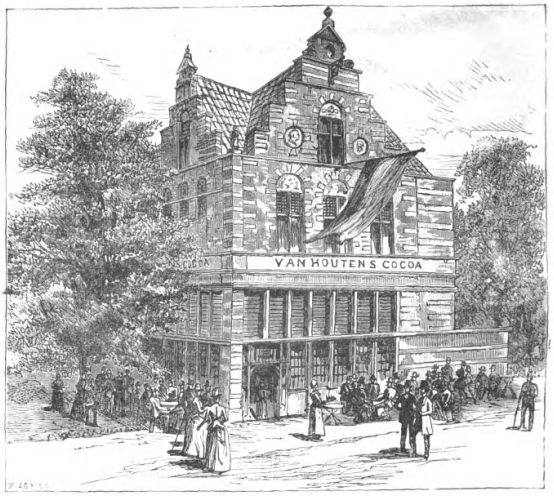
The different classes of articles in the Industrial Exhibition have already been enumerated, and follow much the same order as that with which everybody is now familiar: for example, agriculture, mining, and quarries, engineering, shipping, machinery, carriages, cutlery, chemistry, food and liquors, textile fabrics, paper and printing, furniture, pottery and glass, jewellery, clocks and watches, fisheries, education, and musical instruments, each subject with others allied to it. We give a few Illustrations of carpet-weaving, pen and pencil making, cigarette-making, and the apparatus for distilling rum, sent by a firm at Dundee; also, from among the miscellaneous curiosities, two relics of the French War.

The great Glasgow industry of shipbuilding is well represented in the Exhibition, and may be selected here for more particular description, after the account of its history in our article on "Glasgow and the Clyde, Past and Present." Nearly all the Clyde shipbuilders of note, and some of those on the Tyne, with the principal manufacturers of iron and steel for this purpose, and of marine steam-engines, have contributed to the Exhibition. Many of the models are beautifully

THE GLASGOW EXHIBITION: COPPER RUM STILL,
EXHIBITED BY ROBERTSON AND ORCHER, DUNDEE.

executed; one that is much admired is that of the new Inman and International liner, the City of New York, recently launched by Messrs. J. and G. Thomson. Another is the model of a proposed new Guion liner shown by the Fairfield Company, and expected by them to perform the Atlantic passage in five days. The models of the Government cruisers, despatch and torpedo boats, recently built by Messrs. R. Napier and Sons and J. and G. Thomson, attract much attention. Messrs. Denny and Brothers are represented by a large number of models of their vessels, and by that of a ship's dining-saloon with music-room above, which has been prepared with the view of showing the artistic and structural skill of their establishment at Dumbarton. Messrs. Palmer and Co., of Newcastle, are represented by a stand on which are displayed models of H.M.S. Orlando and Undaunted, twin-screw belted cruisers, and H.M.S. Surprise and Alacrity, despatch-vessels, recently built by this company; also, models of their newest passenger-steamers, and a working-model of triple-compound engines as fitted in the steam-ship Flamborough. Messrs. Swan and Hunter, of Newcastle, and Joseph L. Thompson and Sons, of Sunderland, are also represented by interesting collections of their vessels. Apart from models of the ordinary type of mail and passenger steam-ships, there are examples of the more specialised work for which the Clyde is also famed. Messrs. Fleming and Ferguson, of Paisley, and Simons and Co. and Lobnitz and Co., of Renfrew, show models of the powerful dredgers and hopper-barges, which are an essential agent in the maintenance of such water highways as the Clyde. The last-named firm exhibit the model of the marine-dredger, Dérocheuse, fitted with the firm's patent rock-breaking apparatus, recently built for the Suez Canal Company. Many of the shipowning companies exhibit models of their vessels; while Messrs. Henderson Brothers, of the Anchor line, display pictures of several of their fleet of steam-ships, of which the most prominent is the City of Rome. The Cunard Company show a beautiful model of the steam-ships Umbria and Etruria, noted for their fast passages across the Atlantic. The Allan line exhibit a full-sized example of the intermediate passenger accommodation on board their steamers. At the stand of Messrs. J. and G. Thomson there is also shown a specimen state-room as fitted on board the new Inman liner.

Ship's compasses and other nautical instruments are shown by D. M'Gregor and Co., F. Sewell, A. Dobie and Son, and Whyte and Co. Ship's rigging and other blocks, and steering-wheels, are displayed by the well-known blockmakers, W. Alexander and Co., Govan. In the west corridor, Copeman and Co., London, show their well-known seat-rafts and life-buoys; the latter are also displayed by Steedman and M'Alister, and by John Wilson, Glasgow. Anchors, boat-davits, lamps, clocks, telegraphs, and many other articles of a ship's outfit, are here exhibited. Marine engineering is exemplified in the section occupied by machinery in motion. It contains, for instance, Messrs. Ross and Duncan's set of full-sized triple expansion engines, working under steam, and fitted with Bremme's patent valve-gear for reversing and for varying the expansion; Duncan's patent propeller is attached to the shaft of the engine. Messrs. Wigham, Richardson, and Co., of Newcastle, exhibit a working model of their triple expansion engines, as fitted in the Alphonso XII., of the fleet of the Compañia Transatlantica, Spain. In the Main Avenue, Denny and Co., of Dumbarton, have a model illustrating Brock's patent quadruple expansion engines. At the Palmer Ship-building and Iron Company's stand, already noticed, there is a working model of triple expansion engines, to a scale of 3 in. per foot. Hawthorn, Leslie, and Co., of Newcastle, show, in motion, an exquisitely-finished working model of triple expansion engines for the Royal Italian twin-screw armour-clad, Sardegna, now being constructed by the Società Hawthorn-Guppy, Naples, from the design of the exhibitors. The model, which is to a scale of 1½ in. to the foot, is the work of J. G. Allison, Sunderland, and excites general admiration.



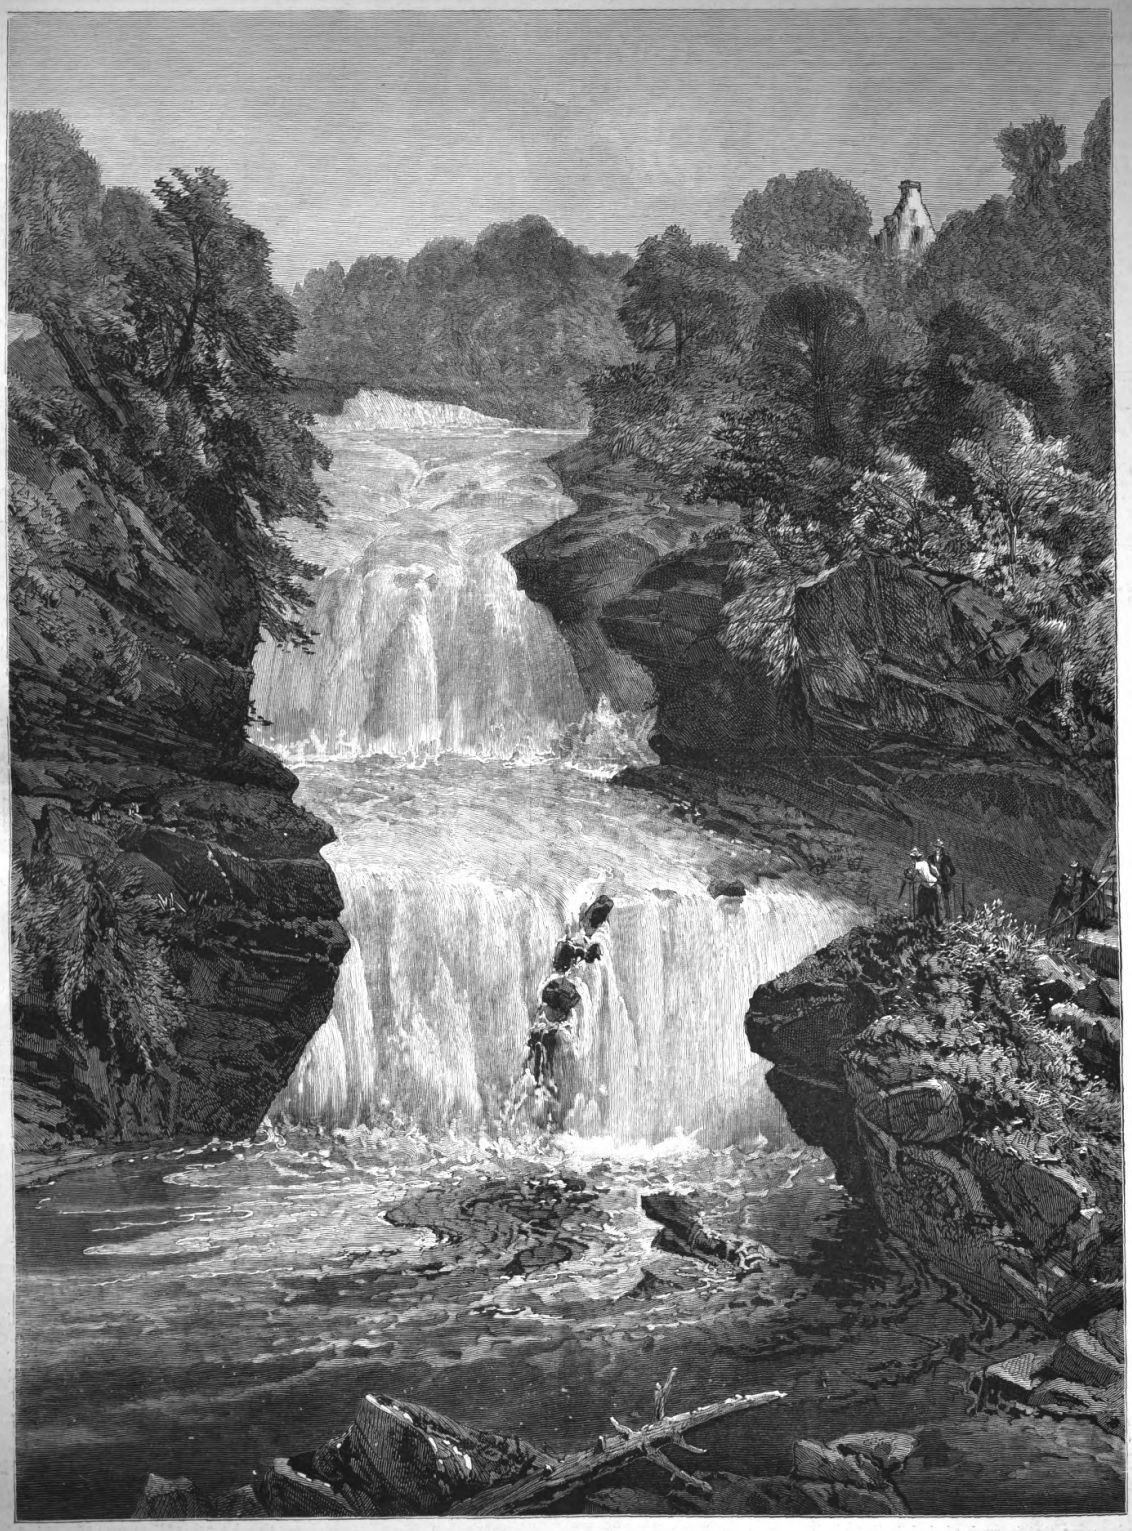
The steel plates, forgings, and castings are of great interest to the marine engineer. The Steel Company of Scotland are represented by one of the "trophy" stands, constructed of examples of the various manufactures in steel. David Colville and Sons, of Motherwell, make an imposing display of their steel manufactures, and the Hadfield Steel Foundry Company, of Sheffield, show a multifarious collection of heavy steel castings for use in almost all departments of engineering. Messrs. Charles Cammell and Co., of Sheffield, contribute an important part of this section. Forged steel crank shafts, cast steel propeller blades, an assortment of ordnance forgings for guns, from 6 in. up to 13·5 in. breech-loading rifled, compound steel-faced armour plates, and armour bolts, are a few of their exhibits, which embrace all kinds of manufacture, from thick armour plates down to the steel plates of which pens are made. Messrs. John Brown and Co., of Sheffield (296), show Purves' patent ribbed boiler-flues, marine-shafting, boiler-end plates, and compound armour; John Spencer and Co., of Newcastle, samples of steel castings and forgings; Lindsay Burnet and Co., Govan, specimen hydraulic and machine flanged-steel boiler-plates.

Machines for drilling, riveting, and tapping plates, when set in their place on the sides of ships or boilers, worked by electro-magnetic power, the invention of Mr. F. J. Rowan, C.E., Glasgow, will be noticed. The collection of machines and tools for working iron and steel, flattening, shearing, sawing, punching, drilling, slotting, milling, screw-cutting, and turning in a lathe, is really wonderful. The various contrivances of patent steering-gear for ships, winches and windlasses, pumps, and other appliances for nautical use, afford an interesting study. All these inventions and manufactures have a special bearing on the means by which Glasgow and the Clyde maintain their position in carrying on a vast maritime traffic.

The Women's Industry Section occupies three courts on the north side of the Grand Hall. The articles are classed under six headings:—Needlework and knitting; lace; mechanical work, such as straw and basket-work, filigree-work, glove-making, flower-making, spinning, feather-dressing, book-binding, &c.; decorative-work and furnishings, carving in wood, &c.; painting, drawing, and engraving on fabrics, china, glass, cards, &c., designs for art embroidery, &c., and tracings of ships' drawings; ladies' and children's hygienic clothing. The work of securing the exhibits was undertaken by three committees of ladies, having the Countess of Rosebery as convener for England and Wales, with Princess Christian as assistant; the Duchess of Abercorn, convener for Ireland; and Lady Campbell, of Blythswood, convener, and Lady King and Lady Thomson, sub-conveners, for Scotland, India, the Colonies, and foreign nations. The labours of these committees, which include in their membership many of the noblest ladies in the land, have been attended with great success. Local exhibitions were held throughout the country to stimulate the work in the districts, and at these the best and most representative articles were chosen for final exhibition. Some came from India, some from Canada, some from Norway, and from other countries of Europe, showing the ornamental work executed by women. From Germany there are illustrations of the mode of teaching needlework in thirteen different schools. There is a silk embroidery loom from Ayrshire in operation, a tweed loom from Harris also worked by women, and some of the Shetlanders attend to produce their fine knitting within the Exhibition. The School Boards have collected the best specimens of work done by girls in the Board schools and in higher-class schools; and the Girls' Friendly Society and similar institutions have shown what can be done under their supervision.

Further notice of the Exhibition, and of the proceedings at Glasgow, must be deferred until next week. In preparing our Illustrations, we have derived some assistance from the photographs lent us by Messrs. Annan, photographic artists.

Her Majesty the Queen, travelling from Osborne on the night of Tuesday, Aug. 21, arrived next morning at Blythswood House, Renfrew, the seat of Sir Archibald Campbell, for a visit of three days, leaving that place for Balmoral on the Friday evening. The Queen, on going to see the Exhibition, was received in the city of Glasgow with a splendid festive demonstration of loyalty, the particular features of which will be shown next week in our Illustrations. The Lord Provost, Sir James King, and the Municipality of Glasgow, did the honours of their city to the satisfaction of her Majesty, and with the hearty co-operation of all classes of the people.

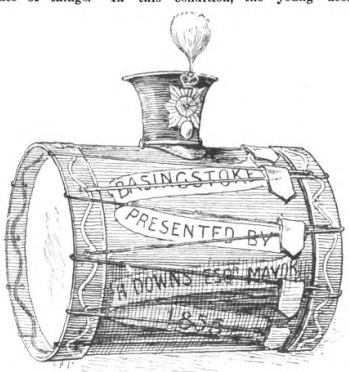


THE GLASGOW EXHIBITION: OLD DUTCH COCOA HOUSE.

SEA-ACORNS.

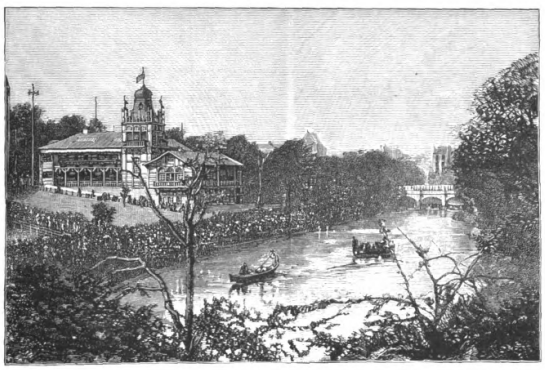
Yesterday, as I came from my dip in the sea, I had to scramble barefooted over a ledge of rock to the safe haven wherein I had deposited the suits and wrappings of the outer man. The surface of the rock, which appeared so smooth viewed from a distance, was, in reality, a veritable place of torture, for it was studded with small sharp shells, contact with which rendered my scramble somewhat of a penitential pilgrimage in its nature. The candid friend who heard my plaint was immediately prepared with a hundred questions regarding not only the nature of these shells, which encrust the rocks everywhere, but concerning the "use" or uselessness of such minute and feeble folk in the world at all. There is much difficulty experienced at times in replying to commonplace questions. What the shells are is a matter easily enough disposed of; what use they may subserve in the world at large, is a point not so easily determined. After all, is this question of "use" really one which need concern us greatly in our studies of life? I trow not; for it surely indicates by no means a lofty conception of things if we are perpetually to speak and think of living beings as we should talk of the items in a store. Each organism, like the smith in "The Fair Maid of Perth," "fights for its own hand" in the struggle for existence. If in the course of its fight it aids or opposes the interests of other living things, it will receive benefit or incur failure in a meed corresponding to its own ways and means. This is really the true philosophy of natural history study. To "consider the lilies" as if they were mere contrivances for human ends and "uses" is a tolerably small-minded fashion of regarding the children of life. To know something of their histories, structure, and relationships, and thereby to learn how life jogs along its primrose way (or the reverse), is in itself an education worth much seeking after and much painstaking care.

A truce to philosophy, however. On a piece of stone close by I discern a colony of these incrusting shells. Into the pool I drop the stone and its tenants. Watch what happens. The upper end of each little shell uncloses, as does a trap-door, and forth issues a set of "feelers," which remind you of delicate feathery plumes. Now, backwards and forwards in the water wave these plumes, expanding to the full in their outward movement, and then gracefully folding inwards, as a preliminary to their next and succeeding sweep. These plumes, moreover, you would find, on microscopic examination, to be abundantly provided with hairs, converting them into veritable brushes, which, like the proverbial broom of Mrs. Partington, are really employed in sweeping the waters. You can guess the use of these plumes, though you may not so readily arrive at a first conception of their nature. They are the commissariat officials of the sea-acorn's economy—for under this name you must know the shells which encrust the rocks, stones, and oysters everywhere. By aid of its "feelers" the sea-acorn sweeps into its mouth the food-particles on which it lives. A most effective brush must these plumes constitute, seeing that they number some twenty-four in all, each of the original twelve being double in nature. It is more than probable that these organs, forming what has been named the "glass



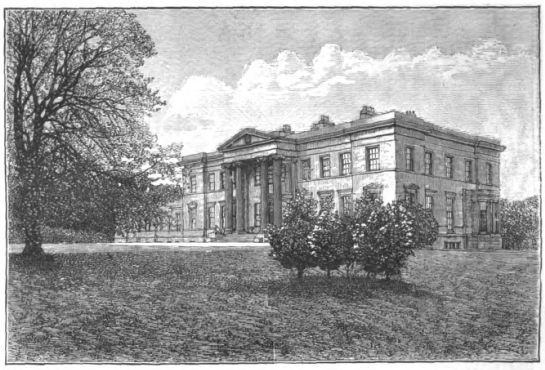
CORA LINN, FALLS OF THE CLYDE, NEAR LANARK.

THE GLASGOW EXHIBITION, VISITED BY THE QUEEN.



hand" of the sea-acorn, also serve for breathing purposes, although inside the shell we certainly light upon structures believed to represent gills. Still, from their incessant waving in the clear water, and from the obvious opportunity thus afforded of bringing the blood of our acorn in contact with the vivifying oxygen of the sea, we may assume with safety that the plumes of the "glass-hand" play a part, at least, in renewing the vital fluid of the miniature frame.

I tap lightly on the stone which contains our colony of sea-acorns, and in a moment you observe each set of plumes is withdrawn, while the trap-doors of the shell are closed with something which reminds you of a defiant snap. This observation, then, proves to us that the acorn possesses means for maintaining relations with the outer world—or, in plain language, that it includes a nervous system among its personal belongings. And if you could dissect the body completely, you would find comprised within the shell a perfect digestive system for the assimilation of food. We cannot presume to gauge perfection of organs by the standard of size in the world of life, and the sea-acorn race illustrates this contention in an apt fashion. Nor can you argue that simplicity of structure always means lowness of origin, for the history of how your sea-acorn came to be what it is proves the necessity for our looking backward as well as forward in the matter of living histories.



Sea-acorns are in reality poor relations of the barnacles which you have seen coating the sides of ships in the graving-dock. The barnacle possesses a stalk, while the acorns want that appendage; and therein lies the principal difference betwixt the races. But both acorn and barnacle in turn show relationships to other and widely different animals. That crab which you see perambulating in the pool in his own lop-sided fashion is an aristocrat of the barnacle class. So also is the lobster, and the shrimp, and the other shelled animals with legs. How do I know this? you inquire. Listen, and you shall be more than satisfied with the correctness of my statement. The sea-acorn in due season develops eggs, and these are liberated from the parent-shell and sent forth into the world of waters to start life on their own account. Each egg develops at first into a widely different animal from the acorn itself. In the days of its infancy the sea-acorn appears as a minute oval body, possessing a single eye. A shell covers its back; a tail appears; and from the front of the body there grows a pair of feelers, while from its sides project two pairs of legs. Internally a digestive system soon appears; and, thus provided, the young acorn swims merrily through the sea. Then comes the moulting-stage. Increase of growth is impossible to a shelled animal unless the old shell be changed for a new one. Hence the reason for the moults which the infant animal exhibits. By-and-by, a further stage is reached when the young acorn attains a still more perfect shell composed of two distinct halves or pieces. The front pair of feelers have increased in size; but the two original pairs of legs have been cast off, and are replaced by six pairs of short, jointed feet. The tail also develops swimming appendages; and two eyes succeed the Cyclopean and earlier state of things. In this condition, the young acorn exactly resembles certain of the adult water-fleas; and it is also to be noted that in the course of their own development the crab and lobster tribes exhibit stages which parallel the condition of the acorn just described. Then the days of its youth come to an end. The feelers grow large and strong; and a cement is poured out from them which fixes the hitherto free-swimming body to rock or shell. The eyes disappear, and the double shell vanishes away, to become replaced by the conical limy structure you see before you on the stone. Last of all, the legs are changed into the plumes or glass-hand of the adult acorn, which, to use the words of a great naturalist, is thus only a kind of degenerate crab, fixed head downwards as we have seen in its shell, and kicking food with its legs into its mouth. Thus you see that to know an animal in reality you must understand its becoming as well as its being. The sea-acorn's history, in this sense, is a lesson which holds good and true of all other living things. ANDREW WILSON.

BASS DRUM AND SHAKO USED AT THE BATTLE OF WATERLOO, IN THE GLASGOW EXHIBITION.

BLYTHSWOOD HOUSE, RENFREW, VISITED BY THE QUEEN.

PENCIL-MAKING: THE GROOVING MACHINE.

A FIGHT WITH A RATTLESNAKE.

A writer in the *Statesman* of India, signing himself "R. M.," who was once head of the Crown Lands Department in the colony of Trinidad, says:—In company with a half-breed, who combined the vocations of woodman and hunter, I stumbled suddenly on a large specimen of the *crotalus mutus* slowly winding its way among the leafy debris of the forest. For some time it was difficult to discern the scaly folds of the snake through the brown mass of decaying foliage; but, having reached a clear spot, the reptile coiled round a low stump and prepared for action. About a yard of the body next the head was contracted into numerous sharp curves not unlike a corkscrew, while the yellow eyes gleamed with a baleful light. There was little fascination about these orbs, and no mistaking the malignant intentions of their owner. A stick brought within reach of that mortal coil was struck almost with the rapidity of lightning, no matter how swiftly withdrawn. This was effected by the instantaneous straightening of the short curves into which this portion of the body had been contracted. Even the wily mongoose would have needed all his marvellous agility to avoid the deadly stroke if once within range. The reach was about a yard, and the assault was delivered horizontally some six inches from the ground, directly towards the assailant.

The hunter, who had hitherto kept at a respectful distance, as he alleged the snake could spring, was eventually persuaded to approach sufficiently near to strike it with a ten-foot pole. At the first blow the heavy coils relaxed from the stump, and the creature appeared dead or stunned. The writer at once grasped the neck about two inches from the head, and raised the reptile partly from the ground to examine it. As though galvanised into life by the touch, the crotalus seemed at once to recover its energies, and swiftly made a couple of turns round the thigh and right arm of its would-be captor. The constricting power exercised was such that the hand grasping the neck soon began to lose power, and the writer realised the awkward predicament into which his temerity had led him. Little could be done with the free left hand while the "scaly terror" began slowly to withdraw its head from the relaxing grasp of the right. For some seconds the trembling woodman appeared deaf to entreaty, and could not be persuaded to apply a noose of liana to the snake's neck. The largest serpents become paralysed when properly noosed, and are readily dragged along the ground helpless as a log. Just as the snake's head seemed about to ooze through the numbed fingers, the half-breed screwed up his courage sufficiently to apply the liana, as directed, with the result that the brute at once relaxed its coils, and was dragged down to a neighbouring stream, hung up and skinned. It measured eight feet five inches, and was about as thick in the largest part of the body as the calf of a man's leg.

The fangs, which were carefully extracted, measured 1¼ in. in length, and were hollow to within a short distance of the point where, on the inner side, lay the orifice through which the poison was ejected by the action of the base of the fan on the small bag in which it was secreted. On squeezing the bag, a small quantity of poison—a yellowish fluid—passed down the hollow in the tooth, and gathered into a tiny drop of concentrated death.

The stomach contained two wood-rats, about the size of guinea-pigs, one partially digested, the other recently swallowed.

According to the annual report of the Central Council of the Children's Country Holidays Fund, 14,048 young ones, gathered from the more crowded districts of London, were sent to cottage homes in the country last year, at a cost of £9178, towards which the parents contributed £2819. The offices of the fund are at 10, Buckingham-street, Strand.

The Corporation of the City of London in the early part of the year instructed the committee managing the City of London School to inquire into the system of teaching modern languages, and what increased facilities could be adopted for their acquirement at the City of London School. The committee has adopted as its own the report of the Head Master, the Rev. Dr. Abbott. It is now recommended that the study of Latin in the middle school should be suppressed in two out of the three forms, and additional instruction be given in French, English history, and geography. Latin would be taught in the senior class in the middle school. The result of these alterations would be to increase the study of French. A recommendation is also made that German should be made a regular and compulsory study (and not extra as at present) for the upper part of the sixth form who had attained a sufficient degree of efficiency in French

PENCIL-MAKING: THE ROUNDING MACHINE.

With a view to further developments in the study of German it is suggested that in future elections of masters, ability to teach that language should form an important consideration. With regard to Spanish and Italian, it is proposed to form classes for the study of languages out of school-hours if sufficient applications be made.

THE LADIES' COLUMN.

Now is the time when the voice of the American is heard in the land. If it were not for these welcome visitors from over the sea the West-End shopkeepers might almost as well shut up during August and September. But the presence of vast numbers of American ladies, who are beginning to find out that shopping in London is much cheaper and pleasanter than it is in Paris, and quite as good, prevents this season of the year from being entirely stagnant, and even coaxes out into the shop windows a few foretokens of the autumn fashions. The gowns which are now being prepared for the autumn season are nearly all made with the fronts of the skirts almost undraped, but embroidered deeply round the bottom. The most fashionable form of embroidery is an "appliqué" of some contrasting colour fixed on with fancy stitching in fine gold or silver thread. Tan colour upon blue, a very pale bluish-grey upon brown, and fawn upon green are amongst the contrasts chosen. The material both of the pattern and of the ground is a firm Amazon cloth, and the edges of the pattern are outlined in chain-stitch of gold or silver thread. The designs are those modified Greek ones which are characteristic of the French Empire fashions; a somewhat set and formal and large pattern being invariably employed. The backs of the autumn skirts will be almost plain, scarcely any loop being seen in the drapery, though it is arranged with considerable fullness over two small steels set close together at the top, quite superseding pads or "improvers." Polonaises in the *Directoire* fashion will be very much worn over the embroidered skirts as just described, with trimming to match for vest and revers.

I am asked by a correspondent when and where Lord Tennyson compared Jane Austen to Shakspeare? My authority is to be found in the correspondence of Sir Henry Taylor, where this opinion is given as having been expressed by Lord Tennyson in conversation. Macaulay's judgment that Jane Austen comes near to Shakspeare is better known. "Shakspeare," said he, "has neither equal nor second; but among the writers who have approached the great master we have no hesitation in placing Jane Austen, a woman of whom England may justly be proud." But, indeed, such an appreciation of the writings of this one of the greatest of English novelists has been expressed by very many of those most competent to judge; and Mr. Cheney was not so far out when he said that his test of intellectual capacity was to discover whether an individual did or did not admire the works of Jane Austen. Archbishop Whately coincides with Tennyson and Macaulay in comparing her to Shakspeare. Harriet Martineau mentions having read "Persuasion" eleven times (the same tale which Whewell had read "oftener than he could say"); and Miss Martineau declares the novels generally to be "unequalled in truth, charm, and interest." Southey held Jane Austen's works to be "more true to Nature, and to have passages of finer feeling than any others of the age." Lord Holland never wearied of them, and invariably had one or the other read aloud to him to distract his mind when tortured by gout; and Walter Scott records in his diary his reading "for the third time, at least, Miss Austen's finely-written novel 'Pride and Prejudice.'"

Is it not almost shocking to reflect that those works were written secretly—surreptitiously—shamefacedly—and that their composition was concealed by the author and her family as much and as long as possible? When Jane Austen was writing those immortal books it was considered necessary that she should keep a large piece of needlework upon her table, in order that she might therewith conceal her manuscript if anybody came to pay a morning call. As Mrs. Cockburn, writing some years earlier than Jane Austen's time, truly observed:—

> If some adventurous genius rare arise,
> Who on exalted themes her talent tries,
> She fears to give her work, though praised, her name,
> And shrinks not more from infamy than fame!

It is impossible to guess how much that women might have done has been lost to the world in the past from that state of feeling; and the wonder is that under such conditions not so few, but so many, women, have already won themselves a place among the immortals.

I am asked furthermore, by the same enterprising correspondent, to mention some names of the living writers that men "write up" and women do not admire. My notes on that subject will be found in my posthumous memoirs! As Charlotte Brontë makes Shirley say: "If I spoke all I think on this point, if I gave my real opinion of some first-rate female characters in some first-rate novels, where should I be? Dead, under a cairn of avenging stones, in half an hour!"

In Manchester, a week or two ago, the Coroner, holding an inquest upon a young infant, took occasion to make some very strong remarks about the improper treatment to which the children of the poor are often subjected. He declared that working-class mothers are frequently more deficient in instinct as to the treatment of their offspring than the lower animals; heavy meals of food suitable for adults being sometimes found in the stomachs of children, who had been as surely killed by such ill-treatment of their tender digestive organs as though they had been poisoned. Doubtless there is much ignorance about the proper food for infants. But it is only too certain that in a large number of cases it is not absolute want of knowledge that is responsible for the improper feeding and other preventible causes of the deaths of the children of the poor. Knowledge avails little where every fresh mouth taking from a scanty store is unwelcome. The insurance of the lives of very young children is unquestionably partly responsible for the excessive mortality amongst them; but even where there is no deliberate design, no admitted and distinct desire, to get rid of the child for some personal advantage to the parents, there is yet only too often a careless indifference, which comes to much the same thing in the end. At the same time ignorance has much to answer for. Many a poor mother tends her children as carefully, and grieves as much if they untimely die, as any rich mothers do; and it is an admirable effort of philanthropy to offer to poor women simple and easily comprehended instruction in the simple principles of infant feeding and hygiene. Baroness Rothschild at Mentmore, Mrs. Pennington at Stockport, Mr. Henry Lee, M.P., at Bolton, and many others, have from time to time arranged for lectures being given upon such subjects to working-women; while in Birmingham there exists a "Ladies' Useful Work Society," with the express object of giving a number of courses of health lectures, either in cottages or in school-rooms, in all parts of the town, winter after winter. The ladies who lecture are doctors' wives or others, who have themselves obtained the necessary instruction from books which are easily procurable. Some of these ladies can speak to a hundred or more women at once; others only feel capable of gathering ten or a dozen around them in a room, and holding a sort of informal conversation. Altogether, many hundreds of working-women have been thus addressed upon these subjects in Birmingham, each winter, for some years past; and so marked has been the result that the Health Committee of the Corporation, in a recent report, specially paid a tribute to the value of the lectures in checking both infant mortality and the spread of infectious diseases.

FLORENCE FENWICK-MILLER.

THE BISHOP'S CASTLE, GLASGOW, AS IT APPEARED ABOUT A HUNDRED YEARS AGO.

AGRICULTURAL SCHOOLS.

From the Agricultural Department of the Privy Council there has been issued an official paper calling attention to the progress of the valuable schools of agriculture which have been established in nearly every province of Italy. These schools, of which nineteen are designated "practical" and six "special," are subsidised by the Government, which, as a rule, pays about three-fifths of the costs of maintaining them, the remainder being found by the provinces and communes in which they are located. In the practical schools the programme comprises the elements of the Italian languages, history, geography, arithmetic, geometry, land-measuring, drawing, accounts, natural science, and all the industries connected with agriculture. Not less than fifteen and not more than eighteen hours a week are to be devoted to this kind of instruction. Practical farm-teaching is conveyed by making the pupils carry on the work of the farms adjoined to the schools, upon which they must be employed from five to eight hours daily when the weather permits. For the special schools, the course of instruction is the same as in the case of the practical schools, but the technical teaching is confined to the special object of each school. In four of these vine-culture and wine-production are the specialties. In one fruit-growing and horticulture are practised. In the other dairying and zootechny form the subjects of the three years' course of study and technical training. Much general improvement to the agriculture of the country round about is attributed to the example and influence of these schools.

THE DUKE OF CONNAUGHT'S BUNGALOW AT POONA.

Indian Engineering contained an illustration of the new residence of the Duke of Connaught at Poona, and gives a description of it. It is a large, pleasant-looking building, situated about midway between the G.I.P. railway station and the Poona Hotel. The top floor will be flagged with dressed Shahabad stone, and the pillars along the verandah are of soft stone with simple but tastefully-carved foliage capitals. There is also a large porch in front, supported on tall white pillars. This, like the ground-floor, has a verandah running round it. The verandah leads out on to a small terrace surmounting the porch. A staircase leads on to a terrace which is about 45 ft. from the ground, from which a splendid view of the cantonment and suburbs can be obtained. On the west, Gunesh Khind and Paruttee Hill can be seen; in the north, a fine view of Kirkee, with the Deccan College in the foreground, is obtained, with Yerrowda Jail and the Bund Hill in the distance towards the right. On the east is seen the Council Hall, with Ghorpooree station a little to the left. On the east the whole cantonment is overlooked, St. Mary's Church standing out prominently against the hills which extend away to the horizon, and which, though bare and bleak-looking now, will present a beautiful sight when clothed with verdure during the monsoons and cold season. It is estimated that the total cost of the building will be 80,000 rupees.

It has been decided by the board of management of the London Homœopathic Hospital and Medical School, Great Ormond-street, to open a new convalescent home at Eastbourne. Already a large amount has been subscribed, including the following donations:—Mrs. Clifton Brown, £10.90; Sir James Alexander, £500; Mr. George Sturge, £500; and Lord Grimthorpe, 100 gs.

It is now ascertained that the last street collection for the Hospital Saturday Fund was the largest in the history of this Fund, amounting to £5000, being £500 more than the similar collection in 1887. By the workshop collection, the proceeds of which are due, it is hoped to realise £10,000; 30,000 collecting-sheets and a large number of collecting-boxes have been supplied to multifarious business establishments in the Metropolis, and special sheets have been issued to the various postal departments, the Royal Arsenal, and to schools, workmen's clubs, friendly societies, and . estries and district boards' officials.

WILLS AND BEQUESTS.

The will (dated Oct. 12, 1876), with a codicil (dated Oct. 20, 1881), of Mr. Evelyn Bazalgette, Q.C., late of Lincoln's Inn, and No. 64, Devonshire-place, who died on July 21, has just been proved by Sir Joseph William Bazalgette, C.B., the nephew, and Edward Bazalgette, two of the executors, the value of the personal estate amounting to upwards of £155,000. The testator bequeaths considerable legacies to relatives; and there are also bequests to servants. As to the residue of his real and personal estate he leaves one moiety, upon trust, for his nephew, Lewis John Francis Twysden; and the ultimate residue to his said nephew, Sir Joseph William Bazalgette.

The will (dated July 16, 1879), with three codicils (dated July 17, 1879; Sept. 29, 1884; and Feb. 15, 1888), of Mr. George Crafter, late of No. 81, Blackfriars-road, and of Woodstowe, Dulwich, solicitor, who died on March 14 last, was proved on Aug. 9 by Mr. William Crafton Perry, Charles Lloyd Roberts, and Mrs. Annabella Roberts, the niece, the executors, the value of the personal estate amounting to over £94,000. The testator gives many and considerable legacies to relatives, friends, clerks, servants, and others; and the residue of his estate he leaves to his nephews and nieces, William Crafter Perry, Annabella Roberts, Jane Crafter, Marion Crafter, and William Crafter.

Letters of Administration of the personal estate of Mr. Joseph Bond, late of No. 5, Regent's Park-road, who died on Feb. 7, 1886, at No. 21, Chesham-terrace, Kemp Town, Brighton, intestate, a widower without issue, were granted on Aug. 11 to the Solicitor for the Affairs of her Majesty's Treasury and his successors in that office, for the use of her Majesty, the value of the personal estate amounting to over £69,000. In the event of no one being able to make out a good claim to the estate of the deceased under some will not yet discovered, the personal estate, although nominally administered for the use of her Majesty, does not go to the Queen, but will eventually go into the Consolidated Fund.

The will (dated Sept. 17, 1872), with nine codicils, of Mrs. Sara Aussten, late of No. 6, Montague-place, Bedford-square, who died on June 28 last, was proved on Aug. 15 by Arthur Raymond Harding and Lieut.-General Frederic Peter Layard, the surviving executors, the value of the personal estate amounting to over £60,000. The testatrix bequeaths £100 to the Solicitors' Benevolent Association; £50 each to the Consumption Hospital, Brompton, the North London Hospital, and the Magdalen Hospital; and very numerous legacies, pecuniary and specific, to relatives, executors, servants, and others. As to the residue of her property, including the property under the will of her late husband, over which she has a power of appointment, she leaves one fourth to her nephew, the Right Hon. Sir Austen Henry Layard; two fourths, upon trust, for her nephews Frederic Peter Layard and Edgar Leopold Layard, their wives, and children; and one fourth, upon certain trusts, for the widow and children of her late brother, John Rickett, and her sister, Louisa Rebecca Linton, and her three children.

The will (dated April 4, 1881) of Mr. John Raymond Raymond-Barker, J.P., D.L., late of Fairfold Park, Gloucester, who died on May 21 last, was proved on Aug. 15 by Sir Lumley Graham, Bart., and Sir John Edmund Commerell, K.C.B., V.C., the nephew, the executors, the value of the personal estate exceeding £51,000. The testator leaves all his freehold and leasehold property in London, Westminster, and the county of Middlesex, upon trust, for his daughters, Augusta and Lenora, for life, and at their deaths to the son of his son Percy, who shall be heir-presumptive to the Fairfold estate; £1000, his household furniture and effects, and the interest of certain securities, to his wife, Lady Katherine Barker, and other legacies. The residue of his personal estate he leaves to his said wife.

The will (dated July 5, 1880) of Sir Charles Edward Keith Kortright, formerly her Britannic Majesty's Consul at Philadelphia, late of No. 2, Grosvenor-crescent, who died on May 19 last, was proved on Aug. 8 by Dame Martha Ellen Kortright, the widow and sole executrix, the value of the personal estate amounting to upwards of £49,000. The testator devises and bequeaths all his property of whatsoever nature and wherever found, real, personal, and mixed, to his wife, absolutely.

The will (executed Feb. 9, 1869) of Mr. Patrick Gammie, late of No. 14, Stanhope-gardens, formerly Inspector-General of Army Hospitals, who died on May 20, 1887, was proved on Aug. 10 by Mrs. Mary Maclean Gammie, the widow and acting executrix, the value of the personal estate amounting to over £29,000. The testator bequeaths £2000 to Charles Addison; and £9000, upon trust, for his wife, for life; then, as to £5000 thereof for the said Charles Addison; as to £1000 thereof for Mrs. Harriet Forbes Simpson; as to £1000 for the Minister and Elders of the Established Church of Forgue, Aberdeenshire, upon trust, to distribute the income periodically among the poor of the said parish as to them shall seem most deserving; £1000 for the Principal and Professors of King's College, Aberdeen, to found a Bursary for modern languages, to be called the "Gammie Bursary;" and as to the remaining £1000 thereof for the Army Medical Officers' Benevolent Society. The residue of his property he gives to his wife, absolutely.

The will (dated Aug. 3, 1887) of Mr. William Eden Nesfield, late of No. 45, Buckingham-road, Brighton, who died on March 25 last, was proved on Aug. 4 by Mrs. Mary Annetta Nesfield, the widow and sole executrix, the value of the personal estate exceeding £13,000. The testator gives, devises, and bequeaths all his real and personal estate to his wife, for her own use and benefit absolutely.

The will (dated Nov. 9, 1885), with a codicil (dated July 22, 1887), of Sir Richard Green-Price, Bart., late of Norton Vicarage, in the county of Radnor, who died on Aug. 11, 1887, at Fitzroy-square, was proved on Aug. 13 by Dame Laura Green-Price, the widow, George William Whitmore Green-Price, the son, and Powlett Charles Milbank, the executors, the value of the personal estate amounting to over £11,000. With the exception of a legacy to an old servant, and a complimentary legacy to his agent, the testator gives all his real and personal estate to his wife.

The will (dated Nov. 18, 1885) of Sir Edward Henry Gervas Stracey, Bart., late of Rackheath Hall, Norfolk, who died on June 6 last, at Bournemouth, was proved on Aug. 13 by Dame Mary Gertrude Stracey, the widow, and Major George Heaviside, the executors, the value of the personal estate amounting to over £10,000. The testator bequeaths all his personal estate to his wife; and he devises all his real estate in the parishes of Rackheath, Salhouse, Sprowston, Wroxham, Crostwick, Hoveton St. John, and other parishes and places adjoining, upon trust, to pay £1000 per annum to his wife, for life. Subject thereto he devises the said real estate to the use of his son, Edward Paulett Stracey, for life, with remainder to his first and every other son, successively, according to seniority in tail male.

Mr. W. R. Kemp, Chief Officer in the Court Orders Department of the Queen's Bench Division, has retired from that position after a long term of service. Consequent upon this resignation several alterations will, it is understood, be effected in the Central Office of the Royal Courts of Justice.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

B W La Motte (New York).—Problem received with thanks. It is very pretty, and shall be published shortly.

W A Smith (Bellary, South India).—We are totally unable to understand your notation, and cannot, therefore, say whether you have copied the diagram rightly or not; but, as published, it cannot take Q, because it is pinned by a W Bat K R sq.

J K Weston.—There is nothing gained by inverting the usual conditions of a problem; besides which your solution proceeds by a series of checks—a method inadmissible in modern problems.

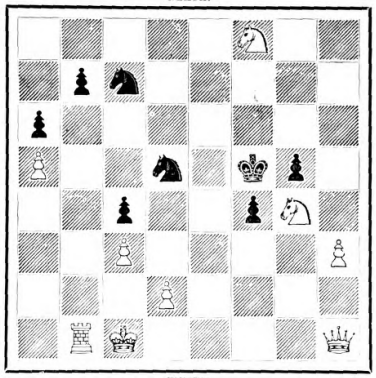
J Ambdalis (Trieste).—A problem tourney figures in the programme of the Bradford Congress, the conditions of which were to be announced during the meeting. We will give them full publicity at the earliest opportunity.

J Daly (Clapham).—We do not publish problems that have previously appeared elsewhere. Yours has done so in the *City of London Chess Magazine*.

Correct Solutions of Problem No. 2311 received from A Wheeler and T Mann (New York); of No. 2312 from Columbus, A Wheeler, D McCoy, and Nos. Reduna; of No. 2313 from: E Crane, Columbus, W S (Sheffield), A Wheeler, E E H, and Bernard Reynolds.

Correct Solutions of Problem No. 2314 received from Mrs. Kelly (Lifton), L Desanges, Dawn, E Phillips, J Dixon, A Newman, Bernard Reynolds, Columbus, J D Tucker (Leeds), E Von Konarzki, W R Raillem, R F N Banks, Howard, A Sergeant, James Sage, W S (Sheffield), E Casella (Paris), Jupiter Junior, W Hillier, E Lucey, E Crane, Thomas Chown, T Roberts, A Wheeler, Shadforth, Lieut.-Col. Lemaire, R Worters (Canterbury), G. T. Addison (York), Major Pritchard, Percy Ewen, W Wright, T G (Ware), S B Oliver, J Hirste Haywood, D T (Woolwich), Peterhouse, R S R (Chester-le-Street), Hereward, Edmund Shaw (Sheffield), D McCoy, J Hepworth Shaw, J A Schmucke, C E P, E Louden, R H Brooks, and T Marshall.

Note.—Problem No. 2315.—The W Knt at K 3rd should be a B P. Solvers will please make this correction.



SOLUTION OF PROBLEM No. 2312.

WHITE.	BLACK.
1. Kt to Kt 7th	Any move
2. Mates accordingly.	

PROBLEM No. 2315.

By Signor Aspa.

BLACK.

WHITE.

White to play, and mate in three moves.

THE BRADFORD CHESS CONGRESS.

Game in the International Masters' Tournament between Mr. Bird and Captain Mackenzie.

(Irregular Opening.)

WHITE (Mr. B.)	BLACK (Capt. M.)	WHITE (Mr. B.)	BLACK (Capt. M.)
1. P to K B 4th	P to Q 4th	14.	P to Kt 5th
2. P to K 3rd	P to K Kt 3rd	15. Kt to B 6th	
3. Kt to K B 3rd	B to Kt 2nd	Although the Kt takes up a strong position, there is nothing to support its advance, and by forcing Black's Queen to its most offensive point, this move only helps his enemy's game.	
4. P to Q 4th	Kt to K B 3rd	15.	Q to R 5th
5. P to B 3rd		16. Kt to K sq	Kt to B sq

B to Q 3rd seems to us a stronger move at this point.

6.	P to Kt 3rd	A well-timed move. This Kt will soon become a most powerful factor in the attack.	
7. Kt to B 3rd	P to Q R 3rd	17. P to K Kt 3rd	
8. P to Q Kt 4th	B to B 4th	Another illustration of the way in which, occasionally, players of the greatest experience overlook the simplest line of play. Black's rejoinder would have been apparent to a novice, and practically ends the game.	
9. B to Kt 2nd	Kt to K 5th	17.	Kt takes Kt P
10. B to K 2nd	P to K 3rd	18. P takes Kt	Q takes P (ch)
An aimless kind of move almost bordering on timidity. B to Q 3rd is surely the right play.		19. Kt to Kt 2nd	B to K 5th
10.	Kt to Q 2nd	20. R to B 2nd	P to R 5th
11. Castles	P to K R 4th	21. B to Q 3rd	B takes B
The commencement of a vigorous and successful attack.		22. Q takes B	P to R 6th
12. Kt to it 2nd	P to K Kt 4th	23. Q R to K B sq	Kt to Kt 3rd
13. P to Kt 5th	P to R 4th	24. P to B 5th	Kt to R 5th
14. Kt to K 5th		25. R to Q 2nd	P takes Kt,
Mr. Bird's pieces are not well placed, nor does this move improve their position. There is certainly danger in capturing the Knight's Pawn; but rather than permit its advance, the risk should be run.		and White resigns.	

GAME BETWEEN "DELTA" AND THE LATE HERR FALKBEER.

The following unpublished game was played between "Delta," the well-known Scottish amateur, and the late Herr Falkbeer, at Simpson's, in July, 1862:

(King's Gambit declined.)

WHITE (Delta).	BLACK (Herr F.)	WHITE (Delta).	BLACK (Herr F.)
1. P to K 4th	P to K 4th	15. K to K B sq	Kt to Q B 3rd
2. P to K B 4th	P to Q 4th	We prefer Kt to Q 2nd with a view of playing P to K B 3rd and K 5th.	
3. P takes Q P	P to K 5th	16. Q to Q 2nd	Q R to Q sq
4. B to B 4th	Kt to K B 3rd	R to K 5th, for the purpose of doubling the Rooks, seems stronger.	
5. Kt to K 2nd	B to Q B 4th	17. Q R to K sq	P to K R 3rd
6. P to Q 4th	P takes P (en passe.)	18. P to K R 3rd	B takes Kt (ch)
7. P takes P	Castles	This only serves to relieve White's cramped position. B to B 4th is better.	
8. Q Kt to B 3rd	B to K Kt 5th	19. K R takes B	R takes R
9. P to Q 4th	B to Q Kt 5th	20. Q takes R	Q takes Q (ch)
10. B to Q 2nd	B takes Q Kt	21. R takes Q	Kt takes P
11. B takes Kt	Kt takes P	22. R to Q 2nd	Kt to B 3rd
12. B takes Kt	Q takes B	23. R takes R (ch)	Kt takes R
13. Castles	R to K sq	At this point the game was given up as a draw.	
14. R to K B 2nd	Q to Q B 5th		

Weak. Q to K R 4th equally threatens the opposing pawn, and prevents K to B sq on account of Q takes R P.

MEETING OF THE BRITISH CHESS ASSOCIATION AT BRADFORD.

The British Chess Association brought its meeting at Bradford to a conclusion during the past week, after one of the most successful gatherings it has yet held—a success largely due to the happy thought which incorporated the annual competition of the Yorkshire Counties' Club in the programme. The services of a strong local executive were thus secured, of whose energy and ability it would be difficult to speak too highly, and to whose credit must be placed much of the smoothness and rapidity with which the different contests were got through. The Masters' Tournament produced some fine play, but nothing approaching that of the London Congress of 1883. Neither do we think, with all respect to Mr. Gunsberg, that his success has the merit of Zukertort's then. The winner, nevertheless, did all that could be reasonably expected of him, and by the addition of this crowning triumph to the many victories of the last few years, proves himself as probably the best tourney player living. The older masters well maintain their reputation, with, perhaps, the exception of Blackburne, whose earlier play was of very variable quality, and incurred for him two or three unexpected defeats. To our knowledge, however, he attended the Congress in defiance of medical prohibition, and, under the circumstances, made as good a fight as could be looked for. Amongst the younger players Locock showed to greatest advantage, and although Lee and Pollock do not figure prominently in the order of scoring, some of their victories were over most formidable antagonists. In connection with the proceedings a banquet was held at the Alexandra Hotel on Thursday, Aug. 16, at which Mr. Newnes, M.P., presided.

Mr. R. Mills, of the Treasury, has been appointed Assistant Comptroller and Auditor-General.

MUSIC.

THE BIRMINGHAM MUSICAL FESTIVAL.

This important celebration will recur on Aug. 28 and three following days. The origin of these triennial festivals—the greatest of all our provincial performances of their class—has so often been given in detail that slighter reference thereto may now suffice. The first occasion was in 1768, when the arrangements were on a comparatively limited scale. These soon began to expand, until the performances assumed a grandeur, and the money results an amount, hitherto unexampled in any provincial, or indeed metropolitan, celebration of the kind, excepting the triennial Handel Festivals at the Crystal Palace. The Birmingham Festivals, like those of the Three Choirs (Hereford, Worcester, and Gloucester), have from their origin been given with the primary object of benevolence—in the former instance in aid of the Birmingham General Hospital; in the case of the Three Choirs festivals, for the benefit of the widows and orphans of the poorer clergy of the dioceses. Of the vast amount of good effected by the Birmingham Festivals in the shape of medical and surgical help, some notion may be formed from the fact that since the foundation of these celebrations a grand total profit of nearly £120,000 has been thus realised and applied; in addition to which the grand organ in the Townhall and an extensive musical library belonging to the hospital, have been paid for out of the festival receipts.

In a musical sense, too, these festivals stand pre-eminent: many great compositions have been commissioned for, and first produced at, them. The list would be too long to reproduce here; it will be sufficient to refer to the fact that Mendelssohn's immortal oratorio, "Elijah," was brought out and conducted by the composer (in August, 1846). Other great works by Mendelssohn, including his "St. Paul" and "Lobgesang" ("Hymn of Praise"), were first given with adequate resources at Birmingham, where grand compositions from the same source would have been produced but for the untimely death of the great composer in 1847. The most recent works of importance produced at Birmingham were Gounod's oratorios "The Redemption" (1882) and "Mors et Vita" (1885). Most of the greatest singers of past and present times have been heard at Birmingham Festivals, and the orchestra and chorus have been on a scale of grandeur and efficiency that left nothing to be wished for; altogether rendering the performances—given in one of the finest buildings of the kind existing, whether as to its commodious arrangements or its acoustical properties—such as are worthy of the important industrial town in which they are held.

From 1849 to 1882 the festivals were conducted by the late Sir Michael Costa, who was succeeded, at the celebration of 1885, by Dr. Hans Richter, by whom the approaching performances will be conducted. The band and chorus are on the usual extensive and efficient scale; the principal solo vocalists engaged being Madame Albani, Misses Anna Williams and Ambler, Mesdames Patey and Trebelli, Mr. E. Lloyd, Mr. Piercy, Mr. Banks, Mr. Santley, Signor Foli, and Mr. Brereton.

In accordance with the laudable custom of the past, the forthcoming festival will open (on Aug. 28) with "Elijah"; the association of which with Birmingham renders it an indispensable feature at each celebration. The morning of Aug. 29 will be appropriated to Dr. Parry's new oratorio, "Judith; or, The Regeneration of Manasseh"; another festival novelty, Dr. Bridge's cantata "Callirhoë," being appointed for the evening of Aug. 30. Dvorák's "Stabat Mater," Sir Arthur Sullivan's dramatic cantata "The Golden Legend," Handel's "Messiah," Bach's "Magnificat," Handel's "Saul," and other interesting works will be included in the performances.

Important new compositions by Anton Dvorák and Dr. Mackenzie had been commissioned, but circumstances have prevented their completion.

The London orchestral rehearsals took place at St. George's Hall on Aug. 20 and following days; and the full rehearsals of band, chorus, and solo vocalists will be held in the Birmingham Townhall, where all the performances are given, beginning, as already said, on Aug. 28.

The Promenade Concerts at Covent-Garden Theatre are pursuing a successful career. Since the opening of Mr. Freeman Thomas's seventh series (on Aug. 11), already recorded, the programmes have been agreeably diversified in their vocal and instrumental selections. The first of the classical nights was of special interest, having included, besides other important features, two fine solo performances—that of Madame Frickenhaus in Schumann's pianoforte concerto in A minor, and that of Mr. J. T. Carrodus in the first movement of Beethoven's violin concerto; each artist having elicited deserved tributes of applause. Effective vocal performances were contributed by Madame Valleria, in Handel's "Angels, ever bright and fair"; Mr. O. Harley, in the tenor romance from Weber's "Euryanthe"; and Signor Foli, in Gounod's air "She alone charmeth my sadness." The fine orchestra was heard in the overture to Wagner's "Flying Dutchman," Reinecke's prelude to "King Manfred," Schubert's great symphony in C, and other pieces of a lighter kind. At recent concerts, Mr. Sims Reeves, the young lady known as "Nikita," and other eminent vocalists have appeared. The "Rose Queen" waltz, composed by Mr. Gwyllym Crowe, the conductor, including the co-operation of Mr. Stedman's well-trained juvenile choristers, continues to prove attractive.

At the Co-operative Festival at the Crystal Palace, on Aug. 18, a new ode was produced; the words by Mr. Lewis Morris, the music by Mr. J. F. Barnett. It is an unpretentious composition, containing some pleasing melodic passages well suited for a large choir (there were said to be nearly 4000 voices).

Another attractive concert, including the co-operation of several eminent vocalists, was given at the Alexandra Palace on Aug. 18.

At the Alexandra Palace on Aug. 17 the festival in aid of the Metropolitan and City Police Orphanage was held, and was attended by several thousands of persons.

Mr. Thomas Milne Colmore, of The Warren, Knowle, and the Midland Circuit, who has acted from time to time as Deputy-Stipendiary, has been appointed to the office of Stipendiary Magistrate for Birmingham, rendered vacant by the resignation of Mr. T. C. S. Kynnersley.

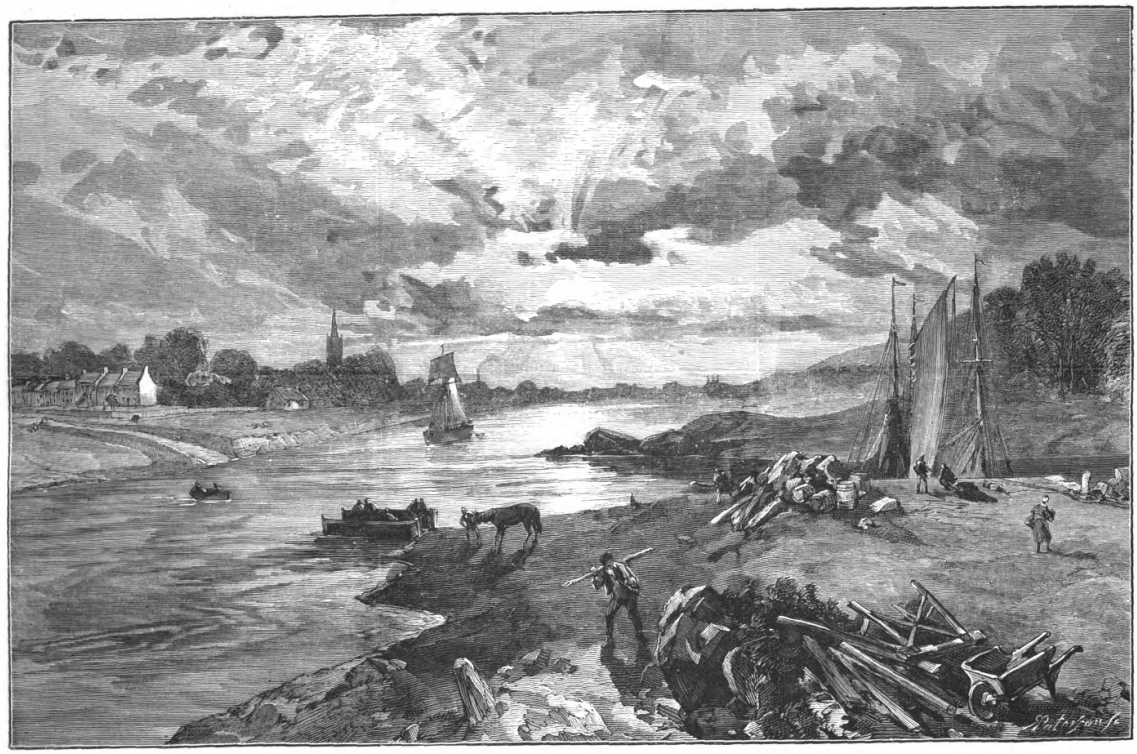
A Proclamation appears in the *Gazette* directing that on and after Oct. 1 the rate at which freight shall be paid for the conveyance on board any of her Majesty's ships or vessels of treasure belonging to parties other than the Crown, whether gold, silver, jewels, or other articles, which may by special order be received on board any of them, shall be 1 per cent. The whole amount of the said freight, when received, is to be divided into four parts, and distributed as follows:—One-fourth to the flag-officer if any, or flag officers if more than one, on the station or in the squadron to which the ship receiving treasure on board may belong; two-fourths to the captain or officer commanding such ship or vessel, who shall give his receipt or sign the bill of lading for the treasure; and one-fourth to Greenwich Hospital, for the use of that institution.

ABOUT GARDENS.

To have a small house and a large garden was the wish of the poet Cowley, and certainly of all natural pleasures the possession of a garden is the most soothing and permanent. The finest scenery is not for all moods; it is sometimes too stimulating, and excites desires and aspirations which in a world like this can rarely be satisfied: but a garden gives the sense of rest. The fretful anxieties of the world have no place in it; and if large enough to be beautiful and yet not too large to be well cared for, it gladdens both eye and heart. The poet from whom I have just quoted says that God gave man a garden as his first gift "even before a wife," and he does not forget to add, by way of contrast, that the first city was built by Cain. Lord Bacon, who plans out a princely garden, suggests so many devices that the feeling of repose is lost; and this is the case, perhaps, in the famous gardens of Chatsworth. Great men, I suppose, must have big playthings; and even when the plaything is comparatively moderate in size—as, for instance, the Leasowes of Shenstone—artificial objects such as urns, grottoes, and statuary, and inscriptions upon tablets, injure, to my thinking, the sense of grateful rest which is a garden's greatest charm. Apart from these excrescences, Shenstone showed a fine taste for landscape-gardening, and it is pitiful that a spot once so famous should have been greatly injured of late years. A taste for this fine art has always prevailed in England, which boasts the fairest gardens in the world.

Gray, writing in 1763, says this art is the only honour our nation has in matters of taste, and that it is not forty years old. For once, Gray is wrong. Landscape-gardening never has been our only honour in matters of taste, and it was in vogue in this country long before the eighteenth century. The Countess of Bedford, who died in 1627, was praised by Sir William Temple for projecting the most perfect figure of a garden that he ever saw. Probably it was formal in style, since Temple admired it; but landscape gardening was none the less an art because it took that shape. John Evelyn, who flourished some years later, showed a genuine love of gardening; and Aubrey, writing at the same period of the Deepdene, says, with a pretty exaggeration, 'It is an epitome of Paradise, and the Garden of Eden seems well imitated here." Milton understood the true beauty of garden scenery when he undertook to describe the home of our first parents; and if the reader turns to that wonderful picture, he will see how the sense of order pervades his fine description of natural beauty. A garden should be to a great extent artificial. If Nature is allowed to run wild, it becomes a wilderness. The hand of man must be visible throughout; but it must be a hand directed with care and love, so as to avoid too much formality on the one hand and too great luxuriance on the other. Milton's friend Andrew Marvell, a fiery patriot whose zeal sometimes outran discretion, was also a true poet, and felt a poet's delight in a garden. There he found fair Quiet and its sister Innocence, and writes that society is all but rude to this delicious solitude. Fruit and flowers grow together in Marvell's beautiful garden, and he sees them with a poet's eyes—

> The nectarine and curious peach,
> Into my hands themselves do reach.
> Stumbling on melons as I pass,
> Ensnared with flowers I fall on grass.
> Meanwhile the mind, from pleasure less
> Withdraws into its happiness.
>
> * * * * *
>
> Annihilating all that's made
> To a green thought in a green shade.



There is another lovely poem of Marvell's, in which a nymph laments the death of her fawn—

> I have a garden of my own,
> But so with roses overgrown
> And lilies, that you would it guess
> To be a little wilderness—

which the prosaic critic will say it needs must have been, since the fawn lay upon the banks of lilies and fed upon the roses.

There is an English air about the sweet gardens of Marvell's fancy, but a taste for the angularity of Dutch gardens came in with William at the Revolution, if not before; and Sir William Temple, who wrote an essay on gardening, introduced the Dutch style at Moor Park, and rejoiced in his formal flower-beds and straight canal. There many a time must Swift have walked with his beautiful pupil Stella, and when he went to Ireland he tried to imitate the Moor Park Gardens on a small scale in his own garden at Laracor. He made a fish-pond, and planted willows in double rows, apple-trees, and cherries. When Addison took him to see his sister's garden at Westminster, where her husband was a Prebend, he thought it a "delightful" retreat; yet he adds, "I like Laracor better." Alas! the garden of which he was so proud is now a potato-field. In his humorous way, Swift associates gardening with politics. "I am sorry," he writes, "we begin to resemble England only in its defects. About seven years ago frogs were imported here, and thrive very well; and three years after a certain great man brought over Whig and Tory, which suit the soil admirably."

Pope was as fond of a garden as his friend Swift, and expended much care and money on his five acres at Twickenham. His gardener published a plan of the little estate, upon which the poet is said to have spent £5000; and of this sum

GOVAN, ON THE CLYDE, WITH THE MOUTH OF THE KELVIN, AS IT WAS IN 1842.

FROM A DRAWING BY MR. W. SIMPSON.

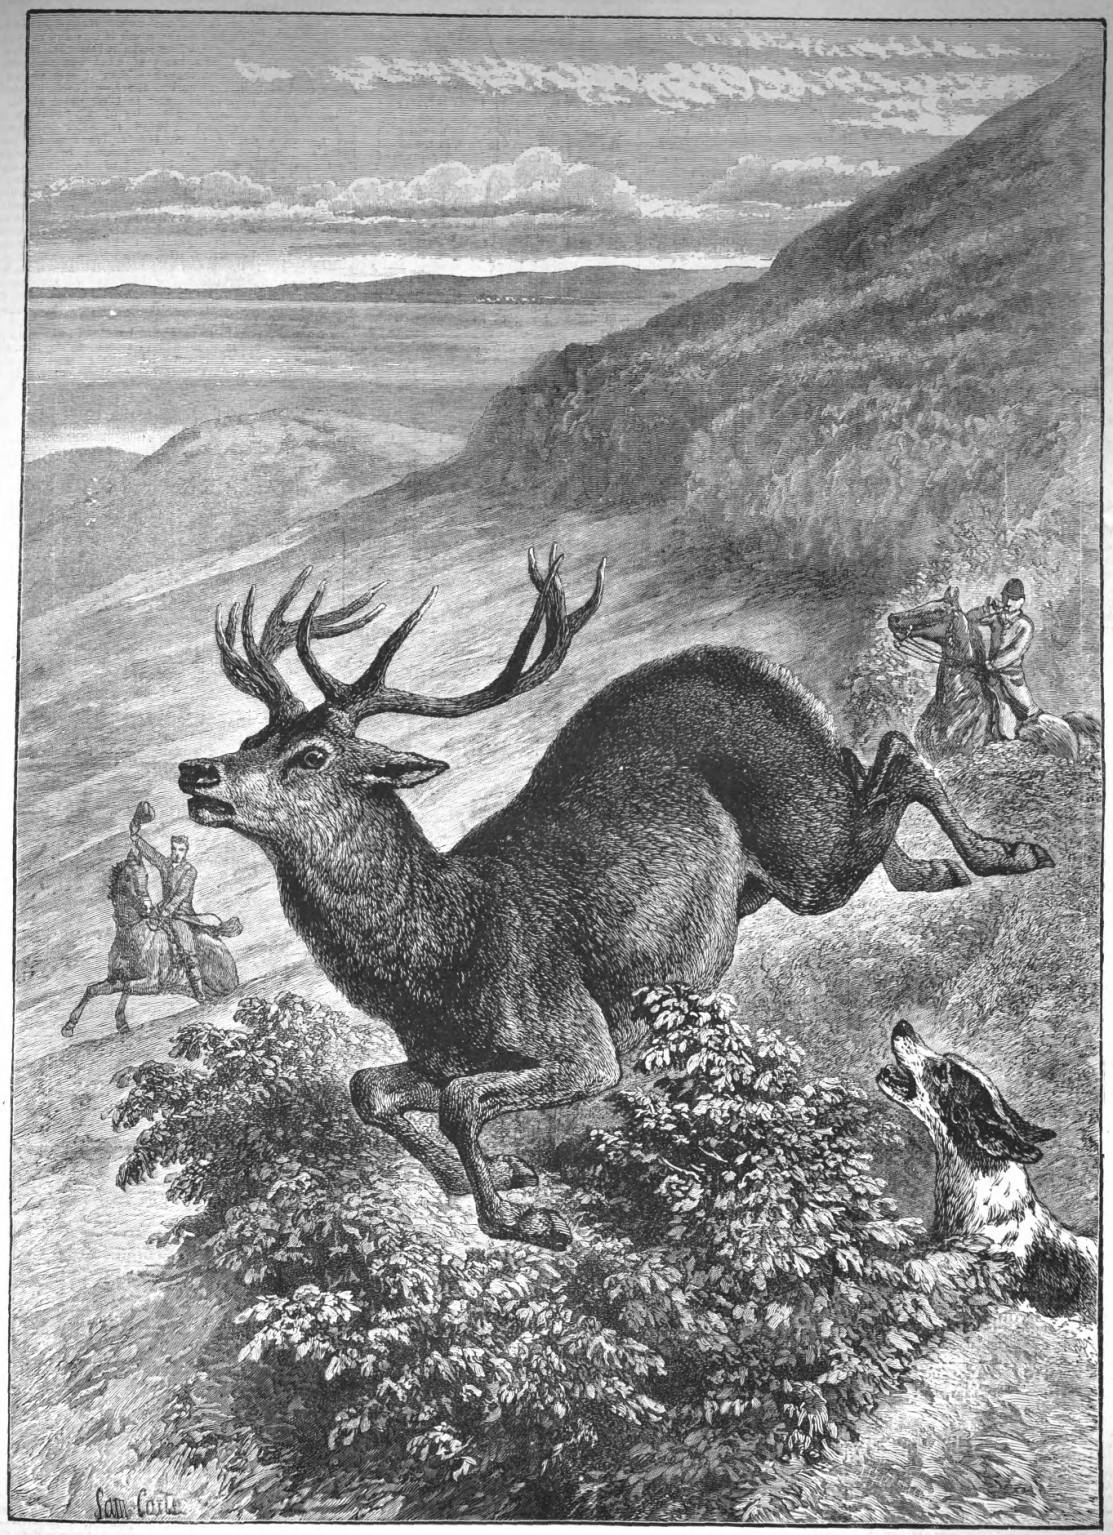
£1000 was spent on the grotesque ornaments of his "plaything," the grotto. The garden itself, which exists no longer, appears to have been laid out with taste. Pope had a love of landscape-gardening, and disliked the formal style of the French, Dutch, and Italian schools. In his view—

> He gains all ends who pleasingly confounds,
> Surprises, varies, and conceals the bounds.

Whatever the most brilliant poet of the Queen Anne period knew of Nature was learned in a garden. The passion for noble scenery, now so common, was unknown to him and to his famous contemporaries. They preferred the pretty art of man to the sublimity of Nature. Later in the century Goldsmith expressed the common feeling of the time when he wrote of the "barren hills," the "torpid rocks," and "stormy glooms" of Switzerland; and apropos of Goldsmith a characteristic anecdote is told of his visit to a garden at Leyden during the time of the tulip mania. His generosity prompted him to buy some roots for his uncle, which emptied his purse, and apparently forced him to reduce his wardrobe, for he set out on his travels with only one clean shirt, and without a shilling in his pocket.

Poets have always loved gardens, and Cowper, the most home-loving of our poets, expresses his love for one in the third book of "The Task"; but he does it not very happily, and the garden pictures in his letters are more attractive. Writing to Newton, he says:—"I sit with all the windows and the door wide open, and am regaled with the scent of every flower in a garden as full of flowers as I have known how to make it. We keep no bees; but if I lived in a hive I should hardly hear more of their music. All the bees in the neighbourhood resort to a bed of mignonette opposite to the window, and pay me for the honey they get out of it by a hum which, though rather monotonous, is as agreeable to my ear as the whistling of my linnets." In his garden, and in the greenhouse he loved so well, Cowper's cares were lightened. Nature, in all its more tranquil forms, gave him the most exquisite solace. "Oh! I could spend whole days and moonlight nights," he writes, "in feeding upon a lovely prospect! My eyes drink the rivers as they flow." Not even to Wordsworth was Nature dearer than to Cowper, though the greater poet's glance was more profound, his sense of beauty more subtle. So also was Shelley's; but what we miss in his verse are the stalwart qualities that give reality to poetry. He sees visions, and to him the homely Nature dear to ordinary people is either not seen at all or seen through a mist. So when Shelley takes us into a garden, it is one of rare beauty indeed; but we feel that neither the lovely flowers nor the lady who tends them belong to our common earth.

I do not think that any poet of our time is so happily at home in a garden as Lord Tennyson; and with what choice words does he describe his own careless-ordered garden at Freshwater, where the magpie gossips garrulous under a roof of pine! What cheerful talks must there have been in it! what high converse! what rare wit! So I thought as I walked through the garden once on a festal occasion in the master's absence, and I thought, too, how pleased and proud Maurice must have felt on receiving the most exquisite invitation to visit a garden and its owner, ever written by a poet:—



> Come, Maurice, come; the lawn as yet
> Is hoar with rime or spongy wet;
> But when the wreath of March has blossom'd
> Crocus, anemone, violet,
>
> Or later, pay one visit here,
> For those are few we hold as dear;
> Nor pay but one, but come for many,
> Many and many a happy year.

In a very different strain, but with true Tennysonian sweetness and felicity of expression, he pictures the garden in which the artist-lover woos and wins the gardener's daughter. And who does not remember Maud's garden of roses, and the lovely garden-song, which is one of the poet's most perfect lyrical efforts?

There are gardens I have seen which live for ever in the memory. Shall I recall *one*? A charming old house, with quaint gables and coignes of vantage and casement-windows nestling amidst roses and honeysuckles, lies halfway down a hill which is partly green with pasture and in part shaded with beech-trees. In the front, facing the south-west, is a lawn with beds rich in colour, upon which through all the happier months of the year the gardener exercises his choicest skill. The lawn might appear a little formal and kept with a care too precise, were it not for the lovely broken ground that falls and rises like the gentle waves of a summer sea. And here, through winding paths and borders thickly covered with the old English flowers dear to cottagers, you come by a slow descent into a small wood with open spaces free to sunshine and flowers. Lower still a rustic bridge crosses a rapid stream that bounds merrily over the rocks. Cross the bridge and you reach a natural bower, helped a little, but not too much, by art. The view is charming, and the joyous noise of the river does but give one a deeper sense of seclusion. What a spot for a poet or a lover! Here the birds hold a full concert when the early buds are on the trees, and a few yards from the arbour, where the stream widens, is a deep pool of the clearest water—the home, doubtless, of a fair nymph with golden hair:—

> But whilst this muddy vesture of decay
> Doth grossly close us in, we cannot see her.

Keeping by the side of the stream for a few hundred yards,

THE WILD WEST OF ENGLAND: UNHARBOURING A STAG ON EXMOOR.

some stepping-stones allow you to cross again, and after ascending a small meadow and passing through a shrubbery, the kitchen-garden is reached. Flowers and vegetables grow together: and through an archway, in a cucumber-hedge, is a glimpse of a wide-spreading lawn, and of the house beyond. If it is the month of strawberries, you will not be in a hurry to return there, or later in the year the walled garden with its ripe peaches and nectarines will satisfy three senses—O fair, sweet garden of delights! O sweeter youth that finds joy in everything, and reaps far more than it sows!

Here I am warned to part company with a subject not readily to be exhausted in a paper twice the length of this. There are many ways in which it might be treated, and out of the many I have touched but slightly upon one. Alas! for Londoners who are forced to dream about gardens without possessing them. Year by year our once beautiful suburban gardens grow less and less in size, and bricks take the place of lilies and of roses. At the beginning of the century a garden was a cheap luxury, and many a poor man who suffered from an "eternal want of pence," found in it his choicest recreation. Now, a good garden means a large income, and ere long the folk who live in suburban villas will have to take to window-gardening or to renounce the pastime altogether. J. D.

OBITUARY.

SIR GEORGE HOLYOAKE-GOODRICKE, BART.

Sir George Edward Holyoake-Goodricke, third Baronet, died at his residence, The Mythe, near Tewkesbury, on Aug. 11. He was born, Nov. 3, 1844, the youngest son of Sir Francis Lyttelton Holyoake (who assumed the surname of Goodricke on inheriting the estates of Sir Harry Goodricke, Bart., of Ribstone Hall, Yorkshire, in 1833, and who was created a Baronet in 1835), by Elizabeth Martha, his wife, daughter of Mr. George Payne, of Sulby Hall, Northamptonshire. He received his education at Rugby, and succeeded his brother in 1883. He died unmarried, and the title consequently becomes extinct. His second sister, Lilla, is wife of Colonel William Cavendish Bentinck Ryan, late Bengal Staff Corps, son of the late Right Hon. Sir Edward Ryan, and brother of Sir Charles Lister Ryan, K.C.B.

We have also to record the deaths of—

Mr. Michael Gould, LL.D., Barrister-at-Law, Administrator General of Madras, on Aug. 14, aged fifty.

The Rev. John Joseph Lomax, M.A., Vicar of Breinton, Herefordshire, on Aug. 14, aged fifty-eight.

Commander Cecil William Beaumont, late Royal Navy, at Haslar, Hants, on Aug. 11, aged forty-five.

Mr. William H. Baily, acting palæontologist of the Geological Survey of Ireland, aged seventy-nine.

The Rev. Francis Turner Gill, M.A., for twenty-eight years Vicar of Warfield, Berks, at Ragatz, Switzerland, on Aug. 9, aged seventy-one.

Mr. John Joseph Jones, of Abberley Hall and Pensax Court, Worcestershire, J.P. and D.L., at Karlsbad, Austria, suddenly, on Aug. 5, aged fifty-eight.

Lieutenant-Colonel Howard Parker, late 15th Foot, eldest surviving son of Lieutenant-Colonel Windsor Parker, of Clopton Hall, formerly M.P. for West Suffolk, at White House, Felixstowe, on Aug. 7, aged fifty-one.

Lieutenant-Colonel Francis William Johnstone, eighth son of the late Mr. James Raymond Johnstone, of Alva, Stirlingshire, at Osborn House, Bolton-gardens, S.W., on Aug. 9, aged seventy.

Mr. Frederick Heysham, youngest son of the late Mr. Robert Thornton Heysham, of Hinton House, near Alresford and Stagenhoe Park, Herts, at Bellevue House, Winchester, on Aug. 10, aged eighty-eight.

Lady Hillary (Susan Curwen), widow of Sir Augustus William Hillary, second and last Baronet, and daughter of Mr. John Christian, of Ewanrigg Hall, Cumberland, at her residence, West Drayton, Middlesex, on Aug. 17.

Lady Arthur Lennox, at her residence, Swallowfield Park, Reading, on Aug. 14. She was the daughter of Colonel John Campbell, and married, in 1837, Lord Arthur Lennox, M.P., youngest son of Charles, fourth Duke of Richmond, K.G. He died in 1864.

Mr. William Eassie, C.E., F.L.S., F.G.S., &c., at his residence in South Hampstead, on Aug. 16. He was honorary secretary of the Cremation Society, of which, in conjunction with Sir Henry Thompson and a few others, he was one of the founders in 1874. Mr. Eassie had a varied and useful career.

Colonel Augustus Thomas Rice, late 51st Light Infantry, at Cheltenham, on Aug. 15, aged seventy-three. He entered the Army in 1831, and became Colonel in 1854. He served with his regiment during the war in Burmah in 1852, at the storm and capture of Rangoon, and at the assault and capture of Bassein, where he was severely wounded.

Lady Harriot Elizabeth Poore, Lady of the Bed-chamber to her Royal Highness the Duchess of Edinburgh, at the Eastney Barracks, Portsmouth, on Aug. 15, aged forty-three. She was the eldest daughter of the present Earl of Verulam, and married, in 1885, Major Francis Harwood Poore, Royal Marine Artillery.

Colonel Arthur Swann Howard Lowe, of Gosfield Hall, Essex, F.R.A.S., J.P., late 4th Battalion Derbyshire Regiment, on Aug. 12, aged sixty-one. He was the youngest son of the late Mr. Alfred Lowe, of Highfield, near Nottingham, and was brother of Mr. Edward Joseph Lowe, of Shirenewton Hall, Monmouthshire, D.L.

Mr. Thomas Macpherson Bruce-Gardyne of Middleton House, Forfarshire, J.P., late Lieutenant 40th Regiment, on Aug. 17, aged fifty-seven. He was the eldest son of Mr. William Bruce, who assumed the name of Gardyne on inheriting the Middleton estates, by Catherine, daughter of Lieutenant-Colonel Macpherson, of Canada.

Mr. Henry Richard, M.P., suddenly, on Aug. 21, at Trebarth, Bangor. Mr. Richard, who was the son of the late Rev. Ebenezer Richard, a distinguished Calvinistic Methodist preacher, was born in 1812. After passing through the Highbury Congregational College he was for several years Minister of Marlborough (Independent) Chapel, Southwark. Mr. Richard was a stanch advocate of arbitration as a means of settling international disputes. From 1848 to 1885 he was Secretary to the London Peace Society. He was a Home Ruler, and an advocate of the total severance of Church and State. He had represented Merthyr Tydvil in the House of Commons since 1868. He was the author of "The Memoirs of Joseph Sturge" and other works.

A charter of incorporation has been granted to Loughborough, Leicestershire, a town with a population of 8000, and a large hosiery trade. There will be three wards, each returning six councillors, with two aldermen each.

Lord Aberdeen, speaking at a cattle-show dinner at Tarland, Aberdeenshire, referred to the reasons which had induced him to sell his landed property at Cromar. The leading reason, he said, was a desire to remedy the evil of absentee landlordism. He desired also to avoid the purchase of the land by rack-renting landlords, and for that purpose he had exposed it in lots to suit the present occupiers. He commended the system of peasant proprietorship as giving a stimulus to personal exertion not otherwise obtainable, and promised when the local governing body was constituted under a system of local government for Scotland to hand over the local market-stance.

DEATHS.

At Madras, on Aug. 14, Michael Gould, B.L., LL.D., Administrator-General of Madras, aged 50. (By telegram.)

On Aug. 15, at Holm Rook Hall, Cumberland, Elizabeth Lucy, the beloved wife of J. W. F. Lowthorpe, and youngest daughter of the late Thomas Raikes, of Welton House, Yorkshire.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

STAG-HUNTING ON EXMOOR.

There is a "Wild West" in North Devon and Somersetshire little known to many Cockneys; and the open tract of moorland extending from the Quantock Hills, above the wide plain of Bridgwater and the fair valley of Taunton, far away westward to the heights of Countisbury, near Ilfracombe, is a district as wild as any in South Britain. Here rises the Exe, which has given its name to the great Moor; and the source of its tributary, the Barle, which joins it below Dulverton, is above Simonsbath, in the heart of what was anciently a "Forest," a Royal Chace, though seldom if ever visited by Kings fond of hunting, who had the New Forest of Hampshire, and other such places, nearer to their usual abode. It is mentioned, however, in a charter of King John's, and was surveyed by order of Edward I. After the lapse of five centuries, during which the native race of Lorna Doone's folk had Exmoor pretty much to themselves, the Crown rights were sold in 1820 to Mr. John Knight, who settled at Simonsbath (originally Simon's Path, from the name of a noted outlaw haunting that place in the olden time), and made some attempts to reclaim the land for agriculture, but with little success. Most of it still remains a wilderness, and is the habitation of rare birds and beasts, among which is the true Red Deer, the same animal that affords so much sport to rifle-shots in the Scottish Highlands; but on Exmoor, from August to April, the Devon and Somerset staghounds, with bold riders who delight to follow them over the roughest and steepest ground, pursue this noble beast in a fashion that would be surprising to ordinary foxhunters, and that is unique among English hunting-men.

In a volume recently published by Messrs. Chapman and Hall, "Records of Stag-hunting on Exmoor," by the Hon. John Fortescue, the reader will find all historical particulars and a variety of anecdotes and practical observations concerning this kind of sport, related in a pleasant and lively style, with many illustrations from drawings by Mr. Edgar Giberne. It is partly compiled from the journals kept, from 1855 to 1881, by the late Mr. M. Fenwick-Bisset, of Pixton House, Dulverton, and of Exford, who was Master of the Devon and Somerset Hounds during twenty-seven years, and was succeeded by Lord Ebrington. There is a book of much value, by the late Dr. C. Palk Collyns, a medical gentleman of Dulverton, on "The Chase of the Wild Red Deer," which is the recognised authority with regard to the natural history of the animal; but it seems to be out of print. Many extracts from it are given by Mr. Fortescue, whose work contains a full account of the whole subject, and will be interesting to the naturalist, to the antiquary, and to the topographer, as well as to the sportsman. We have not space to put before our own readers any of the stirring narratives of good runs and final "kills," frequently in the water of pools or rivers, and sometimes in the sea, which are here related. Our Artist's drawing of the scene, "Unharbouring a Stag," was made above Cloutsham, the view looking over Porlock, with the Bristol Channel and Wales in the distance. It may invite a perusal of the volume to which we have referred.

The annual great show of toy-dogs has been held at the Royal Aquarium.

Mr. Mackey Wilson, the High Sheriff of county Kildare, has given £1000 to the Royal Irish Constabulary Jubilee Fund.

Many clergymen are coming forward with testimony to the fact that the daily opening of their churches has led to no misuse, even in circumstances which might well have promised a different result.

Mr. C. T. Ritchie, president of the Local Government Board, will take the chair at the 224th anniversary festival of the Scottish Hospital corporation, to be held on St. Andrew's Day next, Nov. 30.

The Queen has approved the appointment of Lieutenant-General Lord Abinger, who formerly commanded the Scots Guards, to command the West London Volunteer Infantry Brigade, recently constituted under the mobilisation scheme for home defence.

MYRA'S JOURNAL for SEPTEMBER. Now ready, price SIXPENCE. Contains OVER 100 of the LATEST and PRETTIEST PARIS and LONDON FASHIONS. MYRA GIVES AWAY the following enormous BUDGET OF SUPPLEMENTS,
1. FULL-SIZED PATTERNS of the (a) Electra Corsage; (b) Blouse-Bodice for a Girl; (c) Corsage of the Dunraven Costume; (d) Tunic of the Dunraven Costume.
2. MAGNIFICENT COLOURED FASHION PLATE, specially prepared in Paris.
3. CUT-OUT PAPER PATTERN of open Petticoat-Bodice.
4. FULL-SIZED WORKING DESIGN IN EMBROIDERY for Chair Back, from Royal School of Art Needlework, N.E. Three valuable Prize-Rivets for working same.
MYRA'S JOURNAL is indeed "A MINE OF WEALTH TO LADIES."—Standard.
Dress—Furniture and Furnishing—The Management of the Household—Health and Personal Attention—Employments for Women—The Latest Inventions—Woman's Enterprise and Genius in all Spheres—in short,
ALL SUBJECTS OF USE OR INTEREST TO WOMEN are treated on in its pages.
NO LADY NEED DRESS BADLY OR EXTRAVAGANTLY, MYRA tells you what styles of Dress are in Fashion, gives the fullest instructions as to how to make them, and offers the best advice as to where to buy the material.
NO LADY NEED LACK ARTISTIC AND PROFITABLE EMPLOYMENT FOR HER NEEDLE, MYRA gives innumerable designs in all branches of fancy and artistic Needlework, and gives VALUABLE PRIZES every month for the best workmanship of the same.
MYRA and SON, Covent-garden, London.

JEPHTHAH'S VOW, by Edwin Long, R.A. "Jephthah's Return," "On the Mountains," and "The Martyr" ON VIEW, with his celebrated "Anno Domini," "Anno Regni Tertio," &c., at the GALLERIES, 168, New Bond-street. Ten to Six. One Shilling.

THE VALE OF TEARS.—DORÉ'S Last Great PICTURE, completed a few days before he died NOW ON VIEW at the DORÉ GALLERY, 35, New Bond-street, with his other great Pictures. Ten to Six Daily. One Shilling.

£70,000.
JENNER & KNEWSTUB, LIMITED,
have purchase of the entire Stock of a Diamond Merchant and Manufacturing Jeweller to the value of SEVENTY THOUSAND POUNDS, consisting of magnificent STARS, TIARAS, NECKLACES, BRACELETS, BROOCHES, SOLITAIRES, EARRINGS, PENDANTS, SCARF PINS, GEM RINGS, &c., which they are selling at HALF-PRICE, thus affording an unprecedented opportunity for making advantageous purchases.
An inspection of this extremely cheap and very beautiful collection is most respectfully invited.
JENNER & KNEWSTUB, to Her Majesty the Queen and T.R.H. the Prince and Princess of Wales, 33, ST. JAMES'S-STREET, and 66, JERMYN-STREET, S.W.

PETER ROBINSON, Oxford-st.

TERRIBLE COLLISION IN THE ATLANTIC.

On the morning of Aug. 14 the Thingvalla and the Geiser, iron ships of the Scandinavian Thingvalla Line, were thirty miles south of Sable Island, off the coast of Nova Scotia. The Geiser, of 1818 tons, was steaming eastward from New York to Copenhagen, carrying 107 passengers and a crew of nearly 50. The Thingvalla's course lay westward to New York, a little south of the Geiser's course. The Thingvalla, of 1630 tons, was lightly laden, and carried 61 cabin passengers and 394 in the steerage. The New York correspondent of the *Standard* states that there is some conflict regarding the state of the weather, which is, perhaps, best described as "nasty." No storm was raging, but there was mist, if not fog and some rain. It was under these circumstances that the Thingvalla's bow struck the Geiser amidships, abaft the starboard main rigging, nearly at right angles to the keel, and cut the Geiser almost in two. Neither vessel sighted the other until just before the collision. Until then neither of them had given any signals of warning of her approach, nor could either of them take effective means to prevent the catastrophe. Both engines were reversed, but it was impossible to reverse the movement of the vessels quickly enough. The Geiser starboarded her helm, throwing the bow to the north; but the Thingvalla ported her helm, instead of passing the Geiser to the south. The Thingvalla's bow was torn away, leaving a hole measuring twenty square feet open to the sea; but the bulkhead kept her afloat. Nothing could save a ship injured as the Geiser was. She rocked like a cradle, and within seven minutes sank like a stone. As she settled more and more on the starboard side she careened so that some of the passengers rushing on deck stepped into the sea. Others dashing along blindly fell into the hole made by the Thingvalla. Many were crushed in their berths. The Geiser's second officer, sleeping in his berth, was awakened by the groans of his mangled shipmate, and saw the Thingvalla's prow thrusting itself into the Geiser. He seized the Thingvalla's anchor-chains, and when she drew away he clambered to the Thingvalla's decks, and saw behind him his cabin close to a hole which two elephants driven abreast could have entered. The Geiser launched three boats, one of which capsized. One floated so far away that no one would jump for it. The third was overladen, and was sucked down with the Geiser. When it again floated half of its occupants were gone. Meanwhile, the Thingvalla's boats rescued those who were floating on the wreckage—namely, fourteen passengers and seventeen of the crew. The list of the saved is incomplete. Those who are known to be dead include five officers and the steward and stewardess, twenty-nine seamen, seven cabin and sixty-five steerage passengers.

The Thingvalla, disabled and overcrowded with the survivors from the Geiser, was happily relieved at noon by the German steam-ship Wieland, which took the passengers to New York, leaving the Thingvalla steaming slowly for Halifax, over one hundred miles distant, where she arrived safely.

Captain C. Möller, of the Geiser, has told the following story of the collision:—When Monday morning dawned, the Geiser was off the dreaded bank. It was not foggy, but misty rain prevailed for the greater part of the time. So pleasant was the weather that at ten o'clock on Monday night Captain Möller left the bridge in charge of the chief officer, Mr. Brown, and decided to take a few hours' rest. He reclined on a sofa in the chart-room, directly under the bridge. He gave the officers strict orders to call him should it become foggy, and to report to him at midnight what progress the steamer was making. At three o'clock the chief officer reported that the weather was "sightable," with occasional rain. Captain Möller, after telling the chief officer that he would take the soundings at four o'clock that morning, undressed himself, having decided to take a little sleep. He had not yet closed his eyes when the door of the chart-room was suddenly thrown open. "Come on deck!" wildly shouted the chief officer, "we are going to have a collision." Captain Möller sprang on to the bridge, clad in his night clothes, and assumed the command. He came too late; no human effort could prevent the disaster. The sharp bows of the Thingvalla were about to strike the Geiser directly amidships, opposite the main rigging.

The coolness and bravery exhibited by Captain Möller, of the Geiser, after the collision received the commendation of the few survivors. He stood by his vessel until the very last. Just as the stern of his vessel disappeared a wave swept over the bridge, carrying the captain with it. He was hurled down and nearly drowned by the suction of the vessel. When he came to the surface a terrible sight met his gaze. The rafts and boats were floating about, while men, women, and children were vainly endeavouring to reach them. He swam about for some minutes and succeeded in getting hold of an oar. He was floating for half-an-hour before he was rescued. The chief officer, Mr. Brown, lost his life in trying to save the passengers. He jumped from the bridge to the deck, and began to distribute life-preservers, but perished in the attempt, for in five minutes the vessel sank.

We have received a copy of a little work, entitled "Watches and Clocks," issued gratis, by Mr. J. W. Benson, of Ludgate-hill, which is perhaps the most complete book of its kind published. It is not merely a catalogue, but gives a full and plain description of the mechanism of a watch, intelligible to the general reader.

The Board of Trade have received, through the Foreign Office, the undermentioned testimonials, which have been awarded by the German Emperor to the master, mate, and three seamen of the steam-ship Cato, of Hull, in recognition of their services to the shipwrecked crew of the German schooner Alfred, of Papenberg, which was wrecked off the Horn Reef light-ship on April 2, 1887:—A gold watch for the master, Captain Andrew White; a marine binocular for the mate, William Bettinson; and a sum of 100m. to each of the three seamen, C. Gustavsen, H. Pinchon, and H. Tollefsen.

The Local Government Board has issued circulars to town clerks and clerks of the peace in England and Wales stating that in pursuance of the powers conferred upon them by the Local Government Act, 1888, they have issued orders determining the number of the county councillors for each county, and their apportionment between each of the boroughs which have sufficient population to return one councillor and the rest of the county. The number of councillors so prescribed does not, however, include the county aldermen. The Board point out the duties that will now devolve upon courts of quarter sessions and town councils, so as to determine electoral divisions for the first elections to the county councils by the date prescribed in the Act, which is Nov. 8 next.

Renewed efforts are being made to raise funds to complete the restoration of Peterborough Cathedral. Canon Argles has promised a second subscription of £500, in addition to the £1200 given by him for a Bishop's throne and choir pulpit, and a further £500 for other special portions of choir fittings. Miss Argles has collected £300 towards a choir floor, and Lady Elizabeth Villiers has given £1200 towards choir stalls. Canon Clayton has promised £250 towards the general restoration fund, the contribution to be spread over five years; and Mr. H. P. Gates has offered £350 (to be paid in three years) as a special donation for bell frames in the north-west tower. A subscription of £150 to the general fund has also been received from the Bishop of Leicester. Collecting boxes placed in the cathedral have realised £965.

A national co-operative festival, the first held in this country, was opened at the Crystal Palace on Aug. 18, and was attended by many thousands of co-operators from all parts of the country. The chief features of the programme were a large show of fruit, flowers, and vegetables; an exhibition of objects manufactured at home; a display of goods made by co-operative productive societies, and a choral concert. Mr. G. J. Holyoake addressed the opening meeting, observing that the light of profit-sharing was at last dawning on England. In the afternoon there was an open-air gathering, to whom Mr. Edwin Owen Greening explained the present position of the movement, pointing out that with respect to productive co-operation, by which alone they could hope to realise the emancipation of industry, they had but made a beginning. A resolution in this sense was unanimously adopted.

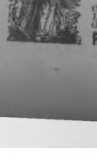
YACHTING.

There was plenty of wind on Aug. 15, at Ryde, when the second day's racing at the Regatta of the Royal Victoria Yacht Club took place; but, unfortunately, it was from the east, with rain at times. Irex again showed Yarana what her eighteen feet extra length was worth in a breeze and sea, by coming in over twenty-three minutes ahead of her; and Yarana, in her turn, beat Petronilla nearly eleven minutes and a half. In the smaller class, May beat the Mohawk handsomely, and won a well-deserved prize. The first was a match exceeding 40 rating: First prize, £50; second, £20. Starters: Irex, cutter, 98, J. Jameson; Yarana, cutter, 58, P. Ralli; Petronilla, cutter, 54, Earl of Dunraven; Hyacinth, yawl, 50, T. Garth. Long Victoria course. Irex won a first-rate race, the timing being:—Irex (£50), 3h. 7m. 57s.; Yarana (£20), 3h. 31m. 12s.; Petronilla, 3h. 43m. 40s.

The next race was for yachts not exceeding 40 rating. First prize, given by the Vice-Commodore, Captain Harvey, £50; second, £15. Starters: May, cutter, 40, T. West; Mohawk, cutter, 40, Colonel Bagot; Neptune, cutter, 40, T. Birchall; Foxglove, yawl, 40, W. Paget. Short Victoria course. May won, with over a minute and a half to spare. The timing at the finish was:—May (£50), 2h. 58m. 54s.; Mohawk (£15), 3h. 0m. 37s.; Foxglove, 3h. 7m. 51s.

The prize sailed for on the 16th was the town cup, presented by the inhabitants of Ryde. It was an open race, any yachts belonging to a recognised yacht club being accepted. A prize of £20 was added by the Royal Victoria Club for the winner in the class in this race exceeding 10 rating and not exceeding 20, and a further prize of £10 was offered by the club for the winner in the class under 10 rating, these two prizes being under the condition that two or more of each class started. The long Victoria course was selected, and Yarana took the town cup; and the Vreda, being the first home of her rating, took the club prize.

The race on the 17th was for the cup presented by the Commodore, the Marquis of Exeter. The course was round the Isle of Wight. There sailed the Yarana, Neptune, Petronella, Mary, Mohawk, Condor, and Irex. They started with a splendid breeze, at ten o'clock, and circumnavigated the island, a distance of over fifty miles, in less than five hours. The Irex arrived at 2h. 50m. 41s., and won the cup. The Yarana won the second prize of £25.



The Engineer Volunteer camp at Upnor was formed on Aug. 18, in connection with the School of Military Engineering at Chatham.

At Downing College, Cambridge, the Rev. J. C. Saunders, M.A., who has for some time been Tutor jointly with Dr. Perkins, becomes sole Tutor of the College, Dr. Perkins having resigned.—At St. Catharine's College, the Corrie Prize for Theology, founded in commemoration of Dr. Corrie, late Master of Jesus College, Norrisian Professor of Divinity, and who was formerly President and Tutor of St. Catharine's, has been awarded to Edwin Stanley Wilkinson, undergraduate of the college.—At Trinity Hall, the Cressinghaw Prize, of the value of £15, for an English essay written by an undergraduate, has been adjudged to R. A. Wigram. Additional prizes have been awarded to M. Collet and H. Morgan Brown.

The summer session of the College of Agriculture, Downton, near Salisbury, ended on Aug. 18 with the usual distribution of honours. Prizes were awarded for excellence in both practical and theoretical competitions. Amongst the former were prizes for milking, butter-making, harnessing and driving, shearing sheep, industry on the farm, knowledge of farm machinery, knowledge of live stock, ploughing, the best kept farm diary, essay on the cultivation of malting barley, best collection of grasses, of insects, and of weeds, report on natural history, field excursions, and best laboratory note-books. The class prizes were awarded for examinations passed in agriculture, chemistry, botany, surveying, mensuration, and building construction. The scholarship offered amongst first year's students was won by Mr. W. D. Linsell, Bevor's Hill, Southampton.

SWITZERLAND.—The Vitznau - Rigi Railway, the shortest, cheapest, and most frequented way to the celebrated Kulm, via Vitznau and Vitznau, with Junction at Kaltbad for the Rigi-Scheidegg.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most elegant, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always lessened by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are also comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the most beautiful climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the consolation of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant existence it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo only a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours, Lucerne to Lugano in five hours. Through carriages to all Stations of the Gothard line. Through-coupé Sleeping-Cars from Ostend to Milan. Railway Carriages, Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's offices.

THE HIGHLANDS OF BRAZIL
SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing, 2300 ft. above sea-level, just within the Southern Temperate Zone; good summer and winter alike; no change of residence forced on the invalid by the autumn of the seasons. English society, English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. to 12s. per diem. Circular, with further particulars, from CHARLES WILLIAM JONES, Esq., 20, Dingy-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

CRUISES TO THE BALTIC AND THE MEDITERRANEAN.—The steam-yacht VICTORIA, 1804 tons register, 1200-horse power, R. B. LYNHAM, Commander, will be dispatched from Tilbury Dock Aug. 30, for 30 days' cruise to the Baltic, and Oct. 15 for six weeks' cruise to the Mediterranean. The VICTORIA is always on view between her cruises, has the Electric Light, bells, and all modern improvements. Apply to MANAGER, Anglo-American Victoria Office, Carlton-chambers, 4, Regent-st., London, S.W.

STEAMERS to NORWAY, the BALTIC, the ORKNEY and SHETLAND ISLANDS. Delightful and regular 12 days' trips to the West Coast and Fiords of Norway from Leith, EVERY SATURDAY, during the month of AUGUST, by the magnificent Steamships St. Sunniva and St. Reginald. Both vessels are lighted by electricity, are provided with Bath Rooms, and combine the comfort of Passengers, and make the passage between Aberdeen and Norway in 20 hours. Direct Steamers to the Orkney and Shetland Islands from Aberdeen and Leith five times a week. To Shetland in 15 hours; Orkney in 10 hours, by the fast and comfortable Steamers St. Magnus, St. Clair, Secretan, and Queen. Particulars of Sailings and Handbook of Norway Trips, price 3d., may be had from John A. Carfrae and Sons, Victoria Office, 4 C.; Sewell and Crowther, 18, Cockspur-street, Charing-cross, W.C.; Thomas Cook and Son, Ludgate-circus, and all Branch offices; C. MacIver and Son, Tower-buildings, Water-street, Liverpool; Wordie and Co., 29 West Nile-street, Glasgow; George Robertson, 16, Waterloo-place, Edinburgh, and 61, Constitution-street, Leith; Charles Merry lees, Northern Wharf, Aberdeen.

VALUABLE DISCOVERY for the HAIR. If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer," for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. "The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of MRS. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

NOVELS.

Joan Vellacot. By Esmé Stuart. Three vols. (R. Bentley and Son).—The choice of a title for this novel would seem to have been a point under deliberation; for its pages are headed, throughout the story, "A Man's Mistake." The man who made the mistake was Major Hector Duncan, V.C.; but whether the mistake he made was in loving Joan Vellacot, whom he did not marry, or in marrying Margaret Austin, whom he did not love, the reader will have to consider. Joan Vellacot, though entitled by her fascinating beauty to have her name finally put on the titlepage, is such a wilful, selfish, and heartless girl, and such a reckless flirt, that any man who loved and married her would soon find *his* mistake; and honest John Peel, an acquaintance from childhood, ought to have known better. She is the younger daughter of Sir Henry Vellacot, of Laxton Hall, Lowcester, in whose family, consisting of two sisters and a brother, having lost their mother, the mutual ties of relationship are painfully strained. The baronet has discarded his son, Carey Vellacot, for marrying a ballet-dancer; and his elder sister, Frances, is deeply grieved by this cruel treatment of him, and by the father's coldness and indifference to herself. Joan has been early spoilt by indulgence and flattery, and is, to say the truth, an unprincipled and mischievous young person. An exhibition of her charms in some "tableaux vivants" at Laxton Hall, where she personates the seductive Egyptian Queen Cleopatra, makes the middle-aged Major Duncan, recently come back from India, her unfortunate victim. After manifesting his affection, and receiving tokens that it will be returned, he is led to believe that Joan has consented to an engagement with John Peel, a wealthy neighbour, her suitor for years past, and highly approved by Sir Henry Vellacot. The Major, naturally indignant, seeks his revenge by applying for the hand of Miss Austin, the only child of a rich cotton-spinner; he is at once accepted, being a very brave and distinguished officer, with good social connections, though poor; and these two are soon married. The character of Margaret Duncan, as a wife enduring severe trials in the discovery of her husband's continued infatuation about Joan, is by far the most engaging object in this story. It is a noble character, portrayed with much thought and care, and for her sake the novel is worth reading; yet "A Woman's Mistake," which is quite as likely as "A Man's," is a title that would have aptly designated her unwary error in so readily accepting Hector Duncan. A romantic sentiment of hero-worship, and his accidental overturn in a carriage, when she relieved him, should not have prompted her to intrust her life's happiness to a gentleman whose only merits were having won a Victoria Cross, and being proud of his reputation as a man of honour. His matrimonial proposal to her was coldly made; and, though his motive could hardly be mercenary, as her fortune was strictly tied up, she must have known that he did not give her much of a heart. In the subsequent renewal of his intimacy with Joan Vellacot, there is nothing approaching to a criminal intention; for Joan's wickedness extends no further than a malicious design to vex and to grieve Margaret by a mere unscrupulous flirtation; while Hector, never meaning to betray or abandon his wife, is just weak enough to be tempted to repeat his assurances to Joan that she is the woman he loves. This unworthy and reprehensible game between the newly-married husband and the unmaidenly damsel, who seeks to exercise her power over him without being herself affected by mutual passion, is begun at Paris, and resumed at a seaside village near Ilfracombe. Idleness, in a remote country-house, where a man cannot spend every day in fishing or shooting, is always the worst foe to conjugal fidelity. If Major Duncan had stayed at Lowcester, and diligently performed the office that was bestowed on him, that of Chief Constable of County Police, he and Margaret would have been a happy couple. As the case was, pursued by such a desperate female intriguer as Joan, and having had no experience of the wiles of "fast" English ladies in his long Indian exile, he was doomed to inflict sorrow on a wife for whose character he felt sincere esteem, and to whom he owed much gratitude besides a husband's duty. There are two good women, Lady Hartwood, a bright and lively widow, shrewd and kind-hearted, and the upright, though rigid and unconciliatory, Frances Vellacot, who endeavour to prevent a disastrous issue; but the end is very tragical. Mrs. Duncan, walking on the cliffs, is startled by suddenly coming upon her husband with Joan Vellacot, falls over a precipice, and is killed. In her sad fate, as the true heroine of the story, terminates all our interest in its actions and events; and this alone is sufficient to warrant us in commending its perusal as one of the best recently published. The supposed reformation of Joan, after all this, seems too improbable for us to join in congratulations on her wedding with John Peel.

A Bitter Repentance. By Lady Virginia Sandars. Three vols. (Hurst and Blackett).—It is to be regretted that an authoress who definitely conceives a situation of great pathetic interest, and several characters of substantial individual character, should mar their conversation with each other by giving them a stilted and unnatural style of talking. The want of simplicity of style is the fatal defect of this novel, which would otherwise be really interesting; for its theme is the distressing position of a widowed elderly gentleman, Sir Arthur Percival, who has an illegitimate daughter, called Magdalen Rose, long supposed by him to be lost, since he abandoned her mother, and into whose family this girl is introduced, quite ignorant of her relationship to him, as companion to her half-sister, Lilly Percival, the only surviving child of his marriage. His, therefore, is the "bitter repentance;" on becoming aware that he is her father, he dares not acknowledge her, and he restrains the expression of his paternal affection for her, because he cannot bear that the pure-souled Lilly, who is an invalid slowly dying of consumption, should learn the misconduct of his youth. Magdalen herself, a brave and noble-minded young woman, brought up to a life of toil and poverty in a squalid part of London, cherishes an almost vindictive hatred of the unknown parent who seems to have cruelly betrayed her mother. In the opening scene, one of the most effective, she comes to a fashionable hairdresser's shop, to sell her own beautiful hair for money to bring an eminent physician, Dr. Tremaine, to save her mother, in the last stage of a fatal disease. This affecting incident becomes known to Lilly Percival, who is one of Dr. Tremaine's patients; and they kindly make arrangements to take care of Magdalen on her mother's death. But the poor girl wanders away, distracted in mind and attacked by fever, throws herself into the Thames, and is rescued by young Lord Conway, happening to pass by in his steam-launch. Conway, the son of the Earl of Ruthin, has romantic and eccentric ideas for a youth of his rank. He has chosen to learn the craft of a mechanical artisan, and intends to associate with men of the working classes, that he may instruct them in matters of their social welfare. Leaving Magdalen, of whom he takes little notice after emerging from the river, to be tended in St. Thomas's Hospital, he goes to a Northern manufacturing town, where he attempts to settle a fierce dispute between employer and employed. The author's description of riots during this "strike" at the ironworks, and her tirade against "Socialism," only show that she has no real acquaintance with the habits and ideas of English workmen. Failing in his efforts of mediation, and threatened by them with furious violence—which would certainly not be the result of such action in dealing with their class—his Lordship returns to his family and friends, among whom are Sir Arthur Percival and his daughter. An engagement, indeed, between Conway and Lilly Percival has long been contemplated, but is finally refused by the young lady, because she feels that she has only a few months to live. In the meantime, Dr. Tremaine, finding Magdalen in the hospital, and having been informed by her mother of the true history of her birth, takes her into his own house as companion to Mrs. Tremaine, his aged mother, who is blind and infirm. Her beauty, and the sweet dignity of her character, soon inspire him with a profound attachment, which he endeavours to control and to conceal, resolving to act the part of a disinterested guardian. The whole party, in the summer holidays, all being on terms of intimacy, are assembled on the seacoast of South Devon, where Magdalen divides her affectionate services between old Mrs. Tremaine and Lilly Percival, who shows her a sisterly love. But the striking likeness of faces between the father and the unrecognised daughter, the strange mystery about Magdalen Rose, and the remembrance of certain scandals in Sir Arthur's early life, excite the suspicion of malicious neighbours. Lord Conway, now paying her too great attentions—though he is rather a coxcomb and a prig—provokes an envious rival, Mrs. Hermon Hodge, a rich young widow of doubtful reputation, to insult and malign the innocent girl. The rudeness and bad manners of some of the aristocracy and people of fashion, as depicted by Lady Virginia Sandars, may be surprising to readers who belong to the obscure middle class of society. At length, when Lilly Percival has been killed by the cruel exposure of her father's long-past transgression, and Lord Conway has been overheard by Magdalen saying that he hesitated to marry her on account of her illegitimate birth, the trials of this brave heroine—she once saved Lilly's life at the risk of her own—arrive at a happy termination. She becomes the wife of Dr. Tremaine, who is exalted to the rank of a medical baronet and is earning a large income, and who is an excellent man of studious and domestic tastes. It is better for her to be Lady Tremaine, after all, than Lady Conway and prospective Countess of Ruthin.

Cardinal Manning took a prominent part in the annual festival of the Catholic Total Abstinence League of the Cross, which was held on Aug. 20, in the Crystal Palace. Addressing the large audience, his Eminence expressed his belief that the Temperance movement was the greatest ruling power in England after the Government. Upwards of 4300 members of the association were assembled.

The Pope Commemoration Committee at Twickenham concluded their labours by passing a resolution expressing their regret that the monument in Twickenham parish church, erected by Pope to his father and mother, and on which his own death is recorded, is concealed by the organ. They further expressed a hope that this monument and the gravestone of the poet, which is also concealed, may both be brought into view should any alterations in the present arrangement of the church make this possible. The committee decided to devote the surplus from the Loan Museum to the purchase of works relating to Pope for presentation to the Twickenham Free Library.

THE QUEEN AND HER GRANDCHILD PRINCE ALEXANDER ALBERT OF BATTENBERG.

FROM A PHOTOGRAPH TAKEN BY SPECIAL COMMAND BY MESSRS. A. AND G. TAYLOR.

OUR NOTE BOOK.

BY JAMES PAYN.

A chivalric German has been publishing an apology for mothers-in-law. How many he has had of his own he does not tell us, but he writes like a man who understands his subject. It is high time in my opinion that such a book was written. The ridicule that has been cast upon that relative by playwrights and jokers has done a good deal of harm to as worthy a class of women as exists, and is generally falsely applied. The treatment of them, both in fact and fiction, is as cruel as it is cowardly. What is significant enough of the quarter from which it arises is that it is the wife's mother that is almost always made the subject of attack; with the man's mother, I confess I have much less sympathy, for he can take care of himself, and if her "interference" is not superfluous, it ought to be; but why should the mother of our girls—generally by far the most unselfish and self-sacrificing of all members of the family—become an object for detraction because one of them marries? If her husband ill-treats her, it is natural enough indeed that *he* should detest her would-be defender; but why should the world at large join hands with the brute? I have had some experience of mankind, and paid an unusual attention (from other motives besides a great natural politeness) to my fellow creatures, and I believe in mothers, whether their daughters are married or single. The prejudice against them is as false as it is vulgar; and what is very hard on them, I notice that in works of fiction, even by the best writers, stepmothers (often just and fair-minded persons, no doubt, but who have many temptations to be otherwise) are habitually described as mothers-in-law.

An order in Council informs us that the provisions of the International Copyright Convention have been extended to the Grand Duchy of Luxemburg. This is news indeed for the English author; if he does not at once set up his carriage on the strength of it, he can, at least, go to the coach-maker's and decide on what sort of carriage it is to be. On the prospect of the proceeds of a translation in every country on the Continent he would, however, hitherto, have been rash to bespeak a gig. It may be very pleasant to be rendered into a foreign language for the first time, but that sensation wears away, and there is little else to be got out of the experience. For a novelist to appear in Russian is always interesting, because, even when he sees it, he can't tell which of his novels it is; but, of course, "the vastest Empire in the world" pays nobody. Poor little Denmark, though honest enough so far as I have found, has nothing to pay. To get a ten-pound note out of Italy is like getting the breeks from a Highlander; and France, though it has breeks, is extremely disinclined to part with them. A Frenchman once bespoke the whole of my immortal works; the sum for each was small, but, on the principle of "a reduction on taking a quantity," I accepted his terms. I heard nothing from him for a year, when another Frenchman wrote to me for his address:—"I have completed the translation of one of your novels for Monsieur D——, *for fifty francs*, but cannot get his money." Nor could *I*, and I never did. The German translator pays what he promises you, though by no means the next day, nor even the day after; it is not a splendid honorarium, but there is no saying what it may swell to now that the Grand Duchy of Luxemburg has joined the Convention.

One has heard of people "weighing their words" (though one seldom sees it put into practice) and now an Italian savant has discovered a method of weighing thoughts. He began with the hand, "placed in a closed vessel of water, when the change of circulation, produced by the slightest action of the body or brain, was shown by a rise or fall in the liquid in the narrow neck of the vessel"; and then he procured a large balance for the whole human body (what the purveyors call "a meat scale"), and found that "even dreams send the blood to the brain sufficient to sink the head." He must have been exceptionally fortunate in finding a gentleman who could dream (or even go to sleep) in a meat scale; but scientific people have great luck. "The changing pulse even told him when the person operated upon was reading Italian or Greek; the greater effort necessary in the latter case seriously affecting the flow of blood." This I can easily believe. The conjugation of a Greek irregular verb, or rather, the failure to conjugate it, used often, I remember, to effect that at Eton, though not exactly in the brain vessels. The practical value of this scientific discovery has been the subject of depreciatory remark; but if by this process a gentleman's thoughts can be pronounced to be "weighty," and he can procure a certificate of the fact, it will save him a good deal of trouble (and the world much weariness) in persuading other people of it, viva voce.

Although the Americans have declined to accept, among the blessings of civilisation, the principle of perpetual pensions, they have invented something like it, all their own. Instead of pecuniary compensation to the owners of land over which they travel, the railway companies, it seems, give free passes to them and their families. This causes the bonds of domestic union to be considerably extended. A man is apt to consider (when he travels) that his governess, and his goddaughter, and even (if he is a widower) the young woman he intends to marry when the year and day are out, to be all members of his family. When the Boston and Providence Railway was chartered it seems to have trusted a good deal to its latter terminus in framing its regulations upon this point. It is fifty years since it started, yet a lady with the characteristic name of Dodge has just established her claim to travel free upon it, as being the granddaughter of an original landowner. With this travelling advantage (which is a sort of fortune) she will, of course, marry, and in due time probably have grandchildren of her own, and so on, and so on; in time, therefore, it may happen that a line of railway—though passing through a populous neighbourhood—will declare no dividends, because half of its passengers will be carried free. What fun it would be to see a meeting of shareholders on one of *our* railways (always a very excitable assembly as it is) agitated by the "Dodge" question!

The Queen, I am glad to record, takes her cats with her when she takes holiday; a very reasonable proceeding, for surely if anybody can be called a member of "the Household," 'tis a cat. Unfortunately what is done by Royalty, in the social way, affects only "the best circles," or else we should never hear, as we always do at this season, of cats left to starve in houses which their owners have quitted to enjoy themselves at the seaside. How can they, *can* they do so? I suppose some of them go to church or chapel, or at all events (though they don't belong to the professional classes) profess some kind of religion or another: but what brutes they must be! What is worse than all, it is the housewife who is to blame in the matter; the dog is "the friend of man," and it requires a nature above the common in the male to appreciate or even "think about" poor pussy; but the cat is the companion of woman, always about her feet, if not in her lap, and this abominable and cruel neglect can in her case hardly be the result of thoughtlessness. No; just as the calculation of the slave owner used to be that it was better to work his slaves to death and buy new ones than to give them food and sleep, so these wretches leave their cats to starve rather than pay sixpence a week for their maintenance! Let us hope that all the time they are away they never sleep for caterwauling.

Caterwauling, or the music of the tiles, was at one time thought very highly of by the Continental public. In the French Encyclopedia (a work with a good deal of queer information in it) one reads of an organ, played by a bear, which enraptured the good folk of Brussels. Instead of pipes, the instrument contained a collection of cats, each confined separately in a narrow case, with their tails held upright, and attached to the jacks in such a manner that when the bear touched the keys, he pulled the tails, "thereby producing a most mellifluous mewing." The organist had also *his* tail (or what there was of it) pulled occasionally, "so as to form a bass accompaniment." This was abominally cruel, of course (though I must say rather funny); but it is probable that the cats were not personal friends of the proprietor of the organ, nor do we read that he shut them up in his house to starve when he had no further occasion for their services.

The thousand pounds given for the great St. Bernard dog does not impress me so deeply as the account of his farewell to his friends. It was really most touching, and seems to have even moved the enterprising American gentleman who purchased the animal. The whole neighbourhood—a considerable portion of which he had occupied himself—turned out to say "Good-bye" to him; and he gave his huge paw to every child who asked for it. His destination is, I read, the stage, on which—and it ought to be a pretty large one—he makes his first appearance in "Fritz." He will, of course, be the Dog of Montargis, and make his mark in "The Crusaders," and I hope he will not disgrace himself by swallowing some small actor whom the public has declined to swallow. And yet (if his noble nature would permit him to stoop to it) what a splendid Disappearance—always a most attractive incident—he might make by swallowing him on the sly! It would give another explanation of "his vast and wandering grave," as the poet terms the ocean. What a fine name, too, the dog has got! how the Fotheringays and Montmorencies of the stage sink into insignificance beside "Plinlimmon"!

An American novelist, who I conclude is in the sensational line, possesses, we are told, an inkstand made of a human skull. "It has silver eyelids which open by a spring, disclosing two fonts in the orbits, that contain red and black ink. This is having all things "in a concatenation accordingly" indeed, for the production of stirring fiction. The remains of our fellow-creatures have been often laid under contribution before for ornamental purposes. "Rich and rare were the gems she wore, a human thigh bone in her hair," sings the poet. A well-known musician in Paris used to produce harmonious sounds from a highly decorated tambourine, the parchment of which had once been a very beautiful skin. "She sang divinely," he would say, with tears in his eyes; "and, as I play this, her voice seems to accompany the instrument." But none of these "adaptations" seem to me so appropriate as the author's inkstand. There is no reason why he should not add a bone pen, and somebody's scalp to wipe it on, to his writing materials. Then the only thing wanting to perfect completeness would be that the skull should be that of an inhabitant of Paternoster-row.

A much debated question just now is how you can pay a professional gentleman for his services with the least shock to both your delicacies of mind. Some are for a genial bluffness with physicians and others; you pull your purse out with a "guffaw," and observe that "short reckonings make long friends"; others hide the fee under the inkstand or somewhere, and leave the doctor to "seek" for it, as if he were a retriever; others put it in the palm of their hand, and try to make it stick to that of the medical gentleman on taking leave, a plan that presupposes that he is not in very good health himself. A fashionable physician, of whom I ventured to ask whether patients ever went away from his consulting-room without paying, replied, "Well, not exactly without paying; but I *have* had four lozenges, neatly done up in paper, given to me instead of two guineas." It so happened that he was a throat doctor, which I thought (though I didn't tell him so) made the mistake very appropriate. It is easy, of course, to cheat the doctor, but difficult to curtail his fee. There is a story of one who took his two guineas a visit with such excessive perseverance that the patient's wife resolved at last to give him but one. On receiving it he instantly fell upon all fours and felt about the floor. "Has anything been lost?" murmured the patient. "Yes, Sir; a guinea," responded the physician. And, rather than have a row by the bedside, the poor lady had to feign to have made a mistake.

FOREIGN NEWS.

A banquet was given at the Hôtel Continental, Paris, on Aug. 23, to celebrate the fiftieth birthday of the Comte de Paris, at which covers were laid for 300. Many well-known Royalists were present, including the Marquis De Beauvoir and MM. Haussonville and Ferdinand Duval.—The French Naval Manœuvres have commenced by an order to the Commander-in-Chief of the Fifth Naval District at Toulon for the immediate mobilisation of the fleet forming the Second-Class Reserve. The order refers to eight ironclads, three despatch-boats, and all the torpedo-boats available, and a squadron of six ironclads from Algiers is to join them.—M. De Chevreul entered his 103rd year on Aug. 28.

King Humbert arrived at Forli on Aug. 28 to witness the military manœuvres in the Romagna. At all the stations through which the Royal train passed, his Majesty, who was accompanied by the Prince of Naples, met with a most enthusiastic welcome.

On Aug. 25 the Queen Regent of Spain, attended by a brilliant staff of generals and officers, inaugurated a powerful new fort which for the last four years military engineers have been constructing on the heights of San Marcos, situated between San Sebastian and Irun and the French frontier. The position is of immense military importance.

Under the personal direction of Emperor William the military manœuvres between Spandau and Potsdam on Aug. 21 resulted in the former garrison being driven from their fortified positions. Both the Emperor and the Crown Prince of Greece bivouacked during the night, although the weather was very rainy. The Emperor went on the 23rd to Sonnenburg, near Custrin, to witness the investiture of his brother, Prince Henry, and of other candidates, with the Order of St. John. The ceremony was performed by Prince Albrecht of Prussia, Regent of the Duchy of Brunswick. The Emperor held another military inspection, and subsequently gave several audiences.—King George of Greece arrived in Berlin on Aug. 27 from St. Petersburg. He was received by his son, the Crown Prince, the Greek Envoy, the Municipal and other dignitaries, and escorted to the Old Palace, where he was the Emperor's guest. About noon his Hellenic Majesty, with his son, went to Potsdam to visit the three Empresses. The German Emperor went on Aug. 27 to Dresden to visit the King of Saxony, with whom he drove through the city, which was gaily decorated. A loyal address was presented by the Burgomaster on behalf of the inhabitants. The Empress Frederick received the Crown Prince of Greece on Aug. 23. Next day her Majesty left Berlin for a few days' visit to Count Münster at his seat in Hanover.

The Queen of Portugal left Vienna on Aug. 22 for Wild Gastein. The King left in the evening for Ernstbrunn, in Lower Austria, on a visit to Prince Reuss.—The sixteenth International Grain Market was opened in Vienna on the 27th, when representatives from all the countries in Europe attended at the Cornhall.

Signor Crispi left Friedrichsruh on Aug. 23. He was accompanied to the railway-carriage by Prince Bismarck, and the parting was very cordial. The interview between Prince Bismarck and Signor Crispi has been followed up by one between the Italian Minister and Count Kalnoky at Eger. The two Statesmen seem to have met at the railway-station, and to have discussed the affairs of Europe over a dinner at a neighbouring hotel. On the 26th, Signor Crispi arrived at Milan, and proceeded at once to Monza to confer with King Humbert.

The Inland Navigation Congress held its final sitting at Frankfort-on-the-Main on Aug. 23. The next congress will meet at Manchester in 1890.

Despatches received from North Africa disclose a terrible state of affairs in Morocco. The Emperor, it appears, has been wreaking a fierce and uncontrolled revenge upon his rebel subjects for their recent slaughter of his cousin Prince Muley and his escort.

The Czar, accompanied by his son, the Grand Duke Michael Alexandrovitch, and the Grand Duke Alexis Alexandrovitch, left St. Petersburg on Aug. 26 for Iljinskoje, the country seat of the Grand Duke Sergius Alexandrovitch, situated near Moscow. The Grand Duke Sergius and his consort and the Grand Duke Paul Alexandrovitch arrived there the same day. The Empress left Peterhof on the 25th for Gmünden, Austria, accompanied by the Heir Apparent and the Grand Duchess Xenia, on a visit to her Majesty's sisters. Her Majesty was cordially welcomed at the railway station, Vienna, by the Crown Prince and Princess of Austria.—The Emperor has given 25,000 roubles for distribution among the distressed families of Orsk, burnt out by the recent fires.—The christening of the newly-born son of the King and Queen of the Hellenes took place on the 23rd in the Russian Imperial Castle at Pavlovsk, the infant Prince receiving the name of Christopher. The Imperial Russian family, the members of the Court, and many high functionaries attended.

President Cleveland has addressed a message to the United States Congress, in which he says that, as they have refused to second his efforts to end the differences with Canada in respect to the fisheries by diplomatic methods, he has no resource left but to ask for powers to enforce a retaliatory policy.

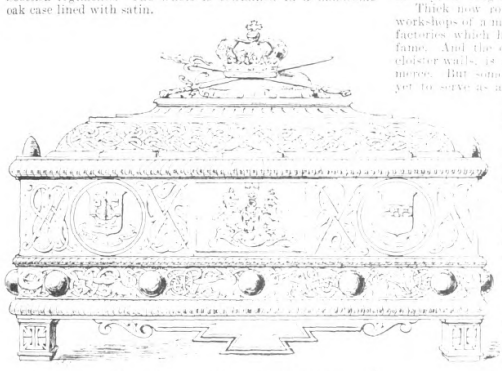
Sir John Macdonald has visited Nova Scotia and Cape Breton Island, being most cordially received everywhere.

The Board of Trade have awarded a binocular glass to Captain P. Marconi, master of the Italian barque Savina, of Genoa, in acknowledgment of his kindness and humanity to the shipwrecked crew of the barque Jane Maria, of Ayr, which was wrecked in the North Atlantic on July 12.

A treasure-chamber has been found in the rear of some unoccupied premises, situated between the new carriage bazaar in Long-acre and Arkell's coachbuilding works. The place has long been empty, and, with the view of making some structural alterations, workmen have been recently set to work. In demolishing a thick party wall, the men laid bare a chamber which was filled with an immense quantity of plate, watches, and jewellery, the value of which is considerable. Many of the articles, which were black with age, were also partly fused, evidently from the action of great heat. It has been ascertained that the place was occupied, many years ago, by a jeweller and refiner, named Armstrong, and during his tenancy was destroyed by fire, the occupants being burned to death.

The rejoicings in celebration of Lord Dudley's majority, which began recently on his Worcestershire estates, were resumed on Aug 25 on his Merionethshire estates at Landrilly. He was enthusiastically received by his tenantry, and at a dinner, at which about 300 were present, he was presented by the tenants with an illustrated address and a Welsh Bible. On the 27th rejoicings were resumed in Staffordshire, where his important mining and other industries find employment for several thousand people. Addresses were presented to Lord Dudley, who drove, accompanied by the Countess of Dudley and members of the family, to Brierly Hill, where the local authorities received them. At night a county ball was held at Himley.

THE QUEEN AT GLASGOW, RENFREW, AND PAISLEY:



CORPORATION GIFTS.

The Municipal Corporations of three ancient "Burghs" of Scotland—the Royal Burgh and great city of Glasgow, the Royal Burgh of Renfrew, which gives a title to the eldest son of the Sovereign, and Paisley, which celebrated the 400th anniversary of its municipal charter on the day of her Majesty's visit—presented loyal Addresses to the Queen, in the manner related in our account of the proceedings on Aug. 22 and Aug. 23. The gold casket in which the Glasgow Corporation Address was contained, and the gold key presented to her Majesty at the opening of the new Municipal Buildings of Glasgow, were manufactured by Messrs. Robert and William Sorley, jewellers, gold and silver smiths, and watchmakers, of 1, Buchanan-street and 136, Argyle-street, in that city. In the front of the casket, which is of oblong shape, the central place is occupied by a representation, in chased work, of the new Municipal Buildings, with two side designs, one representing Railway Traffic and the other Shipping. At the back of the casket is a view of the Glasgow Exhibition building. At one end is the College; at the other, the University of Glasgow. At the four corners are modelled figures personifying Art, Science, Commerce, and Agriculture. On the lid are the Arms of Glasgow, the Royal Arms, and the Scottish Lion and Shield, in high relief, in polished and dead or frosted gold. The casket is inclosed in a case of green velvet, that being the customary colour for Glasgow Corporation presentations.

GOLD KEY OF NEW MUNICIPAL BUILDINGS, GLASGOW.

There is also a casket of silver, overlaid with pure gold, designed and made by Messrs. George Edward and Sons, of the Poultry, London. This is quite different in shape from any casket hitherto presented to her Majesty in this country, the design having been suggested by one of the Indian caskets among her Majesty's Jubilee presents, now on view at the Glasgow Exhibition. It is cylindrical in form, richly chased with runic ornamentation, and studded with Scotch stones from the various counties in Scotland. The Royal Arms are chased at one end, the Glasgow Arms at the other end, and in the centre is a lion supporting a shield with the Royal monogram "V.R." in relief; the whole is surmounted with the regalia. The casket rests on four upright supports of Celtic form, standing on a military red velvet base, at the corners of which are four figures representing four of the most illustrious Scottish regiments. The whole is contained in a handsome oak case lined with satin.

GOLD CASKET OF RENFREW CORPORATION ADDRESS.

The gold key delivered to her Majesty for the opening of the new Municipal Buildings, which is of 22-ct. solid gold, hall-marked, was designed by Mr. W. Young, the architect of the buildings, and was made by Messrs. R. and W. Sorley, of Glasgow.

The gold casket in which the address of the Corporation of Renfrew was presented was also made by Messrs. R. and W. Sorley. It is oblong in shape; in front are the Royal Arms, with the Stuart Arms to the right, and the Arms of the Royal Burgh of Renfrew to the left. On the top are the Crown, Sword, and Sceptre; the lid is flat chased and engraved work, of Celtic pattern, surrounded by twelve Scotch pebbles. At the back is the Blythswood testimonial, with the old and new Townhalls on each side; and on the ends are the steam-ferry and a large Atlantic liner. These subjects are all engraved on polished gold, and underneath these, amid the chased work of ornamentation of pure Celtic design, are a number of Scotch pebbles inlaid, these stones being cut cartouche-shape. The sides are dead gold, with etched scroll-work. This casket is lined with silk of the Royal Stuart tartan pattern, and has a red morocco covered case.

The casket of the Paisley Corporation address is a fine specimen of silversmiths' work, simple but refined in design, executed by the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, London. Its form is rectangular; at the corners are fluted pillars, standing on massive feet in high relief. The front has the Royal Arms in the centre, and emblematic panels on each side, richly chased in repoussé style. The reverse shows the Burgh Arms and views of the Museum and the Fountain Gardens. The ends are embossed in high relief with views of the Abbey and the Townhall. The lid is surmounted by the Royal Crown, and has on the front an ornamental panel, bearing an inscription. The other panels of the lid are delicately embossed with thistles and ornamental tracery.

The bass-drum used at the battle of Waterloo, which is now at the Glasgow Exhibition, and which was shown in one of our Illustrations, is exhibited by Messrs. George Potter and Co., of Aldershott, manufacturers of military musical instruments. They have placed on view an effective assortment of their wares, including the kettle-drums fitted with their ingenious tuning apparatus, which have gained high approval. The old Waterloo drum is laid on the top of their case of exhibits. It was made by the grandfather of the present Mr. George Potter, and was given back to the firm some years ago, being a relic and memorial of their long-established business.

PAISLEY ABBEY.

Since July 24, 1617, when James Sixth of Scotland and First of England came to honour Lord Claud Hamilton, no visit has been paid to this venerable abbey of the Benedictines by the ruling Sovereign of these isles. The ruin, nevertheless, as a monument of Stuart piety, has a close association with the Royal house; and her Majesty, on Aug. 23, in visiting its precincts, has but renewed a connection dating back seven hundred years. For it was by Walter, first of the Stuart race, that the abbey was founded in 1163; and under the flagstones of its mouldering pavement lies many a bearer of the Royal name.

When David I. returned from England after the Battle of the Standard in 1141, he took with him the young scion of a Shropshire house, whom presently he endowed with lands in Renfrewshire, and made Lord High Steward of Scotland. And when the latter, twenty-two years later, founded this abbey church upon his lands, he brought to inhabit it monks of the order of Clugny from Wenloe in his native county. From his office, made hereditary presently by David's successor came the name of Steward or Stuart; and heads of the family were commanders at the fields of Largs and Bannockburn. To Walter, the sixth Steward, who took part in the latter battle, King Robert the Bruce gave his daughter, Marjory, in marriage; and it was through this Princess that the Stuart race inherited the throne. The founder of the family, though he died at Melrose, had been buried here, with most of his succeeding line; and when Princess Marjory, after a single short year of married life, expired in Renfrew Castle, close by, they laid her in the Abbey among her husband's kin. She left a child, however, and he it was who, after the death of The Bruce's only son, ascended the Scottish throne as Robert II. Frail enough, therefore, once was the chance that set the crown upon the head of the long-succeeding line which sways the sceptre at the present day in the person of her Majesty Queen Victoria. In the abbey here lies the dust of Elizabeth More, King Robert II.'s wife while she was yet High Steward, as well as that of Euphemia Ross, his Queen. And here, too, upon his death at Rothesay Castle, were laid the remains of Robert III., the father of the First James. No tablet marks the resting-place of the latter King; but it is known that somewhere before the high altar, where afterwards the great Earl of Ross, last Lord of the Isles, was buried, repose the ashes of the broken-hearted Monarch.

Sufficiently intimate, therefore, in early days was the connection of the abbey with the Royal house; and it is interesting to remember that her Majesty at Paisley has been visiting, besides the scenes of the earliest chapters of her family's history, the long-neglected resting-place of her ancestors.

Thick now round the ancient abbey rise the houses and workshops of a modern town. In sight are the chimneys of factories which have brought to the place another kind of fame. And the once pellmell Cart itself, which runs by the cloister walls, is busy to-day with the stains of modern commerce. But something of the once illustrious fame remains yet to serve as a worshipping place; echoes, as of the past, may still be heard in its famous sounding aisles; and the Royal visit just over recalls the glory of the abbey's bygone days.

That last visit of the Sovereign, made here in 1617, is worth recalling. Before then the reigning family had been frequent guests of the Abbot; but on the departure of James VI. on that occasion the Stuarts took a long farewell to the ancient family shrine. The coming, then, of the King to the town and monastery had a strong dramatic significance, and afforded a striking instance of the unexplained changes of fate. His Majesty's host was Lord Claud Hamilton; and a meeting full of strange memories theirs must have been, so near to the last battlefield of the King's ill-fated mother, and to Crookston Castle, the ancestral home of his sire, Lord Darnley. Worn with age and the vicissitudes of a darkly-chequered life, Lord Claud was himself unable to make welcome for the King, and was forced to leave the honours to his son. But, forty-nine years earlier, it was he who led the Queen's vanguard of two thousand up that narrow lane at Langside, whence, after her escape from Loch Leven, the last attempt was made to set her once more upon the throne. His spear that day had been pointed against the partizans of the boy-King James; and had others only fought as well as Lord Claud at the head of that narrow lane, there might have been no story to tell of a Solway flight, or of an execution at Fotheringay. Many distresses he had had to suffer from the Regents while the King remained a minor, and had he not belonged to one of the most powerful families in the kingdom his life probably would have paid the forfeit of his loyalty. But with the exception of Mary, and the assumption of actual power by James, a change had come about. The King forgave the man who had been his opponent only in name, shut his ears to the aspersions of rival families, and, remembering only that Lord Claud had been his mother's stanch supporter, made him Lord of Paisley and of the abbey lands, and created his son Earl of Abercorn—honours held by the family up to the present day.

Here, then, in the buildings of the lately reformed monastery, the King became the guest of the veteran nobleman; and a brilliant gathering of the neighbouring gentry met to do honour to the Royal visitor.

From that time till now, a space of wellnigh three hundred years, the town has gone its own way, favoured not once by the Sovereign's presence, while its intimate relations with the Royal house have been all but forgotten by the outside world. The inhabitants of the place themselves have been tempted to take pride altogether in Paisley's modern achievements in trade and in the doings of her later-born sons. "St. Mirren's" in recent years may have come to vaunt the names of Tannahill and of Christopher North, almost to the exclusion of that of Stuart; and there must be many who every day pass by the ruined abbey pile who have turned no thought to the dust that lies within its shade. The late visit of her Majesty, however, will have brought many half-forgotten facts to fresh notice, and will have recalled to imagination not a few curious memories of the place's early history and associations.

G. E.-T.

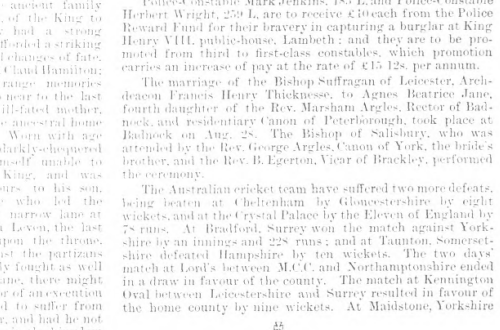
Mr. Robert Anderson, LL.D., barrister-at-law, has been appointed Assistant Commissioner of Police of the Metropolis, in the room of Mr. James Monro, C.B., resigned.

THE COURT.

The Queen's visit to Glasgow (of which an account is given on another page) was brought to a close on Friday, Aug. 24, late on which day her Majesty and Princess Beatrice (Princess Henry of Battenberg), accompanied by the Grand Duke and her Grand Ducal Highness Princess Alice of Hesse, left Blythswood, and travelled by the Glasgow and South-Western Caledonian and Deeside Railway to Ballater, arriving at the castle at 9.20 next morning. A guard of honour was furnished by the Queen's Own Cameron Highlanders at Ballater, under the command of Captain Davidson. Princess Margaret and Prince Arthur of Connaught, together with the children of Prince and Princess Henry of Battenberg, arrived at the castle on Aug. 23. General Viscount Bridport, K.C.B., the Hon. Rosa Hood, and Miss Bauer, also arrived at the castle at the same time, having travelled with

GOLD CASKET OF GLASGOW CORPORATION ADDRESS.

the Royal children. The Queen drove out on the 25th, accompanied by Princess Beatrice and Princess Alice of Hesse. Princess Frederica (Baroness Pawel-Rammingen) visited her Majesty. The Grand Duke of Hesse rode out, attended by Colonel Wernher. Colonel Wernher had the honour of dining with the Queen and Royal family. Sunday, the 26th, was the anniversary of the birthday of the lamented Prince Consort; and on the 27th the gentlemen in attendance on the Queen and Royal family, and the servants and tenants of the Balmoral, Abergeldie, and Birkhall estates, assembled at the Obelisk at noon, and drank to the memory of the Prince Consort.—The Queen has written to Sir James King, Lord Provost of Glasgow, expressing her great gratification at the very cordial and loyal reception accorded to her by the citizens of Glasgow on her recent visits to that city.—The Queen has expressed her readiness to become a patroness of the Welsh National Eisteddfod, to be held next year at Brecon; and her Majesty has sent the Lord Mayor of London £50 in aid of the fund for the relief of the sufferers by the recent floods in the Isle of Dogs.

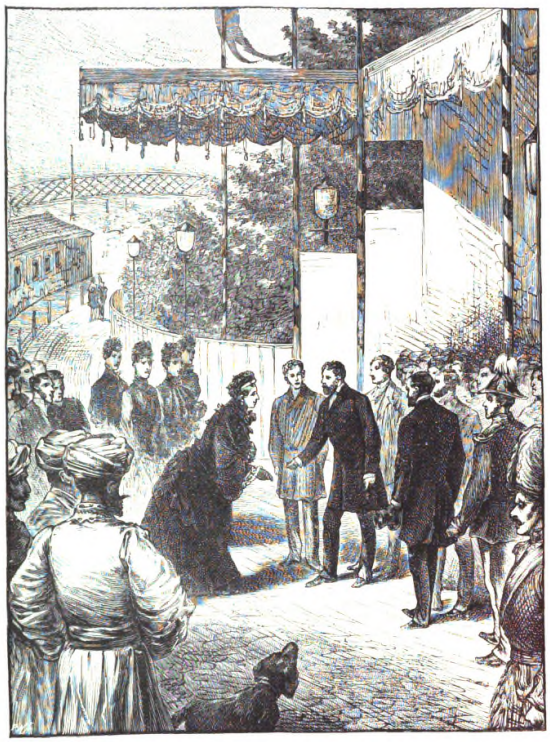


The King of the Belgians left Charing-cross on Aug. 28 for Ostend.

A meeting of the Plenipotentiaries to the Sugar Bounties Conference took place on Aug. 28 at the Foreign Office, under the presidency of Baron Henry De Worms, when the text of the convention was finally adopted.

Police-Constable Mark Jenkins, 185 L, and Police-Constable Herbert Wright, 259 L, are to receive £10 each from the Police Reward Fund for their bravery in capturing a burglar at King Henry VIII. public-house, Lambeth; and they are to be promoted from third to first-class constables, which promotion carries an increase of pay at the rate of £15 12s. per annum.

The marriage of the Bishop Suffragan of Leicester, Archdeacon Francis Henry Thicknesse, to Agnes Beatrice Jane, fourth daughter of the Rev. Marsham Argles, Rector of Badnock, and residentiary Canon of Peterborough, took place at Badnock on Aug. 28. The Bishop of Salisbury, who was attended by the Rev. George Argles, Canon of York, the bride's brother, and the Rev. B. Egerton, Vicar of Brackley, performed the ceremony.



The Australian cricket team have suffered two more defeats, being beaten at Cheltenham by Gloucestershire by eight wickets, and at the Crystal Palace by the Eleven of England by 78 runs. At Bradford, Surrey won the match against Yorkshire by an innings and 228 runs; and at Taunton, Somersetshire defeated Hampshire by ten wickets. The two days' match at Lord's between M.C.C. and Northamptonshire ended in a draw in favour of the county. The match at Kennington Oval between Leicestershire and Surrey resulted in favour of the home county by nine wickets. At Maidstone, Yorkshire

GOLD CASKET OF PAISLEY CORPORATION ADDRESS.

beat Kent by 51 runs, and the match between Lancashire and Notts, at Manchester, ended in a draw. The Cheltenham week concluded with the defeat of Gloucestershire by Middlesex by an innings and 33 runs. At Taunton, Somersetshire beat Essex by three wickets. The two days' match at Lord's between M.C.C. and Hull Town Club was drawn; and the match at Southampton between Hants and Essex ended in a draw.

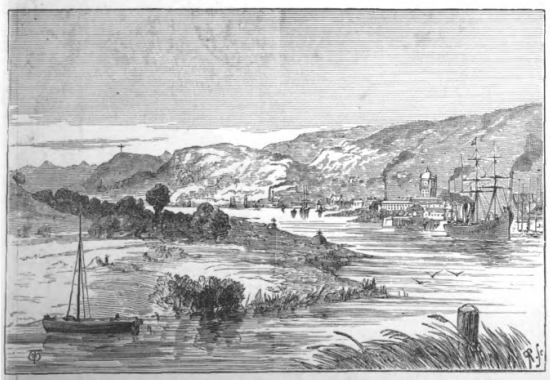
THE QUEEN RECEIVING AN ADDRESS OF THE CORPORATION AT THE NEW MUNICIPAL BUILDINGS, GLASGOW.

THE QUEEN'S ARRIVAL AT QUEEN MARGARET'S COLLEGE FOR LADIES, GLASGOW.

BLYTHSWOOD, VISITED BY THE QUEEN.

Built in 1820, the present mansion-house of Blythswood is a handsome edifice, and looks best when seen from the river Clyde; it is situated in the midst of a well-wooded park, at the confluence of the rivers Cart and Clyde. It has a fine entrance on the east side, where a portico of white freestone breaks the straight line of the building. The proportions of the house on



VIEW IN THE BLYTHSWOOD GROUNDS, WITH TREES PLANTED BY THE LATE DUKE AND THE DUCHESS OF ALBANY.

the outside, and the apartments in the interior, have been very much admired by architects. Within, there is a large entrance-hall and a sculpture gallery, filled with some very fine statues and busts in white marble. The reception-rooms open one into another, between marble pillars, having an agreeable and elegant effect. The view from the Queen's private apartments, on the south-west side, is very grand; the whole valley of the Clyde towards the Argyleshire mountains, with the various vessels of all sizes sailing on the busy river, the Kilpatrick ranges to the north, and the distant spires and domes of Paisley to the south, complete a very lovely scene.

The property was originally called Renfield, but was changed by the builder of the present mansion to Blythswood, the name of the more valuable property belonging to Sir Archibald Campbell, upon which the west end of Glasgow is built. The Campbells have held the property since 1647, when it first came into the possession of Colin Campbell of Elie, who was descended from the Ardkinglass branch of the Argyle family; the first of that family being Colin, brother to Duncan, first Lord of Argyle, in the fifteenth century. The present Sir Archibald Campbell is of the family of Douglas of Mains, in the neighbouring county, who, as heirs of entail, assumed the name and arms of Campbell, in 1838, at the death of the then holder of the property. They had intermarried so early as 1701 with the Campbells. The lands of Mains have been held by the family of Douglas since 1373; they were of the Douglases of Dalkeith, now represented by the Earls of Morton. A peerage was granted to a member of the family, Robert Douglas of Mains, as Viscount Belhaven, in 1633; but the title became extinct. Sir Archibald Campbell is descended from the elder brother of the Viscount. Sir Alexander Douglas.

Blythswood was honoured in 1876 by the presence of the Prince and Princess of Wales, with their two sons, and, in 1874 and 1882, by that of the Duke of Albany, who was accompanied by the Duchess.

We give Views of Blythswood and of scenes around it; the junction of the Cart with the Clyde, at the foot of the park; the view, from the Queen's bed-room, of the valley of the Clyde; and one showing the late Duke of Albany's tree,

JUNCTION OF THE CART AND CLYDE AT THE FOOT OF THE BLYTHSWOOD PARK.

planted in 1882, with another tree planted by the Duchess of Albany. The village church of Inchinnan, near which Archibald, Earl of Argyll, was captured in disguise, in 1685, is shown in another Illustration. In the churchyard are some interesting tombstones of the ancient Knights, carefully preserved by the owner of Blythswood.

Her Majesty, in driving through Blythswood Park, saw the spot where Queen Margaret of Scotland was killed by falling from her horse, and other places with historical associations of some interest.

FRIENDS.

In his "Epistle to Joseph Hill" Cowper quaintly versifies a joke, which is, to say the least, of somewhat musty flavour. A servant asks leave of his master to go out—just a step, he explains—in fact, only to the end of the street. "What for?" inquires the master. "An please you, Sir, to see a friend." "A friend!" exclaims his master, with melodramatic start; "yes, thou shalt, indeed! A friend! Go, fetch my cloak,

For, though the night be raw,
I'll see him, too—the first I ever saw."

Cowper, at all events, was the last man who should have indulged in this sorry quip, for he found, in the depth of his anguish, many a loyal friend who steadied his tottering steps and bound up his bleeding wounds. And, to do him justice, he has, on more than one occasion, expressed, with frank sincerity, his debt of gratitude. The jest is, as I have said, of somewhat musty flavour. It can be traced back to the Greeks, and even to a remoter antiquity, for the Preacher himself moralises on the emptiness of friends and friendship. Yet, like most popular prejudices, it is, as all of us know, without a solid basis. No man is so unfortunate as to be completely friendless; or, as Mr. Longfellow puts it, no heart is so utterly desolate but some other heart responds to it. Even Napoleon's iron egotism gave way before his attachment to Duroc. As for the higher natures—the finer spirits, which are naturally alive to the broader and loftier issues of humanity—these speedily discover and lay hold upon their comrades, their brothers-in-arms, their "other selves." David and Jonathan, Paul and Apollos, Cicero and Atticus—these are old examples of felicitous friendships. Grave-browed Dante emerges from the mingled gloom and radiance of his vision—Milton puts aside his early dreams of immortal fame—to touch the warm hand of a friend. One cannot mention Sir Philip Sidney without thinking of Fulke Greville, or of Spenser without Raleigh, or of Gray without Mason, or of Edmund Burke without Charles James Fox. Milton has his "Lycidas"; Tennyson his "In Memoriam." And we, we smaller men, rejoice in those most true, most loyal, and most generous friends, in whom, we know, we can place our trust without hesitation or reserve. Why, it is the kindly heart of unselfish friendship which does so much to lighten the pressure of adverse circumstance, of unprosperous fortune; which makes life welcomer and more tolerable to each of us. When the stormy winds "do blow," and the rains beat on our uncovered heads, and the spirit of evil is abroad, how we rejoice in the shelter afforded by the faithfulness of our friend! "A friend in need," says the old proverb, "is a friend indeed"—and I thank God that "the need" seldom comes without bringing "the friend." I have no patience with those unjust aspersions against human nature, which, in spite of much moral and intellectual degradation, retains, after all, some likeness to its Divine original. If there be any unfortunate being who cannot claim the right to call *one* man his friend, surely it is his own fault or folly which has brought him to such a pass.

Alas, the saddest things in the pathway traced by our departed years are the memorial-stones that tell of friends who have gone before us. There is such a pure, disinterested, elevated joy in a true friendship that the close of it must always be a matter for tears. In love we find a soul of selfishness, but friendship has no such alloy. It exists entirely for another; its surrenders are always made for another; its rejoicing is always for another. For a friend is even more anxious for our happiness—aye, and for our honour—than we are ourselves. Pythias will die upon the scaffold to redeem the pledge of Damon; though, to be sure, Damon will haste over land and sea to prevent the sacrifice. Of whatever exploits of heroism, generosity, gentleness, and endurance love is capable, I am confident that friendship will transcend them all. It has only one rival in its self-abnegation, and that is—a mother's love.

It has always appeared to me that man's capacity for friendship is a striking proof of the soul's fitness for immortality, because it means a capacity for the loftiest thoughts, the deepest feelings, the finest sympathies, and the bravest deeds. For what does a man ask of his friend? First, to sustain him in "high and noble thoughts, raising his spirits, and adding to his courage," till he outdoes himself. Next, to keep constantly before his eyes the ideal of the perfect life, and to do his utmost to make him or enable him to realise it. Further, to be ever ready, at demand, to supply him with the qualities of justice, punctuality, fidelity, and pity. A man wants of his friend that he shall strengthen him in his worthiest purposes, and persuade him out of all his faults and failings; that he shall inspire and confirm in him the love of truth, purity, and honour; that he shall give him faithful warning when he is straying from the right path, and aid him with manly encouragement when his knees are feeble. And, more, that when sorrows come and trials, he shall be at hand to console and support, with sympathy as well as with assistance. A faithful friend, says an old writer, is the medicine of life. "The end of friendship," says Emerson, "is a commerce the most strict and homely that can be joined; more strict than any of which we have experience. It is for aid and comfort through all the relations and passages of life and death. It is fit for serene days, and graceful gifts, and country rambles; but also for rough roads and hard fare, shipwreck, poverty, and persecution. We are to dignify to each other the daily needs and offices of man's life, and embellish it by courage, wisdom, and unity." Surely there must be something divine in the humanity which can *be* and *do* all this!—which is capable of that glorious relation between two souls known as friendship?

I find it stated that we do not choose our friends; that like all God's blessings, they come unsought. But there can be no accident or haphazard in the formation of a living and substantial friendship. There must be something in the one member of the companionship that there is not in the other. I do not believe in the friendship of "equals" or of "likes." The intercourse may be begun by trivial incidents—a touch—a word—a glance—which reveals a common sympathy or an existing want; but it can be kept up only by the discovery on either side of indispensable attributes. It is essential that the one should look up, and the other look down; that the one should seek protection and the other afford it. I do not actually find that men absolutely identical in tastes and character, or similar and equal in gifts, "foregather," as the Scotch say; there is a stronger polarity in "contrast." The beautiful friendship of Keats and Severn, or of General Nicholson and Sir Herbert Edwardes, or of Charles Lamb and George Dyer, was the friendship between men who had important points of difference. "For mine own part," says Mark Antony, "I shall be glad to learn of noble men;" and that is the spirit in which we must endeavour to decide our friendships. We must take care that our friend is stronger and better than ourself; that so he may command our respect as well as our affection. Then that higher nature will lean towards our weakness, and be attracted by it, deriving its happiness from the strength and support it supplies, just as the deepest gratification of maternal love is found in supplying the necessities of infancy. This seems to me the underlying principle of an enduring friendship—an endearing attachment of soul to soul, and heart to heart. A man seeks and finds in his friend all that he does not in himself possess, but most desires—"the other half of his soul," to adopt the old Platonic fancy. The despondent spirit seeks the brighter, the feeble falls back upon the more robust, the slow and cold is drawn towards the quick and ardent. Thus it is that William III. clasps hands with Bentinck, William Pitt with George Canning, Charles James Fox with Edmund Burke. The chief joy one has in one's friend lies in this, that through him that which is not ours becomes ours; and the chief gratitude which we owe to him is a gratitude for the sublime unselfishness with which he gives us of his best, knowing that in return we can give him only of our poorest.

W. H. D.-A.

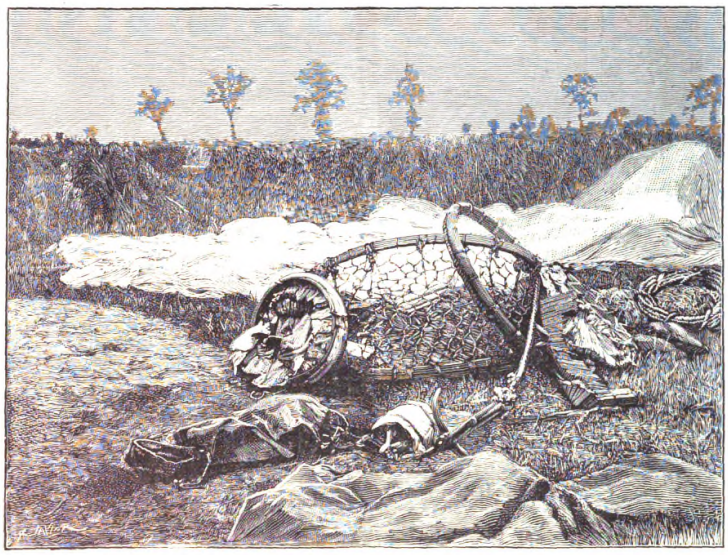
INCHINNAN CHURCH, NEAR BLYTHSWOOD.

THE DAIRY FARMS OF DENMARK.

A great deal of attention has lately been attracted to the agriculture of Denmark, mainly because of the great prosperity of the dairy industry of that country; but it has been reserved for Consul Inglis to present English readers with the most valuable report on dairy farms in that country which has yet appeared, as it contains illustrations of the interior of a Danish dairy factory and the principal machines used therein, as well as tables giving details of winter feeding, milk yield and price, and cost of production in twenty-three large dairies. Most of the information appears to have been obtained from a report written by M. Boggild, who says the number of cows in the country is 900,000. As the population is only 2,000,000 there are forty-five cows to each hundred people, which we find is the largest ratio of which any country in the world can boast. We have recently referred to the large exports of butter from Denmark, and to the system of dairy-teaching adopted in that country. The report before us is concerned chiefly with the dairy factories, about 200 of which, dealing with the milk from 5000 to 6000 cows per day, are conducted on co-operative principles. In this and in the system of instruction in private dairies we have the secret of the great success of the dairy interest in Denmark. The rules of one of the co-operative dairies are given, and they show the minute care which is exercised in those institutions and imposed on the farmers who supply the milk. Having ascertained the most profitable scale of diet for cows, the association insists on their members adopting it, and, in order to encourage them to feed their cows well, payment for milk is in proportion to cream yielded—cream of a given standard no doubt. The principal foods given to the cows in winter are clover hay, meadow hay, mangolds, carrots, turnips, corn, bran, oil-cake, and palm-cake. The proportions vary; but the average weight of corn, cake, and bran per cow per day in twenty-three dairies is 6lb. Turnips are not used in half the dairies, and in most instances where these roots are given the quantity is small. All but six use mangolds and carrots, and all but three hay, both kinds of food being supplied liberally. The average cost of producing 100lb. of milk in the twenty-three dairies comes out at 4s. 2½d., or almost exactly 5½d. per imperial gallon. Apparently this refers to the cost of food only; but, of course, it would be much less in summer.

In London in the week ending Aug. 25 2401 births and 1438 deaths were registered. Allowing for increase of population, the births were 300, and the deaths 115, below the average numbers in the corresponding weeks of the last ten years.

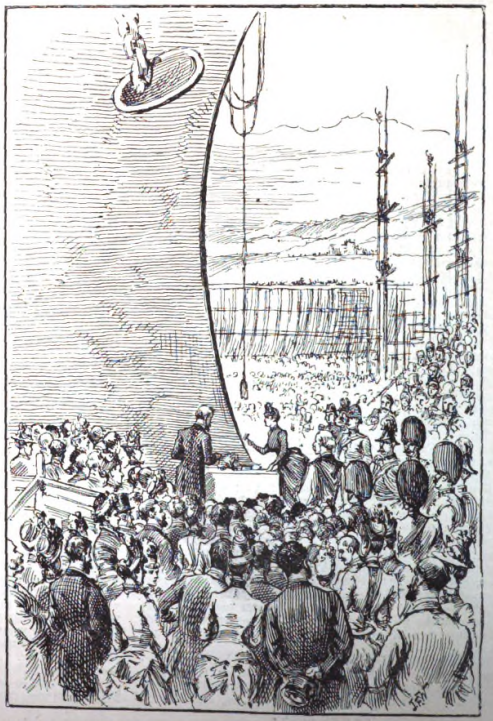
Mr. John Redmond, M.P., Mr. William Redmond, M.P., and Mr. Edward Walsh, editor of the *Wexford People*, a Nationalist paper, were arrested on Aug. 27, and remanded on bail, on charges connected with a recent eviction in the county of Wexford. Father Kennedy, of Meelin, county of Cork, was arrested the same day.



FATAL BALLOON ACCIDENT.

Mr. Simmons, the well-known aeronaut, was killed on Monday, Aug. 27, at Ulting, near Maldon, in Essex, by an accident with his large balloon, the Cosmo, which had ascended that afternoon from the Olympia grounds, West Kensington, where the Irish Exhibition is held. He was accompanied in the car, with an intention of crossing the sea to Flanders and Germany, by Mr. W. L. Field, of West Brighton, and Mr. Myers, of the Natural History Museum, South Kensington, both of whom had made previous voyages. After leaving Olympia shortly after half-past three o'clock, the balloon passed over Romford, Brentwood, Ingatestone, and Chelmsford, and all went well until the descent at Ulting at about a quarter-past five. Mr. Simmons had resolved to descend and anchor for the night, as the seacoast was in sight. Some labourers at work in the fields at Ulting (a hamlet of small houses midway between Witham and Maldon, about three miles from either) saw the balloon coming at a good speed from the south-west. It was then rapidly nearing the earth, and at New House Farm, a short distance away, the occupants were observed to throw out some sand. At this time the grapnel was dragging, as some of the barley in a field that the balloon passed over was torn up. At the edge of this barley-field, immediately touching the high road, are the three elm-trees which are supposed to have been the cause of the accident. They stand about fifteen feet from one another, and are about thirty feet in height. On the balloon rising from over the barley-field, the grapnel caught in the first of the trees, tearing one of the upper branches. The iron held firm, and the balloon, rising to the length of the cable, was blown with a violent crash to the earth, landing in a corn-field on the opposite side of the road. It immediately rose and again descended in the same spot with great force. It is certain that the balloon bumped the earth a third time, and some of the men who had run to the place state that it rose and fell a fourth time, but upon this point there is some doubt. However, it was on the third or fourth rise that the final disaster—the collapse of the balloon itself—occurred. The blacksmith, who, with two other men, had hurried from his forge to the other side of the corn-field, and had endeavoured to hold on to the rope hanging from the car, states that the balloon burst with a loud report when it was up in the air, the silk blew about over the field, and then the car and its occupants fell like a stone. The spot where the car fell for the last time being practically the same as that which it first touched, would seem to show that each time the balloon rose and fell in an almost straight line. The balloon, which was unusually large, being capable of containing 62,000 ft. of gas, with a carrying power of 24 cwt., was not ripped with one large rent, as would have been the case if caught by the tree, but was torn into several distinct pieces. The car was composed of iron wire network, and was 5 ft. in diameter. When it reached the ground for the last time, it was entirely beaten and battered out of shape, some of the seats being displaced, while its connection with the balloon was severed. The whole of the terrible scene only occupied about two minutes, and the labourers were soon able to set to work to extricate the unfortunate men. They had literally to cut their way to the car, and found the occupants lying insensible in a heap. Mr. Myers was on the top, with Mr. Field beneath, and Mr. Simmons at the bottom of the car. A messenger at once started on a bicycle to bring medical help, and Mr. Gutteridge, surgeon, and his son drove over from Maldon, arriving about six o'clock. Mr. Simmons was quite insensible; he died about nine o'clock without having recovered consciousness. The base of the skull was fractured and there were also bruises on the chest. Mr. Field was lying with his right thigh fractured. Mr. Myers received a severe shaking, and has suffered other injuries.

Mr. Simmons had had a ballooning experience of thirty years, and made 495 ascents. He succeeded on three occasions in crossing to the Continent in a balloon, but was twice rescued in the Channel from very perilous situations. In 1875 he ascended from Cremorne Gardens with De Groof, the Belgian "flying man." De Groof endeavoured to descend by means of a parachute of his own invention, but fell dead in the streets. In 1880 Simmons took part in a balloon competition with a number of other well-known aeronauts. The competitors started from various points in the neighbourhood of London, and Simmons on that occasion descended at Widdington, in Essex. Two years later, in March, 1882, the deceased, accompanied by Colonel Brine, of the Royal Engineers, ascended from Canterbury, with the intention of crossing to France. The adventurers passed over Shakspeare's Cliff, Dover, at an elevation of only 500 ft., and all went well until the balloon was a distance of five miles from land; here the wind dropped, and for a time the balloon remained stationary. After a while the wind turned to the south-west, and they found they were slowly drifting towards the North Sea. It was decided to drop into the Channel. The two men put on their cork jackets, and the descent was made. Simmons and his companion were rescued by the steam-packet Foam, and taken to Dover. One ascent that Simmons made took place in June, 1882, at Maldon, in the vicinity of the spot at which he met with his death. On that occasion Sir Claude De Crespigny was his fellow-voyager. Before the balloon rose, a gust of wind dashed the car against a wall; Sir Claude De Crespigny was thrown out and had his leg broken. Simmons was severely shaken; but the balloon rose, going in the direction of France, and Simmons descended near Calais. In September, 1882, Simmons crossed from Hastings to Cherbourg, without accident. In June of last year, Simmons made an ascent from Preston, crossed the Irish Sea, and descended safely about seven miles inland from Kingstown. Simmons also made ascents in India, Egypt, and the United States. The Portrait is from a photograph by Messrs. Fradelle and Young, Regent-street.



THE LATE MR. SIMMONS, THE AERONAUT,
Killed by the Balloon Accident near Maldon, Essex.

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XVI.

ON THE MARCH.

DAYBREAK, next morning, the drums began to beat and the trumpets began to blow, and after breakfast the newly-raised army marched out in such order as was possible. I have not to write a history of this rebellion, which hath already been done by able hands; I speak only of what I saw, and the things with which I was concerned.

First, then, it is true that the whole country was swiftly put into a ferment by the Duke's landing; and had those who planned the expedition provided a proper supply of arms, the army would have quickly mustered 20,000 men, all resolute and capable of meeting any force that the King could have raised. Nay, it would have grown and swelled as it moved. But there were never enough arms from the outset. Everything at first promised well for the Duke. But there were not arms for the half of those who came in. The spirit of the Devon and Somerset Militia was lukewarm; they ran at Bridport, at Axminster, and at Chard; nay, some of them even deserted to join the Duke. There were thousands scattered about the country—those, namely, who still held to the doctrines of the persecuted ministers, and those who abhorred the Catholic religion—who wished well and would have joined—Humphrey knew wellwishers by the thousand whose names were on the lists in Holland—but how could they join when the army was so ill-found? And this was the principal reason, I have been assured, why the country gentlemen, with their following, did not come in at first—because there were no arms. How can soldiers fight when they have no arms? How could the Duke have been suffered to begin with so scanty a preparation of arms? Afterwards, when Monmouth proclaimed himself King, there were, perhaps, other reasons why the wellwishers held aloof. Some of them, certainly, who were known to be friends of the Duke (among them our old friend Mr. Prideaux, of Ford Abbey) were arrested and thrown into prison, while many thousands who were flocking to the standard were either turned back upon the road or seized and thrown into prison.

As for the quality of the troops which formed the army, I know nothing, except that at Sedgemoor they continued to fight valiantly after their leaders had fled. They were raw troops—mere country lads—and their officers were, for the most part, simple tradesmen who had no knowledge of the art of war. Dare the younger was a goldsmith; Captain Perrot was a dyer; Captain Hucker, a maker of serge; and so on with all of them. It was unfortunate that Mr. Andrew Fletcher, of Saltoun, should have killed Mr. Dare the elder on the first day, because, as everybody agrees, the former was the most experienced soldier in the whole army.

The route proposed by the Duke was known to everybody. He intended to march through Taunton, Bridgwater, and Bristol to Gloucester, where he thought he would be joined by a new army raised by his friends in Cheshire. He also reckoned on receiving adherents everywhere on the road, and on easily defeating any force that the King should be able to send against him. How he fared in that notable scheme is common history.

Long before the army was ready to march, Humphrey came to advise with us. First of all, he endeavoured to have speech with my father, but in vain (henceforth my father seemed to have no thought of his wife and daughter). Humphrey therefore advised us to go home. "As for your alleged dedication to the cause," he said, "I think that he hath already forgotten it, seeing that it means nothing, and that your presence with us cannot help. Go home, then, Madam, and let Alice persuade Robin to stay at home in order to take care of you."

"Nay," said my mother; "that may we not do. I must obey my husband, who commanded us to follow him. Whither he goeth thither also I will follow."

Finding that she was resolute upon this point, Humphrey told us that the Duke would certainly march upon Taunton, where more than half of the town were his friends. He therefore advised that we should ride to that place—not following the army but going across the country, most of which is a very wild and desolate part, where we should be in no danger except from gipsies and such wild people, robbers and rogues, truly, but now making the most of the disturbed state of the country and running about the roads plundering and thieving. But he said he would himself provide us with a guide, one who knew the way, and a good stout fellow, armed with a cudgel, at least. To this my mother agreed, fearing to anger her husband if she should disturb him at his work.

Humphrey had little trouble in finding the guide for us. He was an honest lad from a place called Holford, in the Quantock Hills, who, finding that there were no arms for him, was going home again. Unhappily, when we got to Taunton, he was persuaded—partly by me, alas!—to remain. He joined Barnaby's company, and was either killed at Sedgemoor, or was one of those hanged at Weston Zoyland, or Bridgwater. For he was no more heard of.

This business settled, we went up to the churchyard in order to see the march of the army out of camp. And a brave show the gallant soldiers made.

First rode Colonel Wade with the vanguard. After them, with a due interval, rode the greater part of the Horse, already three hundred strong, under Lord Grey of Wark. Among them was the company sent by Mr. Speke, of White Lackington, forty very stout fellows, well armed and mounted on cart-horses. The main army was composed of four regiments. The first was the Blue Regiment, or the Duke's Own, whose Colonel was the aforesaid Wade. They formed the van, and were seven hundred strong. The others were the White, commanded by Colonel Foukes; the Green, by Colonel Holmes; and the Yellow, by Colonel Fox. All these regiments were fully armed, the men wearing favours or rosettes in their hats and on their arms of the colour from which their regiment was named.

The Duke himself, who rode a great white horse, was surrounded by a small bodyguard of gentlemen (afterwards they became a company of forty), richly dressed and well mounted. With him were carried the colours, embroidered with the words "Pro Religione et Libertate." This was the second time that I had seen the Duke, and again I felt at sight of his face the foreknowledge of coming woe. On such an occasion the chief should show a gallant mien and a face of cheerful hope. The Duke, however, looked gloomy, and hung his head.

Truly, it seemed to me as if no force could dare so much as to meet this great and invincible army. And certainly there could nowhere be gathered together a more stalwart set of soldiers, nearly all young men, and full of spirit. They shouted and sang as they marched. Presently there passed us my brother Barnaby, with his company of the Green Regiment. It was easy to perceive by the handling of his arms and by his bearing that he was accustomed to act with others, and already he had so begun to instruct his men that they set an example to the rest both in their orderliness of march and the carriage of their weapons.

After the main army they carried the ordnance—four small cannon—and the ammunition in waggons with guards and horsemen. Lastly there rode those who do not fight, yet belong to the army. These were the Chaplain to the army, Dr. Hooke, a grave clergyman of the Church of England; Mr. Ferguson, the Duke's private Chaplain, a fiery person, of whom many hard things have been said, which here concern us not; and my father, who thus rode openly with the other two, in order that the Nonconformists might be encouraged by his presence, as an equal with the two chaplains. He was clad in a new cassock, obtained I know not whence. He sat upright in the saddle, a Bible in his hand, his long white locks lying on his shoulders like a perruque, but more venerable than any wig. His thin face was flushed with the joy of coming victory, and his eyes flashed fire. If all the men had shown such a spirit the army would have overrun the whole country. The four surgeons—Dr. Temple, Dr. Gaylard, Dr. Oliver, and Humphrey—followed, all splendid in black velvet and great periwigs. Lastly marched the rearguard; and after the army there followed such a motley crew as no one can conceive. There were gipsies, with their black tents and carts, ready to rob and plunder; there were tinkers, who are nothing better than gipsies, and are even said to speak their language; there were men with casks on wheels filled with beer or cider; there were carts carrying bread, cakes, biscuits, and such things as one can buy in a booth or at a fair; there were women of bold and impudent looks, singing as they walked; there were, besides, whole troops of country lads, some of them mere boys, running and strutting along in hopes to receive arms and to take a place in the regiments.

Presently they were all gone, and Lyme was quit of them. What became in the end of all the rabble rout which followed the army I know not. One thing was certain: the godly disposition, the pious singing of psalms, and the devout exposition of the Word which I had looked for in the army were not anywhere apparent. Rather there was evident a tumultuous joy, as of schoolboys out for a holiday—certainly no schoolboys could have made more noise or showed greater happiness in their faces. Among them, however, there were some men of middle age, whose faces showed a different temper; but these were rare.

"Lord help them!" said our friendly fisherwoman, who stood with us. "There will be hard knocks before those fine fellows go home again."

"They fight on the Lord's side," said my mother; "therefore, they may be killed, but they will not wholly perish."

As for the hard knocks, they began without any delay, and on that very morning. For at Axminster they encountered the Somerset and Devon Militia, who thought to join their forces, but were speedily put to flight by the rebels—a victory which greatly encouraged them.

It hath been maliciously said, I have heard, that we followed the army—as if we were two sutler women—on foot, I suppose, tramping in the dust, singing ribald songs like those poor creatures whom we saw marching out of Lyme. You have heard how we agreed to follow Humphrey's advice. Well, we left Lyme very early the next morning (our fisherwoman having now become very friendly and loth to let us go) and rode out, our guide (poor lad! his death lies heavy on my soul, yet I meant the best: and, truly, he was on the side of the Lord) marching beside us armed with a stout bludgeon. We kept the main road (which was very quiet at this early hour) as far as Axminster, where we left it; and, after crossing the river by a ford or wash, we engaged upon a track, or path, which led along the banks of a little stream for a mile or two—as far as the village of Chardstock. Here we made no halt; but, leaving it behind, we struck into a most wild and mountainous country full of old forests and great bare places. It is called the Forest of Neroche, and is said to shelter numbers of gipsies and vagabonds, and to have in it some of those wild people who live in the hills and woods of Somerset and do nothing except gather the dry broom and tie it up and sell it, and so live hard and hungry lives, but know not any master. These are reported to be a harmless people, but the gipsies are dangerous because they are ready to rob and even murder. I thought of Barnaby's bag of gold tied about my waist, and trembled. However, we met with none of them on our journey, because just then they were all running after Monmouth's army. There was no path over the hills by the way we took; but our guide knew the country so well that he needed none, pointing out all the hills with a kind of pride as if they belonged to him, and telling us the name of every one; but these I have long since forgotten. The country, however, I can never forget, because it is so wild and beautiful. One place I remember. It is a very strange and wonderful place. There is a vast great earthwork surrounded by walls of stone, but these are ruinous. It stands on a hill, called Blackdown, which looks over into the Vale of Taunton. The guide said it was called Castle Ratch, and that it was built long ago by the ancient Romans. It is not at all like Sherborne Castle, which Oliver Cromwell slighted after he took the place, blowing it up with gunpowder; but Sherborne was not built by the Romans. Here, after our long walk, we halted and took the dinner of cold bacon and bread which we had brought with us. The place looks out upon the beautiful Vale of Taunton, of which I had heard. Surely, there cannot be a more rich, fertile, and lovely place in all England than the Vale of Taunton. Our guide began to tell us of the glories of the town, its wealth and populousness—and all for Monmouth, he added. When my mother was rested we remounted our nags and went on, descending into the plain. Humphrey had provided us with a letter commendatory. He, who knew the names of all who were well affected, assured us that the lady to whom the letter was addressed, Miss Susan Blake by name, was one of the most forward in the Protestant Cause. She was well known and much respected, and she kept a school for young gentlewomen, where many children of the Nonconformist gentry were educated. He instructed us to proceed directly to her house, and to ask her to procure for us a decent and safe lodging. He could not have given us a letter to any better person.

It was late in the afternoon when we rode into Taunton. The streets were full of people running about, talking now in groups and now by twos and threes; now shouting and now whispering; while we rode along the street, a man ran bawling—

"Great news! great news! Monmouth is upon us with twice ten thousand men!"

It seems that they had only that day learned of the defeat of the Militia by the rebels. A company of the Somerset Militia were in the town, under Colonel Luttrell, in order to keep down the people.

Taunton is, as everybody knows, a most rich, prosperous, and populous town. I had never before seen so many houses and so many people gathered together. Why, if the men of Taunton declared for the Duke, his cause, one felt sure, was already won. For there is nowhere, as I could not fail to know, a greater stronghold of Dissent than this town, except London, and none where the Nonconformists have more injuries to remember. Only two years before this their meeting-houses had been broken into and their pulpits and pews brought out and burned, and they were forced, against their conscience, to worship in the parish church.

We easily found Miss Blake's house, and, giving our horses to the guide, we presented her with our letter. She was a young woman somewhat below the common stature, quick of speech, her face and eyes full of vivacity, and about thirty years of age. But when she had read the letter and understood who we were and whence we came, she first made a deep reverence to my mother and then she took my hands and kissed me.

"Madam," she said, "believe me, my poor house will be honoured indeed by the presence of the wife and the daughter of the godly Dr. Comfort Eykin. Pray, pray, go no farther. I have a room that is at your disposal. Go thither, Madam, I beg, and rest after your journey. The wife of Dr. Comfort Eykin! 'Tis indeed an honour." And so with the kindest words she led us up-stairs, and gave us a room with a bed in it, and caused water for washing to be brought, and presently went out with me to buy certain things needful for us (who were indeed somewhat rustical in our dress), in order that we might present the appearance of gentlewomen—thanks to Barnaby's heavy purse, I could get them without troubling my mother's careful mind about the cost. She then gave us supper, and told us all the news. The King, she said, was horribly afraid, and it was rumoured that the priests had all been sent away to France; the Taunton people were resolved to give the Duke a brave reception; all over the country, there was no doubt men would rally by thousands; she was in a rapture of joy and gratitude. Supper over, she took us to her school-room, and here—oh! the pretty sight!—her schoolgirls were engaged in working and embroidering flags for the Duke's army.

"I know not," she said, "whether his Grace will condescend to receive them. But it is all we women can do." Poor wretch! she afterwards suffered the full penalty for her zeal.

All that evening we heard the noise of men running about the town, with the clanking of weapons and the commands of officers; but we knew not what had happened.

Lo! in the morning the glad tidings that the Militia had left the town. Nor was that all; for at daybreak the people began to assemble, and, there being none to stay them, broke into the great church of St. Mary's and took possession of the arms that had been deposited for safety in the tower. They also opened the prison and set free a worthy Nonconformist divine, named Vincent. All the morning the mob ran about the streets, shouting, "A Monmouth! A Monmouth!" the Magistrates and Royalists not daring so much as to show their faces, and there was nothing talked of but the overthrow of the King and the triumph of the Protestant religion. Nay, there were fiery speakers in the market-place and before the west porch of the church, who mounted on tubs and exhorted the people. Grave merchants came forth and shook hands with each other; and godly ministers who had been in hiding walked forth boldly. It was truly a great day for Taunton.

The excitement grew greater when Captain Hucker, a well-known serge-maker of the town, rode in with a troop of Monmouth's horse. Captain Hucker had been seized by Colonel Phillips on the charge of receiving a message from the Duke, but he escaped and joined the rebels, to his greater loss, as afterwards appeared. However, he now rode in to tell his fellow-townsmen of his own wonderful and providential escape, and that the Duke would certainly arrive the next day, and he exhorted them to give him such a welcome as he had a right to expect at their hands. He also reminded them that they were the sons of the men who, forty years before, defended Taunton under Admiral Blake. There was a great shouting and tossing of caps after Captain Hucker's address, and no one could do too much for the horsemen with him, so that I fear these brave fellows were soon fain to lie down and sleep till the fumes of the strong ale should leave their brains.

All that day and half the night we sat in Miss Blake's schoolroom finishing the flags, in which I was permitted to join. There were twenty-seven flags in all presented to the army by the Taunton maids: twelve by Miss Blake and fifteen by one Mrs. Musgrave, also a schoolmistress. And now, indeed, seeing that the Militia at Axminster had fled almost at the mere aspect of one man; and that those of Taunton had also fled away secretly by night, and catching the zeal of our kind entertainer, and considering the courage and spirit of these good people, I began to feel confident again, and my heart, which had fallen very low at the sight of the Duke's hanging head and gloomy looks, rose again, and all dangers seemed to vanish. And so, in a mere fool's paradise, I continued happy indeed until the fatal news of Sedgemoor fight awoke us all from our fond dreams.

CHAPTER XVII.

TAUNTON.

I never weary in thinking of the gaiety and happiness of those four days at Taunton among the rebels. There was no more doubt in any of our hearts: we were all confident of victory—and that easy and, perhaps, bloodless. As was the rejoicing at Taunton, so it would be in every town of the country. One only had to look out of window in order to feel assurance of that victory, so jolly, so happy, so confident looked every face.

"Why," said Miss Blake, "in future ages even we women, who have only worked the flags, will be envied for our share in the glorious deliverance. Great writers will speak of us as they speak of the Roman women." Then all our eyes sparkled, and the needles flew faster and the flags grew nearer to completion.

If history should condescend to remember the poor Maids of Taunton at all, it will be, at best, with pity for the afflictions which afterwards fell upon them: none, certainly, will envy them: but we shall be forgotten. Why should we be remembered? Women, it is certain, have no business with affairs of State, and especially none with rebellions and civil wars. Our hearts and passions carry us away. The leaders in the cause which we have joined appear to us to be more than human: we cannot restrain ourselves, we fall down and worship our leaders, especially in the cause of religion and liberty.

Now behold! On the very morning after we arrived at

*All Rights Reserved.

DRAWN BY A. FORESTIER.

Her schoolgirls were engaged in working and embroidering flags for the Duke's army.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

Taunton I was abroad in the streets with Miss Blake, looking at the town, which hath shops full of the most beautiful and precious things, and wondering at the great concourse of people (for the looms were all deserted, and the workmen were in the streets filled with a martial spirit), I saw riding into the town no other than Robin himself. Oh! how my heart leaped up to see him! He was most gallantly dressed in a purple coat, with a crimson sash over his shoulders to carry his sword: he had pistols in his holsters, and wore great riding-boots, and with him rode a company of a dozen young men, mounted on good strong nags; why, they were men of our own village, and I knew them, every one. They were armed with muskets and pikes—I knew where those came from—and when they saw me the fellows all began to grin, and to square their shoulders so as to look more martial. But Robin leaped from his horse.

"'Tis Alice!" he cried. "Dear heart! Thou art then safe, so far? Madam, your servant." Here he took off his hat to Miss Blake. "Lads, ride on to the White Hart and call for what you want, and take care of the nags. This is a joyful meeting, Sweetheart." Here he kissed me. "The Duke, they say, draws thousands daily. I thought to find him in Taunton by this time. Why, we are as good as victorious already. Humphrey, I take it, is with his Grace. My dear, even had the Cause of Freedom failed to move me I had been dragged by the silken ropes of Love. Truly, I could not choose but come. There was the thought of these brave fellows marching to battle, and I all the time skulking at home, who had ever been so loud upon their side. And there was the thought of Humphrey, braving the dangers of the field, tender though he be, and I, strong and lusty, sitting by the fire, and sleeping on a feather bed; and always there was the thought of thee, my dear, among these rude soldiers—like Milton's lady among the rabble rout, because well I know that even Christian warriors (so called) are not lambs; and, again, there was my grandfather, who could find no rest, but continually walked to and fro, with looks that at one time said, 'Go, my son'; and at others, 'Nay; lest thou receive a hurt'; and the white face of my mother, which said, as plain as eyes could speak: 'He ought to go, he ought to go; and yet he may be killed.'

"Oh, Robin! Pray God there prove to be no more fighting."

"Well, my dear, if I am not tedious to Madam here"——

"Oh, Sir!" said Miss Blake, "it is a joy to hear this talk." She told me, afterwards, that it was also a joy to look upon so gallant a gentleman, and such a pair of lovers. She, poor creature, had no sweetheart.

"Then on Monday," Robin continued, "the day before yesterday, I could refrain no longer, but laid the matter before my grandfather. Sweetheart! there is, I swear, no better man in all the world."

"Of that I am well assured, Robin."

"First, he said that if anything befell me he should go down in sorrow to his grave; yet that as to his own end an old man so near the grave should not be concerned about the manner of his end so long as he should keep to honour and duty. Next, that in his own youth he had himself gone forth willingly to fight in the cause of Liberty, without counting the risk. Thirdly, that if my conscience did truly urge me to follow the Duke I ought to obey that voice in the name of God. And this with tears in his eyes, and yet a lively and visible satisfaction that, as he himself had chosen, so his grandson would choose. 'Sir,' I said, 'that voice of conscience speaks out very loudly and clearly. I cannot stifle it. Therefore, by your good leave, I will go.' Then he bade me take the best horse in the stable, and gave me a purse of gold, and so I made ready."

Miss Blake, at this point, said that she was reminded of David. It was, I suppose, because Robin was so goodly a lad to look upon; otherwise, David, though an exile, did never endeavour to pull King Saul from his throne.

"Then," Robin continued, "I went to my mother. She wept, because war hath many dangers and chances; but she would not say me 'Nay.' And in the evening when the men came home I went into the village and asked who would go with me. A dozen stout fellows—you know them all, Sweetheart—stepped forth at once; another dozen would have come, but their wives prevented them. And so, mounting them on good cart-horses, I bade farewell and rode away."

"Sir," said Miss Blake, "you have chosen the better part. You will be rewarded by so splendid a victory that it will surprise all the world; and for the rest of your life—yes; and for generations afterwards—you will be ranked among the deliverers of your country. It is a great privilege, Sir, to take part in the noblest passage of English history. Oh!" she clasped her hands, "I am sorry that I am not a man, only because I would strike a blow in this sacred cause. But we are women, and we can but pray—and make flags. We cannot die for the cause."

The event proved that women can sometimes die for the cause, because she herself, if any woman ever did, died for her cause.

Then Robin left us in order to take steps about his men and himself. Captain Hucker received them in the name of the Duke. They joined the cavalry, and Robin was told that he should be made a Captain. This done, he rode out with the rest to meet the Duke.

Now, when his approach was known, everybody who had a horse rode forth to meet him, so that there followed him, when he entered the town, not counting his army, so great a company that they almost made another army.

As soon as it was reported that the Duke was within a mile (they had that day marched sixteen miles, from Ilminster) the church bells were set a-ringing; children came out with baskets of flowers in readiness to strew them at his feet as he should pass—there were roses and lilies and all kinds of summer flowers so that his horse had a most delicate carpet to walk upon; the common people crowded the sides of the streets; the windows were filled with ladies who waved their handkerchiefs and called aloud on Heaven to bless the good Duke, the brave Duke, the sweet and lovely Duke. If there were any malcontents in the town they kept snug; it would have cost them dear even to have been seen in the streets that day. The Duke showed on this occasion a face full of hope and happiness; indeed, if he had not shown a cheerful countenance on such a day, he would have been something less, or something greater, than human. I mean that he would have been either insensible and blockish not to be moved by such a welcome, or else he would have been a prophet, as foreseeing what would follow. He rode bareheaded, carrying his hat in his hand; he was dressed in a shining corslet with a blue silk scarf and a purple coat; his long brown hair hung in curls upon his shoulders; his sweet lips were parted with a gracious smile; his beautiful brown eyes—never had any Prince more lovely eyes—looked pleased and benignant; truly there was never made any man more comely than the Duke of Monmouth. The face of his father, and that of his uncle, King James, were dark and gloomy, but the Duke's face was naturally bright and cheerful; King Charles's long nose in him was softened and reduced to the proportions of manly beauty; in short, there was no feature that in his father was harsh and unpleasing but was in him sweet and beautiful. If I had thought him comely and like a King's son when four years before he made his Progress, I thought him now ten times as gracious and as beautiful. He was thinner in the face, which gave his appearance the greater dignity; he had ever the most gracious smile and the most charming eyes; and at such a moment as this who could believe the things which they said about his wife and Lady Wentworth? No—they were inventions of his enemies; they must be base lies; so noble a Presence could not conceal a guilty heart; he must be as good and virtuous as he was brave and lovely. Thus we talked, sitting in the window, and thus we cheered our souls. Even now, to think how great and good he looked on that day, it is difficult to believe that he was in some matters so vile. I am not of those who expect one kind of moral conduct from one man and a different kind from another: there is but one set of commandments for rich and poor, for prince and peasant. But the pity of it, oh! the pity of it, with such a prince!

Never, in short, did one see such a tumult of joy; it is impossible to speak otherwise: the people had lost their wits with excess of joy. Nor did they show their welcome in shouting only, for all doors were thrown wide open and supplies and necessaries of all kinds were sent to the soldiers in the camp outside the town, so that the country lads declared they had never fared more sumptuously. There now rode after the Duke several Nonconformist ministers, beside my father. Thus there was the pious Mr. Lark, of Lyme: he was an aged Baptist preacher, who thought it no shame to his profession to gird on a sword and to command a troop of horse; and others there were, whose names I forget, who had come forth to join the deliverer.

Lord Grey rode on one side of him, and Colonel Speke on the other; Dr. Hooke, the chaplain, and my father rode behind. My heart swelled with joy to hear how the people, when they had shouted themselves hoarse, cried out for my father, because his presence showed that they would have once more that liberty of worship for want of which they had so long languished. The Duke's own chaplain, Mr. Ferguson, had got a naked sword in his hand, and was marching on foot, crying out, in a most vainglorious manner, "I am Ferguson, the famous Ferguson, that Ferguson for whose head so many hundred pounds were offered. I am that man! I am that man!" He wore a great gown and a silken cassock, which consorted ill with the sword in his hand, and in the evening he preached in the great church, while my father preached in the old meeting-house to a much larger congregation and, I venture to think, with a much more edifying discourse.

The army marched through the town in much the same order as it had marched out of Lyme, and it seemed not much bigger, but the men marched more orderly and there was less laughing and shouting. But the streets were so thronged that the men could hardly make their way.

In the market-place the Duke halted, while his declaration was read aloud. One thing I could not approve. They dragged forth three of the Justices—High Churchmen and standing stoutly for King James—and forced them to listen, bareheaded, to the Declaration: a thing which came near afterwards to their destruction. Yet they looked sour and unwilling, as anyone would have testified. The Declaration was a long document, and the reading of it took half an hour at least; but the people cheered all the time.

After this, they read a Proclamation, warning the soldiers against taking aught without payment. But Robin laughed, saying that this was the way with armies, where the General was always on the side of virtue, yet the soldiers were always yielding to temptation in the matter of sheep and poultry, that human nature must not be too much tempted, and that camp rations are sometimes scanty. But it was a noble Proclamation, and I cannot but believe that the robberies afterwards complained of were committed by the tattered crew who followed the camp, rather than by the brave fellows themselves.

The Duke lay at Captain Hucker's house, over against the Three Cups Inn. This was a great honour for Mr. Hucker, a plain serge-maker, and there were many who were envious, thinking that the Duke should not have gone to the house of so humble a person. It was also said that for his services Mr. Hucker boasted that he should expect nothing less than a coronet and the title of Peer, once the business was safely dispatched. A Peer to be made out of a Master Serge-maker! But we must charitably refuse to believe all that is reported, and, indeed (I say it with sorrow of that most unfortunate lady, Miss Blake), much idle tattle concerning neighbours was carried on in her house, and I was told that it was the same in every house of Taunton, so that the women spent all their time in talking of their neighbours' affairs, and what might be going on in the houses of their friends. This is a kind of talk which my father would never permit, as testifying to idle curiosity and leading to undue importance concerning things which are fleeting and trivial.

However, the Duke was bestowed in Captain Hucker's best bed; of that there was no doubt, and the bells rang and bonfires played, and the people sang and shouted in the streets.

(To be continued.)

Princess Victoria Mary of Teck has become the patron of "The Sea-Shell and Scrap-Book Missions," lately removed to larger premises at 27, Benedict-road, Stockwell, S.W.

Mr. T. M. Colmore has been appointed stipendiary Magistrate for Birmingham, in place of Mr. Kynnersley, who resigned recently owing to ill-health. Mr. Colmore is Recorder of Warwick and a Magistrate for Warwickshire. During the illness of Mr. Kynnersley he acted as deputy-stipendiary.

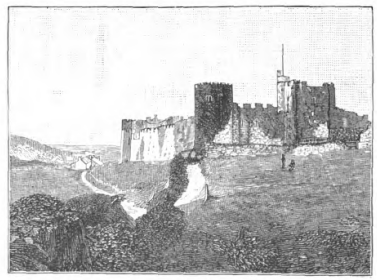
The annual report of Mr. Müller's famous orphan houses at Ashley Down, near Bristol, tells once more a tale of a sustained flow of benevolence towards an institution which employs none of the ordinary means of attracting the attention of the charitable. Two thousand and fourteen orphans have been under the care of the houses during the past year, and it is stated that there are still many vacancies for orphan girls, with whom no money is expected, neither is any influence needed for their admission. In May last the balance in hand is stated to have been £1078, or only enough to last for two weeks' support; but contributions, both in money and in kind, sufficient for their needs have continued to pour in. The total amount received in this way since 1834, when the houses were started, is stated to be £1,153,004, by which sum 106,672 persons have been taught in the schools entirely supported by the funds of the institution, not to speak of the schools assisted from the same source. During the period five large houses, at an expense of £115,000, have been erected.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

SEPTEMBER 1, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.



BLUNDERBORE'S CASTLE.

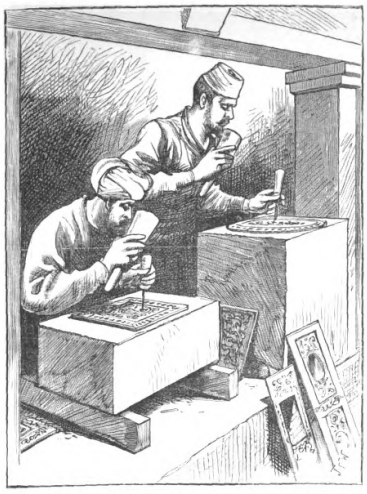
The bright rollicking south-westerly wind bustles up from the sea, driving the great masses of fleecy-white clouds over the dense blue sky, as merrily as if they were a team of spirited horses and he bore in his mighty hands a whip to send them along with cheerily.

The sea, bluer in places than the sky itself, comes rolling in on the wide pebbly beach, and changes every moment: as now, reflecting the heavy clouds, it becomes for a moment almost purple; and then, dancing among the rocks heavy with sea-weed, it appears to be a translucent green, remaining quiet for a moment, and then, suddenly becoming crested with pale foam, it leaps and dances once more, gambolling in until it flings itself, tired and exhausted, almost at the very feet of Blunderbore's Castle; then it recedes gradually, and we hear the roll of the pebbles as they fall back with the wave into deeper water once more.

Standing here by the window of the ladies' room, and gazing down into the valley, it is almost impossible to believe we are in the very last years of this present century of ours. There is no sound of life; no sight of human being; nothing but the deep tones of the sea and the wind, the gallant chorus of the voiceful waves, and the melancholy cry of the sea-gulls as they wheel and dip and float round the old towers and down among the rocks where the tide is flowing in. And as we look round at the stalwart towers and grim walls by which we are surrounded we are quite sure that presently we shall see the drawbridge lowered and the portcullis raised to admit the giant, home after one of his forages for food, and that we shall watch him unload his pockets of his victims and set them down trembling before the great hearth, which is yet black with the fires that have gone out—never to be rekindled—oh! how many, many weary years ago!

But the drawbridge is always down now, and never requires to be raised, while the double set of portcullis-gratings never fall, and only show their teeth to us as we pass beneath, looking up with a shudder at the rusty, revengeful row of spikes, and recognising the wide gaps through which boiling lead was playfully poured from above on the heads of any unwelcome intruder; and we prefer to pause by the ladies' window, meditating on the bright eyes and lovely faces which were there before us, and whose owners spent peaceful lives in this chamber working great rolls of tapestry, and gazing down into the sea-locked valley—waiting for the return of the boats in which their lovers had sailed away, no doubt on marauding plans intent; and where they could see the sally-port, watching, as is ever the woman's part, while the giant and his followers went and came from the wide sea. For there were giants in those days, and this is a veritable giants' castle. Men lived here whose reputation and whose stature doubtless grew with the lapse of years, and by the aid of the gossips' tongues. And we learn from the brown-faced caretaker legends of the prowess of those times that we should like to

believe in, but that we cannot; but which have evidently left their own impression on the village, which still quakes at the hero's name. Albeit, now, their worst enemies are the jackdaws in the castle-towers, which forage in the wind-swept gardens and among the potato-fields, in mild emulation of the men whose forays were once the terror of the country-side, and who took by force all that was the desire of their eyes, be it whose it might be originally.



Better than hearing of those days of blood and tears is it to sit here, quietly listening only to the sound of the birds and the wind and the sea; making up our own stories, and gazing at the beautiful castle by which we are surrounded; at the smooth, green grass, once the castle bowling-green and now given over at times to the universal tennis-courts; at the vast tree of ivy, which clasps with its arms the great grey square towers, and which appears to promise eternal life for them as long as no separation tears them from its arms and casts the clinging ivy down; and at the old mews; and the so-called chapel, which has no trace whatever of church about it, and which, we think, is called a chapel to please the visitors, who somehow always demand to be shown the site of that, before they turn their eyes even to the bigger, handsome relics of what was once a banqueting-hall, and which is more ruinous than any other part: albeit there are remains of the musicians' gallery, which stood in front of the ladies' room, from which, we think, the finest view of all is to be obtained.

For from here we can look across the landward side of the valley to the curious, ugly, square, plastered church, with its squarer grey high tower, where the tomb of the builder of the castle is to be found; where the jackdaws build, too; and where the sea-gulls swoop and scream before the gathering of the storm; and we can see the grim cromlech on the side of the hill, and wonder why it was put there, making our own stories, as the caretaker has none to give us, of this especial theme.

Indeed, we have long dismissed the caretaker, and, sitting in one of the old Norman arched windows, prefer to hear nothing but the sounds around us; and we look out at the few white houses in the valley below the castle, which still nestle up against it as if it were yet powerful, and could defend them against the foes which in the good old times were always ready to swoop down upon them, and which made residence near the castle imperative—albeit at times, if all the stories told are true, they found the owners of the castle sometimes as bad to be with as the ever-expected enemies were supposed to be themselves; until we become more than ever thankful that long stretches of marvellous days of science have put an eternal barrier between us and those said excellent and venerable bygone years.

And yet it is impossible to feel they are quite parted from us, while we look down into the deep black dungeon, placed by some freak of irony below the flooring of the ladies' tower, where dank green moss clings to the wall, and where we require a light to see the great ring and rusted chain which

has often been clasped round strong men worsted in the fray and cast there to moulder into dust: and where we see the stone cauldron, with the relics of the furnace below, where the lead used to be melted before being carried for use to the chamber over the gate: and we cannot believe that these walls are unhaunted, or can ever be free from the souls of those whose

THE GLASGOW EXHIBITION: INDIAN WOOD-CARVERS AT WORK.

rough, wild sway kept the country-side in terror, and who, secure in their strength and in the strength of their castle, did only what was right and pleasant in their own eyes, and who knew only one law, and that one of their own making.

Nay, surely yonder sly and sombre jackdaw, whose head is on one side, and whose feathers are blown all one way, as he pauses on the low wall below there, ere he possesses himself of some tender morsel in the caretaker's garden, must be the present form of one of those venerable robbers;—and now he is meditating reprisals for all the hard things that she has said of him and of his race, members of which hang featherless, limp, and unpleasant, from the sparse bushes in her meagre inclosure;—and surely the soft, grey, wheeling, graceful seagulls, with their mournful cry and their wonderful flight, contain the souls of the watching owners of the ladies' bower, who seek for ever and ever those who went down to the sea in ships, and who never came home to the wind-swept creek and the grim castle, despite the great fires that once roared up the rude chimneys, despite the flood of ruddy light that flowed from the stone casements, and which was reflected in the sea—which, in those days, flowed almost at the castle-foot, and made it doubly impregnable—and the pert water-wagtail, which cannot make a straight line, and which strays hither and thither with any breeze that blows, is the present form of the pert ladies' maids who were for ever scurrying across the courtyard after the men-at-arms, whose quarters were in yonder square tower by the gate!

But the crimson sunset is beginning to flush over the sea; the caretaker jangles her bunch of keys and looks plaintively up at our tower; and, as we know the ghosts, which, after all, are companions to us, are real terrors to her, we descend from our perch and wend our way, looking back for a moment to see her rushing away to her white cottage in the valley, and to note how blood-red the sky looks through the empty windows of Blunderbore's great castle. J. E. P.

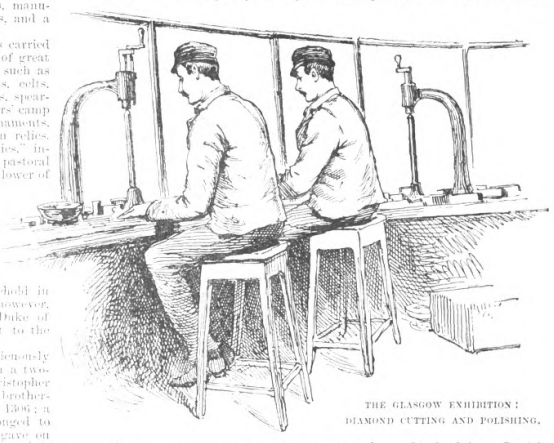
At a meeting of the council of the National Rifle Association, held at their offices, Pall-mall, it was unanimously resolved: "That it is the opinion of the council that the most eligible sites offered in substitution of Wimbledon are the Berkshire Downs and Cannock Chase; and it is resolved that, provided a freehold on the latter site can be acquired, further information be obtained with the view to arriving at a final decision between them." A special meeting of the council is to be held for the purpose of finally deciding as to the site.

THE GLASGOW EXHIBITION: PEN-MAKING.

THE GLASGOW EXHIBITION
ANTIQUARIAN COLLECTION

One of the most interesting structures in the Glasgow Exhibition grounds is the reproduction of the tower of the old Bishop's Castle or Palace, a building of the fifteenth century, which formerly stood near the cathedral, and was removed in 1792 to clear the site for the Infirmary. This tower was erected by Bishop Cameron, though other parts of the castle were two centuries older; it was surrounded by Archbishop Beaton with an embattled wall, 15 ft. high. Its position made its possession a matter of importance to the contending parties during the minority of James V., and in 1515 it was invested and captured from the English, who then held it. Almost immediately after, it was regained by the Duke of Albany, the Regent, who two years later relieved the garrison from a siege by a force under the Earl of Lennox. The next Archbishop, Dunbar, further strengthened the building, which underwent several more sieges and assaults, at intervals, up to near the close of the sixteenth century. For some time it was used as a prison, and then it was neglected and fell into decay. The latest occasion when it was put to practical use was in 1715, when Bishop Cameron's tower, which was almost the only portion intact, was the prison of 300 Highlanders. The accurate reproduction of this building does much credit to Mr. James Sellars, the architect; and our View, looking at it over the Kelvin, the small river that flows through Kelvin-grove Park and the Exhibition grounds, shows it in a favourable aspect.

The interior of the mimic "Bishop's Castle" is occupied by an extensive and valuable collection of Scottish relics, historical, antiquarian, personal, and literary, with specimens of art, ancient weapons, dress, and furniture, sufficient by itself to command close attention. Among the owners who, besides the Queen and the Prince of Wales, have contributed to this display are the Earl of Aberdeen, the Marquis of Ailsa, the Duke of Argyll, Lord Balfour of Burleigh, the Marquis of Breadalbane, the Marquis of Bute, Lord Donington, the Earl of Elgin, the Baroness Willoughby de Eresby, the Earl of Home, the Dowager Marchioness of Huntly, the Marquis of Lothian, the Marquis of Northampton, the Marquis of Tweeddale, Lord Verulam, a number of other ladies and gentlemen all over the country, and various corporations and learned societies. The total number of articles here displayed is 1546, embracing examples of the Early Period, the Early Scottish, the time of Mary Stuart, Scotland after the Union of the Crowns, and of the Jacobite period, besides articles pertaining to the Burgh of Glasgow, and to other Corporations, manuscripts of literary interest, portraits, and a variety of other things.



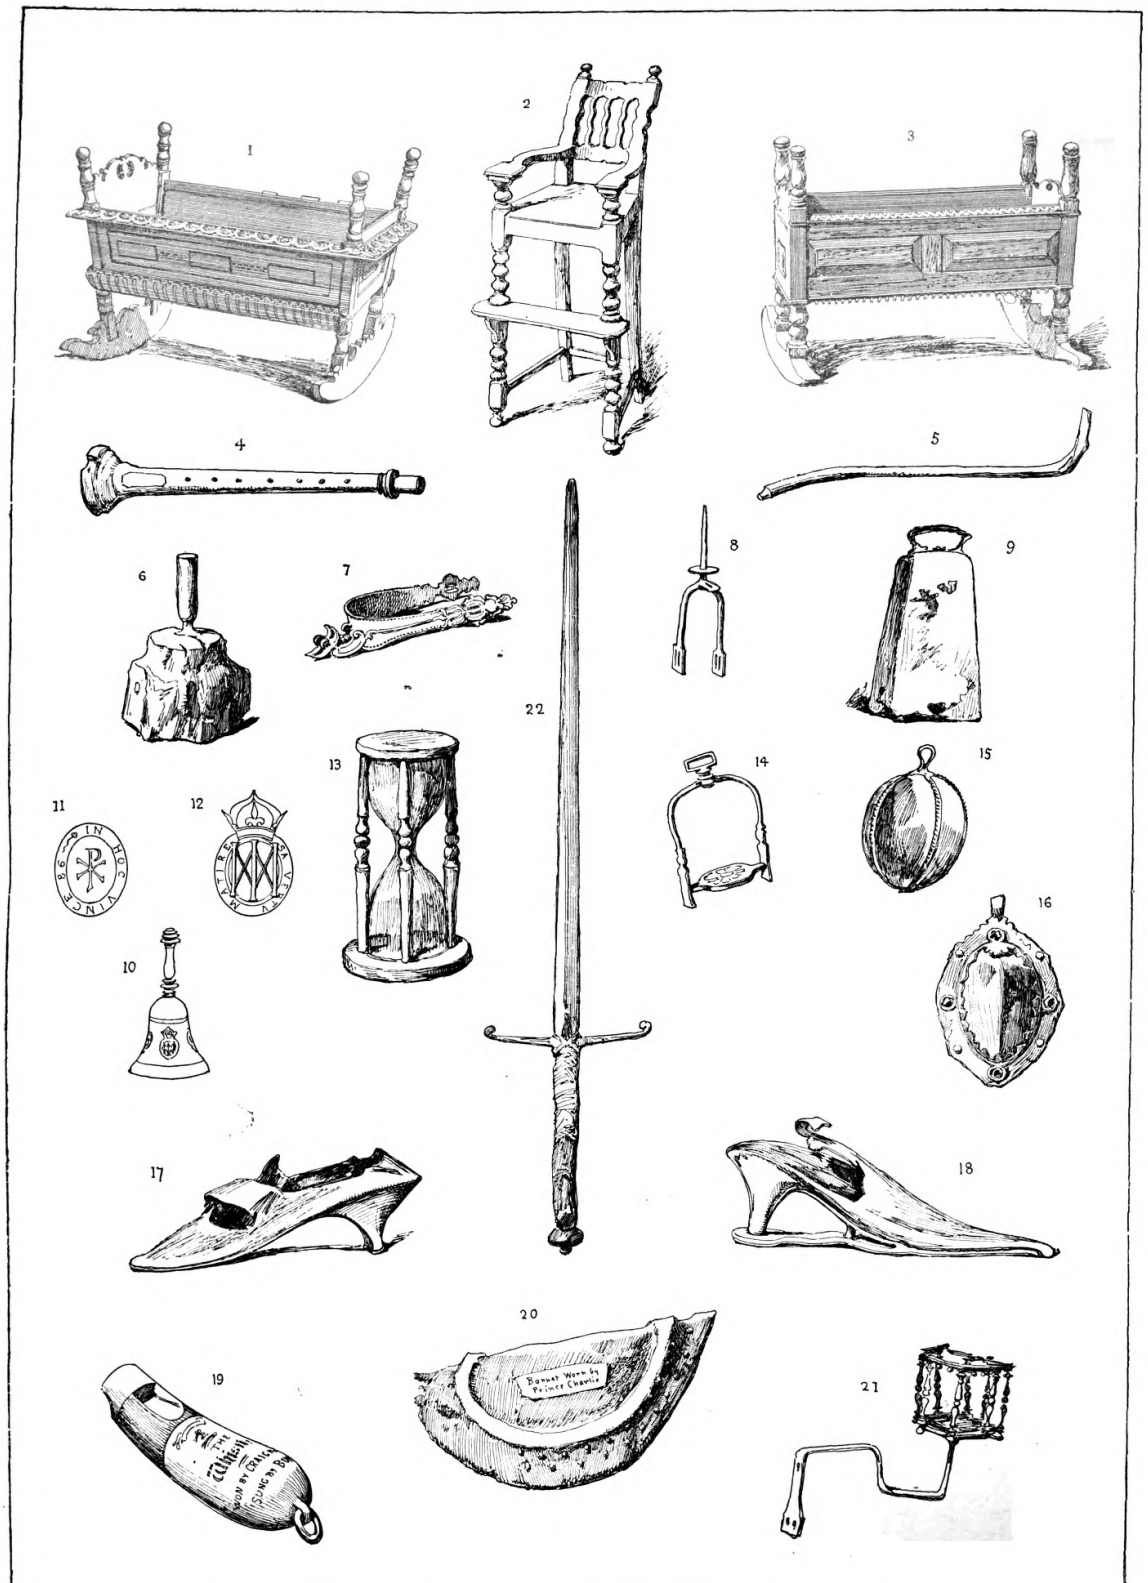
In the first section the visitor is carried back to prehistoric times by remains of great antiquity, discovered in many spots, such as stone hammers, axe-heads, hatchets, celts, cinerary urns and bones, millstones, spear-heads, bronze swords, Roman soldiers' camp kettles, coins, rings, and other ornaments, and numerous other ante-Christian relics. There are some "early Christian relics," including the "Bachuill More," the pastoral staff of St. Moloc, the immediate follower of St. Columba, who zealously laboured to introduce Christianity into Scotland in the seventh century. Of this relic it is stated that a family named Livingstone, living in the island of Lismore, which was the seat of the ancient bishopric of Argyll, were hereditary custodians of the staff, and enjoyed the freehold in virtue of the trust. Their lands, however, passed into the possession of the Duke of Argyll, by whom the staff is lent to the Exhibition.

King Robert Bruce figures conspicuously in this collection. There are shown a two-handed sword with which Sir Christopher Seton defended Bruce, his King and brother-in-law, at the battle of Methven, in 1306; a similar weapon, said to have belonged to Bruce; a sword which the King gave on his deathbed to Sir James Douglas; with his spurs, stirrups, and battle-axe. There is the Brooch of Lorne, which the King is said to have worn to fasten his plaid. It was for a long period preserved at Dunolly Castle by the Lords of Lorne, but it disappeared in the seventeenth century, when the castle was harried by the M'Neils, assisted by the Campbells of Bar Gleann. The latter were supposed to have carried off the brooch, and, although this family never admitted its possession, they are reported to have sold it as late as 1822. Soon after it was found in a jeweller's window by General Campbell, who at once purchased it and presented it to its hereditary owner. The brooch was worn by Captain M'Dougall of Lorne, who commanded the Royal barge in which the Queen and the Prince Consort sailed up the Tay when they were visiting the Marquis of Breadalbane at Taymouth Castle in 1842; and her Majesty examined it with great interest.

The relics of "Mary, Queen of Scots," the unfortunate Mary Stuart, are very numerous. Among them is the "Blair's College Portrait," which originally was the property of Elizabeth Curle (one of Mary's attendants at her execution) and was presented by her to the Scots' College at Douai, where her brother was a professor. At the breaking out of the French Revolution the inmates of the College were obliged to fly, and the portrait was taken out of its frame and hidden in a chimney, which was then built up. In 1811 it was taken from its hiding-place and sent to the Scotch Benedictine Convent in Paris, whence, in 1830, it was taken to Scotland by Bishop Patison and placed in Blair's College. It is recognised as one of the very few authentic portraits of the unfortunate young Queen, and is understood to have been painted by Antyas Cawood, from a drawing made during the Queen's lifetime; after Elizabeth and Jane Curle returned to France. There are several of the Queen's watches, cameos, and rings; a gold-enamel crucifix which she used during her imprisonment in Fotheringay Castle, the Prayer-book she held in her hands at her execution, some samples of tapestry worked while she was in Loch Leven Castle, her workbox and escritoire, and many other personal possessions. To this collection her Majesty graciously contributes a number of relics; including a tortoise-shell cabinet which belonged to Mary, and was bequeathed by Lord Belhaven and Stenton to our Queen, with a request that it should be preserved either at Windsor or Holyrood; a lock of Mary's hair, bequeathed in the same manner; a purse sewed by Mary, also bequeathed to the Queen by Lord Belhaven; a full-length engraving of Queen Mary, by Hagenburg; an engraving of Mary and Darnley, by Elstracke; a replica in oils of the Blair's College portrait, a portrait of Lord Darnley and his brother, and an old drawing, believed to represent the trial of Mary. On the other hand, there are relics of John Knox, and of the Covenanters.

The collection of memorials of the "Jacobite Period" consists largely of medals and medallions, representing various events, such as the birth of King James in 1688, the reception of James II. by Louis XIV. in 1689, the escape of Princess Clementina from Innsprück in 1719, the marriage of James III. to Princess Clementina, and other scenes. The Prince of Wales lends a ring with a miniature portrait on ivory of Prince Charles Edward Stuart, said to have been worn by him, and presented to his Royal Highness by the Duchess of Gordon; and also a pair of pocket pistols, silver-mounted and inlaid with gold, formerly belonging to Prince Charles, and also presented by the Duchess of Gordon. Portraits of "Prince Charlie" and Flora Macdonald, letters from the Prince, drinking-cups, rings, and other personal ornaments; a small MS. of music, which, when folded in a particular manner, conveyed a warning to the Prince, "Conceal yourself; your foes look for you"; Flora Macdonald's wedding-ring; and other curiosities, are found in this collection.

Original letters, and manuscripts of some of the works, of Robert Burns and Sir Walter Scott, constitute the most attractive part of the literary collection. The Burns manuscripts include those of "The Whistle," "The Author's Earnest Cry and Prayer," "The Holy Fair," "The Wounded Hare," and "The Cottar's Saturday Night," "The Twa Dogs," and "Scotch Drink"—these last being lent by the Irvine Burns Club. With these are Burns's rod and sword-stick, and, more interesting still, the identical whistle which prompted his poem bearing that title. This is a small ebony whistle which was brought to Scotland by a Danish gentleman in the suite of Anne of Denmark, wife of James VI. of Scotland. That gentleman claimed to have won and kept the trophy at all the Courts of Europe, where it was the prize in the drinking-bouts, the person last able to blow the whistle being the winner. In a contest in Scotland it was won from its owner by Sir Robert Laurie, of Maxwelton, father of "Annie Laurie." The contest at which Burns was present was in 1776, between a descendant of Sir Robert Laurie and two other gentlemen, to one of whom, Mr. Alexander, of Craigdarroch, Burns, as umpire, awarded it. This curious relic is lent by Captain R. C. Ferguson, to whom it descended. Among the Scott exhibits is "Old Mortality's" mallet, which he used in repairing the martyrs' tombstones. This mallet was presented to Mr. Joseph Train by Mr. Robert Patterson, of Balmaclellan, a son of "Old Mortality." There is an autograph letter relating facts of the history of that personage.

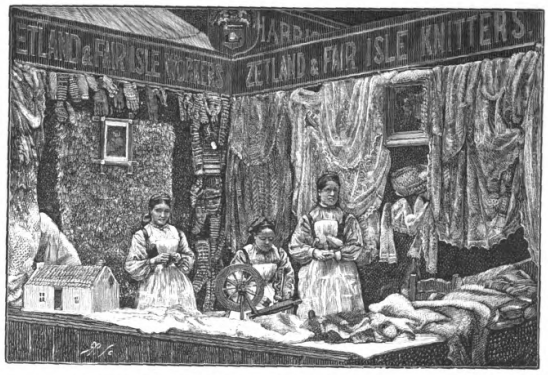


THE GLASGOW EXHIBITION: DIAMOND CUTTING AND POLISHING.

PEASANTS' LAND BANKS IN POLAND.

A report just published from the British Consul-General at Warsaw contains the translation of a new law extending, with certain alterations, the scheme of peasants' land banks, established in Russia since 1882, to the Kingdom of Poland. Under it peasants of Russian, Polish, or Lithuanian extraction may, with the approval of the local commissioner for peasants' affairs, obtain loans for the purchase of lands which do not belong to peasants, and which are not burdened with onerous servitudes, such loans not to exceed 90 per cent of the valuation made by the officers of the bank. In Russia proper the maximum is 75 per cent, and in the case of Poland the additional 15 per cent is to come from a special fund instituted for that country in 1860 to free peasants from dependence on the landlords. The balance of that fund, which amounts now to 2,000,000 roubles, is to be handed over to the land bank. The land purchased in this way cannot be sold until the debt to the bank is cleared off; nor can persons who are not peasants under the definition of law become purchasers or owners by inheritance or gift. In either of the latter cases the disqualified person into whose possession the land may come is bound to sell within a year. The limit of allotments is 8 1-5 acres.

It was announced at Shoeburyness on Aug. 23 that the 1st Glamorganshire (second and third detachments) had taken first prize in the Repository competition, the second falling to the 2nd Durham (third and fourth detachments), and the third to the 4th Durham (third and fourth detachments), certificates of merit being given to the 2nd Durham (first and second detachments) and the 8th Lancashire (third and fourth detachments). The 1st Glamorgan (second and third detachments) took the badges and challenge cup.



1. Oaken Cradle of King James VI.
2. Nursery Chair of King James VI.
3. Carved Oaken Cradle of Mary Queen of Scots.
4. The "Feadan Dubh," or Black Chanter, of Bagpipes of the Clan Chattan.
5. The "Bachuill More," or Crozier, of St. Moloc.
6. "Old Mortality's" Mell or Mallet.
7. One of a Pair of Silver Spurs belonging to King Robert Bruce.
8. One of another Pair of Spurs belonging to him.
9. The "Buidhean" or Bell of St. Fillan.
10. Queen Mary Stuart's Hand-bell.
11 and 12. Emblems and Inscriptions on Queen Mary's Bell.
13. Sand-glass used by John Knox when Preaching.
14. A Stirrup of King Robert Bruce.
15. The "Cloch Dearg," or Charm-stone, of Ardvolrlich.
16. The Glenorchy Charm-stone of Breadalbane.
17. One of Queen Mary Stuart's Shoes.
18. Shoe belonging to Queen Mary of Lorraine.
19. The Whistle, to be won by the man of a drinking-party who could sound it latest in their potations: sung by Burns.
20. Bonnet or Cap worn by Prince Charles Edward Stuart in 1745.
21. Stand to fix Hour-glass on John Knox's Pulpit.
22. Sword of King Robert Bruce.

THE GLASGOW EXHIBITION: HISTORICAL RELICS IN THE BISHOP'S CASTLE.

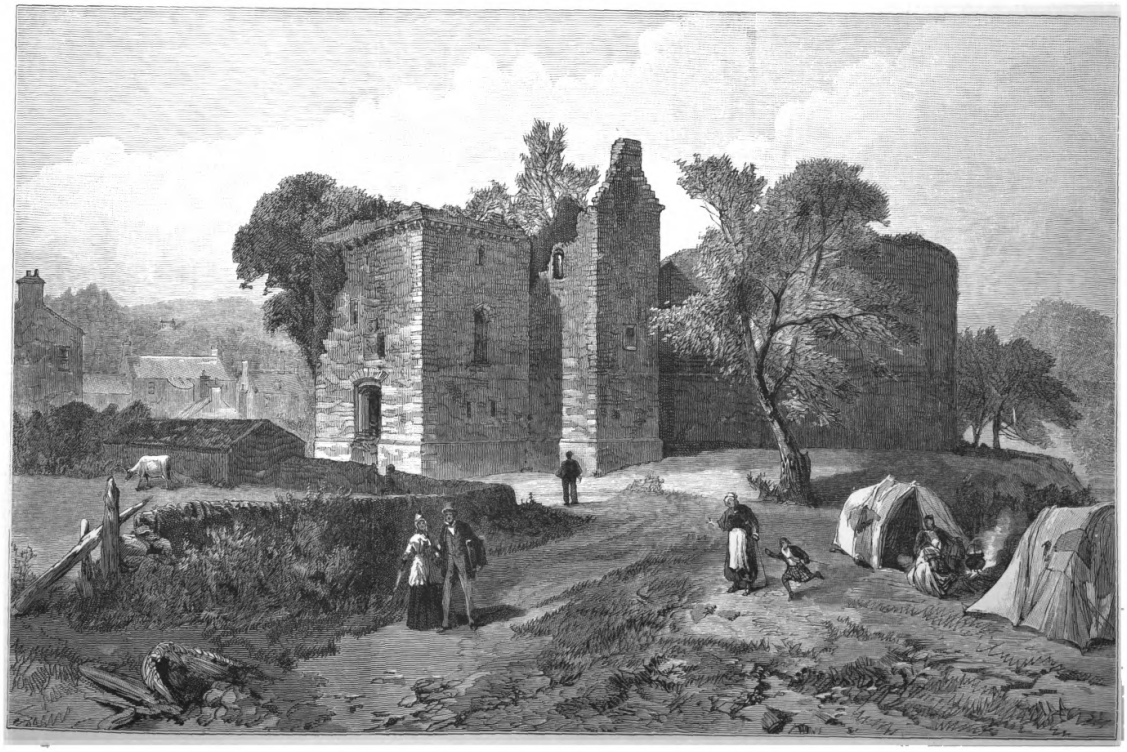
THE QUEEN'S VISIT TO GLASGOW.

THE GLASGOW EXHIBITION: INDIAN SECTION.

THE GLASGOW EXHIBITION: SHETLAND AND FAIR ISLE KNITTERS.

The city of Glasgow, the greatest in population of the provincial cities of the United Kingdom, and one of the greatest in trade and industry, was honoured by her Majesty the Queen, on Wednesday, Aug. 22, with a gracious visit which was performed under the most gratifying conditions, favoured by fine summer weather, and attended with the customary tokens of a public festive welcome sustained by the cordial enthusiasm of a loyal Scottish population. The Queen, who had not been at Glasgow since 1849, when she was accompanied by her lamented husband, the Prince Consort, had now two special purposes in view there; namely, first to perform the ceremony of opening the new Municipal Buildings lately erected in George-square for the City Corporation; and secondly, to inspect the Great International Exhibition of this year, held in the grounds adjacent to Kelvingrove Park, at the west end of the city. The President of this Exhibition, Sir Archibald Campbell, Bart., M.P., of Blythswood, which mansion is at Renfrew, about eight miles from Glasgow, was the host of her Majesty during the two or three days of her sojourn in the neighbourhood, and conducted the official reception of her Majesty at the Exhibition. The Lord Provost of Glasgow, Sir James King, at the head of the Magistrates and Council of that city and "Royal Burgh," did the honours of the Municipal Corporation. These gentlemen, with all the official persons, managers of the Exhibition, citizens, and members of the Scottish nobility and gentry, who bore part in the proceedings, and with the people of Glasgow and of the neighbouring towns, may be congratulated on the success of the arrangements, and on the agreeable impression produced by the Queen's visit.

Her Majesty, accompanied by her daughter, Princess Henry of Battenberg (Princess Beatrice), and the Grand Duke of Hesse, with his son, the Hereditary Grand Duke, and Princess Alice of Hesse (the Queen's grandchildren), had travelled during the night from Osborne, Isle of Wight, to Renfrew, arriving at Blythswood in the morning at half-past eight on Wednesday, the 22nd. Prince Henry of Battenberg had gone to Scotland by sea, and was there to meet the Queen and Princess on their arrival, in company with Sir Archibald Campbell; Sir M. Shaw Stewart, Lord Lieutenant of Renfrewshire; Mr. H. J. Moncrieff, Sheriff of the county; Major-General Lyttleton Annesley, Commander of the Forces in Scotland; and Provost Wright, of Renfrew, who were presented to the Queen. Her Majesty was dressed in black, and looked exceedingly well as she smilingly acknowledged the welcome of the bystanders. The Queen took her seat in a landau, in which also sat Princess Beatrice, Prince Henry of Battenberg, and the Duchess of Buccleuch, the Lady-in-Waiting; and the carriage, attended by outriders, made its way to Blythswood, followed by a procession of vehicles carrying other guests of Sir Archibald Campbell.



The Royal visitors left Blythswood for Glasgow at three o'clock. Before entering the railway-station a brief halt was made at the Municipal Buildings, Renfrew, and her Majesty was presented with an address by the Town Council. The Queen handed her reply to the Provost. It was in the following words:—

It affords me much pleasure to have this opportunity of visiting a Royal Burgh so closely connected with the ancient history of my kingdom in Scotland, and of seeing a district which has done so much in modern times for the prosperity of the United Kingdom.

The journey was resumed, and St. Enoch Station was reached at ten minutes past four o'clock. Here elaborate preparations had been made for the reception. The station is the terminus of the Glasgow and South-Western Railway, and the spacious interior and also the extensive square readily lend themselves to the art of the decorator. The immense arch of the station was draped with flowing curtains and enlivened with wreaths of evergreens and flowers. The ornate fronts of the station and hotel were brilliant with colour. Around and over the entrance to the latter, palms and shrubs were messed in great abundance. From the first and third floors draperies of crimson and yellow were hung. Along the whole length of the second floor, where the ornamentation was orange edged with red, trophies and shields were disposed at intervals, and all the balconies were bright with foliage. Flags waved from the dormer windows on the roof, and the Royal standard was hoisted on the staff of the tower surmounting the whole building.

The Highland troops, forming a guard of honour at the station, received her Majesty with a Royal salute. The Marquis of Lothian, being Secretary for Scotland, presented Sir James and Lady King, Lord Hamilton of Dalzell, Vice-Lieutenant of Lanarkshire, Sheriff-Principal Berry, Dr. Marwick, and Major-General Annesley. The Queen had been given a bouquet by Miss White, of Renfrew, and Lady King now offered another, the Lord Provost tendering an equally beautiful gift of orchids to Princess Beatrice.

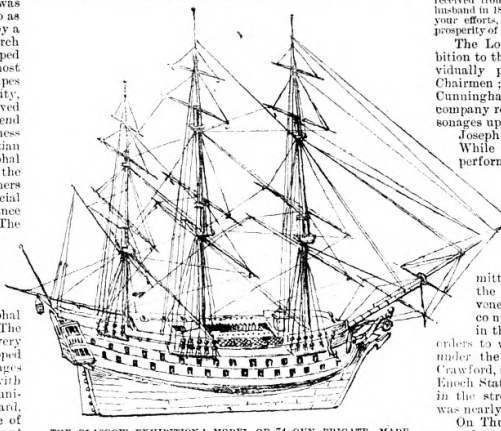
The Royal party then walked across the platform, which was laid with crimson cloth, to the carriages in waiting at the south-west corner of the station. Headed by an escort of the

ROTHESAY CASTLE, ISLE OF BUTE, FROM A SKETCH MADE IN 1846.

15th Hussars, the Royal pageant departed from the station, and proceeded amidst the hearty cheers of the people to the new Municipal Buildings, going by way of St. Enoch's-square, up Buchanan-street, along St. Vincent-place, to the front entrance of the Municipal Buildings in George-square.

On this part of the route the decorations were very fine. The opening from St. Enoch's-square into Argyle-street was spanned by the first triumphal arch, shaped and painted so as to imitate a structure of freestone. It was surmounted by a Royal crown. The somewhat sombre appearance of the arch itself was relieved by flowing draperies of rich crimson, looped with orange. Looking up Buchanan-street, the eye was almost dazzled by the profusion of gorgeous colours. Flowing stripes of variegated material, and flags of almost every nationality, hung down the fronts of the handsome buildings or waved across the fashionable and busy thoroughfare. The east end of Sauchiehall-street was conspicuous also by the richness and the taste of its display. A long avenue of Venetian masts, rising from tufts of foliage, led up to the triumphal arch, which stood at the highest point of the street, near the Corporation Galleries. Along the line wreaths and streamers filled the spaces between the masts, while strings of artificial roses stretched from side to side, presenting from a distance the appearance of a light roof of pink and white. The triumphal arch was most elegant; its piers were shaped into niches, lined with crimson and filled with palms and towering shrubs. The arch itself was of trellis-work, filled out with verdure, and relieved by masses of flowers. Beyond this the decorations were continued to Kelvingrove Park.

At the entrance to George-square another triumphal arch, similar to the first in general effect, had been erected. The square itself, which had been kept clear, presented a very effective scene. Three sides of it were lined with gold-tipped Venetian masts, adorned with flags and wreaths. The frontages of all the buildings on these three sides were decked with coloured hangings, while in striking contrast the new Municipal Buildings were unadorned, save by the Royal Standard, which waved over the porch. The bright green square of lawn, with the beds of bright fresh flowers, came as a pleasant relief to the eye. The Municipal Buildings, the foundation-stone of which was laid five years ago, had been completed externally for some time. They were constructed from the designs of Mr. W. Young, architect, London, and standing on one of the finest sites in the city, are in every way worthy of their position. They occupy the entire eastern side of the square. Within the square, the equestrian statues of the Queen and Prince Albert were effectively decorated. The tops of the pedestals were trimmed with heather, and at the corners were shields bearing the arms of England, Ireland, Wales, and Scotland. Surrounding the bases were banks of flowers and rare plants. As the Royal procession drove through the square the greatest enthusiasm prevailed among the spectators who had the pleasure of witnessing the procession both going and returning.



The proceedings at the Municipal Buildings were brief, her Majesty's stay being only for about ten minutes. On arriving at the grand entrance the Queen was presented by the Lord Provost, Sir James King, with a gold key, and with the following address, which was read by Dr. Marwick, the Town Clerk:—

May it please your Majesty,—We, the Lord Provost, Magistrates, and Council of the city and Royal burgh of Glasgow, desire, for ourselves and the community we represent, to offer your Majesty the renewed expression of our loyalty and devotion to your Majesty's person, throne, and family, and the assurance of our grateful appreciation of the distinguished honour you have done the city in consenting to inaugurate its Municipal Buildings and to visit the Industrial Exhibition now being held here. Since the consecration of the Cathedral and the foundation of the burgh in the twelfth century, Glasgow has received frequent visits from the Scottish Sovereigns. The saintly King David I. attended the consecration of the Cathedral; King James II. and King James III. often visited the city. Both the last-named Sovereigns were Canons of the Cathedral, and conferred upon the See and the burgh signal marks of Royal favour. Queen Mary resided in Glasgow for a few days, and it was twice visited by King James VI. These Royal recognitions have been frequently renewed during your Majesty's auspicious reign. The city was honoured and gratified by a visit from your Majesty and the Prince Consort in 1849; and ten years later your Majesty was graciously pleased to open the works by which the city received the water supply which it has since drawn from Loch Katrine. Since then, Glasgow has been honoured by the presence of members of the Royal family on several occasions—in the unveiling of the statue of the lamented Prince Consort; in the laying of the foundation-stones of the University Buildings and General Post Office; and, three months since, in the opening of the Exhibition which your Majesty is now about to visit. Of these repeated evidences of favour the citizens are deeply sensible, and they have sought to connect their Municipal Buildings with your Majesty's Jubilee, so as to give permanent expression to the admiration and love with which your Majesty is regarded here. The structure will, we trust, long remain a memorial of a reign unexampled in the magnitude and far-reaching issues of the events comprised within it; in the public and private virtues of the Sovereign; and in the perfect sympathy which exists between the Crown and the people. Given in the name and on behalf of the Lord Provost, Magistrates, and Council of the city and Royal burgh of Glasgow, and the seal of the city affixed hereto, this 22nd day of August, 1888.—JAMES KING, Lord Provost; J. D. MARWICK, Town Clerk.

The gold casket containing the address having been handed to the Queen, her Majesty read the following reply:—

I thank you most sincerely for your renewed assurance of attachment to my throne and person. I am deeply touched by your reference to my previous visit to Glasgow, when I was accompanied by my beloved husband. I gladly inaugurate these noble Municipal Buildings, which are worthy of the ancient renown and modern prosperity of your great city.

The Lord Provost then presented the Magistrates and leading officials of the Corporation, after which her Majesty drove out of the quadrangle, and proceeded to the International Exhibition. Along the route to Kelvin-grove Park, vast multitudes of people were assembled, who hailed the Queen's appearance with immense cheering. Another triumphal arch near the Lord Provost's residence formed an entrance to the park. It was in the Oriental style of the Exhibition building. At the grand entrance to the Exhibition, a portico, tastefully adorned with wreaths and flowers, and covered with broad stripes of alternate red and white, had been constructed. Prominent over the entrance the Imperial arms were to be seen; those of Scotland, Ireland, and the Colonies were ranged on either side. The whole was surmounted by the Royal crown of England. Inside the building the original draperies had been replaced by elegant festoons of blue material, which greatly added to the effect of the elaborate frieze. At the west end of the hall, on the site before occupied by the colossal statue of Robert Burns, a Royal dais had been erected. Four broad low steps led to the throne, which was a richly designed seat, flanked by lions and displaying the Royal arms of England. The canopy, rising to a height of above thirty feet, was supported by light pillars and surmounted by a gilded dome and Royal crown. Curtains extended on each side of the canopy across the dais. All the draperies were of Royal purple, with gold fringe. The woodwork was ivory coloured and gilt. On the top were shields bearing the arms of India, Canada, Australia, and South Africa. Behind the Queen's chair was a floral shield bearing the letters V.R. The chairs were upholstered in ivory satin. The Royal Archers, the Queen's Scottish Body-Guard, under

THE GLASGOW EXHIBITION: MODEL OF 74-GUN FRIGATE, MADE OF BONE BY A FRENCH PRISONER OF WAR.

command of the Duke of Buccleuch and the Earl of Stair, formed a guard of honour. The Seaforth Highlanders stood on guard behind them.

Sir Archibald Campbell, President of the Executive Committee, the Vice-Chairman, and the conveners of the Committee received her Majesty at the Exhibition. The Royal party passed through the main avenue to the dais in the Grand Hall, the National Anthem being performed by the Choral Union, bands, and organ. The Royal procession was headed by Sir Donald Matheson and Col. Clark, marshals, the General Manager, Secretary, and Architect of the Exhibition, the Vice-Chairman, the Duke of Montrose, the Marquis of Breadalbane, the Earl of Stair, and the Lord Provost of Edinburgh, in the capacity of Vice-Presidents. Then came the Equerries-in-Waiting; then Sir A. Campbell and Sir James King; and then the Queen, walking very slowly, side by side with the Grand Duke of Hesse, the rest of the Royal family coming behind. The household followed, and the next in order were the conveners of the Women's Industry Section, Lady King, Lady Campbell, and the Duchess of Abercorn. Committees in numerous array and the executive staff brought up the rear of the procession. The National Anthem having been sung, Sir Archibald Campbell, as President, read an address from the Executive Council of the Exhibition. Of this the following extract may be quoted:—

It is impossible for us to talk of the present Exhibition without remembering that, in common with all preceding exhibitions that have been held within the realm under the beneficent sway of your Majesty, it owes its origin to the Great Exhibition initiated, and so successfully carried out in 1851, by the lamented Prince Consort, whose ennobling idea and warmest aspiration it was, by bringing nations and communities into friendly competition with one another in arts and manufactures, to secure the blessings and the benefits inseparable from the promotion of peace and goodwill among mankind. Will your Majesty permit us to advert for a moment to the signal success with which the present Exhibition has been honoured? It has now been open for nearly four months, and during that period has been visited by upwards of two millions and a half of people from your Majesty's wide empire, both home and colonial, besides great numbers from the Continent of Europe and the United States of America, all attracted by a display of some of the noblest productions in every department of science and art and of manufactures, and which, we believe, none have had an opportunity of seeing without expressions of the warmest admiration. We now respectfully submit for your Majesty's inspection some of the principal features and contents of the Exhibition, and express our grateful sense of the distinguished honour which your Majesty is now conferring upon this city and the Exhibition. We earnestly pray that your Majesty may long be spared to reign over a happy and united people.

THE GLASGOW EXHIBITION: THE CENTRAL AVENUE, LOOKING WEST.

The Queen, in an unusually low tone of voice, read a reply in the following words:—

It is with the utmost gratification that I receive the loyal and dutiful address which you have just presented, and I am greatly pleased by the warm manner in which I have been welcomed by the vast community of this great city. I am deeply sensible of the advantages which the manufacturing and commercial interests of the whole civilised world have received from these exhibitions, which were first organised by my beloved husband in 1851. I rejoice in the well-deserved success which has crowned your efforts, and I heartily offer you my best wishes for the continued prosperity of this great undertaking.

The Lord Provost handed the official badge of the Exhibition to the Queen, and the following gentlemen were individually presented:—Messrs. Dickson and Shearer, Vice-Chairmen; Mr. H. Anthony Hedley, General Manager; Colonel Cunningham, Secretary; and Mr. Sellars, Architect. All the company resuming their seats in imitation of the Royal personages upon the dais, the "Song of Praise," composed by Mr. Joseph Bradley, followed by "Auld Lang Syne," were sung. While a selection of Scottish national airs was being performed, her Majesty and the Royal party, accompanied by Sir Archibald and Lady Campbell, Sir James and Lady King, and the Duchess of Abercorn, proceeded by the north-west tower of the grand hall to the Women's Art and Industry Section, and inspected first the Irish, then the Scotch, and then the English and Welsh Sections. Her Majesty was received in the Irish Section by the Duchess of Abercorn and the Irish Committee, and in the other sections by Lady Campbell and the Central Committee. In each section the Lady Conveners presented the officials of the section. The ladies composing the committees were presented to her Majesty in their respective sections. These ladies had received orders to wear black. The Art Galleries were next visited, under the guidance of Mr. Francis Powell and Mr. Robert Crawford, and lastly the Artisan Section. The return to St. Enoch Station was a repetition of the popular demonstration in the streets; and travelling, as before, by special train, it was nearly dusk when the Queen reached Blythswood.

On Thursday, Aug. 23, her Majesty visited the prosperous manufacturing town of Paisley, which celebrated on that day the four hundredth anniversary of its municipal charter, granted by King James IV. of Scotland in 1488. The Queen, with Princess Beatrice, and with the Grand Duke of Hesse and his son and daughter, drove from Blythswood to Paisley, between five and six o'clock. At the Town Hall, an address from the Corporation was presented by Provost Cochrane, to which her Majesty made a gracious reply. Earlier in the day, Princess Beatrice, with her husband Prince Henry of Battenberg, went in the Royal yacht Victoria and Albert up the Clyde to Govan, where her Royal Highness performed the ceremony of launching the *Marathon*, a new armed cruiser for the Royal Navy, built at the Fairfield Shipbuilding and Engineering Works, under the direction of Sir William Pearce. On Friday, Aug. 24, the Queen again visited the Glasgow Exhibition, also the University of Glasgow, and Queen Margaret's College for Ladies, before her departure to Balmoral. A baronetcy has been conferred on the Lord Provost of Glasgow, and the Town Clerk has been knighted.

The Exhibition itself, apart from the Queen's visit, has already been described. We give some additional Illustrations: the View from under the Central Dome; that of the Main Avenue, looking west; the Indian Section, with the woodcarvers; the women and girls from Shetland and Fair Isle, at work knitting; and one or two manufacturing processes. The Indian Section occupies the courts numbered 32, 33, and 34, where are gathered manufactures from every part of India: carpets, rugs, jewellery, silk, wool, and cotton fabrics; woodcarving and lacquered work, metal work, pottery, glass and leather work. Some of these articles have been purchased with the funds provided by the Exhibition authorities; the rest have been forwarded by private parties for exhibition and sale. An Oriental aspect is given to these courts by the erection of model structures, representing temples, pagodas, &c. The wall-space above the stalls is hung with gorgeously coloured carpets from the Eastern looms. To the west of Court 34, a small space has been fitted up to resemble an Indian bazaar, where native workmen may be seen plying their trades as jewellers, wood-carvers, potters, and makers of sweetmeats, with their own primitive tools. In the general Exhibition, Class XVIII., that of jewellery, in the main avenue, the Diamond-Cutting Company (Limited), of London, show the process of cutting and polishing Indian, South African, Brazilian, Australian, and other diamonds by special machinery. Among the Illustrations that we gave last week were those of the making of black-lead pencils and pen-holders, exhibited by Messrs. R. Wilson and Co., of Keswick, Cumberland.

The decorations of St. Enoch's railway-station and hotel at Glasgow, those of the mansion of the Lord Provost, and of other public and private buildings, were provided by Messrs. J. Defries and Sons, of Houndsditch, London.

The members of the Middlesex Natural History Society assembled recently, at Edgware, under the directorship of Mr. Sydney T. Klein, and proceeded through the town of Edgware to the old church at Whitchurch, where the Rector fully explained the many objects of interest. Canons Park, formerly the seat of the Duke of Chandos, was also visited, Brockley Hill being reached by the old Roman road of Watling-street, where the site of the Roman town of Sulloniacae was inspected. The members were then taken through private grounds to examine the obelisk of Cassivelaunus, a Roman encampment, two ancient barrows (one in course of being opened), and a facsimile of Rousseau's Tomb; afterwards crossing Bushey-heath to the residence of Mr. Sydney T. Klein at Stanmore, by whom all the members were hospitably entertained.

Miss Edith Woodworth's Buttercup and Daisy Fund has proved highly successful. Over 300 sick children, collected from some of the poorest districts of London, have been sent into the country for two weeks by the aid of the fund. One hundred and thirty have gone to Salisbury, seventy to Dean, thirty-five to East Grinstead, twenty-five to Godalming, and many others to Halstead, Caterham, West Brighton, and Broadstairs. The fund pays for the return fares of the children and for their entire keep for the fortnight. This result has been mainly obtained through the performance of "Fron-Fron," given at the Globe Theatre on July 26, by Mr. Edgar Bruce and Miss Woodworth, with the kind assistance of the artistes who appeared on that occasion; but Miss Woodworth has also to thank many friends for their donations.

ROTHESAY CASTLE AND THE CLYDE.

Our View of Rothesay Castle, from a sketch made in 1846 by Mr. W. Simpson, belongs to the series of illustrations of "The Clyde, Past and Present." Rothesay Castle is supposed to have been first erected in 1098, by Magnus Barefoot, King of Norway, as a stronghold when he was bent on the conquest of the Western Isles of Scotland. Its first plan was that of a great circular wall, 140 feet in diameter, with four projecting round towers. About the middle of the fourteenth century, King Robert II. added a palace to the original construction, and he is supposed to have built the chapel of St. Michael, which is now only a ruin within the walls. Over the principal entrance to the palace, in a panel, are the Royal Arms of Scotland. The Prince of Wales derives from this place his title of Duke of Rothesay, the eldest son of the Kings of Scotland having that title in former times. This old castle was left in ruins when burned in 1685, and the interior was a mass overgrown with shrubs and weeds. In 1874, the Marquis of Bute, who is hereditary keeper, took charge of the place, and since then it has been well looked after. It is an interesting specimen of the baronial architecture of the period to which it belongs. The island of Bute is noted for its mild climate; it is the Isle of Wight of Scotland, and consumptive patients take advantage of its salubrity. There is on Loch Fad a small residence still known as "Kean's Cottage," where Edmund Kean, the actor, stayed for some time. The views of Arran and the Firth of Clyde are very fine as seen from Barone Hill and other heights in the island

The view down the Clyde from near Kilpatrick, of which the same Artist gives a Sketch, is one of the most noted views on the river. It shows the Forth and Clyde Canal, which ends at Bowling. Beyond Bowling is Dumglass, and the hill of Dumbuck towers high above; Dumbarton Rock stands out alone, and marks pretty nearly where the Clyde ceases to be a river and becomes a firth. In the distance are the mountains of Argyleshire; on the south side of the river is Blantyre House. Adjacent to Kilpatrick are the populous villages of Dalmuir and Kilbowie, with some important factories. One of these is the vast establishment of the Singer Sewing-Machine Company, covering twenty-two acres. These works, capable of producing 10,000 sewing-machines in a week, give employment, when business is good, to four or five thousand hands. They have a steam-whistle that can be heard at Paisley, five miles distant. The managers considerately stopped this whistle during the Queen's sojourn at Blythswood.

THE HIGH COMMISSIONERSHIP IN SOUTH AFRICA.

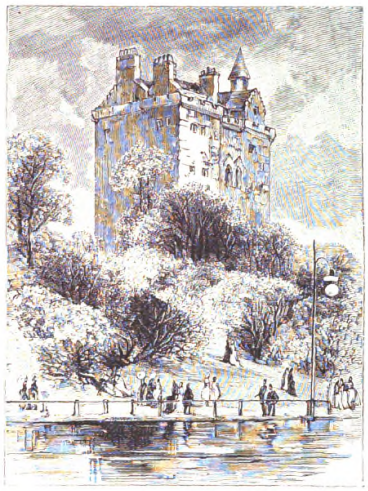
A Blue-book has been published containing the "Correspondence relating to the High Commissionership in South Africa and its Separation from the Governorship of the Cape," together with a sketch-map of South Africa from the Zambesi to Cape l'Agulhas.

The Rev. John Mackenzie, in a long communication to the Colonial Office, urges the necessity for the separation of the office of High Commissioner, discharging Imperial or general functions, from that of Governor of the Cape Colony, discharging local and special functions. He says:—"The business proper to the High Commissioner at once would be, firstly, the correspondence with the Free State, Transvaal, Natal, and Cape Colony on border affairs in such cases as are now brought before the High Commissioner or the Special Commissioner for Zululand; secondly, the guidance of the administratorships of Basutoland, Zululand, Swaziland, Pondoland, and Bechuanaland North and South. There is the loudest call for administration in each and all of these places. It is to our discredit that it has not been sooner supplied." These functions, he urges, cannot properly be fulfilled by the Governor of the Cape Colony. The Secretary of the Colonial Office, in acknowledging the receipt of Mr. Mackenzie's communication, says that he is not prepared to recommend the assumption by this country of the great amount of interference in, and direct responsibility for, the details of extra-Colonial affairs in South Africa which his letters appear to advocate. Sir Hercules Robinson, in a despatch to Lord Knutsford, gives his objections to the proposed changes, and encloses an extract from the leading article in the *Cape Times* of June 8, 1888, likewise adverse to the proposal. A minute of the Ministers to the Governor is given in which they say "the visible results of the present system are so good that it is scarcely too much to say they could not be better." Finally, the text of a question addressed to the Cape Premier on the subject is added, and a telegraphic despatch announcing that both Houses of Parliament had unanimously resolved that the separation of the offices would be fraught with danger to the future peace and welfare of South Africa.

THE VOLUNTEERS.

The officers who have been appointed to command the nineteen brigades of infantry Volunteers under the home defence mobilisation scheme have received from the War Office a letter containing full instructions as to the duties they would have to perform in the event of a demand being made upon them. The "letter of service" is accompanied by a circular from Lord Wolseley, Adjutant-General, desiring the brigadier-generals to state suggestions for improving the efficiency and readiness of their brigades, and that they should keep in constant touch with the units composing their commands.

Lieutenant-Colonel Godwin Austen, of Shalford Park, has offered the National Rifle Association a site close to Guildford, lying between Pewley Hill and Chantry Downs, for the annual competition. Ranges up to 1000 yards can be obtained, and the site is said to be well screened, healthy, well drained, and within a few minutes' walk of Guildford Junction, where four lines of railway converge. It is about twenty-eight miles from London.



Several of the metropolitan Volunteer rifle regiments were engaged in competitive practice on Aug. 25 for a large and valuable list of prizes.

The Hon. Mrs. George Howard, of Castle Howard, Yorkshire, has offered a scholarship of £20 a year for three years, tenable at Aberdare Hall, to women students of the University College of South Wales and Monmouthshire, Cardiff. The scholarship will be awarded at the discretion of the executive committee of the Aberdare Hall.

From the annual accounts of the Chamberlain of the City of London relating to the coal and wine dues, Blackfriars Bridge, police, &c., we learn that the gross amount of duty on coals brought into the Port of London was £176,367; brought by railway conveyance, £220,045; by inland navigation, £418; and by road traffic, £586; total coal duty, £397,418; wine duty in the Port of London, £9573; grand total, £406,991. Of this, £328,798 was paid into the bank to the credit of the Metropolitan Board of Works to the account of the Thames Embankment and Metropolis Improvement Fund. The City Police Fund showed that the receipts for the year had been £131,512. The expenditure under the Sewers account had been £541,764. The City's duty on coals had been £176,630.

THE "CLACH DEARG" OF ARDVORLICH.

Among the articles on view in the collection of Scottish antiquities that has been placed in the "Bishop's Castle" at the Glasgow Exhibition, one of those selected for our Illustrations is the once famous "Clach Dearg," a supposed medicinal charm-stone, lent by Colonel Stewart, of Ardvorlich, Loch Earn-head, Perthshire. This is a piece of clear rock crystal, almost round in shape, and about one and a half inches in diameter, placed in a setting of four silver bands or slips. It derives its name of "dearg," or red, from a pink tinge that comes over it in certain lights after it has been dipped in water. Though not mentioned in any of the family charters or papers, it has been treasured in the family of Ardvorlich as an heirloom for at least four hundred years, and of old was esteemed by their neighbours and followers as the peculiar token or badge of chieftainship over the Balquidder Clan of Stewart, to which branch of the Royal race the Ardvorlichs belong. According to tradition it is one of two famous medicinal stones which, as Nesbit records in his "History of Heraldry" (Vol. II., page 75), were brought over from the East, about the year 1450, by an ancestor of the Ardvorlichs, James Beg Stewart, who was grandson of Murdoch, Regent of Scotland and Duke of Albany. He, being involved in the misfortunes of all the Albany Stewarts of his day, during his exile from Scotland, took part in one of the later Crusades, from which he carried off as spoil these famous stones. This story is confirmed by the Oriental pattern of the setting. The Ardvorlich stone was very much esteemed as a sovereign remedy for several distempers incident to mankind, and very necessary for curing diseases in cattle. The other stone is said to have been given away as an extraordinary present by Alexander Stewart to one of the Earls of Moray. So lately as 1854, the "Clach Dearg" continued to be used for curing diseases in cattle, its efficacy as a remedy for human ills having fallen out of repute some time before. People came from far and near, sometimes from a distance of forty miles, to carry away the water in which the stone had been dipped. The way was for each applicant to draw the water, himself or herself, in a pitcher or bowl, which he solemnly presented either to the laird or lady, who with great ceremony and a muttered form of words like an incantation, stirred the stone thrice in the water, from left to right, holding it by the chain. The last "leddy" who performed the rite is said to

GLASGOW EXHIBITION: REPRODUCTION OF THE BISHOP'S CASTLE IN THE EXHIBITION GROUNDS.

have always accompanied the action with the words, repeated over and over again, "If it 'll do nae gude, it 'll do ye nae ill," which sounded quite oracular enough in the ears of the Gaelic-speaking devotees! The water was then put into a bottle and carried home; but, as its virtue was supposed to be lost if taken into any house on the way home, the bearer had to be careful not to cross any threshold till he reached the byre or bothy where his patient lay, whether cow, or stirk, or horse. The people always said that the "puir beastie," after tasting the sacred draught, immediately stood upon its legs and was healed of the disease. In 1854, when the laird who succeeded to Ardvorlich was in India, the "Clach Dearg" was put for safe keeping, along with the family plate, in the strong room of a bank, where it remained for so many years that the belief in its healing power is gone for ever.

A much desired amalgamation between the Sanitary Institute of Great Britain and the Parkes Museum has taken place, and the objects of the two societies will in future be carried on by "The Sanitary Institute."

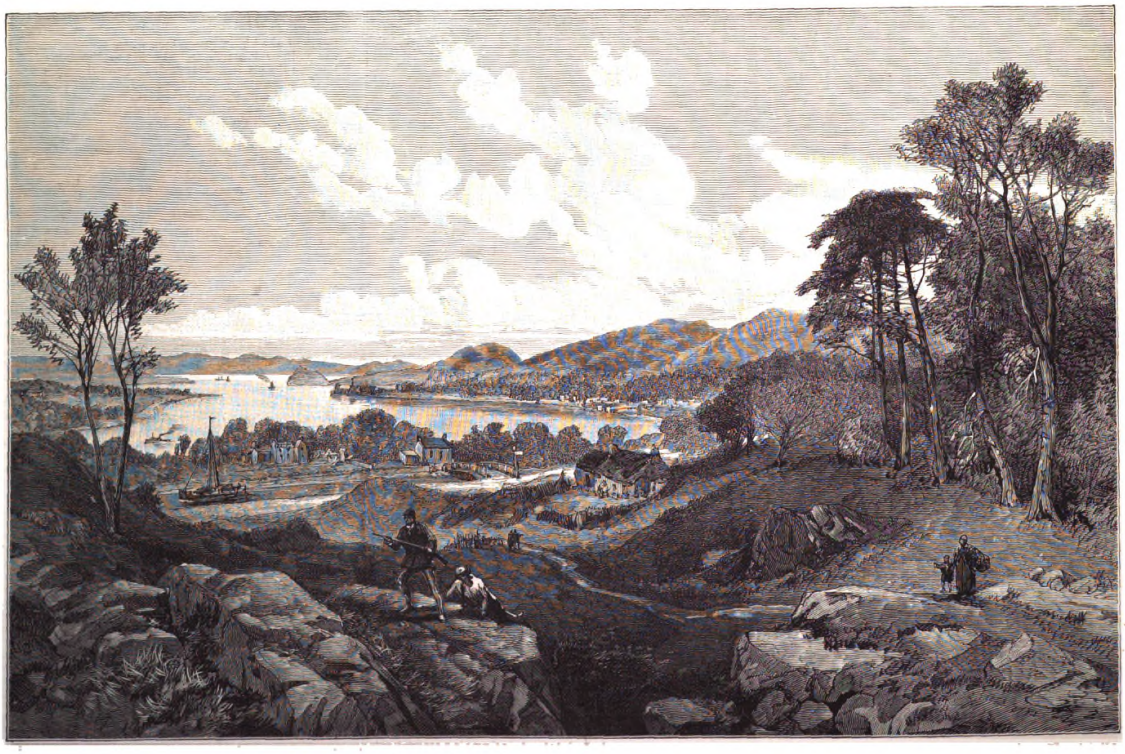
A meeting of American officers, military and naval, now in England, was held on Aug. 25, at the residence of Colonel Gouraud, Norwood, when a resolution of condolence with the family of the late General Sheridan was passed. Several of the speakers, who had served under the late American commander, spoke in warm terms of his merits as an ideal soldier.

The annual prize-shooting contest of the Honourable Artillery Company was held on Aug. 24, and in the competition for the officers' prizes Sergeant Wood, in spite of a strong wind and changeable light, scored 98, being only seven below the highest possible. Private Chantler won the Prince of Wales's prize with a fine score, Private Brooking being first and Private Gilbert second, but both being disqualified as having previously won the prize. Private Brooking was awarded the prize given by the Fitzroy Lodge, and an oil painting presented by the artist, Serjeant W. S. Jay. The Duke of Portland's annual prize of fifteen guineas was awarded to Serjeant J. F. O'Connor Wood, for an aggregate of 186 points. Captain Bateman took the late Captain Jacob's memorial prize, with an aggregate of 175 points; the veterans' prizes were won by Private D. Payne, with an aggregate of 170 points; and Private Homer, with 162 points. The final shoot for the Championship of the Regiment resulted in the prize presented by the President of the Company being taken by Private Gilbert. Several Company competitions were also decided.

DANDELION DOWN.

To-day, as I sit at an open window which looks on a pleasant meadow fringed with willows, marking the margin of the river, a dandelion seed has been wafted into the room by the summer breeze. The dandelion, familiar as it may be to everybody, is a flower which has locked up within its botanical history a very considerable meed of curious philosophy. I confess to possessing for that elegant flower, which is ordinarily and contemptuously named a "roadside weed," a high measure of respect. Primarily the dandelion is not one flower but many—a colony of strap-shaped blossoms, nestling cosily on the flattened top of the hollow flower-stalk. Pluck out one of those blossoms, and look at it narrowly by the aid of a pocket lens. There is the yellow strap, toothed at the top, and forming the corolla of the flower. Probably, once upon a time, when the dandelion blossoms were not packed so closely together (like human units themselves) this yellow strap was composed of distinct and separate petals. Its toothed or fringed margin would seem to indicate as much. Down below you see the down or silky hairs which represent the calyx of the flower, or the green outer part you see so distinctly in the rose, the strawberry (where it is double) or primrose. Here the calyx is a mass of flossy hairs, and discharges, as we shall see, a useful purpose in the after-glow of dandelion life. Below, the little flower forms a tube, and inside the tube are the seed-producing organs. The pistil, wherein the seeds are matured, is that delicate stalk you may perceive rising in the middle of the tube. It is divided in two at its tip, and the ends curl over. On these ends the pollen, or yellow fertilising dust you see so distinctly in larger flowers, will be placed, so as to ripen and fructify the ovules into seeds. Stamens, too, for producing the pollen, the little dandelion flower possesses, all united in a bunch around the stalk of the pistil. So that inside this apparently insignificant blossom, one of the hundred or two which make up the dandelion-head, you find all the parts of a perfect flower. Little wonder that this race of plants flourishes exceedingly and multiplies apace when you discover its colonial nature, and its compound constitution.

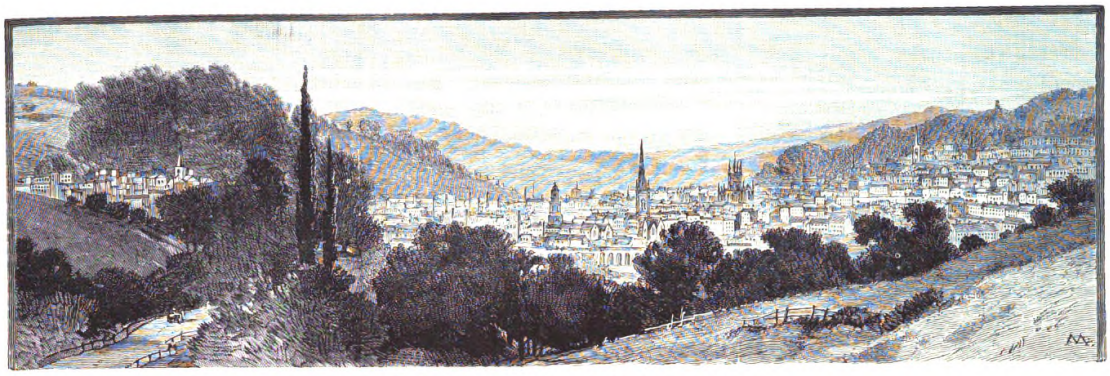
After the blossom comes the fruit, and the dandelion pistils ripen in due season. The yellow leaves wither away, because, having served as flags and ensigns to the insect-hosts, which carry the pollen from one flower to the other, their mission is past and over. Seed-time in dandelion history is well known. You behold the head of flowers converted into a perfect ball of downy hairs, and the children blow them off puff by puff to calculate the time of day, in the exercise of that popular mythology whereof childhood still retains many examples. What has happened, then, to the dandelion-head as its seed-time has dawned upon it? Chiefly this: the silky calyx has developed apace, and has come to form wings whereby the seeds are carried hither and thither by the winds. Not content with producing abundance of seeds, Madre Natura provides for their dispersion far and wide over the face of the earth. There is a wealth of wonderment to be obtained out of the study which begins with a roadside weed and merges into the great question of the diffusion of plant-life at large. The dandelion-seed, which the wind has wafted through the open window, speaks to us of ways and means of securing the propagation of the flowers by the cunning utilisation of the winds—just as in other plants the waters may bear the seeds to distant parts, or as others, again, employ animals to carry their progeny and to spread their kind broadcast. Indeed, from all we know about the dispersion of seeds, we are forced to conclude that the contrivance and ingenuity of Nature are nowhere more typically represented than in securing "fresh woods and pastures new" for the growth of plants. Even in our dandelion there is found a certain noteworthy feature which is typical of many kindred devices for ensuring the due perpetuation of the race. When the flowers are being fertilised the head stands erect and prominent among the vegetation of the highways. Then, when the seeds are ripening, the stalk is lowered, and the flower lies horizontal or bent towards the ground. This device secures the efficient maturing of the seeds, and, when all is ready, and the ripened pistils or "fruits" are prepared for dissemination, the flower-stalk rises erect once more, and each puff of wind carries off the seeds, borne through the air on their wings. "Thistledown," in this sense, is seen to be a structure with a great purpose at its back. These "airy nothings" of the child represent some of the means whereby this earth has become peopled and pastured with the fullness of vegetable growth.



The floating dandelion seed, however, is but the beginnings of thought in this direction, as I have said. When you stroll through the garden or by the wayside, note how herb-robert, by an ingenious catapult-arrangement, plays at "pitch and toss" with its seeds and scatters them abroad and around. If you come across a squirting cucumber anywhere in the south of Europe beware of touching it, lest you be greeted with a veritable explosion of seeds. Watch the ripe poppy-head, full of seeds, and note the little doors which lie just under the lid. You may understand then, how, when the flower-stalk sways to and fro with the wind, the seeds are ejected and thrown out from their parent-capsule. Of winged seeds, too, there are many tolerably heavy kinds, which are dispersed by means of the wind acting on their parachutes. The sycamore seed has a double wing, as also has that of the maple, and the ash and fir are also to be reckoned with in this sense of wind-dispersed plants. When you stop to examine the burdock seeds, you will then discover how the animal is pressed into the service of the plant, for you may note the hooked hairs with which the seeds are provided and wherewith they cleave and cling to the hair and fur of sheep and other unsuspecting ministers of plant-life. Nor is the service of the animal always unconscious. There is a South African plant whose seeds or fruits possess hooks of such a nature that, when the lion has innocently been made a carrier and disperser of these seeds, the king of beasts has been done to death by the torture and irritation they induce. The lion in attempting to free his hair from the seeds is apt to find them adhering to his mouth, and the effort to get rid of the seeds is as often as not a hopeless task. There is no space left wherein to ask you to remember the sticky seed of the mistletoe—a rare provision among our native plants—whereby it adheres to the tree which is to form its "host." It is a curious story, too, that of the dispersion of seeds by the aid of birds. You may read how Darwin, by the exercise of his patient industry, seeing possible results where a lesser mind would "pass by on the other side," moistened and tended the clod of earth which a friend had removed from the foot of a migrating bird. Out of this clod, in time, developed dozens of plants, which, in the natural order of things would have been carried by the bird over great tracts of land and sea. Think, also, how volcanic islands, rising from the azure main as primitive tracts of land, are peopled by the winged seeds which fall on their coasts and bring forth a covering of vegetation to cover the barrenness of the earth.

I may not discourse at present on the why and wherefore of colour in fruits as an aid to the dispersion of the seeds contained therein. The dandelion seed is enough for to-day, and opens the gateway of thought wide enough for you and me for many days to come.

THE QUEEN'S VISIT TO GLASGOW.

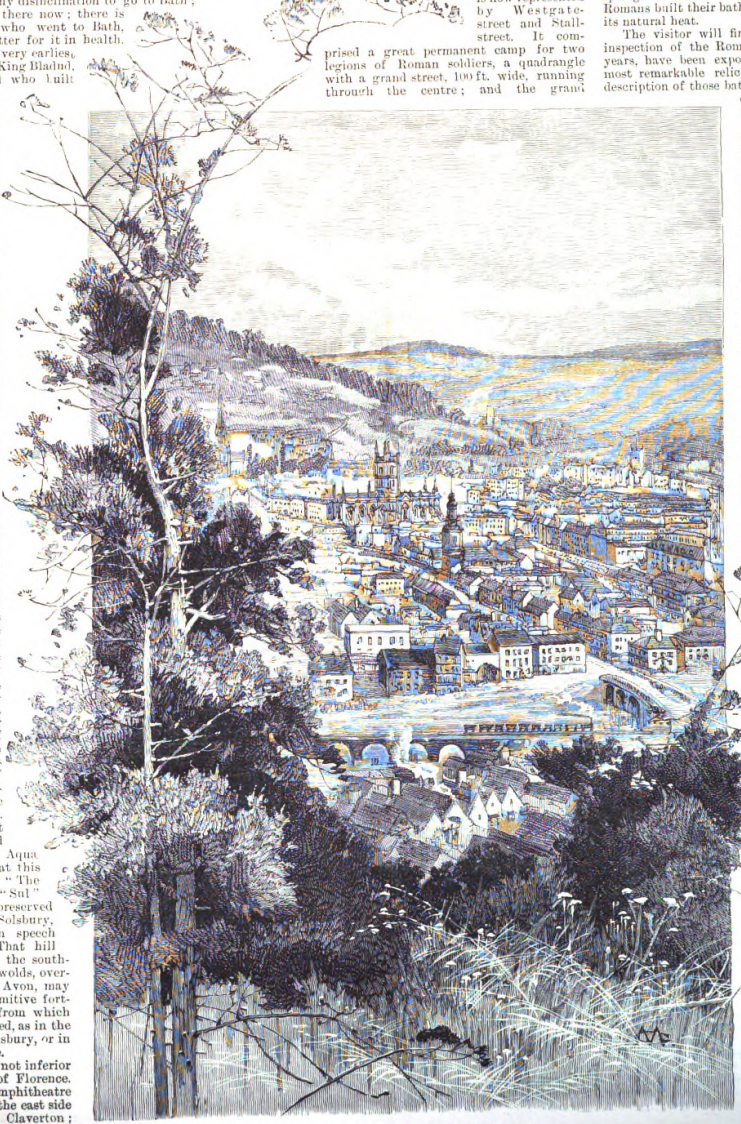


THE GLASGOW EXHIBITION: VIEW FROM UNDER THE CENTRAL DOME.

THE CLYDE, NEAR KILPATRICK: DUMBARTON CASTLE IN THE DISTANCE.

THE BRITISH ASSOCIATION AT BATH.

VIEW OF BATH, FROM NEAR THE ABBEY CEMETERY.



ONE of the most ancient, and perhaps the most beautiful, of the cities in the West of England—attractive in name and fame, agreeable in situation, handsomely built, with an aspect of polite elegance in keeping with its old-fashioned celebrity, and with an air of urban retirement peculiarly its own—Bath has been chosen for this year's Congress of the British Association of Science. "Go to Bath!" was the phrase and form of personal dismissal, in those days when people were sometimes ordered to be "sent to Coventry." We never had any disinclination to go to Bath; anybody may do well to go there now; there is a very long list of people who went to Bath, and came back much the better for it in health.

This list begins with the very earliest of "British associations"; for King Bladud, grandson of the King Lud who built Ludgate, in London, a descendant of the Trojan hero Brutus, who gave his name to Britain, was cured of leprosy by the Bath medicinal waters. He discovered their efficacy by having infected a herd of swine with his disease, and observing that they got rid of it by wallowing in a local pool. If a sceptical generation will not believe Geoffrey of Monmouth, who ought to know better than we can, as he lived much nearer the time, which was 800 B.C., let them give credit to the Bath townsfolk of A.D. 1699. A statue of Bladud was then set up, with an inscription in honour of "Bladud, son of Hudibras"—not, of course, the comic Hudibras of the recent Commonwealth—as the actual founder of "these Baths." Here are "British associations," to be sure, of extreme antiquity, but not "the advancement of science."

A learned and scientific author, Mr. H. W. Freeman, with medical diplomas, surgeon to the Royal United Hospital at Bath, whose treatise on "The Thermal Baths of Bath," just published by Messrs. Hamilton, Adams, and Co., we propose to quote, rejects the story of Bladud and the swine. He shows even that this was a mere absurd interpolation, if it were to be found at all, in the British history of Geoffrey of Monmouth, who does say, indeed, that Bladud, a philosopher and necromancer, the father of King Leir or Lear, was the founder of Bath. The existence of an ancient British town on this site, and the ancient Britons' acquaintance with the healing virtue of the springs, are points not questioned by Mr. Freeman. The Romans, about the year A.D. 54, occupied the town, which they called Aquæ Solis. It seems doubtful that this name originally meant "The Waters of the Sun"; for "Sul" was a native local name, preserved in that of the hill called Solsbury, before the men of Latin speech came into the country. That hill of singular appearance, at the south-west extremity of the Cotswolds, overlooking the valley of the Avon, may have been the site of a primitive fortress-town of the Britons, from which the lower town was colonised, as in the case of Old Sarum and Salisbury, or in that of Fiesole and Florence.

The situation of Bath is not inferior in natural beauty to that of Florence. The valley is similarly an amphitheatre of verdant hills, rising on the east side to the height of 600 ft., at Claverton; on the north, Lansdowne Hill, to 813 ft.; and on the west, at Bathwick, to 400 ft.; while the city, instead of lying wholly at the bottom, ascends these hills, forming terraces, squares, and crescents, one above another, of fair stone houses, intermixed with gardens and trees; the Avon, which is as little beautiful as the Arno, flows in a deep hollow beneath them. Such is the present aspect of Bath.

The Roman city of Aquæ Solis was much smaller, covering mainly that part of the site of modern Bath, to the west and south, which is now represented by Westgate-street and Stall-street. It comprised a great permanent camp for two legions of Roman soldiers, a quadrangle with a grand street, 100 ft. wide, running through the centre; and the grand Basilica, the Temple of Diana, and the Temple of Minerva, stood nearly where the Abbey, with its churchyard, and the Pump-room now stand. Architectural remnants, fragments of fluted columns, sculptured capitals and cornices, prove the magnificence of those Roman edifices. To the south-west of the Basilica, on the other side of the present Abbey-street, were discovered, first in 1755, portions of the Roman Baths, the further discovery of which took place in 1871, and then excited much antiquarian comment. There are sundry hot springs in the soil under this quarter of the city, and the Romans built their baths directly over the largest, to economise its natural heat.

A PEEP AT BATH, FROM BEECHEN HILL.

The visitor will find himself amply compensated for an inspection of the Roman baths, which, within the last few years, have been exposed by the Corporation—perhaps the most remarkable relic extant of the Roman occupation. A description of those baths, with an Illustration, was given in our Journal on Oct. 20, 1883. Mr. Freeman's book should be consulted.

The Roman bath, shown in one of our Illustrations, is 81 ft. long and 38 ft. wide, which was in the centre of a hall, 110 ft. long and 68 ft. 6 in. wide, formerly roofed with a vault supported by pilasters and arches, divided into three aisles, the middle aisle covering the bath. The pedestals and lower part of several of the massive pilasters, with the steps going down to the water, appear in the Illustration; behind them, in the side aisles, which were decorated with sculpture, was a promenade gallery. The floor of this hall is 20 ft. below the level of the neighbouring modern street. Another spacious apartment contained two sudatories, or sweating-rooms, with a fireplace between them and flues to heat them. The circular bath, recently discovered, appears to have been once lined with lead.

In the fifth century of the Christian era, when the Romans had departed, there was a period of confusion among the half-civilised natives, with whom some Belgian colonists were intermixed. Aquæ Solis, the stately and luxurious Roman fashionable watering-place, fell into ruin. The Saxon invaders of Wessex, in 520, besieged this town, but were defeated on "Mons Badonicus" by the renowned King Arthur. In 577, King Ceaulin, ruler of Wessex, aided by Cuthwin, achieved the victory of Deorham or Dyrham, eight miles from Bath, killing three British chieftains, and successfully fought the more decisive battle, supposed to have been at Badbury, near Blandford, in Dorsetshire. The three important cities, Bath, Cirencester, and Gloucester, then fell into the hands of the Saxons or "English"; and the Celtic population were driven westward to Exmoor, and into the parts of Devonshire beyond the Exe. When the Saxons became Christians, a monastery was erected at Bath, in 676, by King Osric of Hwicca; a century later, King Offa, of Mercia, who had annexed much of Wessex to his dominion, built a Cathedral here, in which King Edgar was crowned by St. Dunstan, Archbishop of Canterbury, in 973. Bath was further exalted by King Athelstan, who established a Royal Mint in this city. Under the Normans, though it suffered a cruel punishment from William Rufus for taking part with his brother Robert, its prosperity was advanced by the liberality of John De Villula of Tours, Bishop of Bath and Wells, who constructed the Abbey Baths, committing their charge to the Abbot and Prior of the Benedictine monastery, for the public benefit. Another Bishop founded the Lepers' Hospital, providing it with the Lepers' Bath, which continued for centuries to be appropriated to the exclusive use of that unfortunate class of patients; and in the twelfth century, it appears

from a curious Latin poem by Alexander Neckam, the Bath thermal springs were highly esteemed. We borrow a few lines from the translation given by Mr. Freeman :—

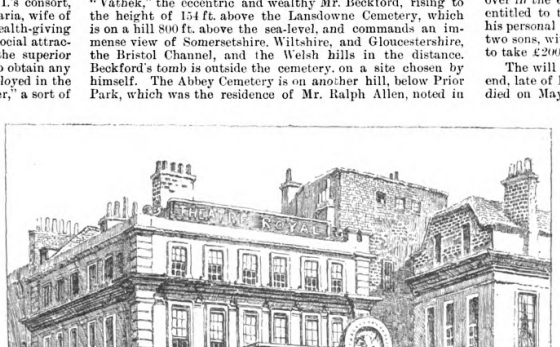
> The sulphur baths of Bath are warm alway;
> Taste, and be healed, with all the speed ye may.
> And think of this, the waters upward led
> Have their first origin in earth's cold bed,
> Warm are the waters all the winter-tide;
> The pores of earth are closed, when frosts abide;
> The fumes descend; earth, nourishing the heat,
> Pours forth its sulphur stream, with health replete.
> When summer comes, outburst the fumes amain;
> The stream grows cold, for earth is cold again.
> So stomachs heat, when winter shows his might;
> Then, meats well seasoned tempt the appetite;
> But when the sun pours forth his scorching heat,
> Reminding us of Phaëton's mad feat,
> Then we are subject, too, to Nature's rule;
> Then falls the appetite, and stomachs cool.

This ingenious description of the fancied analogy between the variable forces, those of animal heat, affecting the digestive functions, and the temperature of the Bath waters, does credit to an author who wrote seven hundred years ago; Neckam was a native of St. Albans, who became Abbot of Cirencester. Mr. Freeman presents also some rather entertaining passages from old writers of the sixteenth century, with the quaint and fantastic account of Bath in Harrison's "Description of England," annexed to Holinshed's Chronicle, in 1577, reprinted by the New Shakspere Society. An interesting personage to be noticed in Elizabeth's reign was Dr. William Turner, Dean of Wells, who had been a doctor of medicine, and who wrote a treatise on the baths of Germany, Italy, and England. Dr. John Jones, M.D., author of "The Baths of Bath's Aid," in 1572, is next introduced, and is followed by notable local physicians of later date, Dr. John Sherwood, Dr. Edward Jorden, and Dr. Tobie Venner, in the seventeenth century; Dr. Robert Peirce, who won the highest professional repute; Dr. T. Guidott, and Dr. E. Baynard, men of considerable literary talent, who bring us down to the Georgian era, and to the grand times of fashion and aristocracy at Bath.

Royal patronage had, indeed, conferred occasional favours on Bath during the Stuart reigns. King James I.'s consort, Queen Anne of Denmark, and Queen Henrietta Maria, wife of Charles I., had sojourned here for the sake of the health-giving waters. But the place had then few artificial or social attractions. At the same time, it was forbidden by the superior commercial advantages of its neighbour, Bristol, to obtain any considerable trade. It had many handlooms employed in the manufacture of "Bath coating" and "Bath beaver," a sort of plush, but did not share the important broad-cloth industry of Frome and other western towns. The custom of the richer classes going to "watering-places," as well for a change in the manner of amusement as for refreshment after London dissipation, began towards the close of the seventeenth century. Bath seems to have taken the lead, which was followed, a quarter of a century later, by Tunbridge Wells. The Assembly Rooms had a presiding manager, styled Master of the Ceremonies, to which office, in 1704, Mr. Richard Nash was appointed, the famous "King of Bath," a man of real ability and public merit. He could not perform his multifarious and often delicate functions without making some personal enemies, and he was unjustly satirised and ridiculed as "Beau Nash;" in one of Smollett's novels he is made to appear an affected fop. The contemporary literature of the reign of George II., the biographical memoirs and correspondence, especially, of persons of any distinction, frequently refer to Bath; and its rapidly increasing importance was then shown by the building of fine streets—Great Pulteney-street is worthy of Mayfair in London—named after eminent persons of high rank. Pulteney, Earl of Bath, was one of the ablest and most influential Statesmen of the Walpole period, and was admired by Lord Chesterfield as the greatest of Parliamentary orators. To amateurs of eighteenth-century satire in verse, Anstey's "New Bath Guide," which is clever and humorous, must still be familiar; but it relates the whims and caprices of a world that has long passed away. Indeed, we feel this almost as strongly in reading our "Pickwick," written by Charles Dickens some fifty years ago, when he caricatured the orthodox rule of polite life at Ba-ath, in the behaviour of Angelo Cyrus Bantam, Esquire, M.C., a successor of Beau Nash, who does the honours of the place to its visitors with an overpowering excess of civility. "The fat old lady?" inquired Mr. Pickwick innocently. "Hush, my dear Sir—nobody's fat or old in Ba-ath. That's the Dowager Lady Snuphanuph." "Is it, indeed?" said Mr. Pickwick. "No less a person, I assure you. That splendidly-dressed young man, coming this way, is the richest young man in Ba-ath at this moment. Young Lord Mutanhed. You'll hear his voice in a moment. He'll speak to me. Very re-markable!" And so it goes on; but Dickens, in 1837, was a Cockney, with little experience of provincial fashionable society, and probably drew to a large extent on his own fancy, and on his reading of the old humourists. Those who were acquainted with Bath, or with any other West of England city or county town, in their youth half a century since, can hardly admit the truth of such pictures, however amusing; or believe that the author then knew much of the manners he professed to describe.

With reference to our Illustrations of Bath, a few particulars remain to be mentioned. The Abbey Church, at the south end of High-street, is remarkable for the height of the clerestory and the oblong shape of the tower, which, from the number and size of its windows, in all fifty-two, has been called the "Lantern of England." Founded in 1500, and built in the shape of a Latin cross, in the pure Perpendicular style, it was in the last decade restored by Sir Gilbert Scott at a cost of £35,000. The only parish churches of which anything need be said are St. Swithin's, containing the remains of Christopher Anstey and Madame D'Arblay, whose writings have recently been revived; and St. Paul's, built when the demolition of St. Mary's Chapel was rendered necessary by the construction of a better approach to the Midland station. The little church of Thomas à Becket, at Widcombe, a short distance out of Bath, is worth a visit.

The baths and springs of mineral waters belong to the Corporation of the city. The Grand Pump-room is on the west side of the Abbey Church, and is the third of its kind which has occupied that site. It is a handsome building, which contains a marble statue of Nash, by Prince Hoare. The charge for occasionally drinking the water is twopence per glass; for regular visitors there is a fixed tariff. The most ancient of the baths is "The King's," close by the Grand Pump-room. It must have been built prior to 1542, for it is described by Leland, who that year saw it. The Queen's Bath, hard by, was erected in 1597 by Mr. Bellott, a munificent public benefactor and a very distinguished citizen, intimate with the Cecils, Elizabeth's Ministers; it was used by Queen Anne of Denmark, hence its name.



The Grand Pump-room stands on the western side of the abbey, and is much admired as a piece of classic architecture. The handsome building in Bath-street is the Grand Pump-room Hotel, in the southern wing of which will be found the splendid baths (undoubtedly the best in the city) erected in 1870 at a cost of £10,000 by the enterprising Corporation. Besides these, there are the Royal Private Baths, the Tepid Swimming Bath, the Cross Bath, and the Hot Bath, so called because of the height of its temperature, registering 130 deg. The thermal treatment is most prescribed for gout and rheumatism, and is also efficacious in indigestion, palsy, and cutaneous affections, as well as in some forms of nervous disorder.

Visitors to Bath will also see the Guildhall, in the High-street, erected towards the close of the last century; the adjoining Market; the Assembly Rooms, between Alfred-street and Bennett-street; and the Literary and Scientific Institution, facing the North Parade; as well as the Royal Victoria Park, laid out with rare skill, and abounding in attractions; the Sydney Gardens, finely timbered; and the bridges, from some of which charming views of the Avon valley may be commanded.

Bath has numerous charitable institutions and schools. Victoria Park has a lake, statuary, warlike trophies, rockwork, an orchestra, and other attractive features, with a great variety of really charming walks and views. The Sydney Gardens also are open to the public, through which, by a deep cutting, runs the Great Western Railway. One of the famous institutions of Bath is its archery club. The bridges are—the Old Bridge, erected in the fourteenth century, on which originally stood a small chapel, dedicated to St. Lawrence; Pulteney Bridge, erected in 1770, on either side of which are rows of shops; Cleveland Bridge, an iron one, connecting Bathwick-street and Walcot; the iron bridge uniting the North and South Parades; the Victoria Suspension Bridge, the Albert Suspension Bridge, and two railway bridges. On the summit of Lansdowne Hill stands the tower erected by the author of "Vathek," the eccentric and wealthy Mr. Beckford, rising to the height of 154 ft. above the Lansdowne Cemetery, which is on a hill 800 ft. above the sea-level, and commands an immense view of Somersetshire, Wiltshire, and Gloucestershire, the Bristol Channel, and the Welsh hills in the distance. Beckford's tomb is outside the cemetery, on a site chosen by himself. The Abbey Cemetery is on another hill, below Prior Park, which was the residence of Mr. Ralph Allen, noted in the reign of George II. as the designer and manager of country post-office communication, as a wealthy proprietor of stone-quarries, and a generous benefactor of the neighbourhood. His mansion, an elegant building adorned with sculpture, was visited by Pope, who wrote of its modest owner,

> Let humble Allen, with inquenious shame,
> Do good by stealth, and blush to find it fame.

It was also at Prior Park that Fielding was a visitor when he wrote "Tom Jones." The house is now a Roman Catholic College.

THE THEATRE ROYAL, BATH.

Over 50,000 people visited the annual floral fête of the Shropshire Horticultural Society on Aug. 23 at Shrewsbury. All day long excursionists arrived from London, Liverpool, Manchester, Birmingham, Leeds, Cardiff, and other places. The receipts reached a total of £2500.

At the annual meeting of the Bath and Wells Diocesan Society, held on Aug. 23, the Archbishop of Taunton presented to the Bishop of Bath and Wells, on behalf of the archdeacons, rural deans, and clergy of the diocese, a gold and sapphire episcopal ring, together with an illuminated address and a cheque for £170, for any diocesan object he might select. The gift was specially made in connection with his eightieth birthday, which he celebrated on Aug. 20.

The preparations for the Jubilee Exhibition of the Royal Agricultural Society of England, which will be held next June in Windsor Great Park, under the presidency of the Queen, have already begun, as schedules have been issued of prizes for hops, jams, and preserved fruits to be competed for at that meeting. Prizes of £20 and £10 are offered for hops exhibited by the actual growers in each of the six following classes:—East Kent, Mid Kent, Weald of Kent, Hants or Surrey, Hereford or Worcester, and Sussex hops. The prizes for jams and preserved fruits are somewhat more elaborate, and are of especial interest in view of the fact that fruit-growing is a rising national industry, and that the Windsor Exhibition of next year will probably be the first preserved fruit show on record. There are two sets of prizes—one in which fruit growers and associations of fruit growers are alone allowed to compete, and the other for manufacturers of jams who are not fruit growers. Prizes of £6 and £4 (with a third prize of £2 in case six exhibitors compete) are offered in each of the following classes:—Jams, fruit jellies, bottled fruit, preserved fruit for dessert purposes, dried or evaporated fruits for cooking purposes, and fruit pulps. In each case the jams or fruits must be prepared exclusively from fruits grown in the United Kingdom in the year 1888. The entries close on Nov. 1 next for hops, and on Dec. 1 for jams and preserved fruits.

WILLS AND BEQUESTS.

The will (dated Nov. 30, 1881), with three codicils (dated May 26, 1887, and April 5 and June 12, 1888), of Colonel Edmund Ruck Keene, J.P., late of Swyncombe Park, Oxfordshire, who died on July 17 last, was proved on Aug. 17, by William Augustus Elmhirst and Captain George Ruck Keene, R.N., the brother, the executors, the value of the personal estate amounting to upwards of £77,000. The testator gives to his wife, who is already provided for by settlement, such horses, carriages, and jewellery as she may select; legacies to his executors, and an annuity to his butler. He provides a portion of £10,000 for his son William George Elmhirst Ruck Keene, and one of £7000 for his son Harry Launcelot Ruck Keene. The furniture, plate, pictures, and other articles at the mansion-house, Swyncombe Park, are made heirlooms to go therewith. All his real estate he leaves to his son who shall first attain twenty-one, and the residue of his personal estate to his son Charles Edmund Ruck Keene, who also succeeds to the settled family estates.

The will (dated Sept. 13, 1864), with a codicil (dated May 16, 1878), of Colonel Richard Byrd Levett, J.P., D.L., of the King's Own Stafford Rifles, late of Milford Hall, Baswick, Staffordshire, who died on July 7 last, was proved on Aug. 20 by Mrs. Elizabeth Mary Levett, the widow and sole executrix, the value of the personal estate exceeding £47,000. The testator leaves the mansion-house, Milford Hall, with the pleasure-grounds and certain woods, and the furniture, plate, pictures, and effects, to his wife, for life, or until her marriage again, and then as to the said furniture, &c., to the person who succeeds to the said mansion-house. All his live and dead farming-stock he gives to his wife. His eldest son, Richard Walter Byrd Mirehouse, having been amply provided for by his maternal grandfather, he devises all his real estate in the counties of Stafford, Salop, and Chester, including Milford Hall on the death or marriage again of his wife, to the use of his second son, William Swinnerton Byrd Levett, for life, with remainder to such one of his sons as he shall appoint; but there is a gift over in the event of any person under such devise becoming entitled to the Sefton Abbey estate, Suffolk. The residue of his personal estate he leaves to all his children, except his said two sons, with the provision that his daughter, Isabel Mary, is to take £2000 more than any of the other residuary legatees.

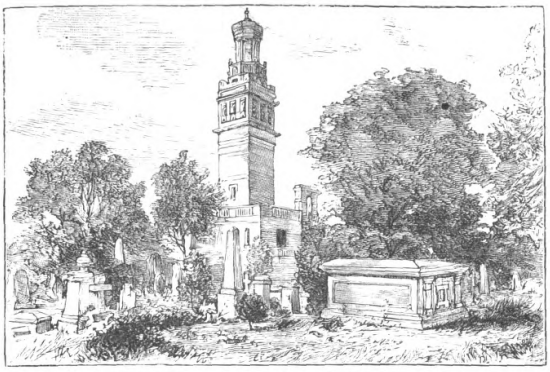
The will (dated July 17, 1880) of Mr. Joseph Phipps Townsend, late of Downhills, Tottenham, and Walpole, Norfolk, who died on May 12 last, was proved on Aug. 16, by Miss Ellen Stanley Townsend, the daughter, one of the executors, the value of the personal estate exceeding £47,000. The testator gives, devises, and bequeaths all his real and personal estate to his daughters in equal shares.

The will (dated June 23, 1888) of Mr. Hugh Barklie Blundell M'Calmont, late of Lincoln's Inn, Barrister-at-Law, who died at Tunbridge Wells on June 24 last, was proved on Aug. 22 by Mrs. Edith Florence M'Calmont, the widow, and James Shaw Robinson, the executors, the value of the personal estate exceeding £44,000. The testator gives all his household furniture, plate, pictures, silver, &c., to his wife, Mrs. Edith Florence M'Calmont; and £100 per annum to the trustees of the marriage settlements of each of his two daughters, Mrs. Ethel Elizabeth Robinson and Mrs. Margaret Anna Rawlins. The residue of his real and personal estate he leaves, upon trust, for his wife, for life or widowhood, and on her death or re-marriage for his two daughters in equal shares. The testator states that the reason why his son Harry Leslie Blundell M'Calmont takes no interest under his will is because he is provided for elsewhere.

The will (dated May 28, 1883), with a codicil (dated Feb. 9, 1887), of the Rev. George William Darby, M.A., J.P., late of North Wingfield Rectory, Chesterfield, Derby, who died on July 16 last, was proved on Aug. 20 by Hugh James Barrow Darby, the son, one of the executors, the value of the personal estate amounting to upwards of £31,000. The testator devises his lands and premises at Ely to his son George Barrow Darby; his land and hereditaments at Middlefen, Isle of Ely, to his son Hugh James Barrow Darby; and the school-house and houses at Fresfield, Norfolk, to his daughter Edith Elizabeth. He bequeaths £1000 each to his daughters, Mary Louisa and Edith Elizabeth; and £2000 each to his sons Charles Wilkins and Frederick William. The residue of his real and personal estate he leaves between his said six children in equal shares.

The will (dated Aug. 4, 1885) of Mr. Joseph Berdoe, late of No. 27, Douglas-road, Canonbury, who died on May 23, was proved on Aug. 22 by Joseph Garden Berdoe and Clifford John Berdoe, the sons, the executors, the value of the personal estate exceeding £26,000. The testator bequeaths an annuity of £200 to his daughter Amelia Rebecca Waddell; an annuity of £200 to Alice Louisa Goff; an annuity of £100 to Benjamin Hatfield; an annuity of £30 to his servant, Jane Hepburn; and there are some other bequests. The residue of his real and personal estate he leaves to his said two sons in equal moieties.

Major-General D. Cameron has been selected for the appointment of Commandant of the Royal Military College of Canada.



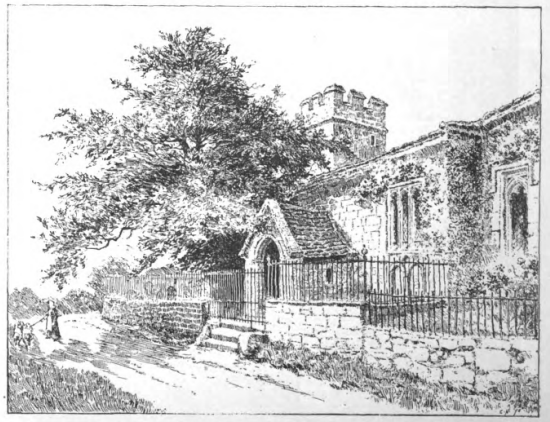
The Coroner's jury which inquired into the circumstances of the fatal accident on the South-Western Railway at Hampton Wick have returned a verdict of misadventure. At the same time they censure Parsons, the signalman at Kingston, and Pickles, the engine-driver; and make several recommendations for the safer management of the line.

Mr. Gladstone, addressing a horticultural meeting at Hawarden, spoke of the humanising influence of flower cultivation, and expressed his belief that the growth of fruit for jam-making purposes might be made a profitable pursuit. He further advocated an extension of spade husbandry, and urged that an organised system of collecting and forwarding agricultural produce would do much to reduce railway rates.

A missionary festival was held in Lincoln Cathedral on Aug. 23, a series of services being held to stir up missionary zeal, but in connection with no particular society. There was a large congregation at eight o'clock, when the Bishop of the diocese celebrated holy communion; and at eleven o'clock there was morning prayer, with a sermon by the Bishop of Colombo, there being present, besides the Dean and Chapter and a large gathering of clergy and laity from all parts of the diocese, the Bishops of North Carolina, Minnesota, Grahamstown, Caffraria, Dunedin, Nelson, and Honolulu. In the afternoon there was a meeting in the Chapter-house, followed by evensong in the nave at eight, with a sermon by the Bishop of Minnesota.

NEW BOOKS.

The Scenery of Scotland, viewed in connection with its Physical Geology. By Archibald Geikie, LL.D., F.R.S., Director-General of Geological Surveys (Macmillan).—In this age, which is not less scientific than æsthetic, many who love the various aspects of nature, especially those of the earths' surface, find their pleasure enhanced by learning how the mountains, the valleys and plains, the rivers and lakes, the outline of sea-coasts, and the beds of soil yielding one or

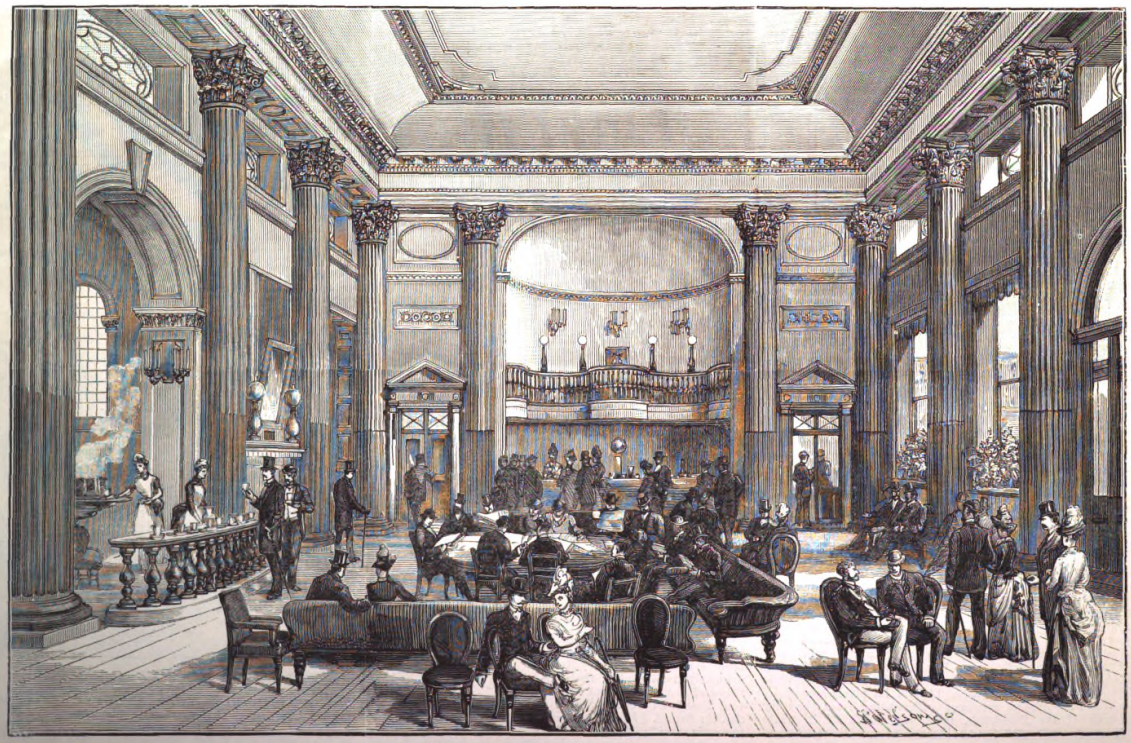


LANSDOWNE TOWER AND BECKFORD'S TOMB, NEAR BATH.

another kind of vegetation, were produced. No country in the world presents a more interesting subject of study, in this respect, than North Britain; its very map provokes intelligent curiosity, which it promises to satisfy by the striking distinctness of its main divisions in the view of physical geography. The tourist, either in the Highlands or in the Lowlands, or in the southern region of Scotland which Dr. Geikie is content to call the Uplands, and which is certainly not Lowlands, will enjoy his easy access to magnificent landscapes all the better after reading this excellent book. The author, who was Professor of Geology at Edinburgh and Director of the Scottish Geological Survey before his preferment to the head of the Geological Surveys of the United Kingdom, has personally examined every nook and corner of that country; besides which, his journeys of scientific observation in Europe and in North America have been partly employed in examining phenomena similar to those of Scotland. "Earth-sculpture" is the carving and moulding of the face of the land by such tools as the rain; the wind; the moisture of the air, and its effect in the chemical decomposition of rocks; the force of rivers, often armed with pebbles and boulders that grind away the banks or the bed; the sapping action of underground springs; the fracture of rocks by frost; above all, the irresistible planing and scooping-out work of immense, slowly-moving glaciers, which carry hard blocks of stone in their nether part, and thereby, with a vast superincumbent weight of ice, shear away the hills that obstruct their onward course, marking their mighty passage by scratches easily recognised along the sides of the widest valleys. The traces of these prodigious forces, and of alluvial deposits, old river-banks, lake-beaches, and sea-beaches of former inlets of the ocean, abound in most parts of North Britain; in addition to which those conditions of a more strictly geological character, the disturbances of beds of rock by upheaval or depression, are frequently attested by rifts and fractures and "faults," by inclines, declines, and "anti-clines," by the "cropping up" of lower strata, by layers placed in reverse order, and by isolated peaks of igneous rock, once molten masses, thrown up from volcanic eruption. If it be true, as we gravely suspect, that the romantic interest felt in what is called picturesque scenery arises partly from a sympathetic sense of the physical commotions, the destructive conflicts, the overwhelming conquests, by which a former state of things has been ruined or subdued and entirely transformed, Scottish topography, studied by the aid of Dr. Geikie, should appeal to the imagination like an historical epic poem. His work contains many explanations, of course, which are equally applicable to some other countries—for example, to Norway and Switzerland, where glacier action, more especially, has in great measure determined the present surface configuration; but Scotland, we believe, exhibits within a small space the greatest variety of results of diverse forces, marine, atmospheric, glacial, and fluvial, its sea-cliffs alone presenting a wonderful study of romantic "weathering," and its inland lochs being scarcely inferior to the Norwegian fjords. The main threefold natural division of the whole country, regarded as a large peninsula, is very clearly made out, and is seen at a glance in the beautiful coloured geological map at the end of this volume. The Northern Highlands, for the most part consisting of hard schists, gneiss, clay-slates, and greywacke, with eruptive masses of granite, syenite, and basalt, extend to the limit of a nearly straight line drawn from Kincardineshire, on the east coast, almost due south-west, to the Firth of Clyde. The Southern Highlands, as we might call them, extend from the coast of Berwickshire, likewise in a south-west direction, to the Mull of Galloway, including the Lammermuir Hills, the Pentlands, the elevated ranges of moorlands where the Tweed and the Clyde, the Teviot, the Ettrick and Yarrow, the Annan and Nith, and all the streams of the Border, and of south-western Scotland, begin to flow. In the middle region, between these two Highland masses, lie the Scottish Lowlands, comprising the lower straths and valleys of the Tay, the Forth, and the Clyde, the fertile Lothians, the invaluable carboniferous beds of Lanarkshire, the fair land of Ayrshire, the chief cities, Edinburgh, Glasgow, Dundee, and many commercial or manufacturing towns, the mines of coal and iron, the seats of trade, industry, and wealth. In another map, that of "the glaciation of Scotland," Dr. Geikie puts before the eye, with striking effectiveness, the manner in which this Lowland Middle Region was cut down, and brought into its present shape, by the numerous glacier movements descending from the lofty ice-fields of the Highlands, north and south of it, while a space was left open for the deposit of sandstone in some places, carboniferous strata in others, gravel, alluvial soil, detritus from the hills, and all that there is on the surface of the plains. As for the incidental facts related by him, with regard to the seacoast, the cliffs, the Hebrides, and the Orkneys, the most remarkable "lochs," often far deeper than the sea around Scotland, and the solitary crags of volcanic rock, such as Arthur's Seat, and those of Edinburgh and Stirling Castles, the Lomonds of Fife, Tinto in Clydesdale, the Bass Rock, Ailsa Craig, and others well known, the mere enumeration would be long. His book is illustrated by above eighty wood-engravings, some of which are pretty views of scenery, others are outline sketches of hills, or geological diagrams. We earnestly recommend this volume, along with Baedeker's admirable Guide-book and Philips's little Atlas of the counties of Scotland, to those who intend to pass a few weeks in that country. Even the pursuit of grouse, of trout or salmon, or of deer, must leave to the sportsman a few vacant hours, and the tourist has a chance of being kept indoors by the rain. In reading Dr. Geikie, under those circumstances, the time will be agreeably and profitably spent.

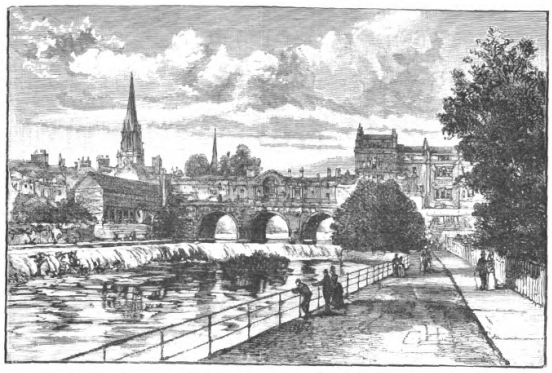
Fifty Years Ago. By Walter Besant (Chatto and Windus).—The Jubilee of the Queen's Reign was a fit occasion for writers conversant with the political and social history of our times, and of our fathers' times, to look back half a century, and to compare the state of England then with its present condition. We have read several books of the kind, but none that is so readable as Mr. Besant's, though some of his opinions do not exactly coincide with our own judgment, and, when he uses statistics, which is but seldom, he states and works his sums otherwise than we should do. For instance, "The Army and Navy together in 1831 contained no more than 277,017 men, or half their present number," is a sentence not easily reconciled with current naval and military estimates. Administrative, economic, and arithmetical details may be learnt, if anybody wants them, from many duller compilations. The author of "All Sorts and Conditions of Men" is sure to contribute a kindly, humane, and genial sympathy with the poor and the labouring classes, a spirit of tolerance and benevolence, to the review of social progress. He does not come forward as a politician; and the legislative achievements on which he descants most vehemently are those prohibiting the cruelties formerly practised in the employment of children in factories and mines. We seem to be none the worse, if not yet much the better, for having obtained four of the Six Points of the "People's Charter." It is not amiss that every man should have a Parliamentary vote; Mr. Besant has great reliance on the good sense of Englishmen and Scotchmen. Democracy has its dangers, but an aristocracy made terrible and disastrous mistakes. The working classes are much better off than they were before; the eighteenth century was for them a dismal time of hard servitude and degradation. In his view, the state of affairs in 1837 was a continuation of the dreary social stupidity of the eighteenth century. He is not old enough to remember, among the impressions of his childhood, the glow of hopeful enthusiasm with which men of that time who cherished Liberal sentiments, calling themselves Whigs or Radicals, urged bold and wise schemes of Reform. All his knowledge of the period is derived from reading, and that of a kind of literature which reflects more the influence of manners, habits, and minor morals, than the pregnant ideas conceived in the minds of public leaders and teachers. The flourishing popular authors between 1830 and 1840 do not present a very imposing array. There were novelists, Lytton Bulwer, Disraeli, Theodore Hook, Lady Blessington, Harrison Ainsworth, Captain Marryat, and G. P. R. James; Dickens and Thackeray were beginning; of the poets, Tennyson and Browning had written some poems, but were not yet deemed fountains of supreme inspiration; James Montgomery, Milman, Procter, Henry Taylor, Talfourd, Ebenezer Elliott, were making poetry; Sir Archibald Alison was compiling a history; Carlyle had written "Sartor Resartus" and the "French Revolution." Wordsworth and Southey, though living, added little to their former works, nor did Moore, Campbell, or Rogers. It was, unquestionably, a languid season for the literature of imagination, humour, and fancy, and for everything of original design in Art; but criticism was profitably employed, and fresh thought was directed to serious problems. Mr. Besant is rather severe on the graceful "Annuals," such as the "Keepsake" and "Forget-me-not," the latter of which, indeed, he does not mention, but one that we preserve contains some pretty and clever pieces. Tom Hood, a genuine humourist and true poet, deserved notice before Douglas Jerrold. Yet we must agree, in the main, with his estimate of the slenderness of original literary talent in that age, when Byron and Scott had departed. The old portraits of many well-known authors, some connected with *Fraser's Magazine* or the *New Monthly*, are reproduced in this volume, as well as some of old George Cruikshank's quaint pictures of Cockney life, reminding us indeed of "Fifty Years Ago." Those who now read "Pickwick" or "Sketches by Boz," "Oliver Twist" or "Nicholas Nickleby," may get a vivid notion of London in the days when Queen Victoria was young. Mr. Besant's commentary is that of a diligent searcher, apparently, in contemporary newspaper reports or chronicles of daily events, to which he applies the light of more recent experience. He is evidently rather glad that his prime of manhood did not fall in that time, and we are glad that he belongs to the present and the future. In one particular, however, he is "laudator temporis acti"; he wishes to see a revival of pugilistic prize-fighting. On the other hand, he rejoices in the provision, to which he has personally rendered great services, of pure and refined entertainments and means of cheerful recreation for the working classes. He denounces the old practices of drinking at taverns, gambling at clubs, cock-fighting, dog-fighting, and other cruel sports, which we fear are not yet extinct. Against the diminution of these pernicious courses, at any rate, must be set the vast spread of betting on horse-races among the lower middle-class. The London theatres are not so good as they were for the intellectual culture of such people as these who used to go to the pit of the Olympic or the Lyceum for half-a-crown. Our gains, indeed, are very considerable; good penny newspapers, cheap editions of all good books that are not copyright; attractive and instructive exhibitions, and the Crystal Palace; excursions at moderate cost, and with quick travelling, everywhere in the British Islands or in Europe; decency, order, comfort, and quiet, in our homes and generally in the streets. "Society," of which in the past Mr. Besant has something to say, in the circles of rank and fashion, or in the middle classes, will live according to its own taste; let it dine at seven or eight, instead of three o'clock, drink any sort of wine it prefers, and the ladies wear any dresses they like. The greatest happiness of the greatest number is best consulted by social and domestic freedom, which is surely more attainable now than it was fifty years ago.

The Makers of Venice: Doges, Conquerors, Painters, and Men of Letters. By Mrs. Oliphant, author of "The Makers of Florence" (Macmillan).—The increasing debt of acknowledgment, on behalf of contemporary literature, to this accomplished lady writer, who has given us many good novels, biographies, critical dissertations, and studies of history, can only be estimated by a general reader of varied tastes and sympathies. In this handsome volume, a worthy companion to her "Makers of Florence," she relates the stirring feats of enterprise and the adventurous vicissitudes, grand strokes of valour, policy, and practical genius, and the triumphs of art, especially in the department of painting, which earned glory for the citizens of Venice. The first part of her work consists of the political transactions of some of the more celebrated Doges, from Pietro Orsolo, elected in 976, whose family went through romantic actions and sufferings, to the Michieli, the famous Dandolo and Gradenigo, the Falieri and Foscari, whose pathetic stories are the subjects of Byron's noble dramatic poetry; and to the humiliation of their office of supreme dictatorship in the fourteenth century. "By Sea and by Land" is the title of a series of brilliant pictures of maritime and military exploits, intermingled with great perils and disasters, from the middle of the thirteenth to the middle of the fifteenth century. It reminds us of the classical narrative of Thucydides; for the great siege of Venice by the Genoese, in 1380, presents incidents not less remarkable than the Athenian siege of Syracuse. The efforts of proud courage and patriotic devotion in a beleaguered sovereign city naturally excite our respectful sympathy, in all ages of history; and Venice in those times bred individual commanders, such as Vittore Pisani and Carlo Zeno, equal in manly virtue, perhaps in ability, to the most eminent Greeks. From the point of view of general history, the constant efforts of the two rival Italian maritime Republics to secure, against each other, the predominance of Eastern commerce and colonisation, demand special attention. Venetian manhood, however, seeking employment chiefly at sea, the usual instruments of land warfare were those bands of mercenaries who became the pest of the country; and the military art, or profession, was practised with success by skilful Condottieri devoid of the sentiment of public duty. The most famous leader, Francesco Carmagnola, a Savoyard, whose Milanese campaigns in the Venetian service were followed by his execution under an accusation of treason, has evidently received a favourable consideration from Mrs. Oliphant, and appears somewhat of a hero in her pages. Colleoni, a native of Bergamo, whose portrait ends the series of these fighting men, was luckier than his great predecessor, and his reputation is conspicuously associated with the power of Venice at its height. To some readers, no doubt, the most attractive section of this book will be that concerning the Venetian painters and those who came to live and work in Venice; the two brothers Bellini, from Padua, and the Sicilian Antonello, who had the secret of rendering flesh tints and surface in portraits; Carpaccio, who showed the manner in which Art could tell a story, and could impart the charm of romance to figures of the saints; the splendid, mighty, delightful Titian, the uncrowned King of painters, who lived ninety years with increasing renown; Tintoretto, a giant in art; Paolo Veronese, the delineator of ideal palace interiors and costumed groups; and others known to every connoisseur. Their lives, indeed, have often been written; but Mrs. Oliphant's last chapters, an account of eminent men of letters, including Petrarch during his residence at Venice, the native historians, Sabellico and Sanudo, and several learned scholars, with Aldus, the exquisite printer and classical editor, and his son Manutius, contain particulars not so familiar to ordinary readers. This volume is illustrated with nearly fifty engravings, mostly from drawings by Mr. R. R. Holmes; its frontispiece is that fine portrait of the Doge Loredano, by Giovanni Bellini, which is in our National Gallery, the calm, thin, gentle, firm, and thoughtful face of an aged statesman, in dainty and delicate attire, expressive of moral and intellectual force, and of enduring patience, more winning and even more commanding than that of any warrior prince: and such men were some of the rulers of Venice.

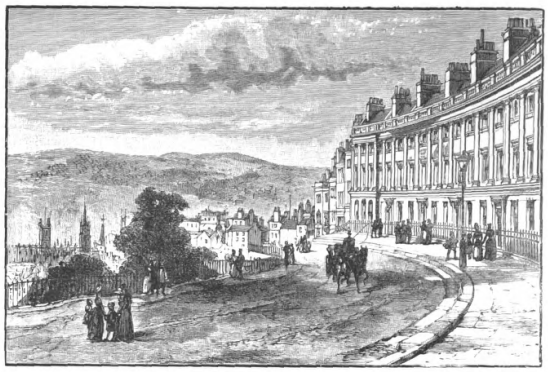


CHARLCOMB CHURCH, NEAR BATH.

BATH, AND THE MEETING OF THE BRITISH ASSOCIATION OF SCIENCE.



THE ABBEY CHURCH, COLONNADE, AND GRAND PUMP-ROOM.



INTERIOR OF THE GRAND PUMP-ROOM.

BATH, AND THE MEETING OF THE BRITISH ASSOCIATION OF SCIENCE.

PULTENEY BRIDGE.

CAMDEN CRESCENT.

THE GRAND PUMP-ROOM, BATH.

This room, erected in 1796, under the direction of Mr. Baldwin, the City Architect, is situated in the Abbey Yard, adjoining the King's Public and Private Baths. Its architecture is Corinthian; it is eighty-five feet in length, fifty-six in breadth, and thirty-four in height, affording ample space for promenading to those who drink the waters. In the recess at its east end is a marble statue of Mr. Nash, executed by Prince Hoare; the right hand of the figure rests upon a pedestal, on the face of which is delineated a plan of the Bath Royal Mineral Water Hospital, towards the establishment of which national charity Mr. Nash greatly contributed by his exertions in obtaining donations of money, and of which he was one of the Treasurers, from the time that it was opened for the reception of patients, in 1742, until his decease in 1761. At the west end is an orchestra for the band, which attends there daily during the winter months. There are three entrances on the northern side, opposite to the principal entrance; within an apse on the southern side is a fountain, which is supplied direct from the spring, with a continuous stream of mineral water, at a temperature of 114 deg. Fahrenheit. The supply of water from the spring to the fountain amounts to eight gallons and a half a minute. This room is opened on week-days from 8 a.m. to 6 p.m. during the whole year; on Sundays from 12.15 p.m. to 2 p.m. throughout the year. At the south-western end of the Pump-room there is a convenient entrance to the King's Baths. The private baths are on the upper storey. To all the baths convenient and comfortable dressing-rooms and closets are attached, containing every requisite for the invalid. In addition to the baths, there are two douche-rooms, and a room containing a thermal vapour and shower-bath of the most approved construction. Also quite recently two handsome rooms, 19 ft. high, have been added, the walls and ceilings of which are lined with tiles. These rooms are used as Aix-les-Bains douches, approached through either of two dressing-rooms, which are so arranged as to economise the time of the bathers. They are for the local application of the water, in contrast with the douche used in the bath. The distribution of water may be regulated by the attachment of large, small, or perforated nozzles to the douche-pipe, or it may be more gently applied by means of the perforated or rose nozzle. Here also are provided tepid and cold mineral water, as well as hot douches. There are two closets heated with hot air, from which warm towels, flannel, and linen are supplied to the bathers. From March until September, all the above-mentioned baths are open to the public from six a.m. till nine p.m.; and from September to March from seven a.m. to nine p.m.; on Sundays, throughout the year, from seven a.m. to half-past nine a.m.

With regard to the medicinal qualities of the Bath waters, used for drinking, we learn from Mr. H. W. Freeman's book, "The Thermal Baths of Bath, with the Aix Massage and Natural Vapour Treatment," that chemical analysis proves the chief mineral ingredients to be sulphate of lime, chloride of sodium, chloride of magnesium, and sulphate of soda; the proportion of iron hitherto detected is comparatively small. The gases evolved from the waters are carbonic acid, nitrogen, and oxygen. To the carbonic acid gas is owing the sparkling appearance of the water, when drawn fresh from the spring. "It is a powerful stimulant of the nervous system; and its effects in contributing to restore pliability to stiffened limbs, especially when applied in a gaseous form to the surface of the body, and in alleviating certain forms of paralysis by reflex stimulation of the nerve terminals, are well known." The quantity of nitrogen contained in the Bath waters, amounting to 97 per cent of the gaseous matter yielded by them, may, in the opinion of Sir Lyon Playfair, have beneficial effects, though physiologists scarcely know why. Drinking these waters fresh from the spring will raise and accelerate the pulse, increase the temperature of the body, and excite the secretions. It may be well to enumerate some of the forms of disease in which the waters are internally useful—namely, in gout and rheumatic affections, in certain forms of chronic skin diseases (especially if gouty); and in the various irregular manifestations of gout, such as gastric and intestinal catarrh, dyspepsia, acidity of stomach, biliary obstructions, certain forms of anæmia in females, nervous debility, the debility also which follows in most acute diseases, and visceral catarrh. Cases, on the other hand, in which the Bath waters should be avoided are lung disorders, asthma, erysipelas, exanthemata, apoplexy, epilepsy, hemorrhages, cancer, general plethora, acute congestions running on to high fevers. A course of the waters is usually prescribed for three weeks.

THE CIRCUS.

THE LADIES' COLUMN.

This is the period of the year when the highest possibilities of ease in female costume are suddenly realised. What can be more comfortable than the dress that is worn on the moors? The most orthodox costume there is a short, kilted skirt of tweed, scarce reaching to the ankles, and innocent of all weighty and cumbrous "artificial protrusions of draperies," as George Eliot put it. Beneath this there is worn either knickerbockers and gaiters, or what may by courtesy be called "a divided skirt," but might bear another name. The bodice is a loose one; generally the Norfolk form, with its three pleats, and its waist only confined to the figure by a band and buckle; or, perhaps, a little cut-away coat, fastened with three buttons, and showing a bit of vest above and below. The hat is a soft felt one, trimmed only with a bow of ribbon and so pliable that it fits easily on the head, and could be doubled up and used for a pillow without injury. The boots are thick-soled and flat-heeled—high in the leg if gaiters are not worn. What more than all this could the most ardent dress-reformer desire?

Such a costume as I have described is being worn by the Comtesse de Paris, who is proving herself so excellent a shot. This fact alone, it is true, does not indicate much about general fashion, for her Royal Highness avails herself of her privilege of position in order always to dress as she sees fit. "A Duchess can do as she pleases," whether it be marrying a man young enough to be her grandson or dressing herself to suit her own fancy. The Comtesse de Paris does not make so great a change in her ordinary costume when she goes to the moors as most women do in donning that sort of garb. The Empress of Austria, when rusticating last year at Cromer, used to amaze the natives by walking about without any hat or bonnet, carrying a big sunshade open in one hand, and a sandal-wood fan of similar dimensions in the other hand. Our own Queen's indifference to fashion and preference for comfort is well known. When shall we humbler women venture to call our heads and shoulders our own, to clothe to our own taste? Well, small beginnings produce great results sometimes; it is something to reflect how many women are wearing comfortable and healthy dress just now, with the excuse of the moors to encourage them in it.

The achievement of a little girl of twelve years of age, Miss Florence Morse, in reaching the highest pinnacle of Mont Blanc—being the youngest person who has ever done so—will not, it is to be hoped, lead to an epidemic of juvenile athletic feats. Man is an imitative animal. One infant prodigy in climbing may as readily produce others, as we have seen this season that one youthful musical wonder is followed by another and still another. The little girl who has accomplished this climb is more to be congratulated on her strength and pluck than the older people responsible for her effort are on their discretion. Certainly, such an exertion is less likely to be permanently injurious to a child of twelve than it would be to a girl two or three years older. But it is always a risk to put a severe strain on the immature muscles and the sensitive circulation of a child, sex apart; and it is to be hoped that this exploit will not be considered one to be emulated.

However, that such a way of winning an early fame should have been chosen for a girl by her friends is significant of the change in opinion about bodily strength in women. Can it be only a century ago that the good Dr. Gregory, in his "Letters to his Daughters," a work received by the parents of a whole generation as a most appropriate compendium of the duty of woman, advised the girls never to boast of possessing good health? The end and aim of Dr. Gregory's teachings to his motherless girls was admittedly to *make them pleasant to men*—"to point out," as he put it, "those virtues and accomplishments which render you most respectable and most amiable in the eyes of my own sex." One of these special attractions was, *according to the fatherly* physician, emphatically *not* to be able to climb Mont Blanc. "*Though good health* be one of the greatest blessings of life, never make a boast of it," he enjoins the female sex. "We [i.e., men] so naturally associate the idea of female softness and delicacy with a corresponding delicacy of constitution, that when a woman speaks of her great strength, her extraordinary appetite, her ability to bear excessive fatigue, we *recoil* in a way she is little aware of!" The *modern* man, happily, on the whole, for his sisters, has got over that extreme sensibility. He not only does not "recoil from" a woman in good health, but he plays tennis with her, and rides behind her in working partnership on a tandem tricycle. It is worthy of note that in the same book in which that unwholesome, that effete, that mischievous, demand of men for sickliness in women was spoken of as a thing to which women must conform, the author added that the sex was thought very little of in that age. "*Men forsake your drawing-rooms*, and after dinner and supper are impatient for the moment for you to retire." So our comparative emancipation from the obligation to be physically feeble has at least not reduced us beneath the level of our foremothers in the estimation of the lordly sex; to be "amiable and respectable" in whose eyes is—well, after all, is in very truth, a main ambition for us, as it was in the past, and still in the future must be.

At the Normandy seaside resorts of Paris fashion the number of close-fitting hats is one of the features of the promenade. Cricketing caps are very generally worn in mornings, and yachting caps, with "cheese-cutter" peaks, are also pretty common; but the newest thing is the Scotch bonnet, which is really a very becoming shape to a pretty young face. When made in a dark green or blue tartan, trimmed only with a Cairngorm brooch or silver thistle out of which possibly a few grouse feathers rise, Highland bonnets have a certain style, and are novel to boot. Most of the French straw hats, following the "Tosca" style, have almost flat crowns with a mass of flowers piled on them, and big brims open in front—being more, in fact, like bonnets than hats, except that they are worn rather too far forward on the head for the former title. Tiny combs with jewelled tops are very fashionable amongst these rusticating fair Parisiennes. The little combs in question are used to catch up the loose ends of the back hair, which it is fashionable to curl along the nape of the neck for evenings, and which would straggle when uncurled without the helpful little combs. These are only about two inches long, and the stones with which their small tops are encrusted are generally cheap, though real—such as garnets, or very tiny pearls and turquoises mixed. Long, loose cloaks trimmed with a profusion of lace in waterfalls down the front, and intermixed with loops and ends of ribbon, are much worn as wraps; and it is probable therefore that in the autumn they will be seen in England, replacing the tight-fitting long coat of which, surely, we are all too weary to be reconciled to its continuance by the simple expedient of Directoire revers and big waist-buttons being added. The newest jackets from Paris houses are very short. Some are trimmed with straps, from shoulder to waist, of either braid or leather. The cloths used in making them have all a smooth, highly-finished surface, with which the new leather trimming goes admirably.

A movement is on foot to present Mrs. Hodgson Burnett with an address, signed by her brother and sister-authors, congratulating and thanking her on the brave and successful stand which she has made against the robbery, hitherto legal, of novelists' brains, by plays being made without their consent from their plots and characters. I am not a novelist, but I can admire Mrs. Burnett's courage and resolution, and hope she will like her address. Title, plot, and dialogue are not, however, quite all that there is in a play, and novelists may yet find themselves obliged to yield the greater part of the profits on plays founded on novels to the adaptor, who knows stagecraft—the construction and possibilities of a drama. Mrs. Bancroft mentions that she was obliged to decline a play by Ouida for want of such qualities; and though most novelists would doubtless be glad to write plays if they could, there are but very few instances, even in France, and hardly any in England, of a popular story-writer being also a successful dramatist.

FLORENCE FENWICK-MILLER.

NEW ZEALAND COLONISATION.

Mr. W. L. Rees, representing the European inhabitants of the east coast and the native races of New Zealand, is on a visit to this country for the purpose of laying before the Government a scheme for providing occupation for a portion of the surplus labour population of the United Kingdom. Mr. Rees, who is accompanied by Wi Peri, a Maori chief, aims at co-operative colonisation, and he is in communication not only with the Government, but with various co-operative bodies, on the subject. He proposes to utilise the surplus labour of England upon the waste lands of the Colonies, and if he is at all successful the natives are willing to hand over for a settlement several millions of acres of land, in addition to the 300,000 acres which they have already given up on the east coast of the North Island, which possesses fine frontages to the sea. Mr. Rees, being a delegate from the Trades and Labour Congress of New Zealand, has placed himself in communication with Mr. Broadhurst. Lord Lothian has asked Mr.

BROAD-STREET, BATH.

Rees to prepare plans to lay before a Parliamentary Committee, as he thinks that the Scotch people, especially the crofters, will give the matter their cordial support.

We are informed that the fund raised for the benefit of the widow and two children of the late Mr. Richard Jefferies amounts in all to £1514 10s. 5d., including the interest on the money while it was lying in bank, and has been invested in the names of trustees, who are Mr. Walter Besant, Mr. Alfred Buckley (New-hall, Salisbury), and Mr. C. J. Longman.

The Association of Public Sanitary Inspectors of Great Britain held their summer meeting at Brighton on Aug. 25. Dr. Richardson read an address by Mr. Edwin Chadwick, the president (who is eighty-nine years of age), in which he showed the progress that had been made in the reduction of the death-rate by the development of sanitation during the last seven years. Dr. Ewart read a paper on the sanitation of Brighton. The members then visited the local waterworks and the sewage works.

Mr. De Keyser, the Lord Mayor of London, accompanied by the Lady Mayoress and by the Sheriffs, visited Termonde, his native place, on Aug. 26. A magnificent reception awaited him; triumphal arches had been erected, and several presents were made to the distinguished visitor by deputations from Antwerp and Brussels. The Burgomaster delivered an address of welcome, and in reply the Lord Mayor alluded to the services of England in securing the independence of Belgium, and the friendly relations which bound the two countries together. At a subsequent banquet, the Burgomaster stated that the King had bestowed on the Lord Mayor the Grand Cross of the Order of Leopold.

The dead body of a man, dismembered, was found on the railway near Coventry on the day after Bank Holiday. There was no means of establishing his identity, and, after the inquest, the body was buried as that of an unknown. Immediately over the man's heart was discovered a long tress of woman's hair; and by this tress he has been identified. Miss F. Thacker, a young lady of Wolverhampton, saw, a day or two ago, a paragraph in a newspaper giving some particulars of the deceased, and she concluded that he was William Bromley, a native of Crick, near Rugby. Bromley had for some time lived at Wolverhampton, and had been engaged to Miss Thacker, and she went to Coventry to inspect the clothes and other property found on deceased. She recognised a small microscope and the sleeve-links which he wore, and when shown the hair found that it was her own. Some time ago he promised to spend Bank Holiday with Miss Thacker, at Wolverhampton. He did not, however, and she believes that, being short of money, he was walking along the railway between the two towns when he was overtaken by a train and killed.

SCIENCE JOTTINGS.

The holiday-season of science is already on the wane. The custom of holding "movable feasts" of scientific nature seems to be growing upon us. The British Medical Association held "high jinks" at Glasgow; the British Association for the Advancement of Science will soon be in the hey-day of its annual outing; the various sanitary societies have already enjoyed their excursions into the provinces; and in a few days, at most, the peripatetic philosophers will return to their usual haunts, there to rest, chrysalis-like, till the next season summons them to public activity. It is remarkable that so widespread an interest is evoked by scientific men and scientific affairs; but our wonder may perchance be decreased somewhat if we reflect that everywhere there is a scientific leaven at work, moulding, reforming, and altering our conceptions of men and things. In the schools, science-lessons now happily form part of the educational curriculum. In our homes we discuss the science articles in the newspapers and magazines; and, although we may not yet have attained to the dignity of "prattling about protoplasm" in our drawing-rooms, none the less is it true that science-teaching is pervading the world to an extent of which those who live outside the world of science are scarcely aware.

* * * * *

There is promise of great things in this extension of such knowledge to the masses. For one thing, I opine, we shall all have our range of mere conversation, and our interest in the world in which we live, extended and enlarged as a result of this educational enterprise. Your ordinary mortal is, scientifically speaking, a nonentity. He knows little or nothing of the world in which he lives; and the commonest phases of his life—the rising and setting of the sun, the relations of insects to flowers, the meaning of the fossils he sees in the rocks, and the hundred-and-one other incidents which environ his life—are all so many unheeded, because unknown, facts of Nature. You can literally exhaust the intellectuality of the ordinary young man (or young woman) after five minutes' conversation at lawn tennis or at the dinner-table. Given the last novel, the most recent play or opera, and the latest social chronicle, in the way of a fashionable marriage, for instance, and your ordinary neighbour is mentally *non est*, as a rule. But given an interest in science and in the great world of things, incidents, and events which science discloses, and you open up vistas of mental enjoyment literally boundless in extent. This is, in truth, the great plea for science-culture all the world over. It is not that science is to make us learned, or encyclopædic in our education; and still less is it that scientific knowledge *is to* make us pedantic. But if we succeed in making science-details open up for us the heavens above and the waters beneath, we may find our lives made to encompass a richer harvest of thought and culture than is possible to even a high degree of literary education alone. This is the real plea for the *rôle* science has to play in common life. If our British Associations and our Social Science Congresses accomplish this much for us—that they give us an increased interest in the work of those who are ferreting out the secrets of Nature, and that they enlarge our views of life and its mental pleasures—then shall the children of "sweetness and light" be rewarded for their labours in the way of scientific research.

* * * * *

Mr. Edison's phonograph, at length, seems to have reached the stage of development at which it may be declared to be an unqualified scientific success. I have before me a paper in which Mr. Edison prophesies for that instrument a great future in the business and social relations of the world. The instruments sent by Mr. Edison to England have certainly reproduced in a marvellous fashion the words and other sounds wherewith they were charged. The future of the phonograph may, therefore, well be all that its inventor claims for it. Our friends, finding us absent from home when they call, will speak their message into the phonographs, which, doubtless, will be placed handy on the lobby-table. We shall speak our "letters" into the instrument, and post the wax cylinders to our friends, who, by placing them, in turn, in their own instruments, will hear our voices reproduced. Foreign letters will then become things of even deeper interest than now, since we shall be able to hear the accents of our friends abroad instead of having to peruse their written words. The wax cylinders, moreover, can be preserved like letters, and made to reproduce as often as may be required the voice-tones which have been impressed upon them. The telephone has proved itself a marvellous aid in the conduct of human affairs. The phonograph certainly seems destined to parallel the telephone in respect of a like success.

* * * * *

The spread of ambulance-teaching is a gratifying feature of that education which includes both old and young in its scope. It is more than interesting to hear an ambulance-class being taught, and to note how eagerly the principles of "first aid to the injured" are imbibed by "all sorts and conditions of men" and women; indeed, as far as ambulance instruction is concerned, I should say the gentler sex are more frequently in a position to exercise their knowledge than are their male neighbours. Mothers, nurses, and others are always in a position to deal at once with domestic accidents, and many a life has been saved at home from such accidents as choking, burning, bleeding, and so forth, by the timely and prompt aid which the ambulance student is able to afford. I have in my possession quite a collection of newspaper-cuttings detailing the utility of "first aid" in the accidents and emergencies of life; and I am pleased to be able to add yet another item to this interesting list. Recently a man at Wylam-on-Tyne sustained a severe wound of his arm which severed the principal vessels. A bystander at once applied a tourniquet (made with a stick and a handkerchief) over the main artery of the upper arm, and checked the dangerous bleeding. But for this timely aid, the man, as the doctor subsequently in attendance declared, would have perished. Earnestly enough, therefore, may we advocate that senior boys and girls, before they leave school, should be trained in ambulance work. Personally, I know this kind of instruction is thoroughly appreciated by the young, who are easily interested in scientific details, when these details are clearly and popularly taught.

* * * * *

I observe that in the State of New York, electricity as a means of capital punishment has been approved of by "the powers that be." That there are no practical difficulties in the way of instantaneously killing a man by means of the electrical current, properly and dextrously applied, is a plain fact. Executions are gruesome events enough under any circumstances; but one cannot help thinking that if the law is to demand life for life, the sacrifice should be accomplished, in the interests of mercy and decency, with somewhat of the rapidity wherewith electricity promises to accomplish the task. Recent executions in England have not tended to increase our respect for the manner in which the extreme sentence of the law is carried out. The medical journals protest against the common mode of execution, and I opine that what America has done in this matter may be followed up with advantage by ourselves.

ANDREW WILSON.

PROGRESS OF THE BRITISH MUSEUM.

The annual statement of the general progress at the British Museum contains the following particulars:—

A commencement has been made of an exhibition of the Greek and Roman sepulchral monuments and other sculpture hitherto stored away in imperfectly-lighted rooms in the basement of the Museum. Intended structural alterations have been postponed owing to disappointment in the necessary supply of funds asked for, and promised, for the past year. It is expected that provision for these works will be made in the grant for the year 1888-89, and that the remainder of the monuments will find adequate exhibition space in a well-lighted lower floor of the present room. From apprehension of injury by exposure to light and changes of atmosphere, it has been found necessary to remove from the walls of the north-west staircase the framed Egyptian papyri exhibited there for many years, but a small selection has been placed on view in the Upper Egyptian Gallery. The wall-space of the staircase will be covered with mosaics from Carthage, Halicarnassus, and other sites, many of them not before exhibited.

In the other gallery has been placed on view an extensive series of Japanese paintings, with a few early Chinese works, taken from the collection formed by Mr. William Anderson during a residence of many years in Japan, and purchased from him in the year 1883. They will remain on exhibition for some time, and will afterwards be replaced by European works from the general collection of prints and drawings. Printed books and manuscripts illustrating the history of shorthand writing have been exhibited in the King's Library, on the occasion of the celebration of the invention.

It is necessary to recur to the subject of inadequacy of the present reading-room for accommodation of the ever-increasing number of applicants for admission, to which attention was drawn in the return for the year 1885. It was then stated that the number of visitors to the room had risen from 105,310 in the year 1875 to 159,340; and it has advanced to 182,778 for the year 1887. No further addition can be made to the number of seats without inconveniently diminishing the desk space allotted to each reader. The room is frequently overcrowded; and what is to be feared is that literary men engaged in genuine research will gradually find themselves pressed out of use of the room by the throng of readers for general information. The wants of this numerous class of visitors would be better satisfied in a separate room, suitably furnished with modern works; and, unless the principle of limiting admission to the present reading-room to purposes of research is adopted, which cannot be recommended, and would, indeed, be extremely difficult to enforce, a measure of this nature may be considered indispensable.

The interruption since the year 1882 of the exploration for antiquities in Assyria and Babylonia, by reason of the refusal of the Turkish Government to renew the firman under which it had been carried on for many years, has caused the abandonment of important sites in those countries to the operations of native diggers. It is to be feared that there has been much destruction and dispersal of inscribed tablets in consequence. Partially-excavated sites, in which collections of these documents were found, and in which, without doubt, more remained to be unearthed, are exposed to the reckless explorations of the Arabs, and the records of these ancient empires are being scattered, or altogether destroyed.

THE WHEAT CROP IN INDIA.

A report has been received from the Government of India giving the Final General Memorandum on the wheat crop of the season 1887-88. It states:—There was, especially in the autumn, a deficiency in the outturn of food-grains in many parts of India during the year 1887-88, but not so great as in the two previous years. This was in some parts of India compensated by the general satisfactory results of the spring harvest of 1888. In the northern half of India a considerable falling off in the outturn of food crops was experienced for the four harvests in succession (i.e., two in the spring and two in the autumn) which preceded the recent wheat harvest of last spring (1888). The surplus stocks in Bengal and the Central Provinces were drained during 1887-88 for requirements in the North-West Provinces, which imported in the last quarter of 1887, from Bengal, Punjaub, and the Central Provinces, about 25,000 tons of food-grains in excess of the amount imported from Bengal, the Punjaub, and the Central Provinces during the same quarter of the previous year. The conditions above noted led to a universal tendency towards a rise in prices, which culminated in the months preceding the recent spring harvest, when the prospects were, in consequence of the delay in the winter fall of rain in Northern India, unfavourable. As soon as the results of the spring harvest were assured by the occurrence of sufficient rainfall, a decline in prices commenced throughout India, which was entirely independent of the export demand in Europe.

The Duke of Westminster has divided twenty-five acres of land between Chester and Eaton Hall into quarter-acre allotments, which he has let to one hundred mechanics and labourers. The scheme is a great success, every allotment being taken up and worked by spade husbandry.

The Anglo-Danish Exhibition at South Kensington was finally closed on Aug. 25. The exhibition was opened on May 14 by the Prince and Princess of Wales, the object being to raise funds for the rebuilding of the British Home for Incurables at Clapham, which was the first institution in England to receive the patronage of the Princess of Wales after her marriage, and it was also designed to celebrate the silver wedding of the Prince and Princess of Wales. It is stated to have been successful financially notwithstanding the unfavourable weather and other adverse circumstances. The bright weather on the closing day drew a large attendance.

The Committee of Council for Agriculture have made their first grants out of the sum of £5000 placed at their disposal by the Government for the present financial year in aid of Agricultural and Dairy Schools. The Cheshire County Dairy School at Worleston, which has done remarkably well this season, receives £150 for the year; the Aspatria Agricultural College gets £250; the Ayrshire Dairy Association, £120; the Wigtownshire Dairy Association, £101; the Kirkcudbright and the Dumfriesshire Associations, £70 and £28 respectively. The largest sum allotted, £300, goes to the Edinburgh University; while the Glasgow and West of Scotland Technical College receives a grant of £200.

A young lady in Southport, who has a fortune in her own right, and is the daughter of a banker in that town, has been "mated to a clown." She became enamoured of a handsome young clown named Carilland while he was performing at a circus. She succeeded in meeting him, and the pair left Southport together. The station-master at Bolton received a telegram asking him to detain "a lame young lady who was travelling by the Southport train"; but it so happened that there were two lame young ladies in the train, and he arrested the wrong one. In the meantime the banker's daughter and her lover made their way to the Bolton Registry Office, and were duly married.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

E J WINTER WOOD.—Thanks for letter and enclosure. We shall publish the problem, and note your success at the same time.

T T CASS.—You would save much trouble if you looked at the solutions carefully. It is expressly stated that if K moves to Q 8th, Q takes P (ch) and mates next move.

H N S (Brighton).—Problem construction cannot be discussed here; but neither a complicated position nor a preponderance of force on the losing side is an important element of a good problem. Your positions want everything but simplicity. Compare them with Nos. 2307 and 2311 and you will see what we mean.

J G GRANT.—Your solution must have escaped us, but it is acknowledged below.

E VON KORNATZKI.—The Kt at K 3rd should be a Black one, as you correctly conjecture. Only the key move is required.

"THE OLD LADY" (Paterson, U.S.A.).—Your feelings shall be considered in future and we will not talk "disrespectfully" of such two-movers again.

G H B (Hull).—Full name and address required before your inquiry can be considered.

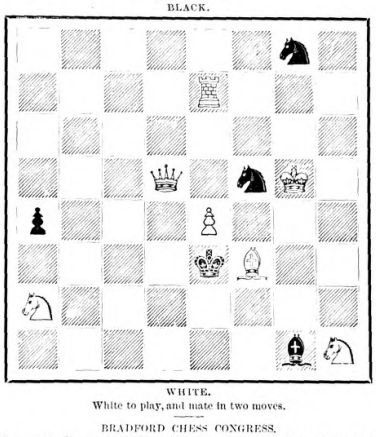
MANY correspondents have written about No. 2305. The Kt at White King's 3rd should have been a Black Kt. We are sorry to have caused so much trouble by an oversight.

PROBLEMS received with thanks from Carslake Wood, E J Winter Wood, and Mrs Baird.

CORRECT SOLUTIONS OF PROBLEM No. 2312 received from J W Shaw (Montreal), The Old Lady (Paterson, U.S.A.), A W Hamilton Gell, and F Drew; of No. 2313 from Joseph T Pullen, E Bohnstedt, J G Hankin, G J Veale, and Sergeant James Sage; of No. 2314 from J Bryden, D T (Peebles), Joseph T Pullen, J Dudley, G J Veale, J Rose (Wath), Rev Winfield Cooper, and E Bohnstedt.

CORRECT SOLUTIONS OF PROBLEM No. 2315 received from L Desanges, J Bryden, E Von Kornatzki, J Hepworth Shaw, E Bohnstedt, E E H, W Hillier, E Lacey, Howard, A Newbery (Paris), Peterhouse, E Phillips, H Worters (Canterbury), D McCoy, Major Prichard, Rev Winfield Cooper, Julia Short, T G (Ware), W R Baillie, Thomas Chown, R F N Banks, H M Prideaux, Heywaird, J Dixon, F Drew, T Roberts, Rev Leonard Watson, S Rover, C E P, and Dr F St.

SOLUTION OF PROBLEM No. 2313.



WHITE.	BLACK.
1. Q to Kt sq	K to Q 4th
2. Kt (at B 2nd) to Kt 4th (ch)	K moves
3. Q Mates.	

If Black play 1. K to B 6th, 2. R takes B (ch), &c.

PROBLEM No. 2317.

By H. M. PRIDEAUX.

BLACK.

WHITE.

White to play, and mate in two moves.

BRADFORD CHESS CONGRESS.

Game in the International Masters' Tournament between Messrs. WEISS and BARDELEBEN.

(Four Knights' Opening.)

WHITE (Mr. B.)	BLACK (Mr. W.)
1. P to K 4th	P to K 4th
2. Kt to K B 3rd	Kt to Q B 3rd
3. Kt to B 3rd	Kt to B 3rd
4. B to Kt 5th	B to Kt 5th
5. Castles	Castles
6. P to Q 3rd	B takes Kt
7. B takes Kt	Kt P takes B
8. Kt P takes B	P to Q 3rd
9. P to K R 3rd	P to K R 3rd
10. B to K 3rd	B to K 3rd
11. Kt to Q 2nd	P to Kt 4th
To prevent the advance of K B P.	
12. P to Kt 4th	K to Kt 2nd
13. K to Kt 2nd	Kt to Q 2nd
14. R to R sq	

Extreme caution has been observed on both sides, and it is not often the game is so far advanced with moves identically the same for each player. White now finds himself in a position to force matters, and infuses some liveliness into the fight.

14.	Q to K 2nd
15. Kt to B sq	R to R sq
16. Kt to Kt 3rd	P to B 3rd
17. Kt to R 5th (ch)	K to B 2nd
18. P to R 4th	P takes P

This capture isolates Black's R P, and

WHITE (Mr. B.)	BLACK (Mr. W.)
opens the way for an inroad of White's pieces. Q R to Kt sq is sounder play.	
19. P to B 3rd	Kt to B sq

Fatal; his R P cannot now escape, and with it goes the game. Q R to K Kt sq was still the best means of saving both.

20. Q to Q 2nd	Kt to Kt 3rd
21. B takes P	Q R to K Kt sq
22. K to B 2nd	

A wise precaution, preventing all danger of the advance of Black's K B P.

22.	P to Q 4th
23. Q R to K Kt sq	R to Kt sq

Black's object in this move is difficult to see; but its consequence is immediately obvious. His defeat is simply precipitated.

24. B to Kt 7th	Q to B 4th (ch)
25. P to Q 4th	P takes P
26. P takes P	Q to B 5th
27. B takes R	R takes B
28. P to B 4th	B takes P
29. R takes B	B takes Kt
30. P to B 5th	Kt to K 2nd
31. Q to Q 3rd	Q takes R P
32. K R takes P	P takes P
33. Q takes P	R takes P (ch)
34. K to Kt 2nd,	

and wins.

CHESS BY CORRESPONDENCE.

Game played between Dr. GORDON, R.N., and Mr. F. LEE.

(King's Gambit declined.)

WHITE (Dr. G.)	BLACK (Mr. L.)
1. P to K 4th	P to K 4th
2. P to K B 4th	B to B 4th
3. Kt to K B 3rd	P to Q 3rd
4. P to Q B 3rd	Q to K 2nd

A novelty in the defence that is not to be commended; White has now the better game.

5. P to Q 4th	P takes Q P
6. P takes P	B to Kt 5th (ch)
7. K to Q 2nd	B to Q 2nd

K Kt to B 3rd is the correct reply. If White then attempt to win a piece by checking at Q R 4th, the following is the probable termination: 8. Q to R 4th (ch) Kt to B 3rd; 9. P to Q 5th, Kt takes P (ch), and wins.

8. P to Q B 3rd	B to R 4th
9. P to Q Kt 4th	B to Kt 3rd
10. R to Q B 4th	Kt to K B 3rd
11. R to K sq	Kt takes P (ch)
12. K to Kt sq	P to Q B 3rd
13. Kt to Q B 3rd	P to K B 4th

P to Q 4th is of no use. White answers with 14. B takes P, P takes B; 15. Kt takes

WHITE (Dr. G.)	BLACK (Mr. L.)
P, Q to K 2nd; 16. Kt takes R, P takes Kt; 17. Kt to Kt 5th, regaining the piece, with a winning position into the bargain.	
14. R to R 2nd	P to Q 4th
15. Q R to K 2nd	Kt to Q sq

If Castles, 16. Kt takes Kt, P takes B; 17. Kt to B 5th, &c.

16. Kt takes Kt	B P takes Kt
17. Kt to K 5th	P takes B
18. R takes P	Q to B 3rd
19. K to R sq	B to K B 4th
20. R (K 4th) to K 2rd	P to K R 4th
21. B to Kt 2nd	Q to K 3rd
22. Q to B 3rd	Kt to R 3rd
23. P to Q Kt 5th	Resigns

Black's resignation is too hasty. The following shows that his position is by no means so hopeless as the surrender implies. If Kt to B 2nd, 24. Kt takes P (ch), P takes Kt; 25. R takes Q, B t kes R; 26. Q takes P, B to Q 4th; 27. Q to Kt 6th, K to B sq; 28. Q takes P, K to Kt 2nd. Black has now R, B, and Kt against Q.

INTERNATIONAL CHESS CONGRESS.

The proceedings at Bradford were brought to a close on Monday, Aug. 20, a consultation game being played between Bird and Blackburne against Weiss and Bardeleben for a special prize of ten guineas, given by F. H. Lewis, Esq. After a protracted fight the game ended in a draw, and the prize was equally divided amongst the combatants. The following are the full scores in the Masters' Tournament:—Gunsberg, 14½; Captain Mackenzie, 13; J. Mason, 12; C. V. Bardeleben, 12; A. Burn, 11½; M. Weiss, 11; J. H. Blackburne, 11; S. Taubenhaus, 10; W. H. K. Pollock, 8; H. E. Bird, 8; E. Thorold, 7½; C. D. Locock, 7½; F. J. Lee, 6; J. Mortimer, 6; Rev. J. Owen, 6; J. F. Hall, 4½; A. Rumbell, 4; Rev. A. B. Skipworth, ½.

The London Banks' Chess Club held its annual meeting on Aug. 23, and a favourable report of the first year of its existence was presented to its members. Messrs. E. P. Mullins (Bank of England) and G. Wallace (London and Westminster Bank), to whose labours much of the success of the club was due, were re-elected honorary secretaries; and a committee consisting of twelve gentlemen from various banks was appointed to arrange the details of the programme for the coming year.

MUSIC.

THE BIRMINGHAM TRIENNIAL FESTIVAL.

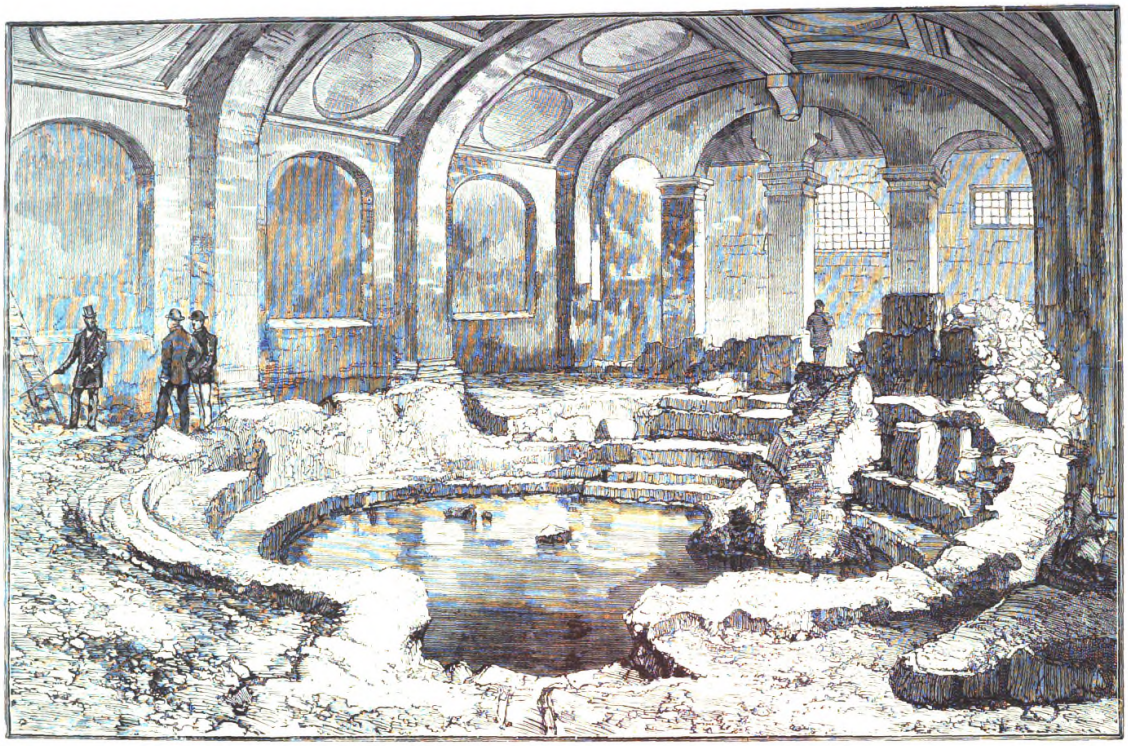
This great music meeting closed on Aug. 31, having opened with Mendelssohn's "Elijah," on Aug. 28. We have already given details as to the antecedents of these great celebrations, and the arrangements for that which has just terminated, most of the performances at which occurred too late for present notice. The programme of the opening oratorio included Mesdames Albani, Trebelli, and Patey, Miss Anna Williams, Mr. E. Lloyd, and Mr. Santley, as principal solo vocalists: the two ladies first named, Mr. Piercy, and Mr. Brereton having been announced as the soloists in Dvorák's "Stabat Mater," which formed the chief portion of the evening concert of the same date. Of the subsequent performances, including the production of Dr. Parry's new oratorio, "Judith," and Dr. Bridge's new cantata, "Callirhoë," and other items, we must speak hereafter.

The Promenade Concerts at Covent-Garden Theatre are still providing ample and varied entertainment for Londoners and provincial visitors, at a period when there is little else of public music going on in the metropolis. Since our last notice of the Covent-Garden concerts another classical night has been given. The first part of the programme included Weber's Overture to "Euryanthe," an impressive "Andante Religioso," by Scharwenka, and Beethoven's Symphony in C minor. Mendelssohn's first Pianoforte Concerto (in G minor) was finely played by Madame Frickenhaus, and a violoncello solo ("Kol Nidrei"), by Max Bruch, was skilfully executed by Mr. E. Howell. Mr. Santley made his first appearance at these concerts this season, and sang several songs with his accustomed effect—other successful vocal performances having been contributed by the young lady known as "Nikita," and Madame Belle Cole. The later portion of the concert consisted, as usual, of a miscellaneous selection.

A series of performances of operas in English was announced to begin at the Alexandra Palace on Aug. 25, under the direction of Mr. Valentine Smith. Wallace's "Maritana" was promised for the first evening, with Mr. W. Carter as conductor.

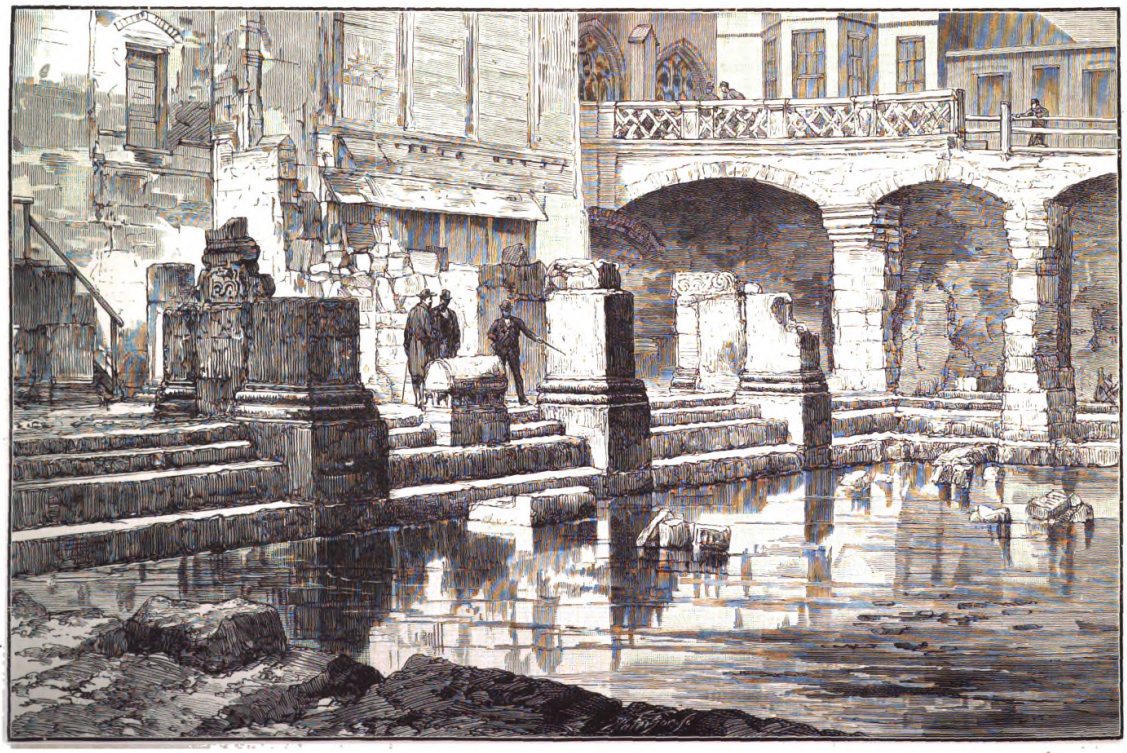
Mr. William Chappell, who died recently at the age of seventy-eight, was eminent as a musical antiquary. He edited many valuable works, especially several collections of old English music of various styles and periods; and produced an important "History of Music (Art and Science)," which, we believe, remains uncompleted. Mr. W. Chappell was related to the principals of the well-known firm of Messrs. Chappell and Co., of New Bond-street, with which establishment he was associated before he gave himself up entirely to literary and musical pursuits, his researches in which have left many valuable results. Mr. Chappell was a member of several learned societies.

TEA-CULTIVATION IN INDIA.



According to the report of the Administration of Assam for the past year, the process of decreasing the number of tea-gardens while the amount of land under tea-cultivation increases was continued during the year. The average size of the Assam gardens is increasing year by year, showing combination among owners or more capital. The small cultivators are disappearing. There were 883 gardens in 1886 and 873 in 1887, although new gardens were opened during the latter year. Even more was done in previous years to amalgamate gardens, with a view to economy and convenience of working. The total area under tea-cultivation in 1887 was 950,171 acres, an increase of 16,037 acres over 1886. In 1882 the area of the gardens was 783,362 acres. These figures represent the areas held by the tea-planters, and either not yet worked at all, or in one or other of the various stages between jungle and productive paying tea-garden. The area under mature plants last year was 177,900 acres, and under immature 33,179. The area under mature plants increases steadily in Assam: in 1882 it was 156,707 acres; in 1885, 159,876. The total tea-production of the province for 1887 is given at 68,451,180 lb., an increase of 6,731,502 lb., or 10·91 per cent over 1886, and more than double the production of 1885. According to the figures of the Indian Tea Association, Assam produced 74·89 per cent of the whole crop of Indian tea in 1887. The yield per acre of the whole province was 385 lb. for the year, as compared with 363 lb. in 1886. The tendency of the cost of production is to decrease with the improved communications and methods of cultivation and manufacture. More is obtained from the soil at less cost, it is handled more cheaply and effectually, and reaches the consumer by more economical communications. The price is now lower than it ever was before, yet the planters are doing fairly well as regards profits. "The explanation is that the tea can now be turned out for less than was possible a few years ago. The use of machinery of an improved character is now largely extended, while freight and cost of transport are much less. The coolies are growing older and more skilled in their work, and can do more and far better than they could when raw hands." The Indian Tea Association estimate that Assam will produce 70,975,884 lb. this year, out of a total Indian crop of 95,829,312 lb.

EXHIBITION OF OLD MASTERS AT BIRMINGHAM.



A loan collection of more than local importance has been opened at the Birmingham Art Gallery. It consists of paintings by Old Masters, including some which have obtained a world-wide reputation. The nucleus of the exhibition consists of ninety pictures, selected from the historical portraits of the Lennard family, which have hitherto only been seen by favoured visitors to Belhus House. Sir Thomas Barrett-Lennard has, however, conferred a distinguished favour on the Birmingham Gallery by allowing Mr. Whitworth Wallis, the curator, to select for several months as many specimens as he desired. This famous collection has been accumulated from generation to generation, and embraces portraits by Holbein, Lucas, Vandyke, Janssen, Sir Peter Lely, François de Troy, Reynolds, and others. This interesting group is supplemented by most liberal loans from the galleries of the Duke of Westminster, Duke of Norfolk, the Marquis of Hertford, the Marquis of Lansdowne, the Earl of Dartmouth, the Earl of Coventry, Lord Windsor, and others. To the Duke of Westminster the collection owes ten celebrated works, including landscapes by Claud, a sea-piece by Gainsborough, and three Rembrandts. The Duke of Westminster also lends "St. John and the Lamb," by Murillo, and a sketch, by Velasquez, of that artist's equestrian picture of the Prince of the Asturias, which is one of the splendid works of the Museum of Madrid. The Duke of Norfolk lends three fine Vandykes from Arundel Castle; while the Earl of Dartmouth sends portraits by Gainsborough, and the Marquis of Hertford some noteworthy works by Sir Joshua Reynolds.

Lady Burdett-Coutts on Aug. 24 presented the prizes to the successful competitors in the children's fourth annual flower-show, held at Lansdowne-place Ragged Schools, Tabard-street, Borough.

THE ROMAN BATHS OF AQUÆ SOLIS, AT BATH.

CIRCULAR BATH, RECENTLY DISCOVERED.

ROMAN BATH, 110 FT. LONG, 68 FT. WIDE, WITH REMAINS OF VAULTED HALL.

Thoughts, like snowflakes on some far-off mountain side, go on accumulating till some great truth is loosened, and falls like an avalanche on the waiting world.

WHAT HEALTH-RESORT, WHAT WATERING-PLACE, WHAT CLIMATE IN THE WORLD

could show results of Preventable Death like these of the power of Sanitation. IGNORANCE OF SANITARY SCIENCE, direct and indirect, Costs Threefold the amount of Poor-Rate for the Country generally. "He had given as models of sanitation of adult life, well-constructed and well-kept prisons, where of those who came in without well-developed disease, and not *good lives either*, the death-rate did not exceed THREE in 1000. In Stafford County Jail the death-rate had, during the last ten years, been actually less than one in every thousand—not a tenth of the death-rate of adult outsiders."—Inaugural Address by E. CHADWICK, C.B., on the Sanitary Condition of England.

THE KING OF PHYSICIANS, PURE AIR.—JEOPARDY OF LIFE.—THE GREAT DANGER OF VITIATED AIR.

"Former generations perished in venial ignorance of all sanitary laws. When BLACK DEATH massacred Hundreds of Thousands, neither the victims nor their rulers could be accounted responsible for their slaughter."—Times.

After breathing impure air for two minutes and a half, every drop of blood is more or less poisoned. There is not a point in the human frame but has been traversed by poisonous blood; not a point but must have suffered injury. ENO'S "FRUIT SALT" is the best known remedy; it removes foetid or poisonous matter (the groundwork of disease) from the blood by natural means, allays nervous excitement, depression, and restores the nervous system to its proper condition. Use ENO'S "FRUIT SALT." It is pleasant, cooling, refreshing, and invigorating. You cannot overstate its great value in keeping the blood pure and free from disease.

IMPORTANT TO ALL.

Especially to Consuls, Ship Captains, Emigrants, and Europeans generally who are visiting or residing in Hot or Foreign Climates, or in the United Kingdom. As a natural product of Nature, use ENO'S "FRUIT SALT." You cannot overstate its great value in keeping the BLOOD PURE. Without such a simple precaution, the JEOPARDY of life is immensely increased. As a means of keeping the system clear, and thus taking away the groundwork of Malarious Diseases and all Liver Complaints, or as a Health-giving, Refreshing, Cooling, and Invigorating Beverage, or as a Gentle Laxative and Tonic in the various forms of Indigestion,

USE ENO'S "FRUIT SALT."

It is particularly valuable. No TRAVELLER should leave home without a supply, for by its use the most dangerous forms of FEVERS, BLOOD POISONS, &c., are prevented and cured. It is, in truth, a FAMILY MEDICINE CHEST in the simplest yet most potent form. Instead of being lowering to the system, this preparation is in the highest degree invigorating. Its effect in relieving thirst, giving tone to the system, and aiding digestion, is most striking.

FOR BILIOUSNESS OR SICK HEADACHE, Giddiness, Depression of Spirits, Sluggish Liver, Vomiting, Sourness of the Stomach, Heartburn, Costiveness and its evils, Impure Blood and Skin Eruptions, &c., ENO'S "FRUIT SALT" is the simplest and best remedy yet introduced. It removes by natural means effete matter or poison from the blood, thereby preventing and curing boils, carbuncles, fevers, feverish skin, erysipelas, and all epidemics, and counteracts any ERRORS OF EATING OR DRINKING, or any sudden affliction or mental strain, and prevents diarrhœa (also removes diarrhœa in the *first* stage by natural means). It is a Pleasant Beverage, and may be taken as an invigorating and cooling draught under any circumstances, from infancy to old age. It is impossible to overstate its value, and on that account no household ought to be without it, for by its use many disastrous results may be entirely prevented. In the nursery it is beyond praise. Notwithstanding its medical value, the "FRUIT SALT" must be looked upon as essential as breathing fresh air, or as a simple and safe beverage under all *circumstances*, and may be taken as a sparkling and refreshing draught, in the same way as lemonade, soda-water, potass-water, &c., only it is much cheaper and *better in every sense of the term, to an unlimited extent*. The "FRUIT SALT" acts as simply, yet just as powerfully, on the animal system as sunshine does on the vegetable world. It has a natural action on the organs of digestion, absorption, circulation, respiration, secretion, and excretion, and removes all impurities, thus preserving and restoring health.

INQUESTS.—A STARTLING ARRAY OF PREVENTABLE DEATHS.—Why should FEVER, that VILE SLAYER of MILLIONS of the HUMAN RACE, not be as much and more hunted up, and its career stopped, as the solitary wretch who causes his fellow a violent death? The MURDERER, as he is called, is quickly made example of by the law. Fevers are almost universally acknowledged to be PREVENTABLE DISEASES. How is it that they are allowed to level their thousands every year, and millions to suffer almost without protest! The most ordinary observer must be struck with the huge blunder. Who's to blame? For the means of preventing PREMATURE DEATH from disease, use ENO'S "FRUIT SALT." It keeps the BLOOD PURE, and is thus of itself one of the most valuable means of keeping the blood free from fevers (and blood poisons), liver complaints, &c., ever discovered. As a means of preserving and restoring health it is unequalled; and it is, moreover, a pleasant, refreshing, and invigorating beverage. After a patient and careful observation of its effects when used, I have no hesitation in stating that if its great value in keeping the body healthy were universally known, not a household in the land would be without it, or a travelling trunk or portmanteau but would contain it.

WHICH MAY BE PREVENTED.

TO EUROPEANS WHO PROPOSE RESIDING IN OR VISITING HOT CLIMATES, I consider the FRUIT SALT to be an indispensable necessary, for by its use the system is relieved of poisonous matter, the result of eating to nearly the same extent and of too rich food as they do in a colder country, while so much heat-making food is not required in a warmer climate. By keeping the system clear, the FRUIT SALT takes away the groundwork of malarious diseases, and all liver complaints, and neutralises poisonous matter.

JEOPARDY OF LIFE—THE GREAT DANGER OF DELAY.—You can change the Trickling Stream, but not the Raging Torrent.

WHAT EVERYBODY SHOULD READ.— HOW IMPORTANT it is to every individual to have at hand some simple, effective, and palatable remedy, such as ENO'S "FRUIT SALT," to check disease at the onset! For this is the time. With very little trouble you can change the course of the trickling mountain stream, but not the rolling river. It will defy all your tiny efforts. I feel I cannot sufficiently impress this important information upon all householders, or ship captains, or Europeans generally, who are visiting or residing in any hot or foreign climate. Whenever a change is contemplated likely to disturb the condition of health, let ENO'S "FRUIT SALT" be your companion; for, under any circumstances, its use is beneficial, and never can do harm. When you feel out of sorts, yet unable to say why—frequently, without any warning, you are suddenly seized with lassitude, disinclination for bodily or mental exertion, loss of appetite, sickness, pain in the forehead, dull aching of back and limbs, coldness of the surface, and often shivering, &c.; then your whole body is out of order—the spirit of danger has been kindled, but you do not know where it may end. It is a real necessity to have a simple remedy at hand that will always answer the very best end, with a positive assurance of doing good in every case, and in no case any harm. The pilot can so steer and direct as to bring the ship into safety, but he cannot quell the raging storm. The common idea when not feeling well is, "I will wait and see—perhaps I shall be better to-morrow;" whereas, had a supply of ENO'S "FRUIT SALT" been at hand, and made use of at the onset, all calamitous results might have been avoided. What dashes to the earth so many hopes, breaks so many sweet alliances, blasts so many auspicious enterprises, as untimely death! "I used my 'FRUIT SALT' freely in my last severe attack of fever, and I have every reason to say it saved my life."—J. C. Eno.

STIMULANTS AND INSUFFICIENT AMOUNT OF EXERCISE FREQUENTLY derange the liver. ENO'S "FRUIT SALT" is peculiarly adapted for any constitutional weakness of the liver. A world of woes is avoided by those who keep and use ENO'S "FRUIT SALT." "All our customers for ENO'S 'FRUIT SALT' freely in my last severe attack of fever, and I have every reason to say it saved my life."—J. C. Eno.

A NATURAL WAY OF RESTORING OR PRESERVING HEALTH,

USE ENO'S "FRUIT SALT."

HEALTH-GIVING, COOLING, REFRESHING, AND INVIGORATING.

"From the Rev. J. W. Neil, Holy Trinity Church, North Shields.

"Nov. 1, 1873.

"Dear Sir,—As an illustration of the beneficial effects of your 'Fruit Salt,' I can have no hesitation in giving you particulars of the case of one of my friends. His whole life was clouded by the want of vigorous health, and to such an extent did the sluggish action of the liver and its concomitant Bilious Headache affect him, that he was obliged to live upon only a few articles of diet, and to be most sparing in their use. This uncomfortable and involuntary asceticism, whilst it probably alleviated his sufferings, did nothing in effecting a cure, although persevered in for some twenty-five years, and also, to my knowledge, consulting very eminent members of the faculty, frequently even going to town for that purpose. By the use of your simple 'Fruit Salt,' however, he now enjoys the vigorous health he so long coveted, he has *never* had a headache nor constipation since he commenced to use it, about six months ago, and can partake of his food in such a hearty manner as to afford, as you may imagine, great satisfaction to himself and friends. There are others known to me to whom your remedy has been so beneficial in various kinds of complaints that I think you may very well extend its use, both for your own interest and *pro bono publico*. I find myself that it makes a very refreshing and exhilarating drink.—I remain, dear Sir, yours faithfully,

"To J. C. Eno, Esq." J. W. Neil.

IMPORTANT TO TRAVELLERS AND ALL LEAVING HOME FOR A CHANGE.

"We have for the last four years used your 'Fruit Salt' during several important Survey Expeditions in the Malay Peninsula, Siam, and Cambodia, and have undoubtedly derived very great benefit from it. In one instance only was one of our party attacked with fever during that period, and that happened after our supply of 'Fruit Salt' had run out. When making long marches under the powerful rays of a vertical sun, or travelling through swampy districts, we have used the 'Fruit Salt' two and three times a day. The 'Fruit Salt' acts as a gentle aperient, keeps the blood cool and healthy, and wards off fever. We have pleasure in voluntarily testifying to the value of your preparation, and our firm belief in its efficacy. We never go into the jungle without it, and have also recommended it to others.—Yours truly,

"Commander A. J. Loftus, his Siamese Majesty's Hydrographer.

"E. C. Davidson, Superintendent Siamese Government Telegraphs.

"To J. C. Eno, Esq., London. Bangkok, Siam, May, 1883."

THE SECRET OF SUCCESS.—"A new invention is brought before the public, and commands success. A score of abominable imitations are immediately introduced by the unscrupulous, who, in copying the original closely enough to deceive the public, and yet not so exactly as to infringe upon legal rights, exercise an ingenuity that, employed in an original channel, could not fail to secure reputation and profit."—Adams.

CAUTION.—Examine each Bottle, and see the Capsule is marked ENO'S "FRUIT SALT." Without it you have been imposed on by Worthless Imitations.

Sold by all Chemists. **DIRECTIONS IN SIXTEEN LANGUAGES HOW TO PREVENT DISEASE.** *Protection in every Country.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

DISORDERED STOMACH AND BILIOUS ATTACKS.

A gentleman writes:—"Dec. 27, 1887.—After twelve months' experience of the value of the **'VEGETABLE MOTO,'** I unhesitatingly recommend their use in preference to any other medicine, more particularly in bilious attacks; their action is so gentle, and yet so effective, that nothing equals them in my opinion. They have never failed to give the wished-for relief. I take them at any hour, and frequently in conjunction with a small glass of Eno's 'Fruit Salt.'—Yours gratefully,

ONE WHO KNOWS."

West Indies. To Mr. J. C. ENO, London.—"Please send me further supply of your **'VEGETABLE MOTO'** to the value of the P.O. inclosed (eight shillings). The first small parcel came fully up to what is written of them.—St. Kitts, West Indies, Oct. 11, 1887."

THE SAME CORRESPONDENT, in ordering a further supply of the **"VEGETABLE MOTO"** in July, 1888, writes as follows:—"I cannot help telling you that the 'Moto' is a valuable addition to your 'Fruit Salt,' and ought to be as generally known as the latter."

ENO'S "VEGETABLE MOTO," of all Chemists, price 1s. 1½d.; post-free, 1s. 3d.

ENO'S "FRUIT SALT" WORKS, POMEROY-STREET, NEW CROSS-ROAD, LONDON, S.E.

THE PLAYHOUSES.

Brown-faced and clear-eyed from health-giving roamings by seaside and loch, on moorland and mountain-side, the advance-guard of tourists are returning to town to laugh at "Betsy," to gather patriotic inspiration from "The Union Jack," and a pleasing fragrance from "Sweet Lavender," to admire mellow-voiced Miss Wadman as Lecocq's "Pepita," to be moved to wonderment by Mr. Mansfield's clever transformation from Dr. Jekyll to Mr. Hyde, and to judge anew of Mr. H. Beerbohm-Tree's abilities in the new Haymarket play of "Captain Swift."

London has another attractive novelty: Mr. W. S. Penley as Zedekiah Aspen, quaintest of his gallery of infinitely grotesque and amusing creations. The time is surely almost ripe for this irresistibly comic actor to rule over a Temple of Comedy of his own. Mr. Penley is unquestionably the most artistic and original of our comedians. He appears as the naïf and green curate, the Reverend Robert Spalding, in "The Private Secretary"; and the fortune of that laughter-lifting comedy from the German is made. In other parts under the appreciative management of Mr. C. H. Hawtrey, Mr. Penley has been consistently diverting. No matter how slight the character, he imparts a distinctiveness to it that might well inspire a few contemporary leading comedians who are always themselves in whatever garb they appear with a little artistic sense of the need of individualising their impersonations. Thus, it would be hard to identify Mr. Penley's dapper City man in "Crutch and Toothpick" with the clerical greenhorn in "The Private Secretary"; and it would be as difficult to recognise in the impersonator of the Reverend Robert Spalding the talented comedian who made us all laugh again as the sporting young man about town, with his catch-phrase of "What wit! what repartee!" as applied to the Gutta-Percha Girl in "The Arabian Nights."

Mr. Penley is, if anything, more entertaining than ever as the peculiar little fop, Zedekiah Aspen, who half covers his white hair with the most comical little wig in the world when he goes courting in the new farcical play of "Uncles and Aunts," by Mr. W. Lestocq and Mr. Walter Everard, at the Comedy Theatre. This so-called comedy is in itself of small merit. Its feeble plot is little better than that of an impromptu drawing-room charade, or game of dumb-crambo. Indeed, "Uncles and Aunts" is solely worth seeing on account of Mr. Penley's very droll lovemaking. The two pairs of young lovers entrusted to Mr. Walter Everard and Mr. W. Draycott, Miss Cissy Grahame and Miss Vane Featherston, are but shadowy personages. There is more backbone in the breezy Uncle Rawlins of that excellent actor, Mr. Charles Groves, and in the peppery Uncle Henry of Mr. W. Lestocq. But all the interest centres in Zedekiah Aspen. There is a roar at his first appearance as suitor for the hand of that designing young lady, Miss Mary Marley; and mirth increases when he transfers his affections to an old flame, the Miss Rawlins whom he has ever cherished in his memory as "Aurora Borealis." In his aforesaid comical little wig, and in an old-fashioned light silk waistcoat and suit to match, Mr. Penley as Zedekiah Aspen presents a figure a mere glance at which elicits shouts of laughter, and causes fun-loving people among the audience to fairly roll in their seats with uncontrollable mirth. In quaint comicality, in fine, Mr. Penley is unsurpassed. See him! A word of praise should be added for Mr. W. F. Hawtrey's drily humorous portrayal of the butler, Bates.

Pending the production of the new comic opera of "Nadjé," the Avenue Theatre has been opened for a brief season of comedy and burlesque by Mr. Henry Bracy, who does not use his admirable tenor voice, however, in either piece. Mr. Arthur Law supplies the comedy. His "Gladys" introduces us to a group of characters thrown together in the first place in Gerald Lockhart's London studio, and next in Colonel Faulkner's Junglepore bungalow. This Colonel Faulkner (Mr. Royce Carleton) is a callous adventurer, who seeks to compel his fair young wife to be his confederate at the card-table in order that Gerald Lockhart, her former lover, may be fleeced. But Gladys Faulkner, who bitterly regrets her marriage, declines to act as his decoy-bird. The Colonel's cheating at cards is exposed by a callow Lieutenant; and in the end he is proved to have contracted an early marriage, Gladys thus being left free to pair off with Gerald Lockhart, who is represented well by Mr. Lewis Waller. As Gladys, Miss Florence West, one of the best of our school of rising young actresses, performed with accustomed grace and force; and the acting of Mr. Richard Purdon as the martinet General Peploe, Mr. Royce Carleton as Faulkner, Mr. Mark Kinghorne as the rascally Dredge, and Mr. Ernest Paterson as Dubois was commendable. But the dessert of the Avenue menu is the favourite dish. The old Royalty extravaganza of "Don Juan, Junior," by Mr. Robert Reece and Mr. Edward Righton, refurbished with new puns and hits at current topics, including the discussion on "Is Marriage a Failure?" is revived with a bountiful liberality as regards the number of comely choristers. The sparkling Don Juan of tuneful Miss Emily Spiller, the seductive Haidee of Miss Addie Conyers, the grotesque Lambro of Mr. Kinghorne, the terrible Sultan Alnaschar of Mr. Richard Purdon, the light-footed Ethiopian minstrel of Mr. Edward W. Colman, the unctuously droll Benzoline of Miss Sallie Turner, the alluring Gulbeyaz of Miss Ada Bemister, the vivacious Zoe of nimble Miss Kate Everleigh, and, above all, the remarkably humorous dancing and singing of Mr. Edward Righton as Pedrillo, with his clever mimicry of Mr. Mansfield as "Dr. Jekyll and Mr. Hyde," rendered the performance of "Don Juan, Junior," manifestly acceptable to those present.

With respect to metropolitan outdoor entertainments, nothing is better in its way than the exciting military spectacle represented twice a day by real cavalry and infantry at the Irish Exhibition. The attack on the castle within the hippodramatic inclosure by a British force, which bombards the Indian rebels' stronghold, carries it by assault, and drives the mutineers out at the point of the bayonet, forms a most impressive spectacle, and is aptly crowned with a brilliant march-past, to inspiriting martial music. This warlike encounter is preceded by a variety of exciting equestrian leaps over a five-barred gate, stone wall, and hedge and ditch; and by a series of well fought-out military contests, such as sword against bayonet, mounted and on foot, tilting at the ring and the "Turk's head." The whole, in a word, forms a unique entertainment such as should draw many thousands to the Irish Exhibition.

THE QUEEN RECEIVING A BOUQUET FROM MRS STEWART CLARK, AT BLYTHSWOOD.

The Anglo-Danish Exhibition gold medal for grates has been awarded to Mr. James B. Petter, of Yeovil, for his Nautilus Grate and Mail-clad Stove.

The twenty-first horse and sheep show, held in connection with the Royal Dublin Society, commenced on Aug. 28 at the society's show-yard at Balls-bridge. The Lord Lieutenant visited the show-yard in the forenoon.

The annual pastoral address of the Wesleyan Methodist Conference, signed by the Rev. Joseph Bush as president, will shortly be circulated. It speaks hopefully of the prospects of Methodism, points out that the net gain of 3500 members recently reported indicates imperfectly what multiplied agencies have accomplished during the past year, and gives the number of new members received as nearly 48,000.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

The British Archæological Association, of which the Marquis of Bute is this year the president, began its sittings in Glasgow on Aug. 27. Although this is the forty-fifth annual congress, it is the first occasion on which the association has crossed the border. Sir James King, Lord Provost, welcomed the members to the city, and Sheriff Berry and Mr. John Honeyman, chairman of the reception committee and president of the Glasgow Archæological Society, all gave them greeting. The members visited the ancient Celtic camp at Langside, near Glasgow, and were present when a memorial, recently erected on the site of the battle of Langside, was handed over to the patrons of Hutchison's Hospital. They afterwards visited the cathedral, whose architectural features were described by Mr. John Honeyman. In the evening the members dined together in the Grand Hotel. The Marquis of Bute, delivering on the 28th the inaugural address, said it was the time of Wallace and Bruce that developed the Scotland of the present, and gave birth to its institutions, such as its burghs, Parliamentary representation, jurisprudence, and the universities, which were subjects of special attachment and pride. The history of Scotland had three great periods—early, mediæval, and modern. The first one ended with the death of Macbeth in 1057, the second ended with the defeat of Queen Mary at Langside, and the modern period was of no special interest.

A new form of speech recording and reproducing machine known as the graphophone, has been brought to this country from America by Mr. H. Edmunds, of the firm of Walter T. Glover and Co., of 10, Hatton-garden. The inventor is Mr. Charles Sumner Tainter, and the proprietors of the patents, the Volta Graphophone Company, of Washington, U.S.A., have appointed Mr. Edmunds as their representative in Europe. It is stated that they are used in both Houses of Congress in Washington for reporting the proceedings.

About 1200 children were taken to Bushey Park on Aug. 28, under the auspices of the Ragged School Union, to enjoy a day in the country. Unfortunately the weather was most unfavourable, rain falling during the greater part of the day, and thus in a great measure detracting from the pleasure of the holiday. Plenty of good, substantial food was, however, provided for the children, and this helped to minimise the depressing effect of the weather. Sweets and toys were distributed, and the teachers, of whom there were about 150 present, were untiring in their efforts to entertain their little charges.

The Revenue and Agricultural Department of the Government of India have issued the following report on the prospects of the cotton crop in the Central Provinces:—"Owing to delay in commencement of monsoon, sowings have been made in some places later than usual, and have in parts of Nimar only just been completed. But in Nagpur and Wardha they were effected much earlier. There is no reason to believe that the area under cotton is less than the normal. The plants are doing well, and reports are favourable from all districts. A break in the rains is needed in Nagpur and Wardha, where the crop is ready for weeding, and if this takes place there is no reason so far why the outturn should not be an excellent one."

Sir James King, of Campsie, Stirlingshire, Lord Provost of Glasgow, on whom her Majesty has conferred the honour of a baronetcy, in commemoration of her visit to Glasgow, is the eldest son of the late Mr. James King, of Campsie, by marriage with Christina, daughter of Mr. James Macnie, of Stirling, and was born in 1830. He was educated at the University of Glasgow; he is a Magistrate for Lanarkshire, and also a Magistrate and Deputy-Lieutenant for Stirlingshire. He was elected Lord Provost of Glasgow first in 1886. Sir James King married in 1861 Marian, daughter of Mr William Westall, of Streatham-common, Surrey, by whom he has a son, John Westall, born in 1863. Her Majesty also knighted Mr. M'Onie, the ex-Lord Provost, and Dr. Marwick, the Town Clerk of Glasgow. Sir William M'Onie was Lord Provost of the city from 1883 to 1886. Sir James David Marwick, LL.D., is a native of Leith. He was appointed Town Clerk of Edinburgh in 1860, and has occupied a similar position in Glasgow since 1873.

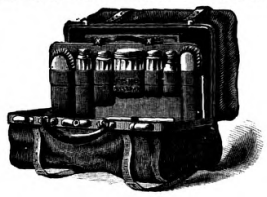
"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately-flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that

EPPS'S (GRATEFUL, COMFORTING) COCOA

a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

OWING to the great popularity attained by the use of St. Jacobs Oil in other countries specially prepared for veterinary purposes, the proprietors, The Charles A. Vogeler Company, of 45, Farringdon-road, London, have determined to introduce this famous remedy in Great Britain for that purpose. The Oil for veterinary purposes is placed in yellow wrappers and is quite a different thing from the Oil in white wrappers. The former contains ingredients particularly adapted for use on animals, and is far superior to all other liniments and embrocations for veterinary purposes. The public are particularly cautioned to use the Oil in **yellow wrappers only** for veterinary purposes. The price of the Oil is within the reach of all, viz., two shillings and sixpence per bottle, of all dealers in veterinary medicines, or free by parcels post from the proprietors. We should most certainly say, from the enormous popularity which the Oil has attained, not only in this country but in every part of the civilised world, that no stable or kennel will be complete without St. Jacobs Oil in yellow wrappers.

It is now used extensively and with wonderful success by the leading Job-Masters, Omnibus and Cab Companies of London and provincial cities, in all cases where an outward application is indicated.

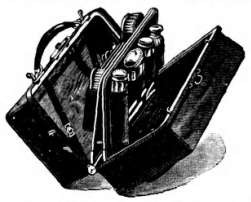


The West-End Omnibus Company, of Auckland, New Zealand, of which Mr. S. Child is manager, writes to the "Daily Herald" of that city:—"We have much pleasure in bearing testimony to the efficacy of St. Jacobs Oil in yellow wrappers for veterinary purposes. Its success has been particularly marked in cases of lameness in our stables. For man and beast, St. Jacobs Oil is the greatest pain-cure ever discovered. It seems to possess properties peculiarly adapted for use on horses, and is undoubtedly the most useful and popular liniment in the world."

The Trotting Editor of the "Spirit of the Times," New York, after an exhaustive interview with leading horsemen, stablemen, sportsmen, drivers, and breeders of horses, states, editorially, that "St. Jacobs Oil in yellow wrappers will do all that is claimed for it in the cure of sprains, stiffness, lameness, and suffering on man and beast."

The popular veterinary surgeon of New York, Dr. William A. Soula, D.V.S., for nine years in charge of the Third Avenue Tramcar stables, certifies to the curative qualities of St. Jacobs Oil, as superior to all other remedies for ailments of horses, such as sprains, galls, and rheumatism; that in many cases horses which have been condemned as useless, on account of injuries received, have been permanently cured by treating such injuries with St. Jacobs Oil in yellow wrappers without the aid of any other treatment.

Perhaps there is no preparation in the world which enjoys the same degree of success and popularity as St. Jacobs Oil. Its sale far exceeds that of any other Proprietary Medicine, and exceeds by ten times that of all other liniments and embrocations combined. This wonderful success rests on the solid foundation of merit which St. Jacobs Oil possesses, combined with original, dignified, and systematic advertising, which has always characterised the announcements of the Proprietors. The name "St. Jacobs Oil" has become a household word in every civilised country in the world. The great success and popularity of the Oil have become the subject of comment by almost the entire Press of the country. In many instances the leading articles of large and influential papers have been devoted to the details of what seemed to be almost magical cures effected by the use of St. Jacobs Oil in local cases, coming under the immediate attention of the publishers. St. Jacobs Oil is endorsed by statesmen, judges, the clergy, the medical profession, and people in every walk of life.



FISHER'S GLADSTONE BAG.

18-in., Plated, £6; Silver, £7 10s.

SMALL CARES.

There are few men who do not long in their best moments—moments that come too rarely—to escape from what Wordsworth calls "the fever of the world." Life is full of fretful anxieties, of little cares that irritate and weaken the mind. A great trial braces the spirit to endure, if not to conquer. Through pain and sorrow we gain fortitude and patience; but the daily worries of life seldom add to the dignity of human nature. Often we cannot get rid of them; they stick to us like burs; and, like the rats that attacked Bishop Hatto, conquer by numbers. Dress is often the cause of small cares, and fashion is a fruitful source of irritation. When a man's boots, instead of fitting like a glove, remind him of one of the instruments used in a mediæval torture-chamber, the pain felt cannot be said to inspire fortitude. A taste for pretty things also has its drawbacks. Our delicate Venetian glasses are easily destroyed by fellow-mortals, whether cats or servants; the sun fades curtains; the moth finds its way into furs; the books of which we are proud are injured by damp or, more frequently, by careless borrowers; and when a "precious" tea-pot or bowl is broken, it is not every woman who is "mistress of herself though china fall." If an author's manuscript is lost in the post, or if a poem, which he trusts may rank him with the immortals, is criticised in the literary journals as weak in meaning and halting in metre, I do not think that cares of this kind are likely to sweeten his temper, or to make a better man of him. If after buying a house which, in the fine language of auctioneers, is "replete with drainage and every convenience," he has, instead of these advantages, a large drain upon his purse, it is to be feared that the discipline will be thrown away.

There are days when nothing goes right with us. Even in our own judgment we fail in all that we attempt to do, and everything done by others is wrong. When dressing, we shave with a blunt razor, cut our chin, and lose our temper. At breakfast time, thanks to the cook's carelessness, we lose it again, and can sympathise with Luther's anger when he flung his inkstand at the Devil. Then comes the post, and the first letter we open is, perhaps, from a tenant demanding some extensive repairs, or from a tradesman sending "account rendered" of a bill which we had totally forgotten; the second is a summons to a special jury, one of the great evils that flesh, combined with a modicum of property, is heir to; the third requests, in an unhappy moment, a subscription to a charity; and the fourth regrets to state that we have overdrawn our banking account. While a man ponders over these disagreeable letters, his wife, who sits smiling on the other side of the table, fills his cup to the brim (figuratively speaking) by reminding him of his promise to meet her in Bond-street to choose a bonnet; and "Fred, dear," she adds, "don't you think, as you are so seldom able to shop with me, I might as well buy a handsome winter cloak at the same time!" I fancy I see "dear Fred" when this request is made, and Mrs. Frederick's look of dismay when her gentle husband "flies out," as after all these provocations he may be pardoned for doing. It is not good for the digestion to get out of temper, and indigestion does not promote good-humour—as the clerks in the irritated man's office find that day to their cost!

On the young and hopeful and healthy the small anxieties of life sit lightly enough. They are felt one day, to be forgotten the next. When "Youth is on the prow and Pleasure at the helm" the vessel sails gallantly in the sunshine—

> Like those trim skiffs unknown of yore
> On winding lakes and rivers wide,
> That ask no aid of sail or oar,
> That fear no spite of wind or tide.

It is when a man wakes up to find that youth is going, or is already gone, that he frequently becomes the victim of small cares, which act like a blister. And the misfortune is that, unlike that painful remedy, they leave no good effects behind them. One of the advantages of money is that it relieves us from a good many of these cares. Too much of that commodity, indeed, generally brings great cares in its train; but how serenely comfortable ought that man to be who has enough! Of course each of us has a different idea of what constitutes enough. Discontent comes from desiring too much. I am content, therefore, to follow a poet's leading, and, with Dr. Wendell Holmes—

> I only ask unto this end
> A little more than I can spend.

The bad health that does not incapacitate a man for work, but only makes work wearisome, is a fruitful breeder of small cares. When a man's back is weak the slightest burden seems heavy. He hates activity, and shrinks from being asked to take his part in the home and in the parish. The healthy man does the thing that ought to be done without hesitation; the man less happily constituted frets himself with thinking about it until the time for action is past.

One of the best ways of escaping from small cares is a mountain ramble or a sea voyage. No doubt travelling brings its worries, but they are of a kind to which we are unaccustomed, and novelty has its charms. There may be discomforts at sea—some people object to sea-sickness—and on land the traveller disposed to grumble may find a cause; but he does not stay with his troubles, as he was forced to do at home, and should black Care overtake him in the Orkneys, he can try the Hebrides or Iceland. If the tourist would avoid the risk of being care-burdened, he must leave no address behind him. This may have its inconveniences. During a month's absence from home, accidents may happen: his house may be burnt down, his wife injured in a railway accident, or his favourite dog die in a fit. Well, after all, these are mere possibilities, that really need not be taken into account. The man who wishes to escape from small cares must not anticipate great ones. What he has to do is to smoothe the creases of life, not to prepare for its adversities.

A good many of our small cares arise from self-consciousness. We trouble too much about what people think of us, and, like Malvolio, "taste with a distempered appetite." We think we are not sufficiently appreciated, and wonder why our claims are unrecognised. Perhaps our high sense of those claims is the reason. It is the man who is humble enough to take a lowly seat who is called to the upper table. Sensitive persons are apt to brood over cares which they manufacture as a miser broods over his gold; they lack the generous and free disposition "that takes those things for bird-bolts that they deem cannon-bullets"; they meet their troubles half-way, and even find a sort of pleasure in counting up their vexations. Doctors will tell you of patients who are proud to have diseases which are sufficiently uncommon to excite medical interest, and I believe some care-troubled people cherish a similar feeling. It gives them a sort of elevation such as that which St. Simeon Stylites enjoyed. There is surely a distinction in being more worried than one's neighbours!

The best remedy for small cares, whether real or imaginary, is to have a great purpose in life. Men who, like Nelson and Wellington, forget themselves for their country's sake, or who, like Livingstone and Gordon, work as ever in the great Taskmaster's eye, are not likely to lessen their strength by fretting over small troubles.

J. D.

WATERLOO BALL: THE ROOM IDENTIFIED.

Sir William Fraser writes to the *Times* to say that he has identified the site of the ball given at Brussels by the Duchess of Richmond the night before the battle of Quatre Bras. Sir William says:—"Some time before leaving England I conversed with a lady who danced with my father at the ball, and who has, as you will see from her name, which I enclose, the best means of knowing where it took place. This lady, giving me at the same time a list of those who were invited, told me that Lord Byron's allusion to 'that high ball' was 'nonsense.' She added that the ball took place, not in the Duke of Richmond's house, but in a coachmaker's depôt, a low-roofed room at the rear of it, the street being named Rue de la Blanchisserie. I made many inquiries in England and in Brussels; no one knew anything of the place, but all agreed that the scene of the ball had been frequently sought without success, and that it no longer existed. I at last ascertained that the site of the Duke of Richmond's house was now covered by a large hospital in the Rue des Cendres. I visited the hospital, and one of the nursing sisters politely pointed out a wing which had formed part of the Duke's house. I examined the garden behind this wing: neither in this nor in the building itself was there any trace of a ball-room. I observed above the wall of the hospital the roof of a high building, and inquired what it was. The sister replied that it was the brewery of the Rue de la Blanchisserie. I walked round to this street, and was informed by the proprietor of the brewery that he knew nothing on the subject. After some conversation I asked if he could tell me of whom his father purchased the property; he replied of a coachbuilder named Van Asch. I inquired if the coachbuilder had a dépôt. 'Yes, a very large one; it is now my granary.' He then took me up to the first floor, and I found myself in the room, the remembrance of which will live so long as the English language. It is 120 ft. long, 54 ft. broad, and about 13 ft. high, the floor smooth enough to be danced on to-night. This room answers precisely to the description given to me. It is immediately in the rear of the Duke of Richmond's house, it is in the street named, it belonged in 1815 to a coach-builder, and it is capable of holding at least 400 persons. I do not think further proof can be required. I have the permission of the proprietor to give his name, V. Vangindenachter, brasseur, Rue de la Blanchisserie, 40 et 42. He most courteously added that he would be glad to show the room to visitors."

Professor Merivale has been elected general secretary for the meeting of the British Association, to be held in Newcastle in 1889.

At a meeting of the delegates of the Hospital Saturday Fund, held on Aug. 25, at the central office, Mitre-court, Fleet-street, the secretary reported that all the money contributed on the occasion of the last Hospital Saturday had been paid in; and the result was a total of £5000, being £500 more than in 1887.

The preachers in Westminster Abbey for September are as follow:—Sunday, 2nd, at ten a.m., in choir, the Rev. J. H. Cheadle, Minor Canon; at three p.m., in choir, Canon Duckworth. Sunday, 9th, at ten a.m., in choir, Canon Saumarez Smith, Principal of St. Aidan's; at three p.m., in choir, Canon Duckworth. Sunday, 16th, at ten a.m., in choir, the Rev. B. K. W. Hawkins, Vicar of St. Bride's, Fleet-street; at three p.m., in choir, Canon Duckworth. Sunday, 30th, at ten a.m., in choir, Bishop of North Dakota; at three p.m., in choir, Canon Duckworth.

MAPLE & CO

TOTTENHAM-COURT-ROAD, LONDON, W.

THE LARGEST AND MOST CONVENIENT

FURNISHING ESTABLISHMENT IN THE WORLD.

MAPLE and CO., Manufacturers of DINING-ROOM FURNITURE. The largest assortment to choose from, as well as the best possible value. Three more houses have just been added to this important department. Half a century's reputation.

MAPLE and CO.'S NEW SPECIMEN DINING-ROOMS, decorated and fully appointed with furniture in pollard oak, brown oak, Chippendale mahogany, antique carved oak, American walnut, and other woods, are now open to the public, and should be seen by all intending purchasers.

THESE ROOMS are not only helpful as showing the effect of the furniture when arranged in an apartment, but also most suggestive as regards decorative treatment, as well as a guide to the entire cost of furnishing in any selected style.

THE SEVILLE LADY'S EASY CHAIR,
In Saddlebags of rich Persian design and colourings, mounted on velvet, £3 15s.

DINING-ROOM FURNITURE.

MAPLE and CO. devote special attention to the production of high-class DINING-ROOM FURNITURE that will afford permanent satisfaction in wear. The numerous recommendations with which Messrs. Maple and Co. have been favoured by customers who have used the furniture for years is a pleasing testimony to the excellence of the articles.

MAPLE and CO.—DINING-ROOM SUITES.—The LICHFIELD SUITE, in solid oak, walnut, or mahogany, consisting of six small and two elbow chairs in leather, dining table with patent screw, also Early English sideboard with plate glass back; and fitted with cellaret, 16 guineas.

MAPLE and CO.—DINING-ROOM SUITES.—The STAFFORD SUITE, comprising six small chairs, two easy chairs in leather, telescope dining table, sideboard with plate glass back and cellaret, and dinner waggon, in light or dark oak, walnut or ash; very substantial in character; 23 guineas.

FURNITURE FOR EXPORTATION.

VISITORS as well as MERCHANTS are INVITED to INSPECT the largest FURNISHING ESTABLISHMENT in the world. Hundreds of Thousands of Pounds' worth of Furniture, Bedsteads, Carpets, Curtains, &c., all ready for immediate shipment. Having large space, all goods are packed on the premises by experienced packers—very essential when goods are for exportation so as to insure safe delivery. The reputation of half a century.

INDIAN CARPETS.

INDIAN CARPETS AT IMPORTERS' PRICES.—MAPLE and CO. receive all the Finest Qualities of INDIAN CARPETS direct from their Agents, and sell them at Importers' Prices, thus saving buyers of Indian Carpets at least two intermediate profits.

MAPLE and CO. have also a great number of really fine Indian Carpets, measuring about 12 ft. by 9 ft., which they are offering at the low price of 7 guineas, as well as a varied assortment of other sizes at proportionate prices.

PERSIAN CARPETS AT IMPORTERS' PRICES.—All these goods are bought by MAPLE and CO.'S Agents in Persia, and sold at Importers' Prices, thus saving purchasers of Persian Carpets at least two intermediate profits.

TO BUYERS of ORIENTAL CARPETS.—MAPLE and CO. offer exceptional facilities to buyers of ORIENTAL CARPETS. The goods are exhibited in ware-rooms, some of which are more than a hundred feet long, so that the very largest carpets can be fully displayed and minutely examined.

TURKEY CARPETS.

A TURKEY CARPET is, above all others, the most suitable for the Dining-room, its agreeable warmth of colouring enhancing the effect of the furniture and decorations, and indicating alike the good taste and comfortable circumstances of its possessor.

TURKEY CARPETS AT IMPORTERS' PRICES.—MAPLE and CO. are not only the Largest Importers of TURKEY CARPETS, but, having a Branch House at Smyrna, with Agency at Ouchak, the centre of the Weaving district, are able to exercise close supervision over the whole process of manufacture which is the only way that excellence of colouring and workmanship can be guaranteed. In this way, Maple and Co. save Turkey Carpet buyers at least two intermediate profits.

MAPLE and CO.—PARQUETERIE

MAPLE and CO.—PARQUETERIE FLOORING for Dining, Billiard, or Smoking Rooms, also for Ball-rooms, Public Halls, Vestibules, as well as for surrounds to central carpets. Maple and Co. are now showing all the New Designs and Combinations of Wood at Greatly Reduced Prices.

MONTE CARLO AS A SUMMER RESORT.

For a summer stay Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.

Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fetes &c.

There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.

As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte-Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.

The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages, Safety Brakes, and Gaze's Offices.

THE HIGHLANDS OF BRAZIL SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing, 2200 ft. above sea-level, just within the Southern Temperate Zone; good summer Invalid by the advance of the seasons. English society, English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. to 12s. per diem. Circular, with further particulars, from CHARLES WILLIAM JONES, Esq., 39, Drury-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

CRUISE TO THE MEDITERRANEAN, visiting Portugal, Spain, The Riviera, Italy, &c. The steam-yacht VICTORIA, 1,864 tons register, 1,500-horse power, R. D. LUNHAM, Commander, sails from Tilbury Dock Oct. 15 for six weeks' cruise. The VICTORIA is always on view between her cruises, has the Electric Light, bells, and all modern improvements. Apply MANAGER, Steam-Yacht Victoria Office, Carlton-chambers, 4, Regent-st., London, S.W.

MALVERN IMPERIAL HOTEL. — The Largest Hotel in the district. Excellent situation. Replete with every comfort for families. Private sitting-rooms. Splendid views of the Malvern Range. Special Droitwich Brine Baths. Baths of every description. Moderate charges. Manager, S. HOLROYD.

ACCIDENTS all the Year Round.—Provide against them by Policy of the RAILWAY PASSENGERS' ASSURANCE COMPANY, Hon. Evelyn Ashley, Chairman. Annual Income, £340,000. Invested Capital and Reserve Fund, £775,000. Compensation paid for 126,000 Accidents, £2,500,000. Moderate Premiums, new concessions. Prompt and Liberal Settlement of Claims. West-End Office: 8, Grand Hotel Buildings, W.C. Head Office, 64, Cornhill, E.C.—WILLIAM J. VIAN, Sec.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

GOLDEN HAIR.—Robare's AUREOLINE produces the beautiful golden colour so much admired, Warranted perfectly harmless. Price 5s. 6d. and 10s. 6d., of all principal Perfumers and Chemists throughout the world. Agents, R. HOVENDEN and SONS, 31 and 32, Berners-st., W.

OBITUARY.

LORD ALFRED PAGET.

General Lord Alfred Henry Paget, Equerry and Clerk-Marshal of the Royal Household, whose death is just announced, was born June 21, 1816, the second son of Field-Marshal Henry William, Marquis of Anglesey, K.G., by Charlotte, his second wife, daughter of Charles, first Earl Cadogan. He was educated at Westminster, and entered the Royal Horse Guards in 1832. In 1881 he attained the rank of General. In 1846 he was appointed Chief Equerry and Clerk-Marshal; and from 1837 to 1865 sat in Parliament for Lichfield. He married, in 1847, Cecilia, daughter of Mr. George Thomas Wyndham, of Cromer Hall, Norfolk, and leaves issue.

LORD CONYERS.

The Right Hon. Sackville George Lane Fox, Baron Conyers of Conyers in the Peerage of England, died at St. Clare, Walmer, on Aug. 24. He was born Sept. 14, 1827, the eldest son of Mr. Sackville Walter Lane Fox, M.P., by Lady Charlotte Mary Anne, Georgiana Osborne, his wife, daughter of George William Frederick, sixth Duke of Leeds and Baron Conyers; and he succeeded his maternal uncle, the seventh Duke of Leeds, as twelfth Lord Conyers, May 4, 1859. He entered the Army in 1854, and served at the siege of Sebastopol (medal and clasp). He married, Aug. 14, 1850, Mary, eldest daughter of Mr. Reginald Curteis, of Windmill-hill, Sussex, and had one son, who died at the age of eighteen, and two daughters, Marcia Amelia Mary, Countess of Yarborough, and Violet Ada Evelyne, between whom the barony of Conyers now falls into abeyance. It is one of the old baronies by writ, heritable by heirs male or female.

SIR JOHN ROSE, BART.

The Right Hon. Sir John Rose, Bart., of Montreal, G.C.M.G., Receiver-General of the Duchy of Cornwall, died suddenly, deer-stalking, at Langwell, in Caithness-shire. He was one of the most distinguished men who won their way in the Colonies. He was born Aug. 2, 1820; called to the Bar, in Canada, in 1842; became Q.C. in 1851; Solicitor-General in 1859; Minister of Public Works in 1860; and Minister of Finance in 1867. In acknowledgment of his public services he was created a Baronet Sept. 9, 1872, made G.C.M.G. in 1878, and sworn of the Privy Council in 1886. Sir John married, first, July 3, 1843, Charlotte, daughter of Robert Emmett Temple, Esq., of Rutland, United States; and secondly, Jan. 24, 1887, Julia, Marchioness of Tweeddale. By the former (who died Dec. 3, 1883) he leaves three sons and two daughters. The eldest son is now Sir William Rose Rose, second Baronet, of Montreal.

THE HON. JAMES SQUIRE FARNELL.

The Hon. James Squire Farnell, formerly Premier for New South Wales, whose death is announced from Sydney, was born in 1827, and educated at his native town, Paramatta. In 1860 he sat in Parliament. In 1872 he was appointed Minister of Lands, which office he held until 1875, and in December, 1877, became Premier; but resigned the following December in consequence of the rejection of his Land Bill. At the last election to the Legislative Assembly of New South Wales he was returned for St. Leonards.

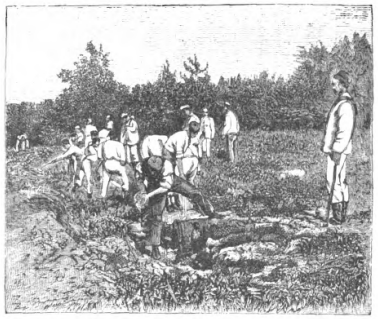
We have also to record the deaths of—

Captain the Hon. Arthur Manners, 15th Hussars, brother and heir presumptive to Lord Manners, at his mother's residence, in Cadogan-square, on Aug. 24, at the age of thirty-four years.

Captain Thomas C. Pullen, at the age of seventy-three years. In recognition of his services with the Arctic Expedition of 1852-3-4 he was specially promoted.

Mr. Philip Henry Gosse, F.R.S., the distinguished zoologist, on Aug. 23, at his residence, St. Mary Church, Torquay, aged seventy-eight.

Lady Henrietta Ogilvy, at Contrexéville, on Aug. 20, was the younger daughter of Thomas William, fourth Earl of Pomfret, a sister of George William, fifth Earl, on whose death, in June, 1867, the title became extinct. She married, Aug. 7, 1856, Colonel Thomas Wedderburn Ogilvy, of Ruthven, Forfarshire.



Anne Pitcairn, Lady Gordon Cumming, of Altyre, in the county of Elgin, on Aug. 19, at Gordonstoun, in her sixty-eighth year. She was daughter of the late Rev. Augustus Campbell, Rector of Liverpool; and was married, Nov. 28, 1845, to Sir Alexander Penrose Gordon Cumming, Bart., who died Sept. 2, 1866. Her Ladyship's eldest son is the present Sir William Gordon Gordon Cumming, Bart.

The Right Rev. Samuel Smith Harris, Bishop of Michigan, at the Langham Hotel, on Aug. 21, aged forty-seven. He had come to England in connection with the Pan-Anglican Conference at Lambeth, and was intending to make a tour of the Holy Land before his return to the United States. He graduated at the Alabama University at the age of eighteen, and, after practising for several years at the American Bar, relinquished his profession and took Orders. He was chosen Bishop at Detroit in 1879.

Margaret Anne, Lady Audley, widow of George Edward Thicknesse Touchet, Baron Audley, of Heleigh Castle, county Stafford, on Aug. 21, at her residence in Gloucester-square. She was Lord Audley's second wife, whom she married in February, 1868, and was widow of Mr. James William Smith. On Lord Audley's death, in April, 1872, the ancient barony fell into abeyance between his two daughters by his first marriage. The Hon. Jane Elizabeth Thicknesse Touchet, eldest and last-surviving daughter of George John, Lord Audley, and sister of the last Lord, died on Aug. 20, aged seventy.

VOLUNTEER ENTRENCHING PRACTICE.

The spade is scarcely less needful than the rifle, as an instrument for infantry troops in modern warfare. The Volunteer entrenching camp near Woking, held during a week or two of August, should be the beginning of similar useful exercises for all Volunteer rifle corps in Great Britain. Its site was at a place called "New Zealand," two miles from the Woking railway-station, in the fir-woods towards Byfleet, near the old Basingstoke Canal. The commandant was Captain Gore Browne, of the 60th Rifles, Adjutant to the Artists' Corps (20th Middlesex Battalion of Volunteers), sixty or seventy of whom came over from Aldershott. Others came from London, who were equally zealous. Lieutenant Carpenter and Lieutenant Woollen were in command under him. The object was instruction in the work of constructing field-works, shelter-pits and trenches, field-kitchens, and other earthworks. Striking camp and re-pitching it were performed with military precision; then they set to work. The rifle-pits were dug twelve or fifteen paces apart. Each was long enough and wide enough for a man to lie down in it. The pit is dug only to a depth of six or eight inches, but the earth taken out is piled up in front to the height of about 2 ft., with a small embrasure in the centre to fire through. Such a rifle-pit is made with pickaxe and spade in a few minutes. They also made permanent rifle-pits, deep enough for a man to stand upright under cover and with a little seat, made of earth, for him to rest upon. Shelters for officers' horses, with cover above 6 ft. high, could be made by three

THE VOLUNTEER ENTRENCHING CAMP AT WOKING: A COMPANY OF THE ARTISTS' CORPS THROWING UP A SHELTER-TRENCH.

men in two hours. It is proved that a rifle-bullet, fired at 200 yards' range, will penetrate a newly-made earthwork only to the depth of twelve inches. For the shelter-trench, a line is marked out by a long rope, and the men begin digging along it, throwing up the earth in front; the trench is dug 18 in. deep, and the earth forms a rampart 3 ft. or 4 ft. high, which is beaten with spades to make it firm and give it a regular shape, and the troops fire over the top of it. The earth is also banked up at the corners of the trench, to protect the troops from being enfiladed by an enemy's flanking fire. All this can be done in about half an hour. The trench shown in our Artist's Sketch is about fifty yards long; its construction would be the task of one company, some of the men being employed on guard while the others worked. In the construction of field-kitchens, the experience of several members of the corps, who are architects, seemed to be of service. A field-kitchen is a sort of covered trench, perhaps a foot wide, serving as a rude oven, with flues to heat it, in which bread and rations of meat can be baked. The operation of erecting the shelter-trench, more especially, was witnessed with great interest by a crowd of spectators. The troops, having arrived on the ground, were formed into covering and working parties. The former had to reply to the fire of the enemy, while the latter grounded their arms and used their entrenching tools. On the instant after completing their work, they took up their arms, manned the trench, and opened fire on the enemy, who was represented by a small detached party. Successive rushes were made to assault the earthwork, which was finally captured. The Volunteers in this camp of instruction also daily practised the duties of guards and sentries, and all that is expected of soldiers on active service.

DR. DE JONGH'S
KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM
KNIGHT OF THE LEGION OF HONOUR
LIGHT-BROWN COD LIVER OIL

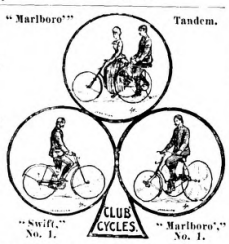
Incontestably proved by Thirty Years' Medical Experience to be
THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS
IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Dr. PROSSER JAMES,
Lecturer on Materia Medica, London Hospital.
"DR. DE JONGH'S Oil contains the whole of the active ingredients of the remedy, and is easily digested. Hence its value, not only in Diseases of the Throat and Lungs, but in a great number of cases to which the Profession is extending its use."

JOSEPH J. POPE, Esq., M.R.C.S.,
Late Staff-Surgeon, Army, India.
"The value of 'hydro-carbons' in all debilitated states of the system is now becoming thoroughly recognised. DR. DE JONGH'S Oil places in everyone's reach a reliable and valuable remedy."

Dr. THOMAS NEDLEY,
Physician to the Lord Lieutenant of Ireland.
"The most uniformly pure, the most palatable, and the most easily retained by the stomach, is DR. DE JONGH'S Light-Brown Oil. I have habitually prescribed it in cases of Pulmonary Consumption, with very beneficial results."



LENNOX BROWNE, Esq., F.R.C.S.E.,
Senior Surgeon, Central London Throat Hospital.
"The action of DR. DE JONGH'S Oil has proved, in my own experience, particularly valuable in many cases of Weakness of the Singing and Speaking Voice, dependent on Bronchial or Laryngeal Irritation."

OUR NOTE BOOK.

BY JAMES PAYN.

For finding out the truth of matters by "frying" or "boiling down," the Americans, notwithstanding their passion for "gas," are generally to be depended upon. The question of whether young gentlemen who distinguish themselves in athletics make good scholars or otherwise has long been a debated one. In England it is the fashion to associate intelligence with muscle, though a few people are violent partisans of the contrary theory. From the calculations recently made from the educational and sporting data at Cornell University, it would seem that the athletes have their fair share of honours, considering that they do not devote so much of their time to study as the others, but very rarely distinguish themselves. This is pretty much what common-sense would have expected. If the inquiry, however, had gone beyond mere scholarship, and concerned itself with other intellectual powers than that of acquisition, I cannot think that the disciples of baseball and "the track" would have made so respectable a record. I would back, for keenness, the professors of what Mr. Caudle called "the manly and athletic game of cribbage" against those who indulge in the more "violent delights" of football; outdoor games, too, are sometimes a source of weakness, which cannot be said (except in a moral sense) of billiards and cockymaroo. Lawn-tennis produces the "tennis arm"; while whist (with the rare exception of the whist "leg") has nothing deleterious of that kind; the "game hand" which you occasionally get at it does you, on the contrary, a great deal of good.

The poet who tells us that "the daw is not reckoned a religious bird because he keeps 'caw-cawing' from the steeple," would have altered his opinion had he been at Monkton Church the other Sunday. The clergyman appears to have been "assisted" (as it is called in the marriage advertisements) throughout the service by a jackdaw, though, of course, he wore no surplice. If the bird had confined itself to this, and to "taking a lively part in the responses," it would have earned nothing but commendation; but, like a certain Royal Duke of the last generation, who used to answer "By all means" when the minister said "Let us pray," it was a little too loquacious, and even upon matters outside the rubric. The whole congregation were inwardly convulsed, and would have perished, martyrs to apoplexy and their sense of propriety, but for the breaking out of the children, which relieved them. Then the juveniles were sent away, and the clergyman proceeded with an audience of adults only. The jackdaw, however, excited by its triumph, "perched upon the reading-desk," and made its own commentary upon the discourse delivered from the pulpit; and when dislodged by the churchwardens and other officials flew up to the rafters, from which commanding elevation his eloquence finally silenced that of his theological rival. I should like to have been present, to have set a good example of silence and solemnity; but to persons given to mirth, the circumstance must have been certainly rather trying. A hundred years ago that delightful bird would have been taken for the foul fiend in feathers.

Why is it, I wonder, that there is always a temptation to laugh at any incident with the least humour in it on the most solemn occasions? Why do jokes, which in print read rather feeble, when uttered in the House of Commons move that august assembly to "roars of laughter"? Why are the law courts "convulsed" by very small witticisms, even though they do not proceed from the Judge? I should be sorry to think so ill of human nature as to believe it arises from mere "cussedness." Perhaps it is that the sense of humour, too long repressed by pretentious surroundings and an atmosphere of twaddle or tedium, unconsciously swells and swells within us, and at the least opportunity explodes in what seems uncalled-for mirth. The greatest man I ever knew, and one of the most tender-hearted, once confessed to me that his well-known disinclination to attend funerals arose chiefly from the difficulty he experienced in keeping his countenance.

Of all nations we English are held (by other nations) to be the most "eccentric," and especially for the way in which we leave our money: when we have no money (a Frenchman tells us) we often leave ourselves "for the benefit of science," as a *pièce de résistance* for the dissecting table, or even "to enrich the land by top dressing." It seems, however, that even a Frenchman may be now and then a little unconventional in his way of disposing of himself. A Parisian cabman committed suicide the other day, leaving his body to benefit not his paternal acres, but the Jardin des Plantes. "I desire," said the testator, "to be cut into slices, to regale the lions, tigers, and bears." Why he should have confined his generosity to those three classes of animals is not apparent. In the records of our Doctor's Commons there is certainly nothing to be found more "eccentric" than this: nor has any one ever earned a free admission for his family to the Zoological Society's Gardens by providing for its tenants in a like manner. Englishmen are very apt to "go to the dogs"; but it only happens during their lifetime.

I have read a good many strange wills made by my countrymen, and almost all of them are mixtures (in the proportion of about ninety-nine to one) of egotism and benevolence. One of the most curious is that of Mr. Tuke, of Wath, near Rotherham (a place of whose existence an English Judge the other day professed himself ignorant, but which it seems was pretty well known in 1810; perhaps it has been since encroached upon and obliterated by the sea). Mr. Tuke bequeathed one penny to every child (there were 700 of them) who should come to his funeral; a guinea to seven navigators for "puddling him up in his grave"; and the same sum to an old lady who for eleven years had "tucked him up in his bed"; to his natural daughter four guineas a year; and forty dozen penny loaves to be "thrown from the church leads at twelve o'clock on Christmas day for ever." I don't know whether this last "provision" is still carried out; but, if so, it must cause considerable (and prolonged) alarm to the passing stranger.

The demise of M. Mollard, "Introducer of Ambassadors," is announced from Paris. It seems at first sight rather an exceptional occupation, like that of the young gentleman who "blacked glasses for eclipses," and not likely to take up much of one's time; but the French are always having new Governments to which new Ambassadors are accredited. Moreover, when not taking Plenipotentiaries by the hand, M. Mollard "taught Court etiquette," and numbered among his pupils no less than 1250 Ministers of State. It seems no wonder—since the more frequent were the changes the better were his fees—that this head of the Turveydrop family "often alluded smilingly to the instability of French affairs."

A New York paper announces the discovery of a new wonder in the memory "department"—a lady who attends chapel, and, without taking a single note, goes home and writes down every word of her minister's discourse without omitting a "the" or an "and." This seems to me to be a little rough upon her minister, especially if he is an extempore divine; but she does not mean it roughly. She has been at it for five-and-twenty years, and written out two thousand of his sermons. Now and then she binds them, and has presented him altogether with forty volumes. When he "drops into" Greek, Latin, and Hebrew, she even follows him, having studied those languages, no doubt, for that especial purpose. The alligator (I think) is said to be accompanied by a little bird who devotes itself to him, in a somewhat similar fashion; but, with that exception, it is only popular preachers who are favoured with such faithful and constant admirers. The poor layman may "lecture" for a week, and even his own children (to judge by their conduct) don't remember a word he says.

The pitcher that goes often to the well gets broken at last, and the professional aeronaut, no matter how many or successful be his ascents, generally meets the fate which has been always prophesied for him. Thus it has happened to that "popular favourite," Mr. Simmons; but to such a veteran, it is probable that, of late years at all events, the apprehension of such a catastrophe never entered his mind. After hundreds of expeditions into "the viewless fields of air" they must be as familiar as any other fields, and less dangerous, because there are no bulls in them: and no doubt to some people this mode of travel has an immense attraction. The motion is delightful, and the passage through the "lucent hyaline" intensely exhilarating. I once knew a man, rather "of the earth, earthy" as to his character in other respects, who never omitted an opportunity of tasting this ethereal pleasure. As a boy, he saved his pocket-money for months till he had scraped five pounds together to go up with Mr. Green, by night, from Cremorne Gardens. He had persuaded two other friends—Jones and Brown—older than himself, to accompany him, of whom he used to tell the following story. Though Jones had screwed up his courage to the sticking-place so far as to get into the car, the sight of the huge balloon swinging and billowing above him, and the thought that "it might knock against the moon or something" (as my friend contemptuously expressed it), were too much for him, and just at the last moment he slipped down one of the retaining cords, and rushed into the refreshment-room with "For Heaven's sake, a glass of brandy!" "You shall have it directly, Sir," said the young lady at the bar; "but here is another young gentleman who wants one quite as much as you do." This was Brown, on whom the same apprehensions had been operating, and who had made his escape in precisely the same manner.

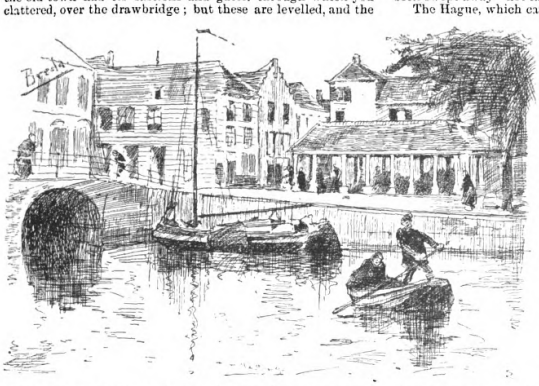
When I read amusing letters in print, I have always some doubt of their authenticity, amusing letters in manuscript being so very rare; and this gives me some suspicion of the correspondence Mr. Baldwin (the parachuter) has given to the world, through the *Pall Mall Gazette*, from the young people who have expressed their willingness to go up with him, and (especially) to come down with him, to share his feat and to sit on his shoulders. Can there really be so many young people, as he describes, willing thus to risk their necks, even for a consideration? To do them justice, they are all practical enough, and some of them a little grasping. "I will do the same as you do," writes one, "for your £200." The pleasure of taking this enterprising youth upon his back, as the eagle accommodated Ganymede, being, he thinks, one that will recoup the Professor for doing his own work for nothing. Another writes, "If you are not suited with a boy, I should like to drop with you for a £1000. Please send money for fare to Palace." Whatever may be his shortcomings as an acrobat, no one can excuse *that* youth of not opening his mouth wide enough. It must be confessed that there is something that smacks of true boy nature in both these epistles. But almost all the rest, except those from the fair sex ("I should think it a great honour to be allowed the pleasure of appearing with you. I am a young lady; my weight is 7 st. 5 lb., which is not much," &c.), suggest dictation. "If I fall, will you let my mother have the money?" would be a beautiful filial touch, if it were genuine; but it seems to me to bear the impress of the maternal mind. Again, "The sum offered would clear my father of several debts, and start us again," is scarcely a juvenile piece of composition; it was probably written "under pressure," to the accompaniment of the whistle of a horse-whip. One gentleman, indeed, makes no pretence of his son's offer being a voluntary one. "It having come to my knowledge that you would like a little boy to ascend with you into the air, and having every confidence in you, I would trust my son with you; his age is nine, and his courage good." *That* sounds perfectly genuine; and, indeed, since nothing is more common than "dropping children" merely to get rid of them, there is nothing surprising in offers to "drop" them for £200, or even less.

There is much discussion just now as to whether various eminent persons speak or do not speak provincially; even when they do, it seems to me to matter little, though unhappily, thanks to a growing deafness and the absence of the bump of "language," I find a greater difficulty in understanding them than most people. But why should authors who are acquainted with ordinary English persist in *writing* in a provincial dialect? It is not helped out, like speech, with gesture and expression, and, therefore, puzzles one far more; and though, no doubt, it gives a local colouring to a story, its readers, unless they are a local public, are more or less colour-blind. If novelists must do this, let them put their dialect in the notes, as translations from the dead languages used to be put, "for the convenience of country gentlemen and others." What would be said of an author born within the sound of Bow Bells who, because he was writing of Londoners, should put v's for w's, and leave out his h's? I have also noticed this peculiarity in dialect stories: that all the people who come from the place the author would describe by this means protest that he knows nothing about the tongue in question. As it doesn't please *them*, and certainly fails in pleasing anybody else, why on earth does he do it? It is curious, by-the-by, that the phrase, "talking through the nose"—a habit attributed by an American humourist to the English—should be applied to a nasal pronunciation; this is so far from being the case that the sound, or an admirable imitation of it, is caused by closing the nose.

THE PLAYHOUSES.

"Advance, Australia!" Mr. C. Haddon Chambers, the extremely young-looking dramatist from Sydney, New South Wales, has, almost at a bound, firmly placed his feet considerably higher up the ladder of fame than the first rung. For the immediate success of his new and effective four-act play of "Captain Swift," Mr. Chambers is undeniably much indebted to Mr. H. Beerbohm Tree, who cast the drama very strongly at the trial matinée in June, and reassumed the title-rôle when the piece served for the opening of the regular autumn season of the Haymarket on Saturday evening, the First of September.

The triumph of "Captain Swift" (somewhat pruned and altered by the author) was never once in doubt on the night of the revival. Mr. Henry Irving and Miss Marion Terry, Mr. John Hare, and Mr. Fernandez were among the most interested members of the audience. Adequate rehearsal had made Mr. Tree's company perfect in their parts. The result was a performance of exemplary force and smoothness. Romantic as the extraordinary story was, the naturalness of the acting gave probability to the plot. It may be remembered that the cleanly-cut central character is that of Mr. Wilding, a young and handsome adventurer, who, as Captain Swift, had been the terror of Queensland, but who is, nevertheless, discovered in the first act quite at his ease, and addressing with the composure of one to the manner born a group of ladies and gentlemen in a London drawing-room. Wilding has made the acquaintance of venerable Mr. Seabrook by fearlessly stopping his runaway cab-horse; and through this chance rescue is introduced by the old gentleman to his home circle. The cool, collected, and polished bushranger becomes strengthened in his desire to bury his nefarious past, and to lead an honest life by the love that springs up in his breast for Stella Darbisher, Mr. Seabrook's niece and ward, whose heart is speedily won by Wilding. But there are grave obstacles to their marriage. In the first place, Mrs. Seabrook recognises Wilding as her son by her first love, and beseeches him not to destroy the happiness of doting Mr. Seabrook by revealing the sad secret of her life. In the next place, Mr. Gardiner, a good-natured colonial visitor to Mr. Seabrook's country seat, lets Wilding plainly know that he is aware he is no other than the noted bushranger, with whom he had had a hostile encounter, but did not regard with utter aversion because Captain Swift had spared his life. As Mr. Gardiner happens to be a suitor for the hand of Mr. Seabrook's daughter Mabel, the odds are, obviously, that in real life he would have felt it his duty to expose the character of Wilding to his host. But what would then become of the drama? Without specifying the anomalies that remain in "Captain Swift," one finds it pleasant to dwell upon the good points. Mr. Tree, if a shade too calm for an outlaw who has "roughed it" in the bush, puts much life and character into his remarkably skilful impersonation of Wilding. Infinitely moving is the situation in which he learns from his mother's lips the secret of his birth, and consents to abandon his love, and to quit the house in which he had for the first time in his life caught a glimpse of home rest and comfort and happiness. Lady Monckton is supremely artistic also in this trying and pathetic scene, which wins for the crushed outcast the sympathies of all. Wilding is stunned by the blow. It is as one in a dream he seeks shelter in Mr. Gardiner's rooms in London—only to shoot himself, to save his mother's secret from being divulged. Captain Swift is undoubtedly one of Mr. Tree's finest creations. It is well matched by Lady Monckton's Mrs. Seabrook, and by Mr. Macklin's manly and unexaggerated embodiment of Mr. Gardiner. Another strong bit of character is the revengeful Marshall of Mr. Brookfield. Excellent also in their way are Miss Rose Leclercq as the hard-hearted sister of Mrs. Seabrook, Lady Staunton; Mrs. Tree as charmingly sweet Stella; Mr. Kemble as Mr. Seabrook; Miss Angela Gudmore as Mabel; Mr. Fuller Mellish as Harry Seabrook, Wilding's rival and half-brother; and Mr. Charles Allan as the Queensland detective. The town and country scenes painted by Mr. Walter Johnstone are of the elaborate nature to which the enterprise of modern management has accustomed us. Perhaps the greatest surprise of all was when a beardless and slender young man, apparently little more than a youth, but really about thirty, bowed his acknowledgements before the curtain in response to the deservedly cordial calls of "Author! author!"



M. Lecocq's comic opera of "Pepita" (to call it by the name of Mr. Mostyn Tedde's English version) is neither musically nor dramatically to be compared with the same composer's famous "Fille de Madame Angot." But the audience that filled Toole's Theatre on the Thirtieth of August evidently found pleasure in the tuneful numbers of "Pepita," and diversion in the light story of the sprightly Princess Inez of the Canary Isles, who through the clever scheming of her friend Pepita gains the throne. Gifted with a mellow voice and prepossessing appearance, Miss Wadman was the life and soul of the opera as Pepita. Miss Kate Cutler as Inez was similarly attractive. Their boorish husbands found capable representatives in Mr. H. Lingard and Mr. L. Kelleher. The most comical feature of all was the duet "My excellent friend, Bombardos," by Mr. Frank Seymour and Mr. W. Marnock. But it was Miss Wadman who carried off the chief honours. The favourable reception of "Pepita" was cheerily acknowledged by Mr. Auguste Van Biene.

MY LITTLE DUTCH TOUR.

A WEEK or two ago, in company with a cheery friend, I made a hurried progress through the less known cities of Holland, leaving out the more familiar Amsterdam and Rotterdam; and now, at the risk of crying out in the wilderness, would heartily recommend this most piquant country to the *blasé* tourist in search of a new sensation. The great vessels of the Dutch company which ply between Queenborough and Flushing are as large and comfortable as the Holyhead boats, have the electric light, are fast-steaming, well-found, and, above all, steady. Aboard one of these—the Prince Henry—we reached Flushing on a bright, sultry morning; a quaint, bright, and even gay little port, with fortifications, quays, Noah's-ark trees, and jangling carillons, and all the Dutch apparatus complete, producing much the effect of Boulogne on the genuine Briton who has never before seen France. Unluckily the vessels do not approach the town, but arrive at a brand-new port of their own a mile off; but it is well worth staying an hour or so to see Flushing.

A few miles further on, we came to a rather slumbering old town—Middelburgh—all red and white houses and rubicund tiles. From the centre rises a couple of those significant spires, bulbous and elegant, which betoken in Flemish countries the townhall and church, whence sounds the usual melodious jangle, faint and silvery—wheezy efforts at a tune. Wandering up the bright street we emerge on the spacious Place, to be astounded by the Townhall, famous all the world over: an elegant and surprising work, richly decorated, and delightfully irregular, with its one elaborate gable or wing, high roof, and rows of statues in their niches. A few years ago the old town had its bastions and gates, through which you clattered, over the drawbridge; but these are levelled, and the

space they cumbered is laid out in charming gardens and parklets, across which the fine air from the low-lying fields and plains is wafted. Here we meet the regular floors of the pictures, with the brimless hats, and of rather piratical aspect, their collars secured with wrought gold clasps, while the flowing laced caps of the women are resplendent with golden shells. But the whole seems perfectly dead—dead as any doornail, and the grass grows in the streets.

An hour or so brought us to Breda, a place known to few except perhaps by Corporal Trim's military recollections. There is quite a scenic air about this antique town; the Cathedral has an elegant openwork tower, light and airy, and built, like so many in this country, of a white brick. All these Flemish towers seem to be the expression of the town itself. It is unfortunate that there should exist a perfect mania for destroying the old gateways, always picturesque, and here none are left. Like their Flemish neighbours, the Dutch have taken heartily to the tramway, which adds a decidedly picturesque element. The smallest, meanest town is thus equipped; a light car drawn by a comfortable, well-looking, well-fattened white horse, ambles lazily through the narrowest and most tortuous streets: while a hoarsely clanging sort of bell is ceaselessly rung by the driver as he goes.

Further on we were set down at Bois-le-Duc—or "Bosch," as it is familiarly called by the natives—a sleepy, but opulent, place; spacious, too, with abundant canals, and a perfect air of contented old fashion. Here is a large, spreading market-place, delightfully irregular in shape, large enough for a regiment to manœuvre in, with blocks of houses intruding at corners, and an entire perfect chrysolite of a cathedral, exquisite in its originality and lace-work details. It is almost bewildering in its profuse buttresses, low cloisters, and other buildings incrusted on to it. But it seems to be all crumbling away—pinnacles and arches and balustrades have disappeared here and there; but restoration on a vast and thorough scale is being carried out, and in judicious fashion. Within, it is a miracle of lightness and elegance; the lofty lantern, with its tall Gothic lights, is unsurpassed. And *such* an organ!—a perfect building, rising in storeys and clusters of pipes, like the stern of some vast antique Spanish argosy, and filling the whole end of the nave, almost from floor to roof. Here was once a magnificent Renaissance screen of black and coloured marbles, with statues and arches, which the restorers cleared away and sold, and which the curious can see now in South Kensington Museum. Here, too, in plain contrast, is the Stadhuis, an unpretending building in the more classical Spanish taste: a reminder of the old conquest and occupation to be found in many of the old towns, as at Brussels, and not inharmonious, adding richness and an air of haughty state.

But the *bonne bouche* of the day was the old town of Nimeguen, or Nymwegen. Here the country grows hilly, and is richly wooded; indeed, a Dutchman frankly confessed it was the only elevated portion of their country, and was, therefore, much *recherché*. Surely one of the most original and *rococo* towns a traveller could desire. At every corner there is something strange or piquant; and with all this thoroughly antique look, there is an air of modern prosperity, bustle, and motion. In the great Place every house is quaint and queer, and of delightfully straggling shape. There is a really exquisite Stadhuis of red brick, newly restored, with its double flight of steps to a gallery of entrance on the lofty first storey. The windows down to the ground are fenced with formidable *grilles*, a Spanish addition, and found occasionally in other towns. Close by is the old weigh-house, piquant and picturesque. In Holland these weigh-houses have a character of their own. Overhanging the Place is the huge and ponderous, but elegant, belfry of the cathedral, to reach whose "close" we pass through an antique double-arched mansion, old as the fifteenth century. Here is a strange, forlorn inclosure, surrounded by some marvellous buildings. One of these, called the "Latin School," is quite extraordinary for its delicate brickwork, its row of niches for statues, many of which are gone or mouldered away. The whole is in a sad state of squalor and dilapidation. The tower is one of those amazing mountains of solid brick which overpower the spectator, and seem to be the effort of Nature rather than of man. To anyone seeking a fillip for his jaded or torpid faculties, I would say, "Go to Nimeguen or Nymwegen;" in fact, as I once heard an Irish friend put it, "I heartily give my *Vetto* for Nywegen!"

Arnheim, the next halting-place, is better known to the traveller, and is a flourishing place enough, where our Dutchmen love to spend their *villegiatura*. But there is little for the lover of antiquity.

Next came Utrecht, a place fairly well known, but hardly appreciated as it deserves. What a bright Dutch gaiety and spaciousness it has! Gay streets and abundance of gay canals, with alleys of fine old trees, huge barges, and the rest. The belfry is itself worth a long journey to see: a vast, overpowering structure, solid and square, pierced by an enormous arch which forms a sort of entry to the town, while at the top it takes the shape of an elegant hexagonal stone tower, lined with rows and rows of bells, which pursue their melodious labours unceasingly. There is one view in Utrecht which cannot be surpassed for picturesque effect—that from the Fish Market, looking up the canal; where animation, colour, and the irregular houses rising from the water, the trees and barges, and the huge tower forming the end of the vista, form as astounding a vista as one of Prout's water-colour scenes. Let no one think the old fashion of things has been swept away—not in Holland, at least.

The Hague, which came next, is more in the professional tourist's way, and is too pretentious and modern to please the antiquary. The Public Gallery of Pictures is, however, a model for its small size: the quality of the pictures, and their excellent disposition in a good, sound, old Spanish mansion. The guardians display their orange ribbons of office; and they have an obliging custom, which might be imitated elsewhere, of not "clearing out" the visitors when the hour for closing arrives, though no one is then admitted.

Next was a pleasant contrast, in the shape of an antique dreamy, perhaps dozing, university city—Leyden. This place is perfectly charming for its tone of general repose, variety of retired streets, shaded canals, and quaint bridges. The long, winding main street has somewhat the air of Oxford—an impression quickened by the handsome modern club, or students' "societat," in front of which are seated a number of lively youths, who, in dress and air, could not be distinguished from English lads. Further up is the elegant Renaissance Stadhuis, with its graceful double-stair and truly quaint belfry behind. It is difficult to give an idea of the "bits" and corners which adorn this pleasing old town. The canals are everywhere, and disposed like streets; but they are narrow and shaded by fine old trees, and one is crossed by a curious covered bridge. Portions recall the tranquillity of Tunbridge Wells. In this sleepy town, the accommodating tram-car sets you down at the door and sign of the "Golden Lion": it is a true old house, with a floridly carved stair and old-fashioned ways enough. Nor are costumes and contrasts of colour wanting. The Catholic priests have a quaint, old-fashioned dress, the most genuinely "Dutch" thing "out." See yon pair, just passing by; walking so gravely arrayed in *very* low-crowned Quakerish hats, full-bottomed coats, canes with ivory tops, breeches, and buckles—wonderfully old-fashioned figures. The Protestant clergy wear what seems to be the old Geneva gown, though rather suggesting an Inverness cape. The women still cling to their singular picturesque head-dress, though they often combine it with the modern fashion, as

when they put a bonnet on top of the old lace-cap and golden "blinkers." The army has much developed of late years; the officers are smart, well set-up men, in handsome, well-fitting uniforms, a little burly, it may be, but soldierlike. Some have orange sashes, and from their shako white cords are festooned across the chest, to be gathered up on the left shoulder with a rosette and tassels. The police wear glazed leathern helmets bound with white metal and a loose cloak. Everywhere is to be met a cordial good nature and civility which is almost English.

Next, on to Delft, where the new and pleasing station is built in the old-fashioned style with a spire, or lantern, and is garnished appropriately with Delft tiles. Here we see the old patterns again: pastoral canals, drawbridges, old East India Company's offices, and a fine Place with a charming Spanish Stadhuis accurately proportioned to the size of the town. There is a noble, dignified statue of Grotius in the centre, and one solitary "poort," or gate, has been left standing. There is, however, little to see; and it should be noted that the travelling sight-seer will find most of the Dutch towns can be disposed of in a couple of hours, a longer stay leading only to tedium and weariness.

We wound up with Dort, or Dordrecht, a "poorish," dis-appointing place, antique enough, but having little "distinction"—mean streets, decayed houses, and a squalid townhall built within living memory—a shabby thing with a Greek portico. A sort of Kermess was going on, which seems to amount to no more than numbers of huge, strident, grinding organs, with merry-go-rounds, and the manufacture of gauffres in glittering palaces. On the walls I read: "Het Mikado, één dag im Titipu. Japonsche Komike Opera van W. S. Gilbert, &c."

Having thus rediscovered a portion of Holland, and, for the hundredth time, I came away and came home. Let the curious amateur accept what may be termed this "straight tip in towns," and put his money on Bois-le-Duc and Nymwegen, and he will be grateful to the present much gratified traveller,

PERCY FITZGERALD.

MARRIAGE OF THE DUKE D'AOSTA.

It is well known that the Roman Catholic Church, if it claims authority to forbid certain marriages as sinful, does not scruple to allow them in the case of personages of high rank; and the union of a niece with her uncle, which is abhorrent to the natural feeling of Protestants, can be made legitimate by a Papal dispensation from canonical laws. So the Pope, at the request of the Empress Eugénie, widow of Napoleon III., but probably not in order to please the King of Italy, who occupies his former sovereignty in Rome, has consented to sanction the wedding, on Sept. 11, of Princess Letitia Bonaparte to her uncle, the Duke d'Aosta. His Royal Highness, brother to King Humbert of Italy, and son of the late King Victor Emmanuel, is forty-three years of age. He was elected King of Spain in December, 1870, and was deposed in February, 1873. His first wife, Princess Marie of Pozzo della Cisterna, died in November, 1876. His sister, Princess Clotilde, married Prince Napoleon Bonaparte, cousin to the late Emperor Napoleon III., in January, 1859, and has three children, one of whom, Prince Victor Napoleon, born in 1862, claims to be heir to the French Empire, while the youngest, Princess Letitia, born Dec. 20, 1866, is now the bride of her own uncle, and becomes the Duchess D'Aosta.

THE WILLOUGHBY MEMORIAL, DELHI.

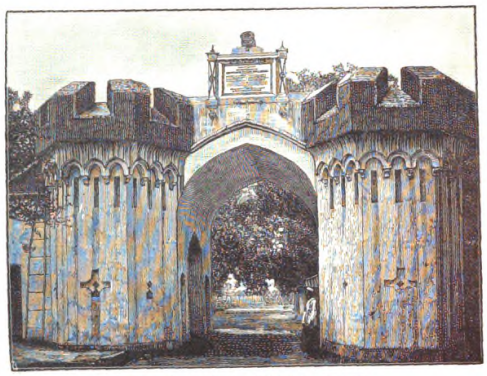
One of the memorable incidents of the Indian Mutiny War of 1857 was the heroic action of Lieutenant George Willoughby, of the Ordnance Commissariat Department, when the rebels gained possession of Delhi. This young officer, with Lieutenants Forrest and Raynor, of the Bengal Artillery, and six European conductors and sergeants of artillery, was in charge of the great magazine of ammunition, near the palace. When these nine, after the natives had mutinied, could no longer withstand the assault of the enemy, Willoughby ordered the magazine to be blown up. Only two of the nine, Raynor and Buckley, escaped alive. Willoughby's grave, if any, being unknown, it was proposed to raise a memorial to him and his comrades on the scene of their noble exploit. Lately, when Lieutenant-Colonel R. Parry Nisbet, C.I.E., was Commissioner of the Delhi Division, he asked the permission of the Government to erect, at his own expense, the memorial to his kinsman Willoughby. It was determined, however, that the cost should be borne by the Government of India. The memorial, the design of which is appropriate and tasteful, was furnished by Mr. H. A. S. Fenner, M.I.C.E., Superintending Engineer, Punjaub. The scroll work of laurels above, the broken lances wreathed with bays on each side, and the dismounted and spiked gun below, betoken that all was lost but honour and duty.

THE STOCKPORT TECHNICAL SCHOOL.

The Lord Mayor of London visited the town of Stockport, near Manchester, on Sept. 8, to assist the committee of the newly-formed Technical School and the Mayor of Stockport, Alderman Joseph Leigh, by performing the ceremony of laying the foundation-stone of the building. The architectural design of this building is represented in our Illustration. The Stockport Technical School, projected last year as a memorial of the Jubilee of the reign of Queen Victoria, is calculated to render great service to the industrial and commercial interests of that large manufacturing town.

JUBILEE ALMSHOUSES AND CHURCH, KENDAL.

The "Sleddall" Victoria Jubilee Almshouses, shown in our Illustration, are very neat and well-constructed buildings for the aged poor of Kendal. The munificent donor, Mr. John Sleddall, left last year the sum of nearly £30,000 exclusively for charitable purposes to the town of Kendal, and about one half that sum has been spent on the almshouses and endowment. There are twelve houses, each intended for man and wife, with an allowance of 12s. 6d. per week. The ancestry of the late Mr. Sleddall is one of the oldest in Westmorland; he was born near Kendal, and for generations the Sleddall family have lived in and around the neighbourhood of the town, one of his ancestors being the first Mayor of the ancient borough, 280 years ago. Mr. Eli Cox, of Kendal, the architect, wrote to her Majesty, through the Home Secretary, asking her gracious permission to associate her name with the buildings. This was granted, the donor having expressed a wish to the architect before he died that he would like her to do so. His death took place immediately after the foundation-stone was laid, in the early part of the Jubilee year.



The Commander-in-Chief has ordered the formation of twelve additional brigades of Volunteers for home defence.

THE NEW FORT AT EL WEDJ.

THE GATEWAY OF THE TOWN.

THE TURKISH OCCUPATION OF EL WEDJ, ON THE COAST OF ARABIA.

The eastern coast of the Red Sea, from the Gulf of Akabah and the peninsula of Sinai down to the Strait of Bab-el-Mandeb, comprises the two Arabian provinces, El Hedjaz and Yemen, belonging to the Turkish Empire, which together extend more than thirteen hundred miles along the sea-shore, but their inland boundaries are not certainly defined. El Hedjaz, containing the Mohammedan sacred cities of Mecca and Medina, is a dominion most indispensable to the Sultan of Turkey, in his religious and political character as Caliph of Islam; and the continual resort of pilgrims to those holy shrines from all the Mohammedan nations of Asia, Africa, and Eastern Europe, brings to that part of Arabia considerable yearly traffic, with a certain source of revenue for the Ottoman Government. In other districts, however, the local Arab chieftains, who also call themselves Sultans, maintain a degree of practical independence which has been recognised in treaties with Great Britain, though we believe the sovereignty of the Porte is not formally denied. A portion of the coast, outside the northern boundary of El Hedjaz, towards the Sinai peninsula, was the country of the ancient Midianites, and here is the site of the famous gold-mines lately explored by Captain Burton (Sir Richard Burton), who has described his surveys in an interesting book. The port of El Wedj, on that coast, was recently occupied by a Turkish garrison; and Major Surtees (a Captain of the Coldstream Guards), accompanied by Captain Ahmed Zeki, was sent officially, by the British Government, to visit the place and to report on its present condition. Mr. Cope Whitehouse, the well-known explorer of Egyptian topography and antiquities, also visited El Wedj in company with Major Surtees, and has favoured us with some photographs of the place.

At the meeting of the British Association at Bath, Major Surtees has been invited to give an account of his visit to El Wedj last year. This town, opposite Kosseir, is the main, if not the only, harbour on a long stretch of shoal-defended coast. A fort was begun some years since by the Egyptian Government to protect the port, with the quarantine station, from any sudden descent of the turbulent tribes of the interior. The Illustrations which we publish show that its construction was so bad that the stones of the parapet could be dislodged by hand; and a gun, when trained and fired, cracked the platform on which it rested. But if the interior of this fort is commanded by the hills behind, it has a substantial gateway, and may be a very important acquisition to the Turkish Government. The Porte now garrisons a continuous territory, through Asia Minor and Syria to Aden, with disciplined troops and experienced officers. The Egyptian Government have been relieved of a serious responsibility and a considerable expenditure. El Wedj ceased to be of importance to the Egyptians so soon as it was determined to send the sacred carpet to Mecca by sea. Further inland, however, on the Egyptian pilgrim road to Mecca, there is another fortress of a very different sort. It dates from the solid age of Sultan Selim, and bears an inscription of Ibn-Toulour, which shows that in the ninth century the region was a province or dependency of the Sovereign at Cairo.

The Egypt of the ex-Khedive Ismail not only included the vast tracts of Equatorial Africa, but comprised a strip of territory in Arabia stretching southward from the head of the Gulf of Akabah to the Turkish frontier of Yemen. It was a subject of special attention when, ten years ago, Sir Richard Burton illumined its coral shores and barren hills with the glow of a trained and vivid mind. "Was it indeed," it was asked, "from these weird valleys that those Midianites came up, with all the existing and inevitable accompaniments of Bedouin life, to encamp against the Israelites, in that famous incursion which lives even yet in poetic verse, as well as in the records of Jewish history?" There was glitter as of gold in the hills of Midian. Sulphur mountains frowned above the remains of mining towns, while rock-hewn inscriptions of uncertain antiquity were found near ruins of an undoubted Roman origin. The vision faded. The prophecy that the land would wake from its lethargy was not fulfilled. The territory has been transferred to the Porte. Egypt in Arabia is now confined to the Sinaitic peninsula.

UNDER THE GROUSE MOORS.

"A capital place for a shot!" is the first natural thought of a sportsman as he comes upon this green, bracken-grown nook by the loch-side. And, see! as a footstep approaches the unfrequented spot, half a hundred rabbits, like so many rooted skirmishers, disappear from the open spaces into their burrows among the fern. A hare or two, as well, may be startled here; and sometimes, with a sudden rush of wings, a covey of grouse will take flight for the heather of their native mountain. No wonder, therefore, that the sportsman, keen with the instincts of "the Twelfth," casts an approving glance at these grassy knolls.

"A choice spot for a picture!" exclaims the artist, as his eye takes in the natural features of the neighbourhood. And in the green foreground, with its lonely tree or two, and the darker upland rising away against the sky above, he sees another "Fringe of the Moor"; or, with a storm-swept heaven and a dash of driving rain, the essentials of another Cecil Lawson: while on the other hand, the breezy loch below and the masses of cloud and sunshine sweeping the surrounding mountains, suggest the material for a water-colour in the manner of Sam Bough. And, indeed, here, with the scent of the bog-myrtle from the moors above, and of the wild clover from the dry dyke-top beside him, filling the air—with the warm sunshine ripening the hazel-nuts in the corrie close by, and not a sound to be heard but the music of the loch's clear waters rippling at his feet, a painter might find for a week or two something like the paradise of his art.

"Another instance of the tyranny of landlords!" says the political reformer, who, knowing nothing of the circumstances of the case, catches sight of signs that the harrow has once been at work on the narrow strath, and leaps at once to the conclusion that the spot has been the scene of a depopulation by the proprietor for purposes of sport. And the rush-grown and furze-covered inclosures which once—it is too true!—were fruitful farm-land, offer a fit subject for grave misgivings, though by no means on the conventional lines of the popular land-agitator of to-day. The fields, indeed, which are cropped now only by the wild game of the mountain, once waved green and gold with the growing and ripening corn; and in the farm-house, falling to ruin now among the rowan-trees yonder, many a brood of stout lads and comely lasses has been reared. But it is not because of a landlord's rack-renting or because of a sportsman's eagerness after game that the once-happy home has been left to decay, and the once fruitful soil to become again a wilderness. The cause lies elsewhere. As a matter of fact, the last tenant of the place paid only a nominal rent. His brother was his landlord, and by their father's will the farm here was secured to the younger son for life upon payment of a few shillings of annual rent per acre. His position, therefore, was as favourable as a Highland farmer's well could be. It is to the altered fiscal laws of the country that the desolation here is due. Since the repeal of the tax upon corn it has become more and more impossible to grow grain to profit in the uncertain climate of the hills. The distance from cities is too great for the tenant to find refuge in that final resource of modern farmers—the sending of milk to market. And so, no other means of livelihood upon the soil being apparent, the once green and fertile spot, like many another nook in the land, has been left to return to a state of nature, while the tiller of it and his children have drifted into the seething whirlpool of city life.

No thoughtful wanderer can come upon such a spot without asking himself whether it can be good for a country to be so stripped of its physical strength, knowing as he does that a stalwart yeomanry is the backbone of a nation? Involuntarily he recalls the fate of Rome when the peasantry of Italy had ceased to till the soil, and, crowding into the capital city, depended for their bread upon the corn of Egypt and of Sicily: and he would fain ask whether it may not be possible once more to people these silent places with a hardy and independent race?

It seems vain for many a year to hope for help to this end from Customs legislation. Not until America has ceased to pay for our manufactures with her wheat will it become apparent to the British voter that it is better for him physically to grow his grain than to buy it; and only when the majority of his trades have shared the fate of carpet-weaving, flour-milling, and sugar-refining, will he begin to doubt the wisdom of depending entirely upon his manufactures for bread, and begin to look again to native soil for his support. But already Greenock and Greenwich and Bristol have felt the pinch from the failure of the sugar-industry; ever-increasing mutterings, as of a threatening volcano, come each winter from the seething "East-End"; and it may be well if, before long, that pool of city life be tapped, and the stream by gentle means directed into rural channels.

The growing of grain for sale will not, it is evident, within the near future prove a remunerative occupation in these remoter spots; and, indeed, at no time probably will it be possible to become wealthy upon the produce of these northern glens. But it is well to remember that a nation is not necessarily in the best state of prosperity merely when its pockets appear to be full. Rome was replete with silver and gold when she fell before the barbarian hosts. It would promise better for the country's future, and be immeasurably happier for the people themselves if some of the crowded East-End masses of her cities could be converted into open-air craftsmen and healthy peasants. The choice is not between the chance of wealth in London and in the country, but between the possibilities of robust physical life amid the smoke of Whitechapel and in the clear air of Argyll.

This change is not to be made by the passing of a law to lower arbitrarily the price of land. Such a law has always to be paid for by someone, and generally by those who have least cause to be mulcted. It is to private effort that the country must owe this service, and it lies with the people who have wealth (not necessarily the aristocracy, who are often poor) to find out new means of livelihood in the country, and to help, each man his quota of population, towards the using of such means. If Sir Ivan, for instance, the new owner of this strath, instead of spending his years aimlessly in bringing down pigeons at Hurlingham and grouse on the moors here, were to set himself the task of colonising these loch sides, he might find his reward in the rearing of a stalwart race, and would certainly do the State a valuable service. Why should he not, like the patricians of old Rome, take pride in being patron of a hundred clients, or, like the Highland chiefs, his forerunners, rejoice in the following of a prosperous clan? Many a happy cottage might nestle along these inland shores. There are fish enough in the loch for the catching; and the planting of the hills above with trees, while giving employment to many a labourer, would return in time a handsome profit to the owner. Besides these, many an industry might be borrowed from abroad. Why should Swiss milk and toys be imported from the Alps, cheese and eggs from Holland, and honey from California? All these might be produced in such a spot as this, if people were only brought here and helped to use their hands. Their gardens themselves, of an acre or two, with the fish they could take from the loch, might afford them a living; while some such industry as the oyster-culture, which has proved so immense a success in the basin of Arcachon, might furnish them with the means of obtaining the necessaries they could not produce.

THE LATE MR. W. CHAPPELL.

Humble, of course, the lives of such colonists must be; but fresh air, healthy food, and comfortable shelter are the first essentials to happiness, and these, at least, would be free to dwellers here. However it may be brought about—whether by private effort, by co-operation, or by the delayed, and perhaps disastrous action of natural laws—it is evidently only by recourse to means such as these that the congestion of our city populations can be relieved, and spots like this, between loch and mountain, made once more the home of a healthy and independent race. G. E.-T.

UNDER THE GROUSE MOORS.

THE LATE MR. W. CHAPPELL, F.S.A.

Mr. William Chappell, who died on Aug. 20, at the age of seventy-seven, was during many years the chief managing partner of the old musical firm, Messrs. Chappell and Co., of New Bond-street, established by his father, Mr. Samuel Chappell. In 1840 Mr. William Chappell founded the Musical Antiquarian Society, for which he edited Dowland's songs and a "Collection of English National Airs," giving their pedigrees and anecdotes connected with them, with an essay on "Minstrelsy in England." This was afterwards expanded into his "Popular Music of the Olden Time," published in two volumes, 1855-59. It was under Mr. Thomas Chappell's management that the great extension of Messrs. Chappell's business took place, and he was the projector of the Monday Popular Concerts and the Saturday Popular Concerts. Besides compiling a "History of Music," Mr. William Chappell assisted in editing "The Roxburghe Ballads," Bishop Percy's folio manuscript of "Ballads and Romances," and other literary works. He further wrote a treatise "On the Use of the Greek Language, Written Phonetically, in the Early Service Books of the Church of England."

Our Portrait is from a photograph by Messrs. Fradelle and Young, Regent-street.

MUSIC.

THE BIRMINGHAM TRIENNIAL FESTIVAL.

Our previous notice of this great celebration (which closed on Aug. 31) was necessarily incomplete, most of the performances having taken place too late for comment until now. The novelties were fewer on this occasion than at several previous festivals, disappointments having occurred that could not be foreseen by the directors. Important new works were arranged for with Anton Dvorák and Dr. Mackenzie, but circumstances prevented their completion.

To speak first of the special novelties that were actually produced at the festival just terminated; these were two in number—Dr. Parry's oratorio "Judith; or, The Regeneration of Manasseh" and Dr. Bridge's cantata "Callirhoë." The first-named work is based on text supplied by the composer himself, who has to some extent made use of Dean Prideaux's version of the Bible narrative.

"Judith" is one of the most ambitious of the many compositions by which Dr. Parry has gained prominence in recent years, and one of the most successful. The music is throughout scholarly in style, with alternations of a serious tone with a lighter melodic treatment that stands in agreeable relief thereto; there being less of that tendency towards a reflection of the exaggerated style of the modern German school than has been apparent in most of Dr. Parry's previous works. The several choruses of priests, people, Assyrians, and others, the music associated with the worship of Moloch, and that associated with the exploit of Judith, are full of varied and dramatic contrasts. Some of the solo music, too, is both impressive and beautiful; among several examples being Judith's ballad, "Long since, in Egypt's plenteous land," and Manasseh's solo, "God maketh the battle"; not to mention other instances. The choral and orchestral details of the oratorio were excellently rendered; and that the solo music received full justice in performance may be inferred from the fact of Miss Anna Williams having sung that of Judith, Madame Patey and Mr. Lloyd, respectively, that of the Queen and Manasseh, and Mr. Santley that of the High Priest and a Messenger; Masters P. Fry and A. Stephens having been efficient in the passages for the two children. The work was an entire success. A symphony of Haydn and Franz's choral psalm, "Praise ye the Lord," completed the programme of the day now referred to.

Dr. Bridge's cantata is associated with text supplied by Mr. Barclay Squire, who has taken for his subject the old Greek narrative of the love of Coresos, a Priest of Bacchus, for the beautiful Callirhoë, by whom he is scorned; the plague of madness drawn on the people at the invocation of the wrathful priest, and the decree of the oracle demanding the death of a victim, this being Callirhoë herself. The priest, in remorse, stabs himself instead; and, her aversion turning to admiration, she kills herself. A stream gushes forth, and the lovers are seen transformed to river deities.

Dr. Bridge's music successfully realises the romantic aspect of the text, while at the same time possessing much of melodic charm and interest. Several movements proved highly effective in performance; among them the graceful opening chorus, the prayer of Coresus, the chorus which follows it, the chorus of messengers to Dodona, Callirhoë's scena, "Woe is me," a processional march, and the jubilant final chorus. As in Dr. Parry's "Judith," effective use is made of representative themes. The solo music assigned to the different characters—Callirhoë, the Priestess, and Coresus—received all possible effect from its rendering, respectively, by Madame Albani, Madame Trebelli, and Mr. Lloyd. The picturesque orchestral details included some characteristic imitations of the sound of brazen vessels in the Oracle scene. Of both the novelties above referred to fresh opportunity for comment will soon be offered by their repetition in London. "Callirhoë" (conducted by the composer) was a great and legitimate success.

Of those portions of the miscellaneous evening concerts not yet referred to it will be sufficient to say that the specialty at the second was Sir Arthur Sullivan's dramatic cantata, "The Golden Legend," which retains its popularity, and has already been so frequently discussed as to need no further comment, beyond stating that the principal solo vocalists at Birmingham were Mesdames Albani and Trebelli, Mr. E. Lloyd, and Signor Foli. The following items of the programme included a pleasing overture, composed and conducted by Herr Grieg; a specialty on the third evening having been Miss Fanny Davies's fine rendering of Schumann's pianoforte concerto in A minor.

Brief record may suffice of other performances of the week not previously noticed—"The Messiah," on Aug. 30 (with Madame Albani, Madame Patey, Mr. C. Banks, and Signor Foli as solo vocalists); Bach's "Magnificat" on the following morning, the solos by Miss Anna Williams, Madame Trebelli, Mr. Banks, and Signor Foli; Beethoven's symphony in C minor; and Berlioz's "Requiem," the tenor solo in this by Mr. E. Lloyd; the festival having closed on Friday evening, Aug. 31, with Handel's "Saul," an oratorio that has been less frequently heard than several others of his works of that class. It is the fourth in the long list of his English oratorios, having immediately preceded "Israel in Egypt" and "The Messiah." "Saul" contains some grand choral writing that may compare with any of that in Handel's other oratorios. The solo portions at Birmingham were assigned to Misses Anna Williams and Ambler, Madame Patey, Mr. Banks, Mr. Piercy, Mr. Brereton, Signor Foli, and Mr. Santley. Additional accompaniments by Mr. E. Prout were supplied.

The performances, orchestral and choral, during the festival, have been generally of high excellence, and the names of the solo vocalists, already incidentally given, are sufficiently indicative of efficiency in that respect. The duties of conductor have been worthily fulfilled by Dr. Hans Richter, as at the previous festival, in 1885, when he replaced the late Sir Michael Costa; and valuable service was rendered at the organ by Mr. C. W. Perkins (the successor to Mr. Stimpson); the co-operation of Mr. Stockley, as chorus-master, having had (as often before) great influence on the efficiency of the choral performances.

THE HEREFORD MUSICAL FESTIVAL.

The one hundred and sixty-fifth meeting of the cathedral choirs of Hereford, Worcester, and Gloucester will take place in the first-named city, on Sept. 11 and three following days—an inaugural service being held in the cathedral on the previous Sunday, when a sermon with special reference to the occasion will be preached by the Rev. Canon Sir F. A. Gore Ouseley, Bart. These festivals have for their primary object the affording aid to the widows and orphans of the poorer clergy of the three dioceses. The money aid thus obtained arises entirely from collections made in the cathedral after the services and oratorio performances, and from subsequent donations—the proceeds from the sale

of tickets being applied exclusively to the festival expenses, any deficit in that respect being divided among the stewards. The number of these gentlemen has, during recent years, been largely augmented in consequence of some rather large losses sustained on former occasions. A similar occurrence is less likely now than ever, and, if taking place, will fall but lightly on the many who are responsible.

A complete and effective orchestra is provided for the forthcoming performances, Mr. J. T. Carrodus and Mr. V. Nicholson being engaged as leading violinists; the band also including many of our most skilled instrumentalists. The chorus comprises the members of the three associated cathedral choirs, augmented by additions from Bristol, St. George's (Windsor), Trinity College (Cambridge), and other sources; Dr. Langdon Colborne, organist of Hereford Cathedral, being the conductor.

The solo vocalists engaged are Madame Albani, Miss Anna Williams, Miss Ambler, Madame Enriquez, Miss H. Wilson, Mr. E. Lloyd, Mr. C. Banks, Mr. Brereton, and Mr. Santley.

In accordance with frequent past custom, the opening performance of the festival (on Sept. 11) will consist of Mendelssohn's "Elijah," the next day being appropriated to Handel's "Samson" and Sir Sterndale Bennett's sacred cantata "The Woman of Samaria." In the evening (also in the cathedral) the first and second parts of Haydn's "Creation," Spohr's cantata, "God, Thou art great," and Schubert's "Song of Miriam" will be performed; Thursday morning being appropriated to Cherubini's Mass in D minor, Mr. Cowen's "Song of Thanksgiving" (produced at the recent opening of the Melbourne Centennial Exhibition); Dr. Parry's ode, "Blest pair of Sirens," and Sir F. G. Ouseley's oratorio, "The Martyrdom of St. Polycarp." The climax to the cathedral performances will be, as usual, Handel's "Messiah" on the Friday morning.

Evening concerts in the Shirehall on Sept. 11 and 13, will include Sir Arthur Sullivan's cantata, "The Golden Legend," and miscellaneous selections of vocal and instrumental music, a supplemental chamber concert, in the same locality, on the Friday evening, winding up the festival week.

The Marie Roze Opera Company—under the joint direction of Colonel Henry Mapleson and Mr. N. Vert—is giving a series of operatic performances in the provinces previous to the departure of Madame Marie Roze on her tour round the world. The coming absence of the eminent prima donna will, no doubt, add to the attractiveness of her provincial appearances.

The arrangements for the National Eisteddfod of Wales at Wrexham on Sept. 4, 5, 6, 7 included choral and instrumental competitions and "Elijah" and "The Messiah," with full orchestra and competent solo singers.

Mrs. Sydney Naylor, better known in operatic life as Madame Blanche Cole, died recently from dropsy. This popular artist was born at Portsmouth in 1851, and as a girl of eighteen she first appeared on the stage at the Crystal Palace as Amina in "La Sonnambula." Her success was almost immediate.

THE LAST OF THE GREAT EASTERN.

Some feelings of regret, almost of pity—for a ship, though she does not actually suffer, like a living creature, seems endowed with a sort of personality—may be aroused by the final doom of destruction, after many years of humiliating idleness, that will soon put an end to the largest vessel ever set afloat by human skill and industry. The Great Eastern has made her last voyage; on Saturday, Aug. 25, she arrived in the Mersey, towed by two Liverpool steam-tugs, the Stormcock and the Pathfinder, having been assisted in this manner to pass from the Clyde, where she had been moored, between Helensburgh and Greenock, since December. She was under the command of Captain Collier, who had charge of the ship on behalf of the present owners, Messrs. Henry Bath and Co., of Liverpool and London, and was manned by a crew of about 115 hands all told. She was accompanied by a Liverpool pilot (Mr. Dudley), who took charge of her off the Calf of Man. She was off the bar at an early hour in the morning, and came into the Mersey with the flood tide. Her progress up the river was naturally watched with interest from both shores, the Liverpool landing-stages being crowded at two o'clock in the afternoon, at which hour she passed up to the Sloyne. It was noticed that since she was last seen in the Mersey she had been divested of her huge paddle-wheels. Her draught of water was 15 ft. forward and 21 ft. aft. About an hour after high water the vessel was beached on the Cheshire shore, a short distance south of the New Ferry Pier, where, at low water, the huge hull stands high and dry. She is fastened with two kedge anchors from each bow. Large numbers of people went by the New Ferry and Eastham Ferry steamers for the purpose of seeing the big ship. It is understood that the owners will proceed to have her dismantled and broken up at once. Her ponderous machinery will first be taken out, and, if she can be lightened of this weight in time to take advantage of the next spring tides, the hull will probably be floated higher up the beach to facilitate the operations. It is estimated that about £20,000—an amount equal to the price paid for her by Messrs. Bath and Co.—will be expended in converting the ship into portable fragments.

Many persons among us will remember, above thirty years ago, the construction of this immense steam-ship, which was commenced on May 1, 1854, in the yard of Messrs. Scott Russell and Co., at Millwall, under the direction of the eminent engineer, Mr. Isambard Kingdom Brunel, the original designer. The name at first given to her was "The Leviathan," which was changed to "The Great Eastern" when the ship was finished, the Eastern Steam Navigation Company having intended to employ this vessel in the Indian and Australian trade. Mr. J. Scott Russell took the contract for building the ship and supplying the paddle-engines, while the engines for the screw-propeller were furnished by Messrs. Watt and Co., of Birmingham. It was expected that the combination of screw and paddles, worked by steam-power, with large sails carried by five or six masts, would be supremely advantageous. But the engines were insignificant, compared with those in use at the present day; those for the screw-propeller were of 1600-horse power, and the paddle-engines of 1200-horse power (nominal), while the screw was 24 ft. in diameter, and the paddle-wheels 56 ft. The locomotive power was always deficient for the size of the vessel, which had a length of 691 ft., 83 ft. width of beam, and a depth exceeding 60 ft., with a capacity of 22,500 tons burthen—about twice the size, on the whole, of the largest ships that are now built. It was an engineering mistake; the form of the hull was a mistake in naval architecture; and the project of having so big a vessel was a commercial mistake. The ship had no keel whatever, being shaped very much like an Indian's birch-bark canoe, though not tapering off at the stern; consequently, she rolled a great deal in any heavy sea, the waves frequently washing over her sides, in spite of their great height; but her length, more than the eighth part of a mile, forbade pitching fore and aft. It is quite conceivable that she might have been swamped, but her length was divided into eleven water-tight

THE LATE LORD ALFRED PAGET.

compartments, and a hole in her bottom would not have sunk her, though she would soon have got her back broken if stuck on a rock. The bottom was double, formed of two skins of half-inch thick iron, with a space between, the air in which gave more buoyancy than is desirable at the bottom of a vessel, increasing her tendency to roll. The hull was ingeniously strengthened by the bulkheads and the transverse iron beams and two longitudinal tunnels or tubes of iron; yet no seaman could doubt the possibility of its being torn asunder if ever it were fixed on the rocks in a stormy sea. It was Brunel's idea that this huge steamship should carry five or six thousand tons of coal, sufficient for the double voyage outward and homeward, which would save the expense of coaling abroad; but he, and the commercial men who employed him, apparently did not consider that there would be some uncertainty and delay in getting a cargo of 10,000 tons or more for a single ship in a distant port. As the result proved, such an amount of traffic was not to be obtained, and neither the voyage to New York, nor the voyages to Bombay, or to Melbourne, were profitable to the owners. Passengers soon found that the Great Eastern was not a comfortable vehicle, in spite of her large and airy state-rooms and the extensive promenade on her deck. There was space enough to accommodate four thousand passengers of different classes, but those who embarked were only the few attracted by curiosity and novelty, and did not care to repeat the experience. The launching of the Great Eastern, which occupied several anxious weeks in November of 1857, was a most difficult task. As she could not be launched end on, because the Thames at Millwall is not wide enough, she had been built with her broadside to the water's edge on an inclined floor with a gradient of one in twelve, down which she was to be pushed, a distance of 260 ft., by the action of hydraulic engines or rams along the upper broadside. Messrs. Tredwell, of Gloucester, undertook this operation, but the engines and the pushing apparatus could not always work simultaneously and uniformly, and only a few yards, feet, or inches of movement could be effected in a day; the ship appeared more than once to get askew, and to stick fast immoveably. Two or three men were killed by the accidental breaking of a chain. Mr. Brunel, who came daily to superintend the launching, surrounded by crowds of spectators, was terribly distressed; and when the ship was got into shallow water, still fast aground, the further launching was deferred for the high tides. At length, on Jan. 31, 1858, the Great Eastern was got afloat; many thousands of visitors were admitted on board to view the ship, of which there were several Illustrations in our own Journal. The hull and engines, so far, had cost about £640,000, but the original Great Eastern Ship Company was obliged within a twelvemonth to sell her for £160,000 to a new company, which at the end of 1858 was fitting out the great ship as she lay in the Thames. She was designed to go round the Cape to the port of Trincomalee, in Ceylon, in thirty days, thence to Calcutta and Madras, then to Singapore, to Hong-Kong, and to Sydney and Melbourne, delivering and gathering cargo at each of those ports, and then to come home. As a mercantile traffic speculation, this route did not find favour with the commercial world; and the trial trip down the Channel was attended with an alarming disaster, the blowing-up of a steam-reservoir around the funnel, which scalded ten poor fellows to death, and frightened away passengers, though it was an accident that might have happened on board another vessel. The Great Eastern was afterwards offered to Government for a troop-ship to convey 10,000 soldiers at once; and the experience, then recent, of the Indian Mutiny, was made an argument in favour of this proposal. But the War Office, or the Admiralty, did not think it prudent to risk so large a part of the British Army in one bottom. Troops could be sent to India more quickly by the Overland route and the Red Sea; there was no Suez Canal; and if there had been, the Great Eastern could never have got through it. In June, 1861, the Great Eastern took on board 3300 troops for Canada, but was caught in a storm, and put back seriously damaged. She had made a show trip to New York in 1860, doing the voyage in ten days and a half. The only great and useful performance that this extraordinary ship ever achieved was in laying the Atlantic telegraph cable in July, 1866, and recovering a cable lost the year before. For some time she was exhibited as a show, and has been on view at New York, at Melbourne, and at New Orleans. Latterly, being no longer seaworthy, it was intended by a private purchaser to convert her into a coaling-hulk at Gibraltar. One might have fancied that she would do for a kind of floating hotel or boarding-house, moored in some deep and safe inlet of the western British or Irish coasts. Her doom has now been uttered; she is to be broken up for old iron: so ends the dream of Mr. Brunel, a man of genius in his way, enamoured of grand and mighty works, but with an imagination that often far overleapt the calculations of prudence, and for whose designs, magnificent as they were, shareholders had no particular cause to be grateful. His death, on Sept. 15, 1859, was thought to have been hastened by grief and worry on account of the Great Eastern, and many other people wished that she had never been built.

THE LATE MR. P. H. GOSSE, F.R.S.

THE LATE LORD ALFRED PAGET.

The death of Lord Alfred Paget, a gentleman long and well known, both as a member of Parliament and as one of the ablest and most useful officials of the Royal household, took place on Aug. 24. His Lordship was the third son of Field Marshal the Marquis of Anglesey, and was born in 1816. He was educated at Westminster School, served in the 1st Life Guards, and was placed on the retired list, with the rank of General, in 1881. He represented Lichfield in the House of Commons from 1837 to July, 1865. He was Chief Equerry and Clerk-Marshal to the Queen from 1846 till 1874, when he resigned the office of Chief Equerry. He married, in 1847, a daughter of General Thomas Wyndham, of Cromer Hall, Norfolk, and had several sons and daughters. His death took place on board his yacht in the Caledonian Canal, near Inverness, and was caused by a chill taken in grouse-shooting.

The Portrait of the late Lord Alfred Paget is from a photograph by Messrs. Boning and Small.

THE LATE MR. P. H. GOSSE, F.R.S.

This eminent naturalist, whose death has lately been announced, was born at Worcester, in 1810, but was brought up at Poole, in Dorset, and in early youth was sent as a mercantile clerk to Newfoundland. There he passed eight years, and spent three years in Lower Canada. He devoted himself to the study of zoology and entomology, travelled through the United States, and resided about a year in Alabama, making a large collection of drawings of insects. After his return to England, in 1839, Mr. Gosse published a general synopsis of his investigations. In 1844 he visited Jamaica, there spent eighteen months in the study of zoology, and issued on his return "The Birds of Jamaica," an "Atlas of Illustrations," and "A Naturalist's Sojourn in Jamaica." During the next few years he published an "Introduction to Zoology," and prepared many works for the Society for Promoting Christian Knowledge. He then applied himself especially to the microscopic study of the British rotifera, and took part in the formation of public and private collections of marine animals. In 1856 he was elected a Fellow of the Royal Society. Among Mr. Gosse's works are—"The Aquarium," 1854; "A Manual of Marine Zoology," 1855; "Tenby, a Seaside Holiday," 1856; "Life in its Lower, Intermediate, and Higher Forms," 1857; "Actinologia Britannica; a History of the British Sea Anemones and Corals," 1860; "The Romance of Natural History," 1860-62; "A Year at the Shore" and "Land and Sea," 1865. His scientific merits were acknowledged by his election to the Royal Society. His son, Mr. Edmund Gosse, is well known as a literary critic and scholar.

Lord James Douglas, brother of the Marquis of Queensberry, was married on Sept. 4, at Hawick, in the Roman Catholic Church, to Mrs. Martha Lucy Hennessy, of Kensington Court, London.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIDEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XVIII.

THE MAIDS OF TAUNTON.

THE NEXT day was made remarkable in our eyes by an event which, though doubtless of less importance than the enlistment of a dozen recruits, seemed to us a very great thing indeed—namely, the presentation to the Duke of the colours embroidered for him by Susan Blake's schoolgirls. I was myself permitted to walk with the girls on this occasion, as if I had been one of them, though a stranger to the place, and but newly arrived—such was the kindness of Susan Blake and her respect for the name of the learned and pious Dr. Comfort Eykin.

At nine of the clock the girls who were to carry the flags began to gather in the school-room. There were twenty-seven in all; but twelve only were the pupils of Miss Blake. The others were the pupils of Mrs. Musgrave, another school-mistress in the town. I remember not the names of all the girls, but some of them I can still write down. One was Katharine Bovet, daughter of Colonel Bovet: she it was who walked first and named to the Duke those who followed; there was also Mary Blake, cousin of Susan, who was afterwards thrown into prison with her cousin, but presently was pardoned. Miss Hucker, daughter of Captain Hucker, the Master-Sergemaker who entertained the Duke, was another; there were three daughters of Captain Herring, two daughters of Mr. Thomas Baker, one of Monmouth's Privy Councillors; there was Mary Meade, the girl who carried the famous Golden Flag; and others whom I have forgotten. When we were assembled, being dressed all in white, and each maid wearing the Monmouth colours, we took our flags and sallied forth. In the street there was almost as great a crowd to look on as the day before, when the Duke rode in; and, certainly, it was a very pretty sight to see. First marched a man playing on the crowd very briskly; after him, one who beat a tabor, and one who played a fife; so that we had music on our march. When the music stopped, we lifted our voices and sang a Psalm all together; that done, the crowder began again.

As for the procession, no one surely had ever seen the like of it! After the music walked six-and-twenty maids, the youngest eight and the eldest not more than twelve. They marched two by two, very orderly, all dressed in white with blue favours, and every girl carrying in her hands a flag of silk embroidered by herself, assisted by Miss Blake or some other older person, with devices appropriate to the nature of the enterprise in hand. For one flag had upon it, truly figured in scarlet silk, an open Bible, because it was for liberty to read and expound that book that the men were going forth to fight. Upon another was embroidered a great cross; upon a third were the arms of the Duke; a fourth bore upon it, to show the zeal of the people, the arms of the town of Taunton; and a fifth had both a Bible and a drawn sword; and so forth, every one with a legend embroidered upon it plain for all to read. The flags were affixed to stout white staves, and as the maids walked apart from each other and at a due distance, the flags all flying in the wind, made a pretty sight indeed; so that some of the women who looked on shed tears. Among the flags was one which I needs must mention, because, unless the device was communicated by some person deep in the Duke's counsels, it most strangely jumped with the event of the following day. Mary Meade, poor child! carried it. We called it the Golden Flag, because it had a crown worked in gold thread upon it and the letters "J.R." A fringe of lace was sewn round it, so that it was the richest flag of all. What could the Crown with the letters "J.R." mean; but that James, Duke of Monmouth, would shortly assume the Crown of these three kingdoms?

Last of all walked Miss Susan Blake, and I by her side. She bore in one hand a Bible bound in red leather stamped with gold, and in the other a naked sword.

The Duke came forth to meet us, standing bareheaded before the porch. There were standing beside and behind him, the Lord Grey, his two chaplains, Dr. Hooke and Mr. Ferguson, my father, Mr. Larke, the Baptist minister of Lyme Regis (he wore a corslet and carried a sword), and the Colonels of his regiments. His bodyguard were drawn up across the street, looking brave and splendid in their new favours. The varlets waited beyond with the horses for the Duke's party. Who, to look upon the martial array, the bravery of the Guard, the gallant bearing of all, the confidence in their looks, and the presence, which should surely bring a blessing, of the ministers of religion, would think that all this pomp and promise could be shattered at a single blow?

As each girl advanced in her turn, she knelt on one knee and offered her flag, bowing her head (we had practised this ceremony several times at the school until we were all quite perfect in our parts). Then the Duke stepped forward and raised her, tenderly kissing her. Then she stood aside holding her flag still in her hands.

My turn—because I had no flag—came last but one, Miss Susan Blake being the last. Now—I hope it was not folly, or a vainglorious desire to be distinguished by any particular notice of his Grace—I could not refrain from hanging the ring, which the Duke had given me at Ilchester five years ago, outside my dress by a blue ribbon. Miss Blake, to whom I had told the story of the ring, advised me to do so, partly to show my loyalty to the Duke, and partly because it was a pretty thing and one which some women would much desire to possess.

Miss Katharine Bovet informed the Duke that I was the daughter of the learned preacher, Dr. Comfort Eykin. When I knelt he raised me. Then, as he was about to salute me, his eyes fell upon the ring, and he looked first at me and then at the ring.

"Madam," he said, "this ring I ought to know. If I mistake not, there are the initials of 'J. S.' upon it?"

"Sir," I replied, "the ring was your own. Your Grace was so good as to bestow it upon me in your progress through the town of Ilchester, five years ago."

"Gad so!" he said, laughing; "I remember now. 'Twas a sweet and lovely child whom I kissed—and now thou art a sweet and lovely maiden. Art thou truly the daughter of Dr. Comfort Eykin?"—he looked behind him; but my father neither heard nor attended, being wrapped in thought. "'Tis strange: his daughter! 'Tis indeed wonderful that such a child should"—— Here he stopped. "Fair Rose of Somerset I called thee then. Fair Rose of Somerset I call thee again. Why, if I could place thee at the head of my army all England would certainly follow, as if Helen of Troy or Queen Venus herself did lead." So he kissed me on the cheek with much warmth—more, indeed, than was necessary to show a gracious and friendly goodwill; and suffered me to step aside. "Dr. Eykin's daughter!" he repeated, with a kind of wonder. "How could Dr. Eykin have such a daughter!"

When I told Robin of this gracious salutation he first turned very red and then he laughed. Then he said that everybody knew the Duke, but he must not attempt any Court freedoms in the Protestant camp; and if he were to try—— then he broke off short, changed colour again, and then he kissed me, saying that, of course, the Duke meant nothing but kindliness, but that, for his own part, he desired not his sweetheart to be kissed by anybody but himself. So I suppose my boy was jealous. But the folly of being jealous of so great a Prince, who could not possibly have the least regard for a simple country maiden, and who had known the great and beautiful Court ladies! It made me laugh to think that Robin could be so foolish as to be jealous of the Duke.

Then it was Miss Susan Blake's turn. She stepped forward very briskly, and knelt down and placed the Bible in the Duke's left hand and the sword in his right.

"Sir," she said (speaking the words we had made up and she had learned), "it is in the name of the women of Taunton—nay, of the women of all England—that I give you the Book of the Word of God, the most precious treasure vouchsafed to man, so that all may learn that you are come for no other purpose than to maintain the right of the English people to search the Scriptures for themselves. I give you also, Sir, a sword with which to defend those rights. In addition, Sir, the women can only give your Grace the offering of their continual prayers in behalf of the Cause, and for the safety and prosperity of your Highness and your army."

"Madam," said the Duke, much moved by this spectacle of devotion, "I am come, believe me, for no other purpose than to defend the truths contained in this book, and to seal my defence with my blood, if that need be."

Then the Duke mounted and we marched behind him in single file, each girl led by a soldier, till we came to the camp, when our flags were taken from us and we returned home and took off our white dresses. I confess that I laid mine down with a sigh. White becomes every maiden, and my only wear till then had been of russet brown. And all that day we acted over again—in our talk and in our thoughts—our beautiful procession, and we repeated the condescending words of the Duke, and admired the graciousness of his kisses, and praised each other for our admirable behaviour, and listened, with pleasure unspeakable, while Susan Blake prophesied that we should become immortal by the ceremony of that day.

CHAPTER XIX.

KING MONMOUTH AND HIS CAMP.

Next day, the town being thronged with people and the young men pressing in from all quarters to enrol themselves (over four thousand joined the colours at Taunton alone), another proclamation was read—that, namely, by which the Duke claimed the throne. Many opinions have been given as to this step. For the Duke's enemies maintain—first, that his mother was never married to King Charles the Second (indeed, there is no doubt that the King always denied the marriage); next, that an illegitimate son could never be permitted to sit upon the ancient throne of this realm; and, thirdly, that in usurping the Crown the Duke broke faith with his friends, to whom he had solemnly given his word that he would not put forward any such pretensions. Nay, some have gone so far as to allege that he was not the son of Charles at all, but of some other whom they even name; and they have pointed to his face as showing no resemblance at all to that swarthy and gloomy-looking King. On the other hand, the Duke's friends say that there were in his hands clear proof of the marriage; that the promise given to his friends was conditional, and one which could set be aside by circumstances; that the country gentry, to whom a Republic was most distasteful, were afraid that he designed to re-establish that form of government; and, further, that his friends were all fully aware, from the beginning, of his intentions.

On these points I know nothing; but when a thing has been done, it is idle to spend time in arguing that it was well or ill done. James, Duke of Monmouth, was now James, King of Great Britain and Ireland; and if we were all rebels before, who had risen in the name of religion and liberty, I suppose we were all ten times as much rebels now, when we had, in addition, set up another King, and declared King James to be an usurper, and no more than the Duke of York. Nay, that there might be wanting no single circumstance of aggravation, it was in this Proclamation declared that the Duke of York had caused his brother, the late King, to be secretly poisoned. I know not what foundation exists for this accusation; but I have been told that it gave offence unto many, and that it was an ill-advised thing to say.

The Proclamation was read aloud at the Market Cross by Mr. Tyley, of Taunton, on the Saturday morning, before a great concourse of people. It ended with the words, "We therefore, the noblemen, gentlemen, and Commons at present assembled, in the names of ourselves and of all the loyal and Protestant noblemen, gentlemen, and Commons of England, in pursuance of our duty and allegiance, and for the delivering of the Kingdom from Popery, tyranny, and oppression, do recognise, publish, and proclaim the said high and mighty Prince James, Duke of Monmouth, as lawful and rightful Sovereign and King, by the name of James II., by the grace of God, King of England, Scotland, France, and Ireland, Defender of the Faith. GOD SAVE THE KING!"

After this the Duke was always saluted as King, prayed for as King, and styled "His Majesty." He also touched some (as only the King can do) for the king's-evil, and, it is said, wrought many miracles of healing—a thing which, being noised abroad, should have strengthened the faith of the people in him. But the malignity of our enemies caused these cases of healing to be denied, or else explained as fables and inventions of the Duke's friends.

Among the accessions of this day was one which I cannot forbear to mention. It was that of an old soldier who had been one of Cromwell's captains, Colonel Basset by name. He rode in—being a man advanced in years, yet still strong and hale—at the head of a considerable company raised by himself. 'Twas hoped that his example would be followed by the adhesion of many more of Cromwell's men, but the event proved otherwise. Perhaps, being old Republicans, they were deterred by the Proclamation of Monmouth as King. Perhaps they had grown slothful with age, and were now unwilling to face once more the dangers and fatigues of a campaign. Another recruit was the once-famous Colonel Perrot, who had been engaged with Colonel Blood in the robbery of the Crown Jewels—though the addition of a robber to our army was not a matter of pride. He came, it was afterwards said, because he was desperate, his fortunes broken, and with no other hope than to follow the fortunes of the Duke.

It became known in the course of the day that the army was to march on the Sunday. Therefore, everybody on Saturday evening repaired to the camp: some to bid farewell and Godspeed to their friends, and others to witness the humours of a camp. I was fortunate in having Robin for a companion and protector—the place being rough and the behaviour and language of the men coarse even beyond what one expects at a country fair. The recruits still kept pouring in from all parts; but, as I have already said, many were disheartened when they found that there were no arms, and went home again. They were not all riotous and disorderly. Some of the men, those, namely, who were older and more sober-minded, we found gathered together in groups, earnestly engaged in conversation.

"They are considering the Proclamation," said Robin. "Truly, we did not expect that our Duke would so soon become King. They say he is illegitimate. What then? Let him mount the throne by right of arms, as Oliver Cromwell could have done had he pleased—who asks whether Oliver was illegitimate or no? The country will not have another Commonwealth—and it will no longer endure a Catholic King. Let us have King Monmouth, then: who is there better?"

In all the camp there was none who spoke with greater cheerfulness and confidence than Robin. Yet he did not disguise from himself that there might be warm work.

"The King's troops," he said, "are closing in all round us. That is certain. Yet, even if they all join we are still more numerous and in much better heart; of that I am assured. At Wellington, the Duke of Albemarle commands the Devonshire Militia; Lord Churchill is at Chard with the Somerset Regiment; Lord Bath is reported to be marching upon us with the Cornishmen; the Duke of Beaufort hath the Gloucester Militia at Bristol; Lord Pembroke is at Chippenham with the Wiltshire Trainbands; Lord Feversham is on the march with the King's standing army. What then? are these men Protestants or are they Papists? Answer me that, Sweetheart."

Alas! had they been true Protestants there would have been such an answer as would have driven King James across the water three years sooner.

The camp was now like a fair, only much finer and bigger than any fair I have ever seen. That of Lyme Regis could not be compared with it. There were booths where they sold gingerbread, cakes, ale, and cider: Monmouth favours for the recruits to sew upon their hats or sleeves; shoes and stockings were sold in some, and even chap-books were displayed. There was a puppet show with Patient Grizzle; and a stand where a monkey danced. Men and women carried about in baskets last year's withered apples, with Kentish cobs and walnuts; there were booths where they fried sausages and roasted pork all day long; tumblers and clowns were performing in others; painted and dressed-up girls danced in others; there was a bull-baiting; a man was making a fiery oration on the Duke's proclamation: but I saw no one preaching a sermon. There were here and there companies of country lads exercising with pike and halbert; and others, more advanced, with the loading and firing of their muskets. There were tables at which sat men with cards and dice, gambling: shouting when they won and cursing when they lost; others, of more thrifty mind, sat on the ground practising their trade of tailor or cobbler—thus losing no money, though they did go soldiering; some polished weapons and sharpened swords, pikes, and scythes; nowhere did we find any reading the Bible, or singing of hymns, or listening to sermons. Save for the few groups of sober men of whom I have spoken, the love of amusement carried all away; and the officers of the army, who might have turned them back to sober thought, were not visible. Everywhere noise; everywhere beating of drums, playing of pipes, singing of songs, bawling and laughing. Among the men there ran about a number of saucy gipsy girls, their brown faces showing under red kerchiefs, their black eyes twinkling (truly they are pretty creatures to look upon when they are young; but they have no religion, and say of themselves that they have no souls). These girls talked with each other in their own language, which none out of their own nation—except the tinker-folk, who are said to be their cousins—understand. But English they talk very well, and they are so clever that, it is said, they will talk to a Somersetshire man in good broad Somerset, and to a man of Norfolk in his own speech, though he of Norfolk would not understand him of Somerset.

"They are the vultures," said Robin, "who follow for prey. Before the battle these women cajole the soldiers out of their money, and after the battle their men rob and even murder the wounded and plunder the dead."

Then one of them ran and stood before us.

"Let me tell thy fortune, handsome gentleman? Let me tell thine, fair lady? A sixpence or a groat to cross my palm, Captain, and you shall know all that is to happen."

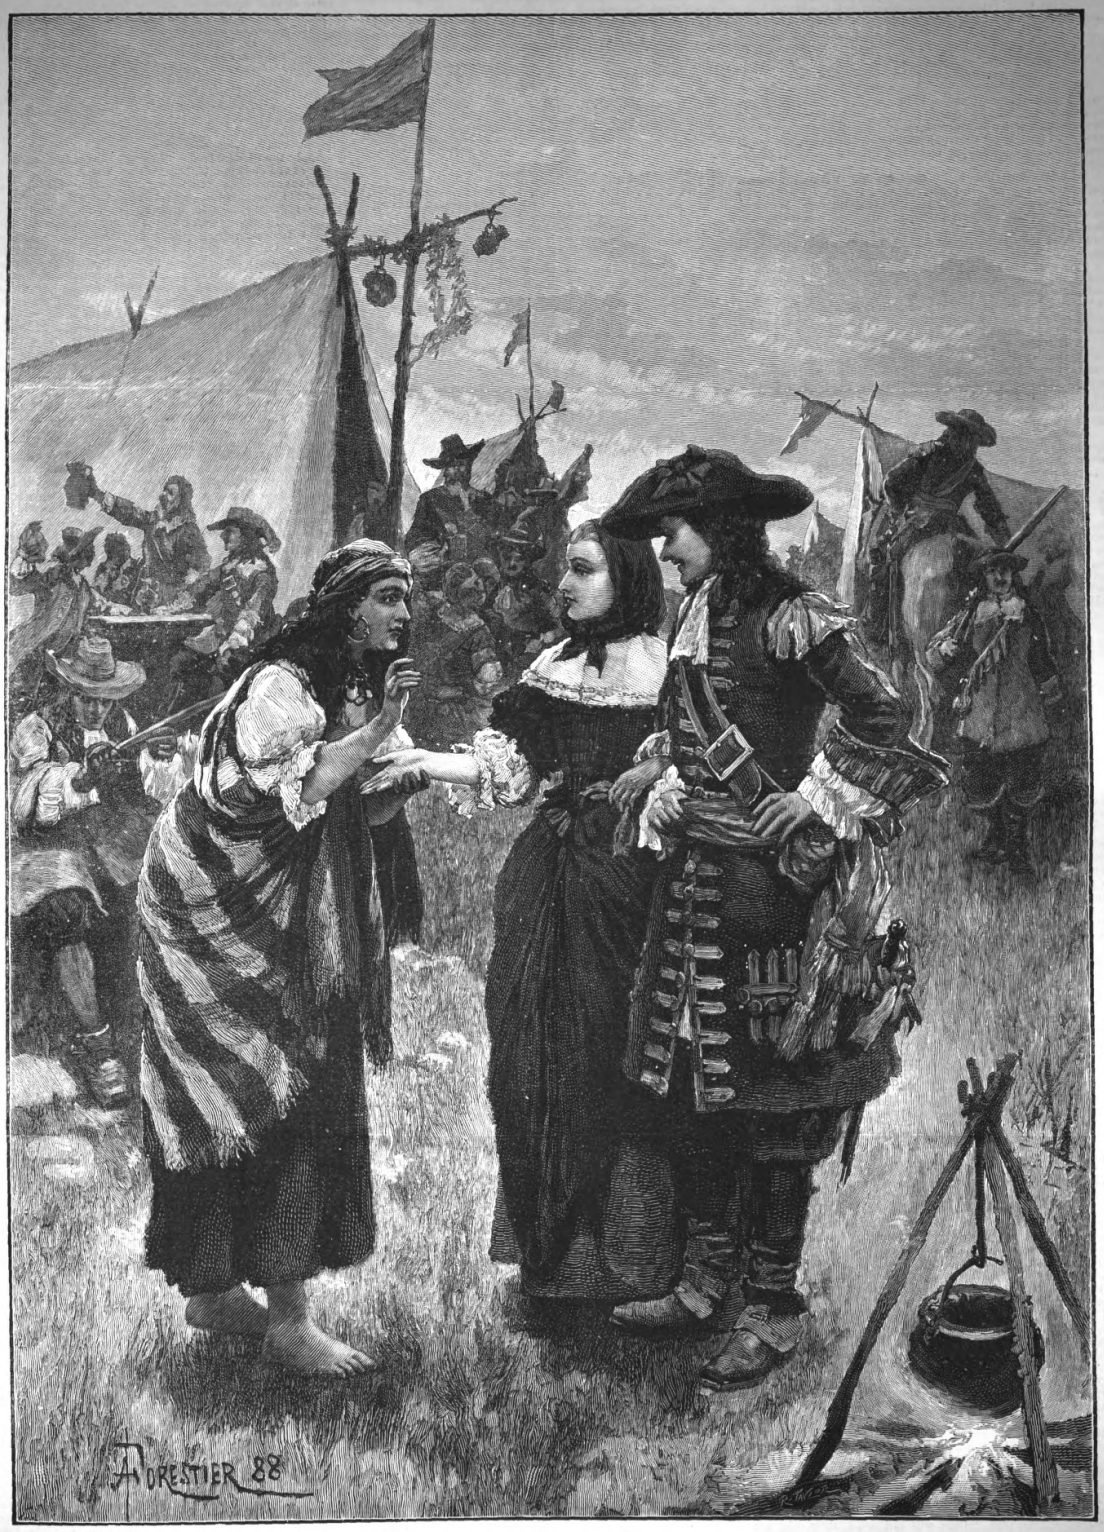
Robin laughed, but gave her sixpence.

"Look me in the face, fair lady"—she spoke good, plain English, this black-eyed wench, though but a moment before she had been talking broad Somerset to a young recruit—"look me in the face; yes. All is not smooth. He loves you; but there will be separation and trouble. One comes between, a big man with a red face; he parts you. There is a wedding, I see your Ladyship plain. Why, you are crying at it, you cry all the time; but I do not see this gentleman. Then there is another wedding—yes, another—and I see you at both. You will be twice married. Yet, be of good heart, fair lady."

She turned away and ran after another couple, no doubt with much the same tale.

"How should there be a wedding," I asked, "if I am there and you not there, Robin—and I to be crying? And how could I—oh! Robin—how could I be married twice?"

"Nay, Sweetheart, she could not tell what wedding it was. She only uttered the gibberish of her trade; I am sorry that I wasted a sixpence upon her."



"Robin, is it magic that they practise—these gipsies? Do they traffic with the Devil? We ought not to suffer witches to live amongst us."

"Most are of opinion that they have no other magic than the art of guessing, which they learn to do very quickly, putting things together, from their appearance; so that if brother and sister walk out together they are taken to be lovers, and promised a happy marriage and many children."

That may be so, and perhaps the fortune told by this gipsy was only guess-work. But I cannot believe it; for the event proved that she had in reality possessed an exact knowledge of what was about to happen.

Some of the gipsy women—but these were the older women, who had lost their good looks, though not their impudence—were singing songs, and those, as Robin told me, songs not fit to be sung; and one old crone, sitting before her tent beside a roaring wood-fire over which hung a great saucepan, sold charms against shot and steel. The lads bought these greedily, giving sixpence apiece for them; so that the old witch must have made a sackful of money. They came and looked on shyly. Then one would say to the other, "What thinkest,

*All Rights Reserved.

DRAWN BY A. FORESTIER.

"Let me tell thy fortune, handsome gentleman? Let me tell thine, fair lady? A sixpence or a groat, to cross my palm, Captain, and you shall know all that is to happen."

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

lad? Is there aught in it?" And the other would say, "Truly, I know not; but she is a proper witch, and I'll buy one. We may have to fight. Best make sure of a whole skin." And so he bought one, and then all bought. The husbands of the gipsy women were engaged, meantime, we understood, in robbing the farm-yards in the neighbourhood, the blame being afterwards laid upon our honest soldiers.

Then there was a ballad-monger singing a song about a man and a broom, and selling it (to those who would buy) printed on a long slip of paper. The first lines were —

There was an old man and he lived in a wood,
And his trade it was making a broom.

but I heard no more, because Robin hurried me away. Then there were some who had drunk too much cider or beer, and were now reeling about with stupid faces and glassy eyes; there were some who were lying speechless or asleep upon the grass; and some were cooking supper over fires after the manner of the gipsies.

"I have seen enough, Robin," I said. "Alas for sacred Religion if these are her defenders!"

"'Tis always so," said Robin, "in time of war. We must encourage our men to keep up their hearts. Should we be constantly reminding them that to-morrow half of them may be lying dead on the battle-field? Then they would mope and hang their heads, and would presently desert."

"One need not preach of death, but one should preach of godliness and of sober joy. Look but at those gipsy wenches and those lads rolling about drunk. Are these things decent? If they escape the dangers of war, will it make them happy to look back upon the memory of this camp? Is it fit preparation to meet their Maker?"

"In times of peace, sweet Saint, these lads remember easily that in the midst of life we are in death, and they govern themselves accordingly. In times of war every man hopes for his own part to escape with a whole skin, though his neighbour fall. That is why we are all so blithe and jolly. Let us now go home, before the night falls and the mirth becomes riotous and unseemly."

We passed a large booth, whence there issued sounds of singing. It was a roofless inclosure of canvas. Some ale-house man of Taunton had set it up. Robin drew aside the canvas door.

"Look in," he said. "See the brave defenders of Religion keeping up their hearts."

It was furnished with benches and rough tables: at one end were casks. The benches were crowded with soldiers, every man with a pot before him, and the varlets were running backwards and forwards with cans of ale and cider. Most of the men were smoking pipes of tobacco, and they were singing a song which seemed to have no end. One bawled the lines, and when it came to the "Let the hautboys play!" and the "Huzza!" they all roared out together:—

Now, now, the Duke's health,
And let the hautboys play,
While the troops on their march shall
Huzza! huzza! huzza!

Now, now, the Duke's health,
And let the hautboys play,
While the drums and the trumpets sound from the shore
Huzza! huzza! huzza!

They sang this verse several times over. Then another began—

Now, now, Lord Grey's health,
And let the hautboys play,
While the troops on their march shall
Huzza! huzza! huzza!

Now, now, Lord Grey's health,
And let the hautboys play,
While the drums and the trumpets sound from the shore
Huzza! huzza! huzza!

Next a third voice took it up—

Now, now, the Colonel's health,
And let the hautboys play,

and then a fourth and a fifth, and the last verse was bawled as lustily and with so much joy that one would have thought the mere singing would have gotten them the victory. Men are so made, I suppose, that they cannot work together without singing and music to keep up their hearts. Sailors sing when they weigh anchor; men who unlade ships sing as they carry out the bales; even Cromwell's Ironsides could not march in silence, but sang Psalms as they marched.

The sun was set and the twilight falling when we left the camp; and there was no abatement of the roaring and singing, but rather an increase.

"They will go on," said Robin, "until the drink or their money gives out; then they will lie down and sleep. You have now seen our camp, Sweetheart. It is not, truth to say, as decorous as a conventicle, nor is the talk so godly as in Sir Christopher's hall. For rough fellows there must be rough play; in a month these lads will be veterans; the singing will have grown stale to them; the black-eyed gipsy-women will have no more power to charm away their money; they will understand the meaning of war; the camp will be sober if it is not religious."

So we walked homewards, I, for my part, saddened to think in what a spirit of riot these young men, whom I had pictured so full of godly zeal, were preparing to meet the chance of immediate death and judgment.

"Sweet," said Robin, "I read thy thoughts in thy troubled eyes. Pray for us. Some will fight none the worse for knowing that there are good women who pray for them."

We were now back in the town; the streets were still full of people, and no one seemed to think of bed. Presently we passed the Castle Inn; the windows were open, and we could see a great company of gentlemen sitting round a table on which were candles lit and bowls full of strong drink; nearly every man had his pipe at his lips and his glass before him, and one of them was singing to the accompaniment of a guitar. Their faces were red and swollen, as if they had taken too much. At one end of the table sat Humphrey. What? could Humphrey, too, be a reveller with the rest? His face, which was gloomy, and his eyes, which were sad, showed that he was not.

"The officers have supped together," said Robin. "It may be long before we get such good quarters again. A cup of hipsy and a song in good fellowship, thou wilt not grudge so much?"

"Nay," I said, "'tis all of a piece. Like man, like master. Officers and men alike—all drinking and singing. Is there not one good man in all the army?"

As I spoke one finished a song at which all laughed, except Humphrey, and drummed the table with their fists and shouted.

Then one who seemed to be the president of the table turned to Humphrey.

"Doctor," he said, "thou wilt not drink, thou dost not laugh, and thou hast not sung. Thou must be tried by court-martial, and the sentence of the court is a brimming glass of punch or a song."

"Then, gentlemen," said Humphrey, smiling, "I will give you a song. But blame me not if you mislike it; I made the song in praise of the sweetest woman in the world." He took the guitar and struck the strings. When he began to sing my cheeks flamed and my breath came and went, for I knew the song; he had given it to me four years agone. Who was the sweetest woman in the world? Oh! he made this song for me!—he made this song for me, and none but me! But these rude revellers would not know that—and I never guessed that the song was for me. How could I think that he would write these extravagancies for me? But poets cannot mean what they say—

As rides the moon in azure skies,
The twinkling stars beside;
As when in splendour she doth rise,
Their lesser lights they hide
So beside Celia, when her face we see,
All unregarded other maidens be.

As Helen in the town of Troy
Shone fair beyond all thought,
That to behold her was a joy
By death too poorly bought.
So, when fair Celia deigns the lawn to grace,
All life, all joy, dwells in her lovely face.

As the sweet river floweth by
Green banks and alders tall,
It stayeth not for prayer or sigh,
Nor answereth if we call.
So Celia heeds not though Love cry and weep;
She heavenward wendeth while we earthward creep.

The marbled Saint, so cold and pure,
Minds naught of earthly ways;
Nor can man's gauds entice or lure
That fixed heavenly gaze.
So, Celia, though thou Queen and Empress art,
To heaven, to heaven alone, belongs thy heart.

Now while Humphrey sang this song, a hush fell upon the revellers; they had expected nothing but a common drinking-song. After the bawling and the noise and the ribaldry 'twas like a breath of fresh air after the closeness of a prison; or like a drink of pure water to one half dead with thirst.

"Robin," I said, "there is one good man in the camp." I say that while Humphrey sang this song—which, to be sure, was neither a drinking-song, nor a party song, nor a song of wickedness and folly—the company looked at each other in silence, and neither laughed nor offered to interrupt. Nay, there were signs of grace in some of their faces, which became grave and thoughtful. When Humphrey finished it, he laid down the guitar and rose up with a bow, saying, "I have sung my song, gentlemen all—and so, good-night!" and walked out of the room.

"Robin," I said again, "thank God, there is one good man in the camp! I had forgotten Humphrey."

"Yes," Robin replied; "Humphrey is a good man, if ever there was one. But he is glum. Something oppresses him. His eyes are troubled, and he hangs his head; or if he laughs at all, it is as if he would rather cry. Yet all the way home from Holland he was joyful, save when his head was held over the side of the ship. He sang and laughed; he spoke of great things about to happen. I have never known him more happy. And now his face is gloomy, and he sighs when he thinks no one watcheth him. Perhaps, like thee, Sweet, he cannot abide the noise and riot of the camp. He would fain see every man Bible in hand. To-day he spent two hours with the Duke before the Council, and was with thy father afterwards. 'Tis certain that the Duke hath great confidence in him. Why is he so gloomy? He bitterly reproached me for leaving Sir Christopher, as if he alone had a conscience to obey or honour to remember!"

Humphrey came forth at this moment and stood for a moment on the steps. Then he heaved a great sigh and walked away slowly, with hanging head, not seeing us.

"What is the matter with him?" said Robin. "Perhaps they flout him for being a physician. These fellows have no respect for learning or for anyone who is not a country gentleman. Well, perhaps when we are on the march he will again pick up his spirits. They are going to sing again. Shall we go, Child?"

But the president called a name, which made me stop a little longer.

"Barnaby!" he cried; "jolly Captain Barnaby! Now that Doctor Gravesairs hath left us we will begin the night. Barnaby, my hero, thy song. Fill up, gentlemen! The night is young, and to-morrow we march. Captain Barnaby, tip us a sea-song. Silence, gentlemen, for the Captain's song."

It was my brother that they called upon—no other. He got up from his place at the summons and rose to his feet. Heavens! what a broad man he seemed compared with those who sat beside him! His face was red and his cheeks swollen because of the strong drink he had taken. In his hand he held a full glass of it. Robin called it hipsy—and it is a mixture of wine, brandy, and water with lemon juice and sugar—very heady and strong.

Said Barnaby that there was one religion for a landsman and another for a sailor? I thought of that as he stood looking round him. If it were so, it would be truly a happy circumstance for most sailors; but I know not on what assurance this belief can be argued. Then Barnaby waved his hand.

"Yoho! my lads!" he shouted. "The ship's in port and the crew has gone ashore!"

Then he began to sing in a deep voice which made the glasses ring—

Shut the door—lock the door—
Out of window fling the key.
Hasten: bring me more, bring me more:
Fill it up. Fill it up for me.
The daylight which you think,
The daylight which you think,
The daylight which you think,
'Tis but the candle's flicker:
The morning star will never wink,
The morning star will never wink,
Till there cometh stint of liquor.
For 'tis tipple, tipple, tipple all around the world, my lads,
And the sun in drink is rightly lapped and curled, my lads,
And to-night let us drink, and to-morrow we'll to sea;
For 'tis tipple, tipple, tipple—yes, 'tis tipple, tipple, tipple—
Makes the world and us to jee.

"Take me home, Robin," I said, "I have seen and heard enough. Alas! we have need of all the prayers that we can utter from the depths of our heart, and more!"

(To be continued.)

The twenty-seventh annual show of the Derbyshire Agricultural and Horticultural Society has been held at Derby under favourable auspices, the entries being numerous.

Norwich Castle, so long used as a prison, having been acquired by the Corporation, will, at a cost of about £11,000, be turned into a public museum, art gallery, &c. The greater part of the money has been subscribed or promised, and it is expected that the remainder will be speedily obtainable, and that the alterations will shortly be proceeded with.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

SEPTEMBER 8, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (viâ British), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

THE LADIES' COLUMN.

The Queen has taken an opportunity, during her recent visit to Glasgow, of again and very emphatically expressing her sympathy with the higher education of women. Her Majesty visited and received an address from the committee of Queen Margaret's College, an institution which Mrs. John Elder, in 1884, presented to the Glasgow Association for the Higher Education of Women. The average number of students attending the college is 250. It is very pleasant to find wealthy women aiding in so generous a manner as Mrs. Elder did in presenting the college in the education of girls. It is quite clear that in a generation or two the extreme inequality in endowed and assisted education which now exists between girls and boys, and between young men and women, will be greatly reduced. So soon as public opinion sanctions such provision being made, generous and rich women are not wanting to supply the needful funds. Leaving the luckless "Holloway's" out of the question, Girton College has been the recipient of various munificent donations from women—notably, one from the late Miss Gamble, of Portland-place, who made the college her residuary legatee, and so provided it with over ten thousand pounds, out of which a new wing was built. Mrs. Abel Heywood left an equal sum to the women's classes of the Owen's College, provided the council will use it for that purpose; and Mrs. Elder's gift to the Glasgow College has been equally munificent. The approval accorded to such efforts by the Queen cannot fail to give an impetus to the happy wave of female generosity which is bringing higher education within the means of more and yet more girls. The Queen's reply to the address from the College included the following phrases:—"It is a source of gratification to me to hear of the success of Queen Margaret's College; every movement which tends to raise the position of women and to extend the sphere of their usefulness has my warm approval."

So the movement for "extending the sphere of usefulness" of women goes on, the time being ripe for it. There is, no doubt, another side of the shield, and some of the girls of the next generation may be disposed to envy their ancestresses who lived in quieter times: who learned to read, write, and keep the simplest accounts, and were then freed from all obligation to study, and were not expected to be any more highly cultivated. To whom much is given, from them much is required; and it would be idle to deny that the calm, domestic days led by our grandmothers were in some respects enviable. But one cannot live out of one's century, if one would; whatever its peculiar strain and effort, they must be borne as the price of its special advantages. Changed conditions have altered the position of women. Steam has taken full half of our old domestic work away, both by enabling manufactures to be best done on a large scale, and by increasing the ease with which manufactured goods can be conveyed to those who use them. Thus the work of women is taken from the home, and women must follow their work, and must in large numbers turn out of the domestic shelter to find their vocation, in the varied duties of the wider world. They must, then, be as well prepared as may be for the battle of life, and for the exercise in it of all their powers; for the more highly organised work in which women must now share demands the exertion of many intellectual and moral as well as physical capabilities that were little required in the more routine, though equally arduous, duties of old-fashioned housekeeping. If the modern conditions of women's labour press more hardly than older ones did on the idle, the feeble, and the incapable—the remedy, and the only possible remedy, is to reduce the number of such members of our sex, by improving both body and mind by education—which is the object of colleges for women.

Though this is the dull season in town, when the West-End is almost deserted, when the squares are given over to caretakers and cats, when the shopkeepers condescend to be on the watch for customers, and when hardly any but hack-carriages are seen in the streets; yet London is not without novelties. There are none in the world of fashion; but in those little matters which form suitable presents to take home to friends in the country there is as much that is fresh to be seen now, as at any other season. Amongst the newest things is a fir-cone brooch, the ornament itself being in gold, the series of little overlapping plates of the precious metal giving exactly the natural appearance, while the case in which it lies, nestling in the blue silk lining, is of leather, marked off to have a similar appearance. A novel development of the popular watch-bracelet has the tiniest of time-keepers dangling from a very short and slender chain, and looking as though it were the key of the padlock centre of the narrow bangle that surrounds the wrist. Another form of the same useful ornament is in silver, and is called a wristlet; there is a narrow band of silver around the arm, from which hangs a series of little chains of silver. On one of these a sovereign-purse is intended to hang; on another is a little silver watch set in a deep socket; on another is a tiny propelling pencil-case; while a fourth is left free in order to have attached to it any small parcel or other object that it may be wished to carry. This is, in effect, having a châtelaine on the wrist—a notion that could only commend itself to a person who liked display and noise. A pretty brooch is in the form of a gold "merry-thought;" one variety of this idea has a tiny bird in plain gold perched on the lower branch, and another has the space between the two halves filled in with the figures denoting this year of grace. In novelties for table use is a sardine server, with the holders shaped like two of the fish, fixed crosswise on the ends of the sugar-tong-like prongs. Another is an egg-boiler for table use, which will allow the mistress to prepare the matutinal egg to the precise taste of each member of the household, and to serve it up quite hot and fresh. The article consists of a silver boiler shaped like an orange, opening in the middle to take the water in which the eggs cook. This vessel is supported on the top of a tripod stand, at the bottom of which is a ring with a little spirit-lamp upon it, that keeps the water boiling. There is another variety of the same object in which the boiler is suspended by chains, like a gipsies' kettle, from the middle of a "three-stick" stand, with a separate little support for the spirit-lamp beneath.

Mr. Oscar Wilde has now, I believe, edited the *Woman's World* for a year. The September number introduces a new feature, which one is rather sorry to see. Hitherto, only women have written in the pages of that magazine; this month two contributions—a short poem and an article on tapestry—are signed with masculine names. Those contributions, however, are hardly likely to be regarded as the spice or savouring salt of the number, the gem of which, to my thinking, is a paper on "Roman Women at the Beginning of the Empire," by Miss Richardson, illustrated by two beautiful portraits from antique busts. The view shown of the great influence exercised by women in a time when law and custom straitly forbad them not only power but even personal liberty, is most striking, and the paper is written in an elevated yet picturesque style befitting the stately subject. Other interesting articles are Mrs. Cooper-Oakley's "Bonnets of the Reign," "Ouida's" on "The Streets of London," and a series of apophthegms by the Queen of Roumania.

FLORENCE FENWICK-MILLER.

ENGLISH HOMES.

No. XV.

Wentworth Woodhouse.

"BUT Wentworth — who ever names him without thinking of those harsh dark features, ennobled by their expression into more than the majesty of an antique Jupiter; of that brow, that eye, that cheek, that lip, wherein, as in a chronicle, are written the events of many stormy and disastrous years, high enterprise accomplished, frightful dangers braved, power unsparingly exercised, suffering unshrinkingly borne: of that fixed look, so full of severity, of mournful anxiety, of deep thought, of dauntless resolution, which seems at once to forebode and to defy a terrible fate, as it lowers on us from the living canvas of Vandyke?"

These are the famous words of Macaulay: and even thus one might ask, Who ever names Wentworth House—the great mansion in the south of Yorkshire, not far from clouded Sheffield—without at once thinking of its sometime owner, Thomas Wentworth, Earl of Strafford: "the one supremely able man the King had" in his fatal struggle with the Commons of England?

Far back as we have any records of its history, Wentworth Woodhouse belonged to Strafford's ancestry. In the days of Henry III., William de Wyntword of Wyntword acquired the estate by his marriage with Emma, daughter of William Wodehous "of Wodehous"—most likely a real house of wood, an ancient timber dwelling, dating perhaps from the Conquest. The usual spelling of the name of old was "Winteworth"; and so, they say, it is still pronounced locally—though I cannot say I noticed it. In Domesday the name is mentioned five times: once with the spelling "Wintreworde," which perhaps suggests a true derivation from "winter."

And here lived the Wentworths of Wentworth Woodhouse, and inherited the house and lands, in regular male succession, from the time of Henry III. to that of Charles II. Eleven William Wentworths held rule here without a break; and then came a series of alternate—or very nearly alternate—Williams and Thomases, which lasted till, on the death of Strafford's son without issue, the property passed to the children of his daughter.

Among these earlier Wentworths were some good fighting-men. Best known to fame, and something of a "character" in his way, was the second Sir Thomas, who flourished—and that greatly—in the days of Henry VIII. His bravery at the Battle of the Spurs won him the honour of knighthood; later on, his wealth gained him the title of "Golden Thomas." It seems an odd employment of this wealth to have paid with it a fine that he might *not* be made a Knight of the Bath: more reasonable was the license he obtained from the King in 1528, that, being infirm, he might wear his bonnet in the Royal presence.

The younger branches of the family founded houses of their own; there were the Wentworths of North and of South Elmsal, of Bretton, of Wentworth Castle—also in Yorkshire—and of Nettlested, in Suffolk. This last family became Earls of Cleveland and Barons Wentworth.

But the eldest branch achieved the highest honours. The first Baronet was a powerful and wealthy man; and his son and heir took every way of advancement, moving ever upwards, till he died, said Clarendon, "the greatest subject in power, and little inferior to any in fortune, that was at that time in any of the three kingdoms."

We need not take it that he advanced by base means. There is nothing low in the face that Vandyke shows us; it was no vulgar man who wrote that last letter, in which he urged his own death upon the King. But of Wentworth's enormous ambition there can hardly be a doubt; and his motto was "Thorough"; and we find that every step he took bore him higher, either in fame, or power, or wealth.

He was married twice—first to the Lady Margaret Clifford, daughter of the Earl of Cumberland, and connected with many of the greatest English houses; and, in 1624, two years after her death, to Arabella Holles (sister of Denzil), the daughter of the Earl of Clare. Thus, each time he married "well," as it is called; but each seems to have been a marriage of affection, and his exceeding grief at the death, in childbirth, of his second wife is on record, as is the sympathy then shown for him in the town of York, where he seems to have been greatly liked.

Yet the early records of his quiet life at Wentworth show that he was determined to be first, wherever he was, at whatever cost. Clarendon mentions his rivalry with "the old Lord Saville," whom he defeated, and succeeded as Custos of the Rolls for the West Riding; nor rested "till he had bereaved him of all place and power in Court, and so sent him down, a most abject, disconsolate old man, to his country."

With this masterful spirit, it is not surprising that he made enemies; and a more curious evidence of this than any of Clarendon's direct words is given by the index to the "History of the Rebellion." Here we find, in entry after entry under the head of "Wentworth," *Earl Holland hostile to him—Sir H. Vane his implacable enemy — Earls Essex and Holland his enemies, and why—Army incensed against him—Lord Savile his bitter enemy — Queen hostile to him — Sir T. Hotham his enemy—Earl of Southampton not his friend.* Perhaps in all his quarrels he was right; yet, in any case, what a talent for quarrelling!

He came of age in 1614, and in the same year, on his father's death, succeeded to the estate. Here he mainly lived—it was fourteen years before Parliament took up any great share of his time—and kept up a stately hospitality, in the great red-bricked house of which some part still stands. He entertained largely; and, apart from guests, his ordinary household numbered sixty-four. He always loved the life of a country gentleman. Much later, when he was ruling Ireland with an iron hand, he found time to order minutely the affairs of his home estate; and wrote then of his love of rural peace, remembering, no doubt, the life he had described ten years before, when he wrote to Sir George Calvert "Our objects and thoughts are limited in looking upon a tulip, hearing a bird sing, a rivulet murmuring, or some petty yet innocent pastimes."

He entered Parliament in 1620—he was elected, on Christmas Day, knight of the shire for the county of York—and at once took an active part as a friend of the people, a strong opponent of the unlimited monarchy of the Stuarts. This Parliament did not live long, nor did the next (in which he sat for Pontefract); but Sir Thomas Wentworth was already an opponent so powerful that the King was glad to keep him out of the Parliament of 1627 by making him Sheriff of his county.

But in this same year came a motive for the strongest

EARL AND COUNTESS FITZWILLIAM.

public action. Like Hampden, Wentworth refused to pay his share of the forced loan demanded by the King. He was imprisoned in the Marshalsea, and afterwards was ordered to keep within the town or neighbourhood of Dartford. By Christmastime, however, he was free; and early in 1628 once more sat for Yorkshire in the House of Commons.

And then—then came the sudden change, which has made the character of Wentworth one of the hardest riddles in history. Macaulay and others attribute it to sheer venality: the King tempted him, and he fell; the King paid a high price, and bought him, body and soul. (And it is true that, as early as July in this year, Charles's former enemy was made a Peer, Baron Wentworth of Wentworth-Woodhouse; on Dec. 10 he was created Viscount Wentworth; he was soon made a Privy Councillor, Lord Lieutenant of the county of York, and Lord President of the North.)

Mr. Gardiner gives him credit for honesty, makes him a kind of Girondist—though a Girondist with the will of a Cromwell. And, as has been said, no base man could have written that final letter to the King; as no altogether worthy man could have ruled Ireland as he ruled it, or have said—when Hampden, his friend of old, refused to pay ship-money till he was lawfully bidden—"He should be whipt into his senses; and if the rod be so used that it smart not, I am the more sorry."

From whatever motive, Wentworth was the mainstay of the King's cause during the next twelve years, as Lord President of the North, Lord-Deputy of Ireland, Lieutenant-General of the army against the Scots; and was rewarded with titles and great wealth. In 1640 he was made Baron Raby, of Raby Castle; he was Earl of Strafford, a Knight of the Garter, and Lord Lieutenant of Ireland.

But his measure was full. In the first year of the Long Parliament one of the earliest measures of the House of Commons was his impeachment before the Lords. Then followed that famous trial in Westminster Hall, when for eighteen days he defended himself against the mightiest opponents in England "with all imaginable dexterity, answering this and evading that with all possible skill and eloquence." He was not condemned till a Bill of Attainder was passed—and his Royal master signed it: moved thereto, perhaps, by the noble letter which, with any other King, one thinks, should have pleaded most eloquently for him. "Sir," wrote Strafford, "my consent shall more acquit you herein to God, than all the world can doe besides. To a willing man there is no injury done. And as by God's grace I forgive all the world with a calmness and meekness of infinite contentment to my dislodging soule, so, Sir, to you can I give the life of this world with all the cheerfulness imaginable; in the just acknowledgment of your exceeding favours." And so, on Tower-hill, "with marvellous tranquillity of mind, he delivered his head to the block."

His son, an amiable weak man, died childless in 1695, leaving the estates to pass to the issue of a sister who had married Edward, second Baron Rockingham.

And the second Chief Minister of England, who also ruled at Wentworth—the builder, indeed, of the present house—was a Rockingham: Charles Watson Wentworth, first Marquis. An honourable, pleasant, simple man—

Gentle, intrepid, generous, mild, and just,

says his epitaph—but of no very commanding abilities, he was a singular contrast to the mighty Strafford. Yet he was twice Prime Minister of England—the second time with every prospect of long-continued power, had not his sudden death overthrown all hopes. Burke, his intimate friend, wrote the fine "Character" which is engraved in the mausoleum which we shall pass before we leave the park, by its southern gate, for Rotherham. On the other hand, one remembers the epigram of a wit of the Opposition party:

Tell the truth—if the people can hear without shocking 'em—
That the Nation's asleep, and the Minister's *Rocking 'em*.

Quitting the Prime Minister till we reach his mausoleum, we come to the line of the Fitzwilliams, still holding rule here. The third Earl of Fitzwilliam married Lord Rockingham's daughter, and thus came to inherit Wentworth; but his family had been landowners in this immediate neighbourhood—at Sprotborough, only some ten miles off—as long ago as the eleventh century. One good-hearted Sir William Fitzwilliam of those early days set up in the High-street of Sprotborough a cross, with these words engraven on brass—

Whoso is hungry, and lists to eate,
Let him come to Sprotburgh to his meate:
And for a night, and for a day,
His horse shall have both corn and hay.
And no man shall ask him where he goeth away.

But as the days went by men grew less hospitable, and in 1520 the cross was pulled down.

History tells us of some sixteen William Fitzwilliams, and four Johns, in the direct line; many of them men of note, and one—the William of Elizabeth's day—Lord Deputy of Ireland five times, for four and thirty years. His grandson was raised to the Peerage of Ireland; and a descendant, fourth Earl Fitzwilliam, achieved the rare feat of making himself beloved as Lord Lieutenant—as we shall see in due place. The great grandson of this fourth Earl—William Thomas Wentworth Spencer Fitzwilliam, seventh Earl Fitzwilliam—whose golden wedding is this week to be celebrated, now holds rule at Wentworth Woodhouse; of which house, and the park about it, the things to be seen therein and the way thereto, some account must now be given.

The nearest way to Wentworth is to take the train from Sheffield to the little station at Chapeltown, whence the house is but two miles' walk—the two longest miles, though, that I recollect to have met. (Or you can go from Rotherham, whence it is a four-mile drive.)

It is a pleasant journey, by reason of its contrasts. You come out from the terrible smoke-cloud of Sheffield, pierced by its thousands of tall chimneys, and pass the little red houses just beyond, quite pert and shiny in the sunlight, with the great slope of Wincobank high above them; and quickly you are in the green country, a land of hills and dales, with tall trees bordering the little fields, and everywhere houses dotted about and signs of humanity. You are in the ancient woodland that Robin Hood (and Walter Scott) have made famous for us; for here "in that pleasant district of merry England which is watered by the Don, there extended in ancient times a large forest, covering the greater part of the hills and valleys which lie between Sheffield and the pleasant town of Doncaster. The remains of this extensive wood are still to be seen at the noble seats of Wentworth, of Wharncliffe Park, and around Rotherham." This, indeed, was of old Sherwood Forest; it was here that Gurth and Wamba talked, as the sun was setting in a cloudless sky.

It is a smoky country now, though a picturesque; the roads are grey, and the houses dirty, and even in the Park itself, eight miles from Sheffield (and four from its murky neighbour Rotherham), one seems to taste the smoke in the air, and November brings fogs quite worthy of London. Yet you are among the hills, and there is a fresh wind blowing, and you have varying views of wood and slope; passing by the first lodge, uphill along a grey road between the fields, you catch always a glimpse of water, or of a high church on a round-topped hill, or a line of dark wood along the ridge, across the valley on your right.

THE TERRACE.

To the Park itself there are high iron gates, with no bell,

and a classic temple for a lodge. It looks as though you could not get in without winding a horn, or some such formality of the days of Robin Hood; but you can, and very simply—as you will probably find out, if you go there and think it over.

In the Park, a bluff solid wall on the left bounds the private

THE ENTRANCE HALL.

gardens; upon it is a little temple, with a statue therein, and a row of elms runs along the higher ground behind the wall. To the right you look down into a cup of hills, with dark lines of trees, and peeps of the grey water of little lakes shimmering constantly in the light. Long-horned cows move across the smooth grass—"Brahmins," and Highlanders, with rough coats, black, brown, and white—and red and fallow deer are further off. At the end of the wall is a kind of round tower, with a dial projecting from its side; and as you turn the corner you come immediately upon a grand view of the house—a great Classic building, two hundred yards in length, with a stately portico high up above a zigzag staircase, and wings standing boldly out to right and left. It is, indeed, "not ugly," as Horace Walpole says—with some surprise, for the British Classic is not as a rule a thing of beauty in architecture. What gives picturesqueness to Wentworth Woodhouse is the amount of relief, of variety, in its design; the projecting middle block, the line of statues along the roof, the general absence of "Classic" flatness, and, most of all, I think, the variety of colour. The pale, brownish yellow of the mass is not only broken up by the windows, and the pillars with their darker shadows, but it is as it were picked out with black—along the top runs an irregular line made up of statues, vases, projections, and ornaments, all black, or of the darkest brown: and thus, tipped with black against its yellow, and crossed and varied with stairs and pillars, the whole building seems to sparkle in the sunlight, as it stands out against the wide lawn, and the dark masses of the trees, with distant hills and a grey sky beyond.

This present house was built, by the first Marquis of Rockingham, round that which was Strafford's home; "a pompous front, screening an old house," Walpole calls it, and says that "it was built by the late Lord on a design of the Prussian architect Both." The house seems to have been turned round—the back of the present house was the front of the old one; very curious in colour this is: gray-yellow in the middle, but the rest of a pale red, or pink, with pink paths to match it, in daring contrast to the green lawn. (These paths have all the look of brick, broken up small; but they are really made of "shale"—rubbish from the neighbouring pits, burnt, and made into very capital material for garden-walks; and perhaps of a colour no bolder than the glaring yellow gravel to which we are accustomed.)

Otherwise, this back-front (if one may so call it) is stately enough, with its projecting wings, and statue a-top in the middle; and it overlooks a lovely greensward bordered with rare trees of the softest, deep colour, and a long path leading through the gardens, with the high spire of the church standing up against the sky at its end.

These gardens are the prettiest of the old fashion that I have ever seen, with cut hedges and winding beds of regular design—one most lovely bed of violas of a glowing purple-blue is quite unforgettable—and a sweet scent such as rarely comes from the grand new flowers of modern gardens. And beyond, in the great walled kitchen garden—guarded by statues of Lucretia and Collatinus, carrying on an animated conversation across the gateway above which they are perched—there are long borders of flower-beds, with colours not massed in platoons as now-a-days they mostly are, but far lovelier in the constant sparkle of their bright variety, exquisite dots of purple, yellow, scarlet and white, among the bright green of their leaves.

Just beyond the gardens are the two churches, new and old; the former, built by the present Lord Fitzwilliam, a landmark from far away, a graceful Early English building of yellowish stone, with a tall slender spire. Across the way stand the yellow ruins of the older church, in the churchyard bright with flowers: a small square tower, a desolate place where once the congregation sat, and the former chancel, now used as a mortuary chapel. Here are very interesting monuments of Strafford—with his kneeling figure above—his father and mother, and his son; and just behind this church lies the little drab village of Wentworth, quite eclipsed by the great house which has sprung from it.

But the house is waiting, and we must return to it—not having yet, indeed, entered at the front door. It is the small door on the ground-floor which is always used: the grand portico above is for solemn state alone. Entering, you pass through arches into a low, pillared hall — were it only a ruin, it would doubtless be called the Hall of a Hundred Columns, for there at are least twenty. All is of a cool grey stone; at the back, stairs wind up to right and left, with statues at their feet; on the walls are horns of wapiti and bison, shot by Lord Fitzwilliam's sons; and beside the fireplace are comfortable seats, for the hall is used sometimes as a room for receiving visitors who have business with the Earl.

THE EARL OF STRAFFORD'S BED-ROOM.

Immediately above this hall is the saloon, into which the grand portico leads; indeed a noble room—square, lofty, and very spacious and bright. Round it are yellow pillars of scagliola, but all the rest is white; a marble floor, white walls, with recesses in which statues stand, and, higher up, a gallery running round the room. Red curtains to the windows—that look across the wide sweep of lawn and distant hill almost into Nottinghamshire—and great vases of a deep blue-green give colour, so that the saloon does not look cold or bare; all is stately and satisfying, as in the great room of a great house it should be.

Turning from this room to the next on the right, even in the doorway you see, face to face to you, the famous picture of the great man of the house, Vandyke's Strafford. What strikes one in the massive, thoughtful face, is its enormous *sense*. Looking at the splendid lofty brow—fine as that of some Elizabethan poet, of Beaumont or Jonson—one can believe in the power of eloquence for which Wentworth was unrivalled; but the quality that comes home to one is the practical sagacity of the statesman, the grasp of men and things. It is the face of a master, indeed; one looks back upon it again and again—and here in his house all seems to group itself round Strafford.

Thus, in this room, one looks at his contemporaries — Rupert's rough soldier face, and the somewhat lackadaisical Earl of Derby, whose head fell in the same cause as Strafford's—sooner than even at the magnificent "Adoration of the Shepherds," in which Sir Joshua has painted himself and his friend Jarvis. In the next—called the Vandyke Room — one goes directly to another portrait of Wentworth, only less fine than the first; then to his queer companion, Laud, with his silly, senile face; to his Queen and enemy, Henrietta Maria, charming, childish, weak; to Charles himself, looking (in this picture) every inch a scamp; and to the next generation—Strafford's son, weak but amiable enough, and Charles's ugly, but no fool.

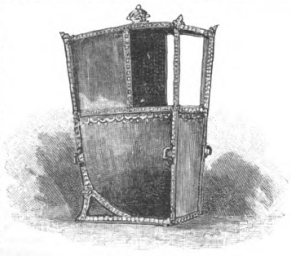
And, while we think of it, shall we not visit Strafford's own rooms, in the oldest corner of the house?—still, no doubt, very much as he left them (not that he *has* left them altogether, as you shall see). Two quaint, dark little rooms they are—hardly such as a great Earl would choose for his lodgings now-a-days. They overlook the little Chapel Court, of plain, dark-red brick, and face the grey old Well-gate—Inigo Jones's, they say—through which Strafford passed from his own house for the last time, and over which Lord Rockingham is said to have planted the little tree, which still grows and flourishes, in no earth worth speaking of. Beyond is a pleasant peep of a slope of garden, with its smooth green grass and pink pathway.

But the rooms themselves are as unpretending as may be. The first, the dressing-room, is a small dusky chamber, with white pillars standing out against a background of dark yellow; and the bed-room is, if anything, yellower still, with pillars across, which cut off a little sombre recess for the bed.

Yet hither, as they say, the Earl returns occasionally. I have been to many great houses, but never, to my disappointment, have found in any one of them the traces of a ghost; but here, I am assured, the maid-servants go in terror of the great Earl himself, who passes down the Oak Staircase—and the Oak Staircase is there, and I saw it—at eleven o'clock on Friday nights; and, for convenience, carries his head under his arm.

Another legend, of precisely equal truth, tells how Strafford, being in danger of arrest at Tankersley Old Hall near here, where he sometimes lived, was fain to climb into a great oak-tree as a hiding-place; but his favourite dog came after him to the tree—not, I believe, climbing up—and so betrayed *him*. And, indeed, there is the dog in his picture in the Vandyke Room.

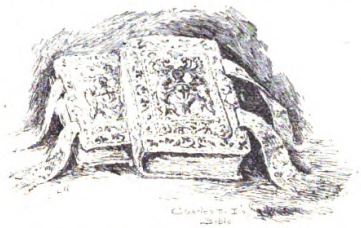
Of another nature are the memorials of Strafford in the library—his own collection of books, with many fine Elzevir and Aldine classics; a portrait of his two plain daughters; and a Bible and prayer-book, richly adorned, given to him by his King, to whom he gave so much.



THE PICTURE GALLERY.

The Wentworth library consists of several adjoining rooms, and contains, besides the large collection of books, some curious paintings and engravings. One ancient picture shows us the figures of two Fitzwilliams slain at Flodden "in doing their duty against the Scots"; and there is a quaint old print of "His Honour of Wentworth and Margaret Gascoyne, his wife."

Returning to the state-rooms of Wentworth Woodhouse and the pictures thereof—or, rather, the very few that space will permit one to mention—the first place must needs be given to the splendid "Whistle-jacket Room." "I have got you a pair of horses that will fly like Whistle-jacket," says Tony Lumpkin; and here is the famous racer, with a stately drawing-room all to himself but for two other pictures, and one of them unfinished—a bright and beautiful room, lofty, whitewalled, with a gold arabesque to enrich it, gay with rich blue furniture, rich screens, and other magnificence. His portrait, by Stubbs, is a noble picture of a noble horse—entirely unlike the trim pictures of slim racers one knows so well: a great canvas with no background, but only one massive, bright chestnut charger, with sweeping mane and tail, rearing magnificently at the universe.



The two other pictures in the room are worthy companions for this one. Over the chimneypiece is one of the loveliest of Reynolds's child pictures — the little Lord Fitzwilliam, his sweet face and pretty childish figure coming from a dark landscape to meet us. The child grew up to be a noble man — and when his rule, as Lord Lieutenant of Ireland, proved too humane and liberal for the Government of the day, his recall was mourned in Dublin as a national calamity. A singularly fine portrait by Lawrence of this nobleman, in his old age, is the third picture in the room.

OLD SEDAN CHAIR.

Of the rooms on the other side of the saloon the first is the sculpture-room, where stands a little regiment of busts and statuettes: a fine bust of the Marquis of Rockingham is one of the many memorials of the good Prime Minister, which we have, I fear, a little overlooked, in our devotion to him whom

Pym called the "wicked Earl." His portrait hangs in the dining-room, to which we come next, among many other interesting portraits and excellent pictures. In this room, they used to say, it was settled as the elections came on who

should be member for Yorkshire—a matter hardly to be settled in any dining-room now-a-days!

More pictures in the billiard-room, a chamber whose prevailing colour is an old-fashioned green; pictures of racers of the last century, ridden by jockeys, apparently, of the century before, and attempting some original mode of progression on their hindfeet; and other horse-pictures in the manner of the Whistle-jacket portrait—very good and pleasant in colour. Here, too, is a remarkable cabinet of tortoiseshell, which purports to be an exact representation of King Solomon's Temple.

Then there is the picture gallery—a long, red and white, comfortable room; much used, indeed, as a sitting-room—by no means a bare abode for painted people only. I will not try to catalogue its contents; but there are, among many others, a portrait of Shakspeare, said to have belonged to Dryden, a group of Italian poets—Dante, with his severe nose, the most prominent—a sleeping (one might even say a snoring) Cupid, by Guido, and an infant Hercules, the sturdy handiwork of Sir Joshua.

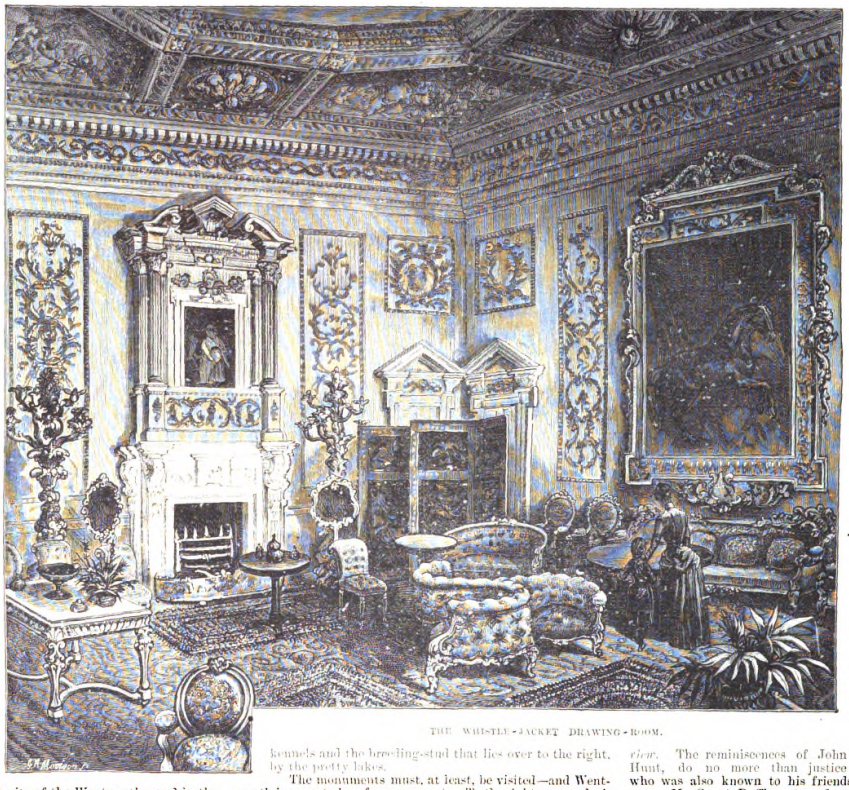
A Holy Family, by Raffaelle, and the somewhat faded beauty of a Magdalen, of Titian, represent the Old Masters; who are in great force—in the typical manner which has somewhat marred their popularity—in the Chapel down-stairs. This is a plain building, roomy, and quiet in colour, with a high gallery for the Earl and his family; and is decorated with Martyrs and Virgins who enjoy their martyrdom and virginity with becoming severity.

In the Chapel Gallery—pleasant, cosy, and rather dark—are chiefly family portraits. There is an interesting black bust of Charles I.; and Lady Milton's sedan-chair stands here, to remind us of the days when London was as Constantinople in the matter of paving.

Of the other rooms of Wentworth—and there are hundreds, literally—one would fain speak, but cannot. Only two interesting little rooms just by the Pillared Hall may be mentioned—in one are portraits of the Wentworths, and in the other, called the Ship Room, is preserved—besides some pictures of Lord Fitzwilliam's steam-yacht, and other vessels—one of the curiosities that serve to remind us of the fact which at Wentworth there is no danger of forgetting.

This is, that we are in Yorkshire. Every association of the house brings to mind one or other of the two main characteristics of the great county—hospitality and horse-racing. Here in the Ship Room, as in the Whistle-jacket Room above, we find the memorial of a great racer—a shoe of Bay Malton, the famous horse who is said to have won for his owner the money with which was built the splendid quadrangle of the Wentworth stables, perhaps the finest in England. Hence came the first winner of the St. Leger, the Marquis of Rockingham's Sampson; here stand every winter some seventy-eight hunters—proofs of the love of horseflesh and of hospitality at once.

There are, it is to be feared, not many great country houses where the traditions of a generous past are kept up as they are at Wentworth. For six months in the year the great house is full of guests; at the rent-days in May and November three hundred guests a day feed in hall and kitchen for the best part of a week; and ancient customs are kept up here, to be found, I believe, nowhere else in England.



Some, indeed, have had to be discontinued, in deference to the growing sobriety of the age, or because of the neighbourhood of a great town like Sheffield. It is not so very long since, at the rent-day, all tenants were given as much beer as they could drink—and due provision of straw to "sleep it off" on; and every tramp who passed through the park had but to ask, and he was given a horn of ale and a crust of bread.

These customs have passed away; but yet survives an ancient usage by which, on every Tuesday in November, neighbours from all the country round invite themselves to dine with the Earl and Countess. Each day, sixty or seventy commonly avail themselves of this pleasant right.

This hospitality keeps in full work the great old kitchens, the bakehouse, and the old-fashioned brew-house where twice a year Wentworth brews its own excellent beer and ale. Moreover, it finds tenants for the enormous cellars which are one of the greatest "sights" of the house. Dark vaults of immense length, "like the crypts of a cathedral," with massive pillars none too large for the weight they have to uphold, extend far and wide under the halls and galleries of Wentworth. Their ancient gloom is now lighted here and there with gas; but yet there is something weird, a damp air as of the dwelling of gnomes, in their dark shadows and heavy ceilings fungus-grown. In long lines down their sides stand the huge casks—for the most part holding over a hundred and twenty gallons each—filled with strong ales, sometimes twenty, sometimes fifty years old; the former a pure and glorious beer of immense potency—the latter now cousin-German to vinegar. These beer-cellars were once upon a time full, or nearly full; but it is a sober age—by comparison—and there is now room and to spare. There is, nevertheless, huge store of the true Yorkshire stingo; and of wine—let us say, some eighteen thousand bottles. Much is of the rarest and most precious vintages; and there are not less than six thousand bottles of admirable sherry, waiting till the day of champagnes and clarets be past, and Xeres and his old friend Oporto come to their own again.

Perhaps the most noteworthy among these many ancient vaults is the Water Cellar: a strange and gloomy place, where you look down into a kind of dark inner chamber, where is a great black pool of water fed by a running stream, as to which no man knows whence it comes or whither it goes. A ghostly place, and admirably suited for a secret murder.

It is not without relief that you step back into the open air, and look out upon the wide park. Here is still much to be seen—even if you are no sportsman, and neglect the great

THE WHISTLE-JACKET DRAWING-ROOM.

kennels and the breeding-stud that lies over to the right, by the pretty lakes.

The monuments must, at least, be visited—and Wentworth is a great place for monuments. To the right, as you look from the grand entrance, is Keppel's Column, erected in honour of the famous Admiral, a great friend of the first Marquis; to the left, a memorial of the same period—when there was certainly a burst of memorials—is Hoober Stand, which describes itself in an inscription as "This pyramidal building"; and directly in front of the house, near the edge of the park—perhaps three-quarters of a mile away—is the splendid mausoleum built on the untimely death of Lord Rockingham, in 1782.

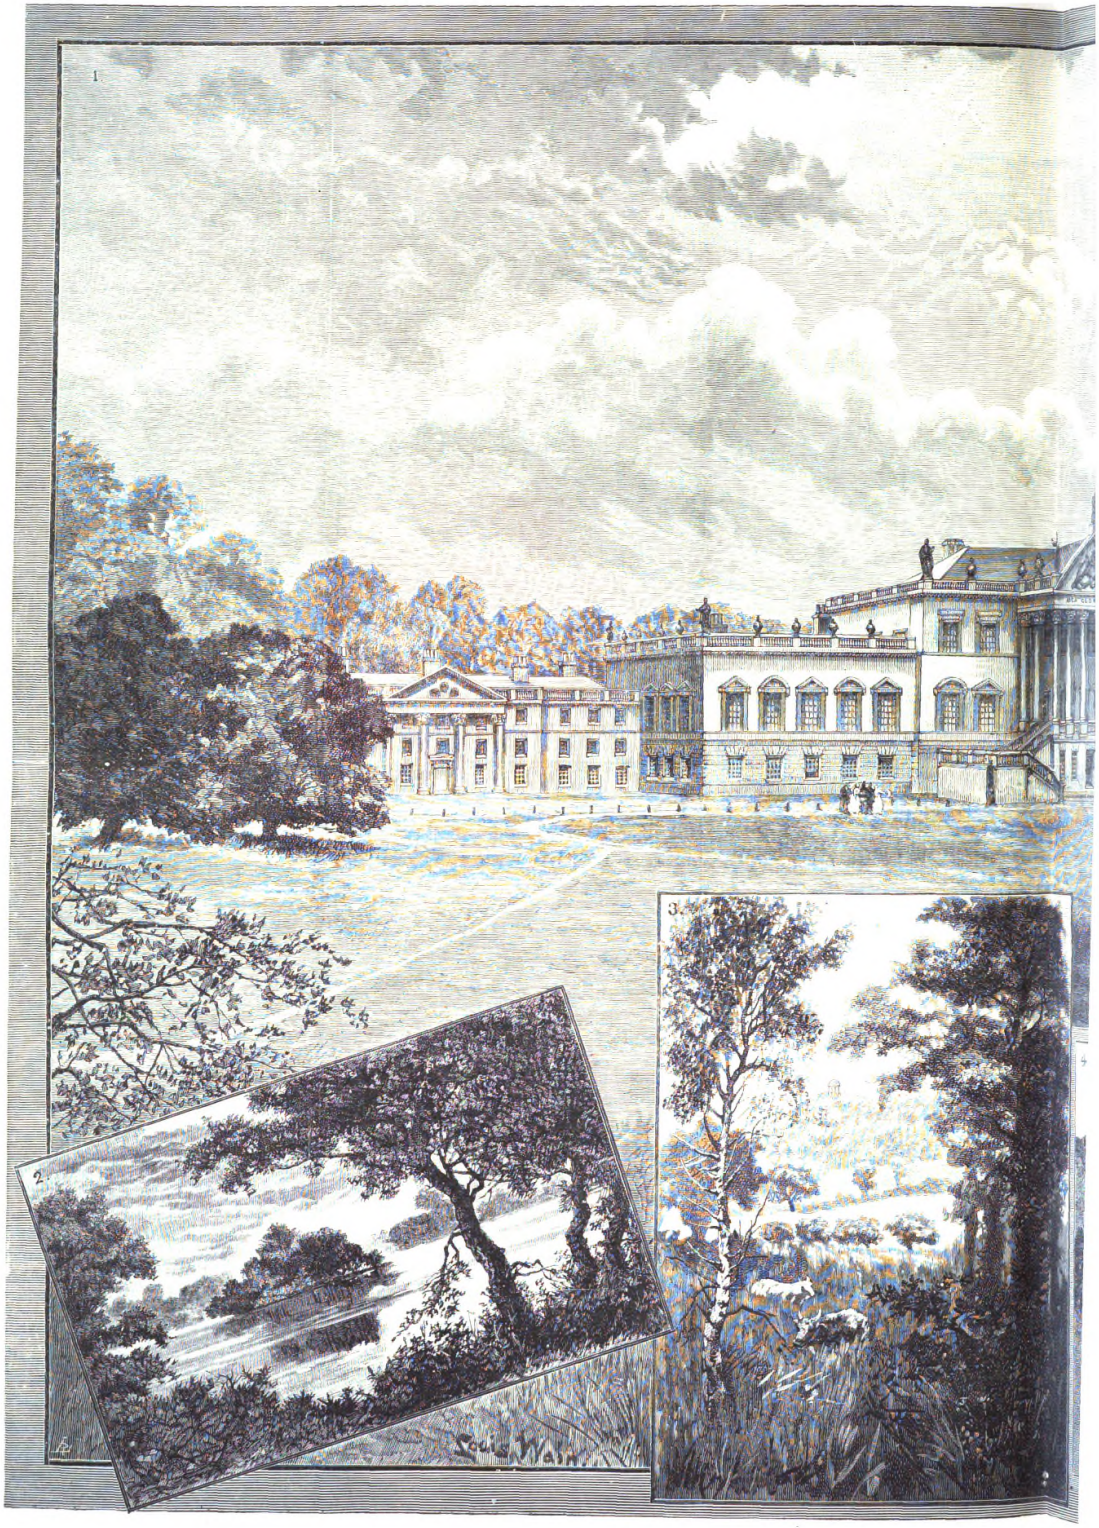
It stands in a pretty wood by the lodge gate, a very high three-storey building of freestone, by no means ungraceful, with a lofty cupola, supported by Ionic columns; and at each corner of its little plot of grass a tall obelisk. In the lower storey is a domed chamber, in which stands a lifesized marble figure of the Marquis, by Nollekens; the attitude is that of an orator, with outstretched hand, but very simple, touching, and dignified. Round the chamber are the busts of the famous Whigs of Rockingham's day—Fox, Edmund Burke, and the rough face of Keppel; and Burke's noble tribute to his friend is inscribed on the marble. As a statesman, he says, Lord Rockingham far exceeded all others "in the art of drawing together, without the seduction of self-interest, the concurrence and co-operation of various dispositions of men, whom he assimilated to his character and associated in his labours."

It is at Wentworth Park, this week, that is to be held the greatest festival it has ever known—a golden wedding must necessarily be one of the rarest of celebrations; and all the miners, tenants, schoolchildren, will have cause long to remember the rejoicings of this happy anniversary. On Monday—the day itself—will be held a great garden-party, with maypole dances, addresses from the tenants of the Malton estates, and all manner of festivity. Two days before this will be the grand gathering of four thousand children from the schools round about; and at the end of the week—on Saturday, Sept. 15—another mammoth garden-party, when twelve hundred miners and workmen and their wives, with tenants and others employed on the estates—say in all some four thousand people—will have a hearty meal, athletic sports, and other "diversion." Many interesting presentations are being prepared—a picture of the hunt, with Lord Fitzwilliam's portrait, by Hopkins and Havell; a painting of Lady Fitzwilliam, by Herkomer; a coloured window in the church, given by Lord Fitzwilliam's family; and an illuminated address, with an album and a representation of Sprotborough Cross, from the miners of Elsecar and Low Stubbin Collieries.

EDWARD ROSE.

MAGAZINES FOR SEPTEMBER.

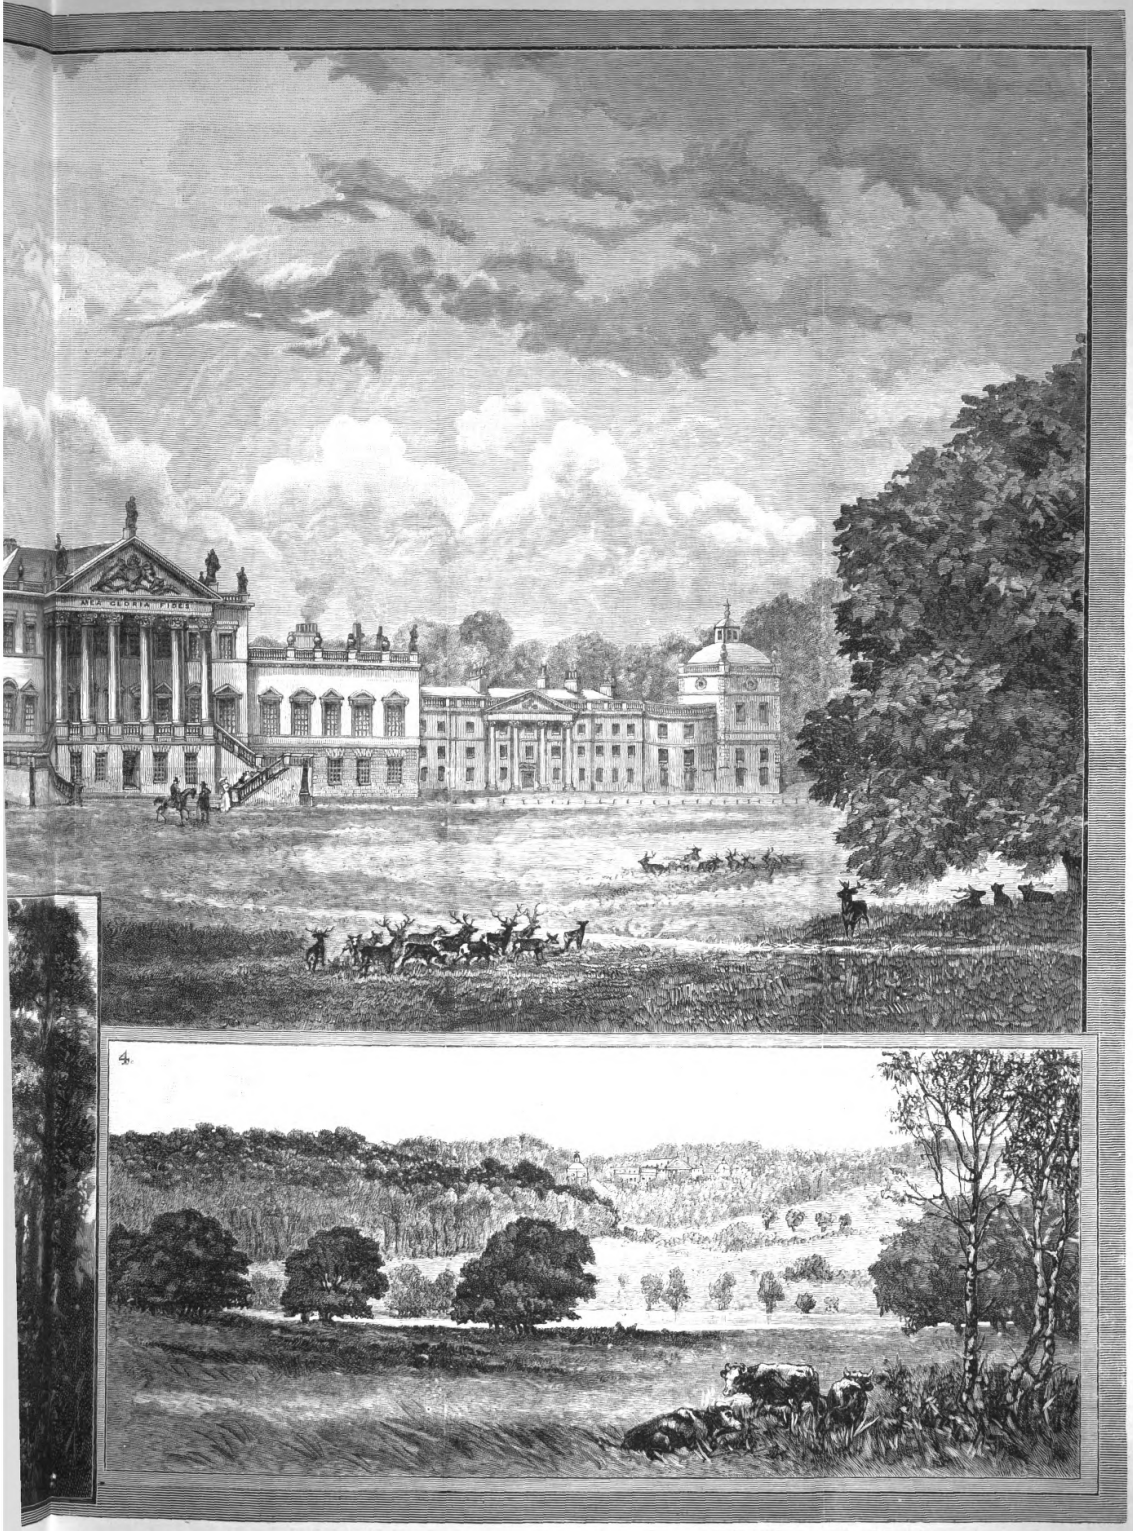
Nineteenth Century.—Miss Beatrice Potter's knowledge of the conditions of female labour at the East-End of London accredits the painful revelations of "Pages from a Work-Girl's Diary." An outline of the positions assumed by industrial Socialists in America is contributed by General Lloyd S. Bruce. Sir Lyon Playfair replies to Lord Armstrong's strictures on Technical Education. The Marquis of Lorne gives an account of searches for the wreck of a galleon of the Spanish Armada, called the "Florida" or "Florencia," sunk off the coast of the island of Mull. "Chaucer and the Italian Renaissance," a topic of much literary interest, is discussed by Mr. F. T. Palgrave. The miners of Scotland, many of whom are now Irishmen, are described as a class by Mr. Robert Hadow. Ethical inquiry is indulged by Mr. Leslie Stephen with a severely logical essay on "Belief and Conduct." The breeding of mankind on scientific principles, with a view to the elimination of physical and mental hereditary defects, is recommended by Mr. Julius Wertheimer under the title of "Homiculture." Mr. E. Pulsford compares the economic progress of New South Wales under a Free-Trade policy, with that of Victoria, which has preferred a Protectionist tariff. Co-operative stores for Ireland—why not for the agricultural districts of England?—are advocated by the Hon. Horace Curzon Plunkett. A memoir of Millet, the truthful painter of rustic life in France, by Mrs. Henry Ady, should be interesting to friends of sincere art. Mr. Oswald Crawfurd, though no Englishman knows and loves the Portuguese more fairly, does not spare finding fault with their East African administration in his remarks on the slave trade. The recent biography of the late Mr. W. E. Forster draws forth a circumstantial endeavour by Mr. Gladstone to prove that the Chief Secretary for Ireland who resigned office in May, 1882, was not justified in complaining of faint support from the Liberal Government of that date.



Contemporary Review.—Sir W. W. Hunter, a great official and statistical authority on the present condition of India, boldly and ably sets forth the urgent problems of financial and political reform. He lays much stress on the proposals of the late Indian Congress and of the Calcutta and Madras Chambers of Commerce, and on the opinions expressed by Sir Richard Garth, the late Chief Justice of Bengal, and in the August number of the *Westminster Review*, by Mr. Holman Hunt, do no more than justice to that gifted artist, who was also known to his friends as a good and amiable man. Mr. Grant Duff's notes of a visit to Mount Carmel in Syria, where he was the guest of Mr. Lawrence Oliphant, contain some facts worthy of notice. Professor J. R. Seeley estimates the chances of any modern author obtaining what might be considered "literary immortality"; but supposing that none ever can, "let each write to his ideal." Dr. John Rae continues his analysis of "State Socialism," as expounded by some German writers. Of Henry More, the mystical Christian Platonist of the seventeenth century, there is an interesting study by Mr. Arthur Benson, of Eton. The legal protection of children against parental cruelty or neglect is the subject of an article by Mrs. Tabor; while Mr. J. Scott Keltie advocates the study of commercial geography, and Mr. W. T. Stead describes his impressions of Petersburg. Archbishop Walsh disputes the statistics of Mr. G. Wyndham regarding the Irish Land question.

Universal Review.—A well-known political supporter of Mr. Gladstone, the Rev. Canon MacColl, advocates Home Rule for Ireland. The editor, Mr. Harry Quilter, comments on the genius of the late Mr. Frank Holl, and regrets that portrait-painting turned him aside from his true mission of depicting pathetic and tragic scenes. Mr. Henry James continues his romance, "The Lesson of the Master." The quality in sculpture sometimes termed "couleur," a mystery to the uninitiated, is defined by Mr. Alfred Gilbert as just relief, harmony of light and shade and gradation, and due relation of one part to another, which one would have thought were the essential qualities of all fine art. A prose treatise, by Mr. W. Hazlitt

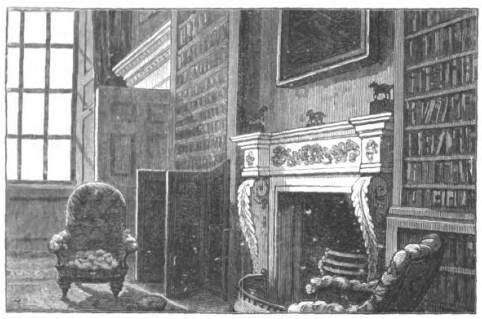
LEATHER BOTTLES.



ENGLISH HOM

1. South-east Front of Wentworth Woodhouse. 2. On the Lake. 3. The

WENTWORTH WOODHOUSE: THE SEA



COUNTRY HOMES. No. XV.

3. Mausoleum, from the Park. 4. Wentworth Woodhouse, from Rockingham Woods.

THE SEAT OF EARL FITZWILLIAM, K.G.

Roberts, on the co-operative system, is followed by Mr. Lewis Morris, the poet, with an ode on "The Triumph of Labour." Mr. F. Gale's recollections of the cricket-field are accompanied by a portrait of William Dorrington, of Town Malling; and he considers that cricket was as good fifty years ago as it is now. A brief sketch of Bayreuth and the Wagner performance, by Mr. E. H. Bell, and a further instalment of Alphonse Daudet's "One of the Forty," occupy some remaining pages.

THE LIBRARY, WENTWORTH WOODHOUSE.

Fortnightly Review.—Lord Wolseley, who wrote last month on military courage, now gives us an essay on military genius, comparing the skill of Napoleon, Julius Cæsar, Marlborough, and General Lee, who were commanders as well as strategists, having the "personal magnetism" to impart confidence to their soldiers, of which he thinks Wellington had less. The Parliamentary business of the Session is reviewed by Mr. A. Baumann, M.P. An anonymous critic severely condemns the romances of Mr. Rider Haggard. Judge Chalmers explains and disapproves of the still remaining form of imprisonment for debt on failure to satisfy County Court judgments. Mrs. Lynn Lynton's review of the memoirs of the scandalous Abbé Galiani exposes the state of French morals and manners in the eighteenth century. The domestic and social condition of women in India, especially with regard to compulsory marriage in childhood, is shown by Mr. Lester de Fonblanque to be intolerably oppressive. "A Hundred Years Ago," by Colonel Knollys, is a striking contrast to the present state of England. A complete and methodical account of the late Naval Manœuvres may be recommended as useful reading. Professor Dowden's study of "Shakspeare's Wisdom of Life" is guided by much critical and ethical insight.

National Review.—The frontier quarrel with Thibet, which just now embarrasses our Indian Government, is examined by Mr. R. S. Gundry. Mrs. Jeune gives her personal recollections of the late Mr. W. E. Forster. The old and the new style of partridge-shooting are compared by Mr. T. E. Kebbel. An inquiry concerning the value and effect of music in mental culture, by Mr. J. F. Rowbotham, is followed by Mrs. Lane-Fox with one estimating the possibility of a national school of opera. Mr. Paul Sylvester reviews some modern Spanish novels. The Irish Coercion or Crimes Act of 1882 is compared with that of 1887, clause by clause, in an article by Mr. George Alexander. Professor Sayce relates a few popular stories gathered by him in Syria and Egypt. "The Gates of Hades," by Mr. Percy Greg, is a treatise of dreams and hypnotic hallucinations with reference to the belief in ghosts and the like. Mr. J. G. Bettram's remarks on oyster-cultivation in England, France, and America, are of some practical value. Captain Penrose Fitzgerald questions the correctness of some of Sir Samuel Baker's views regarding our maritime defences.

Murray's Magazine.—The disparaging observations of Sir Lepel Griffin upon the United States of America are replied to by Mr. Theodore Roosevelt, who also vindicates his countrymen from the milder imputation of lack of taste and sensibility to grace or beauty, and "want of distinction," ascribed to them by Mr. Matthew Arnold. "The Reproach of Annesley" is continued, and there is "A Tale of a Ten Pound Note." Articles on partridge-shooting, on "village opinion," and on early English music, occupy some pages. The defects of our army organisation are held up to scorn in a supposed letter from a Prussian officer visiting England. Mr. W. M. Acworth concludes his account of the working of our great railways with a description of the Great Eastern Railway.

Blackwood's Magazine.—The story of "A Stiff-necked Generation" arrives at its twenty-fifth chapter. A literary and romantic conversation, reported by the late Miss E. J. Hasell, between congenial friends on an isle of Derwentwater, introduces pleasing versions of several of Firdousi's Persian tales. There is a short story, "My Treasure"; an account of General Colby's work in the Ordnance Survey of Scotland; a translation from Uhland, by Sir Theodore Martin; a narrative of rough Irish campaigning experiences "in a proclaimed district," by Mr. F. Noel Paton; a review of contemporary French novelists; a political article on Mr. Forster and Ireland; and a commentary on the Naval Manœuvres.

Macmillan's Magazine.—Mr. Bret Harte proceeds with his new Californian tale of "Cressy," the name of a girl. A pleasing account of the birds in a rural part of Wales is supplied by Mr. Wardc Fowler. The critical notice, by Mr. Saintsbury, of Praed's graceful and lively verse-compositions, and Professor Minto's discourse on Pope and eighteenth-century poetry, will suit readers of literary taste. Of more value, indeed, is the admirable study of Montaigne's life and character in Mr. Walter Pater's historical romance, "Gaston de Latour." Professor T. E. Holland relates the festival at Bologna on the eighth centenary of the famous University in that city. The practice of sportsmen and game-preservers in America is described by Mr. A. C. Bradley. Mr. Stephen Wheeler exposes the libellous and seditious character of the native press of India.

Longman's Magazine.—"A Dangerous Catspaw," by Mr. D. Christie Murray and Mr. Henry Murray, is a story of a barrister with a burglar client and with embarrassing female acquaintance. Archdeacon Farrar reviews "John Ward, Preacher," a powerful American tale which exhibits the distress caused by gloomy Calvinistic views of religion. "The Cruel Priest" is a Scottish ballad narrating a grim tragedy of the olden time. "Poor Harry," by Mr. W. E. Norris, is a little rustic story, gracefully and neatly told. Mr. W. J. Henderson describes with exactness and with much animation the annual manœuvres of the New York yachting squadron along the New England coast. The mild attractions of Picardy for landscape artists and tourists are described by Mr. Graham Tomson. Mr. Edmund Gosse furnishes a love-song. "Orthodox," by Miss Dorothea Gerard, is the story of a Jewess in Galicia, and of her lover, a young nobleman in the Austrian army.

Time.—"Work and Workers," by Mr. John Pendleton, lies this time in the collieries of the West Midlands. Mr. Karl Blind contrasts the French Republic with that of Switzerland. The centenary of New South Wales suggests to Professor Strong an historical retrospect of Australian progress. Mrs. Power O'Donoghue narrates an excursion in Wicklow, with a visit to the home of Mr. Parnell. The coral-reef controversy is examined by Mr. H. B. Guppy, with reference to Darwin's early view, recently disproved by Mr. John Murray. Mr. Arthur Grant collects some anecdotes of the splendid Moorish ladies in Spain of the Middle Ages. Bologna and its ancient University are treated of by Mr. G. B. Stuart. The sport of shooting wild geese in Northern India is described by Mr. H. H. Sharpe. A lecture to the Ethical Society, by Mr. Bernard Bosanquet, defines the respective spheres of individual and social reform. Anecdotes of rats are collected by Mr. T. Leyland There is a short tale, by Mr. Walter Raymond, called "A Complete Change"; and further chapters are added by Mr. Julian Corbett to his romance of "Kophetua XIII."

Harper's Monthly.—Wood-engravings, as usual, exquisitely finished, adorn this and two other New York magazines. The rambles of Mrs. Pennell and her husband, a well-known artist, have often entertained us; but instead of the conjugal tricycle, which carried them through France, they tried walking with knapsacks through the Western Highlands of Scotland, and found it a grievous mistake; her present narrative leaves them in the island of Mull, but going to Skye. The caribou, one of the finest wild animals of North America, has a chapter to himself. Another chapter is devoted to Japanese china, the old Satsuma ware. The city of Memphis, on the Mississippi, with the States of Tennessee and Arkansas, is selected for this month's "Studies of the Great West." Helena and Butte, in Montana, are also described. The new gallery of Italian tapestry at Florence is the subject of an instructive article. We find Barbadoes, Demerara, Trinidad, and other West Indian colonies, treated with skill by the pen and pencil. Mr. William Black's Highland story, "In Far Lochaber," and tales by Mr. W. D. Howells and others, provide a sufficiency of fiction.

The Century.—Many Englishmen will thank the American writer and editor for the interesting account of Uppingham School and of its late head-master, the Rev. Edward Thring, with his portrait, and with sketches by Mr. Joseph Pennell. The history of Lincoln's Presidency and of the Civil War is continued. Industrial or handicraft instruction, in the schools of Massachusetts, appears an example worthy of imitation. A pathetic story is told of the Trappist monastery in Kentucky, some account of which was given last month. Mr. George Kennan proceeds with his reports of the condition of Russian political exiles and prisoners in Siberia. There is a story of Americans in Mexico, with reminiscences of the war in that country forty years ago. The various student "fraternities," clubs, or friendly societies, formed at the American Universities and Colleges, present a phase of social life not undeserving of notice. Some curious particulars are stated with regard to the shifts and privations imposed on the people of the Southern States by the exclusion of imported commodities during the Civil War. There are also many fine engravings.

Scribner's Magazine.—Mr. W. H. Mallock describes "Scenes in Cyprus," with some good illustrations from photographs taken by himself. Personal recollections, by Mr. Hugh McCulloch, of several eminent Americans of the past forty years, are deserving of notice. The articles on American railway passenger travel are continued, and merit the attention of railway managers here. The story of "A London Life," by Mr. Henry James, is concluded. "Presidential Campaign Medals" have some value as memorials of the political history of the United States. On Fuji, or Fusiyama, the Sacred Mountain of Japan, there is a poem by Mr. Percival Lowell. Mr. T. D. Seymour gives some account of Modern Greece.

English Illustrated Magazine.—Mr. Henry James, in "The Patagonia," brings his Americans over to Europe, landing them at Liverpool. A picturesque region, little known, that of the Polish Carpathians, is delineated by Mr. Adam Gielgud. Mr. Ashby Sterry's "London Street Studies," with accompanying sketches by Mr. W. D. Almond, and the article on Hampton Court, illustrated by Herbert Railton and A. D. M'Cormick, keep us at home. Professor Minto has finished his carefully studied historical romance of "Ralph Hardelot."

The following magazines for the month appear to contain articles of fair average quality, *The Cornhill, Temple Bar, Gentleman's Magazine, Belgravia, London Society, Tinsley's, The Argosy, The Theatre, Atalanta, The Naval and Military, Good Words, The Leisure Hour, Cassell's, The Sun, All the Year Round,* and *Myra's Journal of Dress and Fashion.*

ART MAGAZINES.

A prominent work in the London art exhibitions of the season just closed was Mr. Arthur Hacker's picture, "By the Waters of Babylon," which forms the frontispiece to the September number of the *Art Journal.* Current art is further illustrated by an interesting account of the Scottish pictures in the Glasgow Exhibition. There is also an illustrated account of the Fürstenberg Gallery of Pictures, Donaueschingen, a little town on the borders of the Black Forest, near the source of the Danube. A prettily-illustrated article on "Old England's Boston"—that is, Boston in Lincolnshire—will probably cause the reader, like Oliver Twist, to "ask for more," if he be interested in this picturesque and historic old town. The account of William of Wykeham is continued from a former number; and in "A Plea for Schools of Art," the writer insists on the necessity of teaching workmen to draw and colour well before they can hope to become successful designers. Not the least interesting article in a varied and readable number is Mr. Joseph Hatton's account of "Some Provincial Clubs," wherein the tastes and habits of London club-men and their provincial fellows are pleasantly contrasted. Mr. Marcus B. Huish continues his "Notes on Japan and its Art Wares."

If a carping critic were to turn over the pages of the current number of the *Magazine of Art* for the express purpose of finding fault, and after the superficial examination which is supposed to be common to critics he pronounced the number a little dry and wanting in variety, he would, at all events, bestow a word of admiration on the frontispiece, "The Convalescent," after Sir J. E. Millais, which, despite the sooty shadows of the face, is a charming picture. The "Orpheus and Eurydice" of G. F. Watts, R.A., is scarcely so well rendered as that great work deserves. Both these subjects illustrate an account of one of those private art collections which are scattered in such numbers all over Great Britain—the Kepplestone Collection, in the neighbourhood of Aberdeen, belonging to Mr. Alexander Macdonald. The account of the French painter Rousseau is interesting, and the examples of his work are excellent. Articles on "Poetical Treatment in Art," by J. R. Hodgson, R.A.; "Sculpture at the Royal Academy;" "The Stopping-Point in Ornament;" "Bernard Van Orley," a Flemish painter, make up the rest of the number.

SURGICAL APPLIANCES FOR THE POOR.

It is very distressing to know that any difficulty should be experienced by the poor in obtaining surgical appliances. The funds at the disposal of the hospital authorities, and of the Hospital Sunday Fund in particular, are, it must be admitted, quite inadequate to meet the demands of the suffering poor of the metropolis; while in the case of the more important of the surgical aid societies the rule of compelling cripples to canvass for a number of subscribers' letters is, in most cases, an insurmountable difficulty. Another obstacle, one equally great, and which it would be quite impossible to meet without the aid of the press, is the widespread ignorance which prevails as to the duties of guardians and district medical officers, upon whom the Law imposes the duty of supplying surgical appliances to all poor persons who are unable to pay for them. The printed instructions issued by the Local Government Board to guardians, medical officers, relieving officers, churchwardens, and overseers of the poor are perfectly explicit on this point, and leave no room for doubt that the poor, whether paupers or not, have a direct claim on their parishes for all necessary appliances. This fact should be more generally known; if it were, then the harsh and cruel letter system adopted by certain of the voluntary charities would soon be seen to be wholly unnecessary, and a considerable saving would be effected in the distribution of charitable funds. It would also be greatly beneficial to the afflicted if the committee of the Hospital Saturday Fund would reserve a small percentage of their receipts for the gratuitous issue of instruments, instead of compelling, as they now do, all applicants to pay half the cost of the same. The Hospital Sunday Fund apportions four per cent of its gross receipts for the purpose of procuring surgical appliances, but this only yielded last year about £1820, and proved to be, as in former years, inadequate. It is understood that at the next meeting of the council of the Hospital Sunday Fund, a proposition, influentially supported, will be made to increase the percentage, and which it is hoped will be carried *nemine contradicente.* Since it is a step in the right direction, and as the Charity Voting Reform Association has recently issued a paper on surgical aid to the metropolitan clergy, calling attention to the powers conferred on guardians by the Poor Law, there is every reason to believe that, before long, some of the difficulties standing in the way of the afflicted with regard to surgical appliances will be entirely removed.

In recognition of their services at the recent Conference at Washington on the subject of the North American Fisheries, the Queen has conferred a baronetcy upon Sir Charles Tupper, G.C.M.G.; the Grand Cross of the Order of St. Michael and St. George upon the Hon. Sir Lionel Sackville-West, K.C.M.G., her Majesty's Minister at Washington; and Knight-Commanderships of that Order upon Mr. J. S. D. Thompson, Q.C., Minister of Justice, Canada; Mr. J. S. Winter, Attorney-General, Newfoundland; and Mr. J. H. G. Bergne, C.M.G., Superintendent of the Treaty Department of the Foreign Office.

THE VANDYKE ROOM, WENTWORTH WOODHOUSE.

SCIENCE JOTTINGS.

GERMS: GOOD AND BAD.

Turning out the contents of a portmanteau the other day, a pair of boots, which had evidently been deposited therein in a damp condition, came to light covered thickly in some parts with a growth of blue mould. To the attentions of this mould, of course, no housewife is a stranger. It grows on her cheese and invades her jelly-pots, and does not despise even damp boots, as we have seen, in its selection of a local habitation. The question of the mould's origin leads us in the direction of more than one great and grave theory regarding the beginnings of life at large. Where the mould comes from may best be answered, as a philosophical query, by saying that it springs from a germ or germs, derived from a parent-mould. These germs, microscopic in size, are carried by the air, and are given off from the parent-mould as minute living particles. Like drift-wood on the sea, they are borne hither and thither in company with many thousands of neighbour-germs, like and unlike, and when they find a suitable soil (as in the cheese or the jelly) they spring up into the mould whereof they are the early and legitimate representatives. The air around us, as Tyndall long ago proved and expressed it, is a "stir-about" of minute particles, some of mineral and inorganic nature, others of organic and living kind. It is an ocean having particles, living and dead, for its floating things; and the living particles, in brief, are the "germs" whereof we hear so much that is interesting in the science of the day. It is true that we are encompassed about by a great cloud of living particles; but it is not true to assert that these particles are all equally noxious to man or equally innocuous in so far as human interests are concerned. Some germs, like those of the blue mould, may be deemed harmless enough in their character. Others again, like those of the yeast-plants, are more destructive, it is true, or may be sometimes pressed into the service of man. That bottle of claret you left uncorked after dinner two days ago has gone to the bad. You declare it to be as sour as vinegar; and well may it be so, for vinegar it has become. Into your wine from the air there dropped sundry microscopic germs of yeast-plants. These bred and multiplied in the soil they found ready to hand in the shape of the wine. Through the exercise of their own chemical powers they produce vinegar by a process of fermentation, just as certain other and nearly-related yeast-germs manufacture alcohol out of sugary solutions. By the air also are carried the germs of diseases; and that many of our epidemics are air-borne in their nature and propagation remains a sure fact of health-science. These germs of disease, dispersed broadcast, like the germs of the yeast-plants and of the blue moulds, seek a soil in the shape of the animal frame. Once found, this soil is utilised, and there is witnessed in the case of the body an analogous process to that seen in the wine. The little leaven (of disease) which leavens the whole lump (of the body) is exactly represented by the fever-germ. With the Apostle, one might go further and assert that, sown in weakness, the germ appears in strength. In each case the little living particle, whether of the mould, the yeast-plant, or the fever, reproduces its like. It multiplies exceedingly: the few germs become thousands, and all we see happening, alike in fermentation and in the fever, is merely the result of germ-growth. "Like begets like," and thus the germ reproduces in each case, sometimes directly, sometimes indirectly, the likeness of the parent to which it owed its origin.

Questions of size are always difficult to settle or determine from a popular point of view, and, when we seek to gain some adequate idea of the dimensions of germs, we are met with the difficulty of translating into terms of common life those of the infinitely little. If we speak of a germ which in length is the one ten-thousandth part of an inch—that is, equals one part of an inch which has been divided, as to its length, into ten thousand parts—we utterly fail to grasp any notion of the size indicated. An appeal to figurative description, while more graphic in character perchance, yet leaves us with the dimmest conceptions of the dimensions of germs. One writer tells us that on the area of a single square inch we could place, in a single layer, a population of common germs or *bacteria*, 100 times as great as the population of London. Graphic as is this estimate, the idea of the actual size of the individual germs remains simply unattainable. It is this diminutive size compared with the great results in the way of disease certain of these germs may and do produce, which is more than sufficient to appal us. Think for a moment of that fatal "wool-sorters' disease" which was formerly prevalent in Bradford. This ailment is caused by the entrance into the human frame of a minute germ, or *bacillus*, with which we are, microscopically, perfectly well acquainted. Sown somehow in the body through handling the wool of animals which have died of a similar disease (known in the animal as "splenic fever") this particle grows and multiplies as we have seen, and kills mankind through its abundant self-reproduction into thousands within the human tissues. Upon human life it would, therefore, seem that disease-germs work their will unmolested. Yet this is by no means the case. Science has, in truth, been up and doing for years past, teaching us how we may scorch and destroy these particles, how we may limit their spread, and how we may protect ourselves and our goods and chattels against their attack. We are far from being helpless in the war we wage against germs, and every year that passes over our heads proves this statement true. The deaths from germ-produced fevers and allied ailments show a steady decrease year by year, and in due season we may reduce such a death-rate to a miserable minimum if the people could only be well trained up in the sanitary ways wherein they should safely and readily walk.

But all our germs are not hurtful, as we have seen, and some exercise in the domain of Nature a decidedly useful function. Long ago, De la Tour showed the world that fermentation was not a result of death, but a consequence of life. It was the result of the growth and multiplying of the yeast-plants in their appropriate soil. Similarly, we open our eyes to the fact that putrefaction and decay are really works and actions wherein the omnipresent "germs" are playing the beneficent part of natural scavengers. They are removing from the earth's surface the fragments of life, and are preventing the world from becoming a perennial charnel-house. Still further may you dive into the useful ways of germs, aided by the eye of science. Darwin has told us of the part played by the earthworm as an underground farmer. Fertility of ground is brought about by the perpetual turn-over which the subsoil receives at the hands of the worm. Our germs probably accomplish as much for us in this latter direction. They break up and decompose the refuse of life and aid its incorporation with the soil everywhere. If the world might be much the better for the absence of certain germs, it is no less true it would certainly be rendered much the worse by the absence of others. If, on the one hand, certain germs kill or wound us, others, again, make the world purer and sweeter as the result of their work. It is in this, as in so many other things, we are apt to grumble at things as they are because we do not see, or care to notice, the reverse and kindlier side of the medal.

ANDREW WILSON.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

G ADAMSON.—Many thanks. Your substituted paragraph appears below.

F DALY (Clapham).—The problems are essentially the same, although No. 2 is certainly the better version. We had no intention of imputing anything wrong beside you in the matter. Hope to hear from you again.

E ST. JOHN CRANE.—Thanks for the problem. We unfortunately are suffering from a glut of two-movers, and cannot promise early insertion, even if suitable.

MRS D B NASH (Davenport, Iowa, U.S.A.).—We are sorry we cannot answer by post. The problem is quite right, as you will have probably discovered by this time. The solution runs: 1. K to Kt 8th, P to Q 4th; 2. Kt to R 8th, &c.

F N BRAUND.—Game and notes duly to hand, for which we are much obliged.

J F COLE (Sutton).—Black is supposed to play his best, and, therefore, cannot be mated in two moves. A mate in four is beyond the conditions of the problem. There is no mate in three by your proposed solution.

A BEGINNER.—There is no British weekly chess periodical. Staunton's "Hand-book" is as good as anything for your purpose.

E VON KORNATZKI.—We think the position quite sound, and are surprised that your ingenious but unnecessary emendation has not led you to the correct solution.

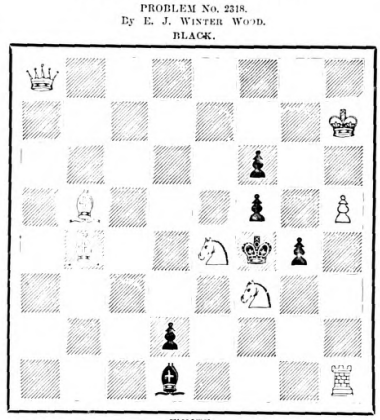
R B MORTIMER.—Very fair indeed, but too elementary for our column. What is the piece on White's K Kt sq? A Pawn is clearly impossible.

J AMYGDALIS and L. DESANGES.—Received, with thanks.

CORRECT SOLUTIONS OF PROBLEM No. 2315 received from S Parry, Columbus, Nos 1 Redin, W Fry (Saltaire), J D Tucker (Leeds), Lieut.-Col. Loraine, Shuldham, C E P, Bernard Reynolds, R H Brooks, Mrs Kelly (Lifton), R E Bamborough, W H B (Wrexham), A W Hamilton Gell (Exeter), G J Veale, Sergeant J Sage, and A Newman.

CORRECT SOLUTIONS OF PROBLEM No. 2316 received from G T Addison (York), J Hall, R F N Banks, T Roberts, Columbus, E E H, Mrs Kelly (Lifton), Alpha, E Lowden, Howard A. W Hillier, E Casella (Paris), Jupiter Junior, E Lacey, E Phillips, Peterhouse, Sergeant J Sage, A W Hamilton Gell (Exeter), A Newman, Rev. Winfield Cooper, J Dixon, T G (Ware), J Hepworth Shaw, J D Tucker (Leeds), W R Raillem, Thomas Chown (Brighton), Julia Short (Exeter), R H Brooks, Bernard Reynolds, Dr F St, Lieut.-Col. Loraine, C E P, Shuldforth, R H Wotten (Canterbury), S B Gower, J Drew, and Colonel R.

SOLUTION OF PROBLEM No. 2314.



WHITE.	BLACK.
1. Q to K R sq	P to B 3rd
2. B to Q 5th	K takes Kt
3. Q to R 5th, mate.	

If Black play 1. K to B3rd, then 2. Q to R 4th (ch), &c.

PROBLEM No. 2318.

By E. J. WINTER WOOD.

BLACK.

WHITE.

White to play, and mate in three moves.

BRADFORD CHESS CONGRESS.

Game played in the International Masters' Tournament between Messrs. GUNSBERG and MORTIMER.

(Giuoco Piano.)

WHITE (Mr. G.)	BLACK (Mr. M.)	WHITE (Mr. G.)	BLACK (Mr. M.)
1. P to K 4th	P to K 4th	17. P to R 4th	R to Q 3rd
2. Kt to K B 3rd	Kt to Q B 3rd	The Queen is now in danger, and precautionary measures are necessary for escape.	
3. B to B 4th	B to B 4th		
4. P to Q 3rd	Kt to B 3rd		
5. P to B 3rd	Castles	18. Kt to K 4th	Q to Q sq
6. P to Q Kt 4th	B to K 2nd	Another oversight; Q to K 2nd is the correct move.	
Loss of time. The Bishop is better posted at Kt 3rd.			
7. Q to Kt 3rd	P to K R 3rd	19. Kt to Kt 5th (ch)	K to R sq
8. P to Q R 4th	P to Q 3rd	20. Kt to B 7th	R takes Kt
9. Kt to R 4th		21. B takes R	Q to B 3rd
		22. B to Q 5th	P to K 5th
An excellent move, gaining White the better opening.		23. P to K Kt 5th	Q to B sq
9.	P to Q 4th	Black's game is not to be saved. With a little care victory is only a question of time for White.	
10. P takes P	Kt takes P		
11. Kt to Kt 6th	P takes Kt	24. Q takes P	R to K sq
		25. Q to B 3rd	B to B 4th
There seems no alternative.		26. B takes Kt	P takes B
12. B takes Kt (ch)	K to R 2nd	27. P takes P	P takes P
13. Q to B 4th	Q to Q 3rd	28. K to Q 2nd	P to K R 4th
Black here exposes his Queen too much to the batteries of the enemy. B to Q 2nd is better and threatens R to K Kt 4th.		29. Q takes B P	Q to B 2nd
		30. K R to K sq	B to Q 2nd
14. B to K 3rd	Q to B 3rd	31. B to Q 4th (ch)	K to R 2nd
15. Kt to Q 2nd		32. B takes R	B to B 5th (ch)
White takes prompt advantage of the noteworthy lack of Mr. Mortimer's usual acumen in the last few moves.		33. K to B 2nd	Q takes R
		34. Q to K 4th	Q to B 2nd
15.	B to K B 4th	35. K to Kt 2nd	B to R 3rd
Presumably overlooking White's simple reply.		36. R to K sq	B to K B sq
		37. Q to K 5th	Q to Kt sq
16. P to Kt 4th	B to Q 2nd	38. Q takes B P	Q to B 2nd
		39. Q to K 8th	Q to Kt sq
		40. R to K 4th, and wins.	

Game between Mr. LOCOCK and Mr. GUNSBERG.

(Ruy Lopez.)

WHITE (Mr. L.)	BLACK (Mr. G.)	WHITE (Mr. L.)	BLACK (Mr. G.)
1. P to K 4th	P to K 4th	16. B to Kt 2nd	R to Kt 2nd
2. Kt to K B 3rd	Kt to Q B 3rd	Black's game requires some care at this point. Mr. Gunsberg is equal to the occasion.	
3. B to Kt 5th	Kt to B 3rd		
We look upon this as better than P to Q R 3rd.		17. Kt to K 4th.	
		Too soon. Mr. Locock has an excellent game, and he might have maintained it by simply playing K R to Q sq; if then B takes Kt, Q retakes with a fine position	
4. Castles	B to K 2nd		
5. P to Q 4th	K Kt takes P		
6. Q to K 2nd	Kt to Q 3rd		
7. B takes Kt	Kt P takes B		
8. P takes P	Kt to Kt 2nd	17.	B takes R
9. Kt to Q 4th	Castles	18. Kt to B 6th (ch)	K to R sq
10. Kt to Q B 3rd	Kt to B 4th	19. Q to R 6th	
11. R to K sq	R to Kt sq	Clearly a miscalculation, overlooking the advance of the K B P at the right moment. There is nothing better than to take the B with R, which still leaves some play in the game.	
12. P to Q Kt 3rd	Kt to K 3rd		
13. Kt to B 5th	B to Kt 5th		
14. Q to K 3rd	P to Q 4th		
15. P tks P (en pass.)		19.	P takes Q
This lets Black's Q R into play; but as White wanted the open file for his B, it suits both parties.		20. Kt to R 8th (dis ch)	P to B 3rd, and White resigns.
15.	P takes P		

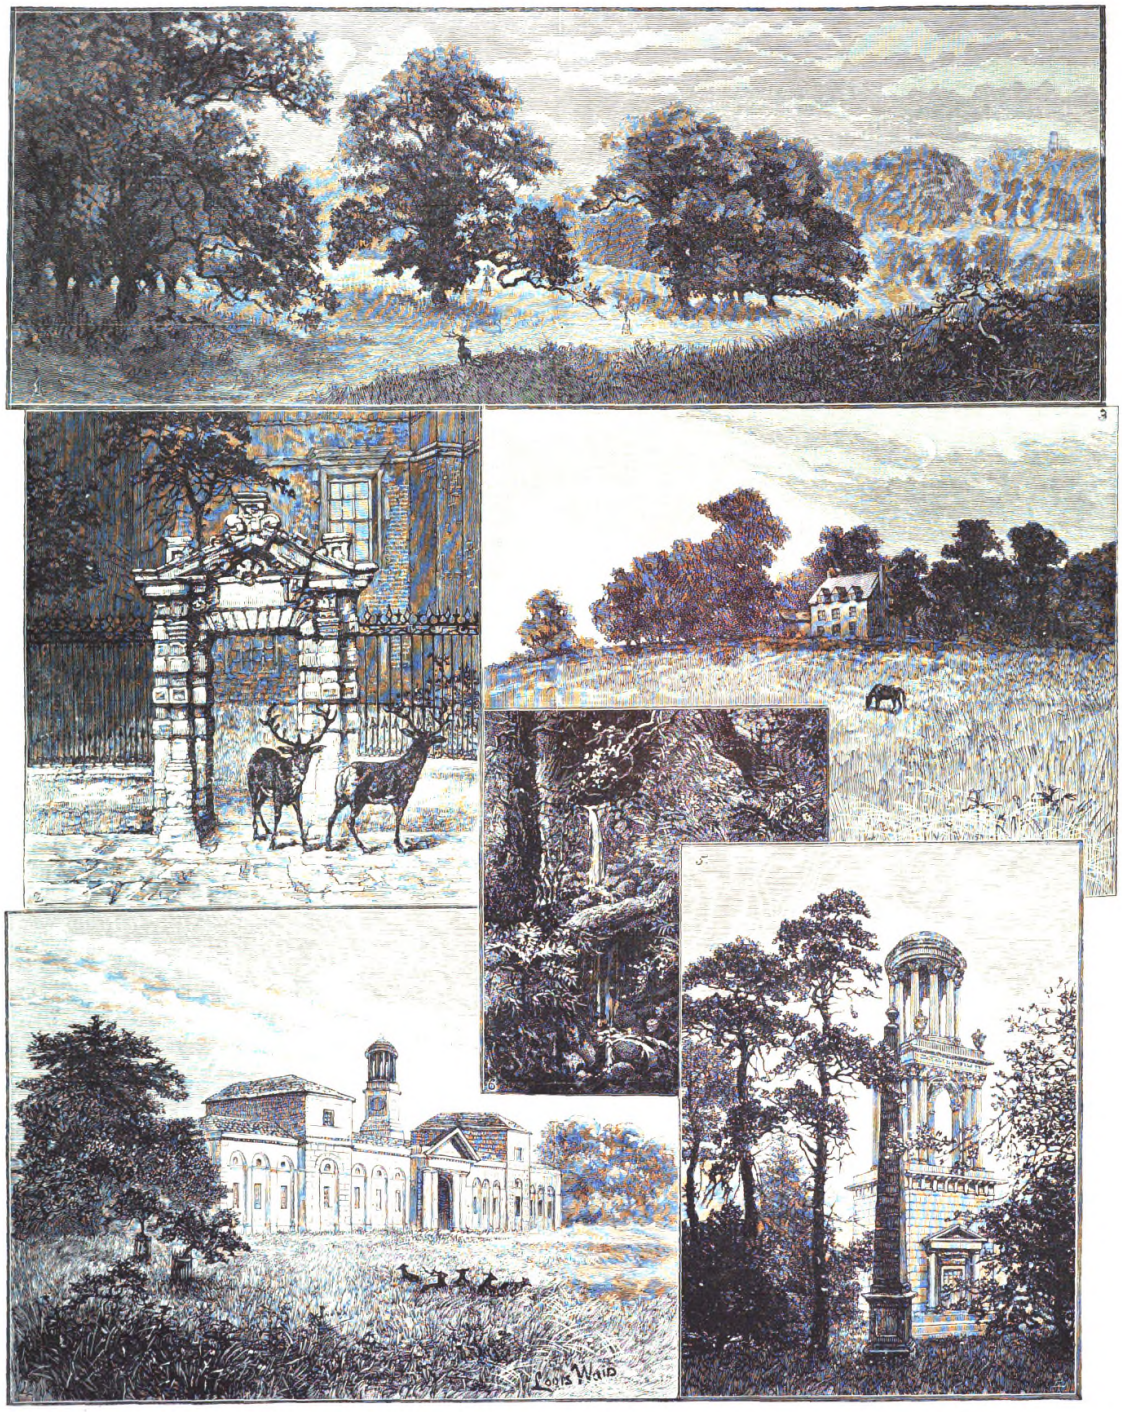
We have received the first six numbers of Vol. III. of the *Columbia Chess Chronicle*, an American chess weekly. The whole of its contents is devoted exclusively to this elegant pastime, and much enterprise is shown in giving the necessary variety and interest to its pages. The humours of our cousins' journalism are well illustrated by its editorials, and their chess skill no less admirably shown in the games and problems. We learn that there is a project on foot to found an American Chess Association, which ought to be a great success, seeing that America holds the honours in both departments of the game.

For the third time in succession Mr. E. J. Winter Wood has won the first prize for the three-movers in the *Sheffield Independent* tourney. We publish above the position with which he has secured this recent honour.

The *Kentish Mercury*, one of the best known of suburban newspapers, has started a chess column, another evidence of growing public interest in the game. London is now fairly well supplied in this respect; but the editing too often lacks the vigour displayed by many of the northern journals, where the ardour of editor and contributors is of a most amusing intensity.

DR. W. G. GRACE.

Few men have obtained, even in these days of hero-worship, a prouder position than the subject of the present sketch. His exceptional, one may justifiably say his phenomenal, excellence at the national game of Englishmen has made his name known far and wide; the fame of it has been carried to the uttermost parts of the earth; throughout that vast empire on which the sun never sets it is a household word. Frenchmen, and even Germans, who understand not cricket, but regard it as merely a more than usually extravagant outcome of British eccentricity, have heard of our great player, and know the pedestal whereon he stands among us, even if they pity us for having raised it for him.



Needless to say, it is no ordinary, no ephemeral champion of whom such words as these can be truthfully written. The leviathan of the cricket-field is not one of those who, by laborious perseverance or spasmodic energy, attain the highest pinnacle in their sphere, only to be promptly cast from it by the ceaseless efforts of their rivals. The supremacy he gained at the outset of his career was too great to be disputed, and now, after the lapse of more than two decades, we find the abilities which first made him famous so little impaired by time that he still towers above all competitors, and he is as undeniably the king of cricket as he was in his dashing prime of fifteen years ago. Dr. Grace's record is unique in the world of sport; there never has been in any other branch of it, at any period soever, so marked and long-continued a superiority on the part of one man over all his fellows.

Naturally, such a cricketer as this is, like the poet, "born, not made," however greatly judicious instruction and assiduous practice may have developed the inherited talent. William Gilbert Grace comes of a good athletic stock. His father, Dr. Henry Mills Grace—and we may here mention incidentally that all the males of this Gloucestershire family have belonged to the medical profession—was an excellent performer with bat and ball, who by managerial energy and active assistance in the field worked up the local club (the "Mangotsfield") to such a pitch of excellence that the older and larger "West Gloucestershire" body was fain to amalgamate with it. And his mother, who had been a Miss Pocock, had the true Anglo-Saxon blood in her veins, and took as keen a delight in cricket as any member of her family. This, by-the-way, included five sons and four daughters; all the former cricketers and all the latter keen and sympathetic onlookers, though we must regretfully discredit the pretty story that they were the earliest instructors of the subsequent champion. His father, his elder brothers, and his uncle, Mr. Pocock, were his tutors in the pastime, and there was not one among them from whom the young aspirant could not derive some valuable cricket lesson. The eldest of the boy Graces was Henry, the second, Alfred; and both of these were good average players, able on occasion to enrich a total with a three-figure innings. Edward Mills Grace, the first to make the patronymic famous, came next, having been born in 1841, seven years earlier than the brother whose doings were to cast all others in the shade. William Gilbert saw the light on July 18, 1848, and in 1850 George Frederick arrived to complete the famous trio of younger sons. "The Three Graces," with whose renown every schoolboy is familiar. Before W. G. came into prominence, his brother, E. M., was undoubtedly the best batsman for run-getting in England, and to this day, veteran as he is, he is still a terror to loose bowlers. Poor Frederick passed away from the sport he loved so well in 1880, having played for his county versus Australia a short time before his death, and being considered inferior only to his brother Gilbert.

To give a complete record of the myriad deeds which have made the latter celebrated would require more space than we have at command; but certain statistics we are bound to furnish, lest anyone should feel inclined to cavil at what may seem the exuberance of the foregoing remarks. W. G.'s first public appearance in the field was for West Gloucestershire v. Bedminster, when, at the early age of nine, he scored 3, not out. In 1860, in his twelfth year, he played an innings of 51 for West Gloucestershire v. Clifton; and for the same club, against the same antagonists, he commenced the season of 1863 with an innings of 86. In his sixteenth year, playing for South Wales v. Gentlemen of Sussex, he scored, after it had been suggested that he should stand out of the team for a more experienced player, two fine innings of 170 and 56, not out. At seventeen he made his first appearance for the Gentlemen v. the Players—a contest the record of which his individual skill entirely revolutionised during subsequent years. Since 1865 he has played in these matches alone over eighty innings at an average of about 45 runs per innings. At eighteen years of age he proved his exceptional powers by a grand innings of 224, not out, for England v. Surrey; and since that time his three-figure innings have been altogether too numerous to specify here. Suffice it to say that he has compiled one score of 400, not out; two of over 300; ten of over 200; and 124 of 100 and upwards! When it is considered that the large majority of these scores have been made in first-class matches, comment becomes, indeed, superfluous! His 400, not out, does not happen to be the largest score on record, for Mr. Stoddart compiled 485 in a small match at Hampstead; though it is a matter of certainty that, had Dr. Grace been able to spare time for a fair proportion of second-class cricket, the glory of the biggest individual scorer would have been his also. He is the only batsman who has ever aggregated over 2000 runs in a season, in first-class matches: *he* has more than once surpassed 3000! He is the only batsman who has ever, in first-class matches, compiled two "centuries" in one match: *he* has done it three times—once in the present (his forty-first) year! He has made the largest score on record in a first-class match—viz., 344 for M.C.C. v. Kent; and within a fortnight he made the largest recorded score in a *county* match—318, not out, v. Yorkshire. The last-named is probably his greatest achievement; though the 400, not out, being made with twenty-two men of Great Grimsby in the field, runs it hard. For fifteen consecutive years he was at the head of the batting averages, being temporarily deposed, in 1881, by Mr. A. N. Hornby, a player who, for pluck, endurance, and knowledge of the game, has for more than twenty years been a keen rival of the champion, and who even now is worthy of a place in an England Eleven. Dr. Grace's record in all first-class matches since the outset of his career is an aggregate of over 33,000 runs at an average of over forty-five runs per innings! In Australian matches he has been uniformly successful, making runs even when all others have signally failed, and the unanimous opinion of colonists is that there never has been, and never will be, a batsman like him.

As a bowler he has always been near the top of the tree, and in one season, 1877, he was absolutely the most successful performer with the ball in all England. As a field, he is marvellously good everywhere; and, as a cricketer generally, he has always been "thorough." His merits were publicly recognised in 1879, when he was presented with a testimonial, to which cricket-lovers, from H.R.H. the Prince of Wales downwards, cheerfully subscribed. In conclusion, we may add that in his youth he was one of the fastest runners in England, winning over seventy prizes, and that at present he has few superiors at the totally different pastime of whist!

ENGLISH HOMES, No. XV.—WENTWORTH WOODHOUSE.

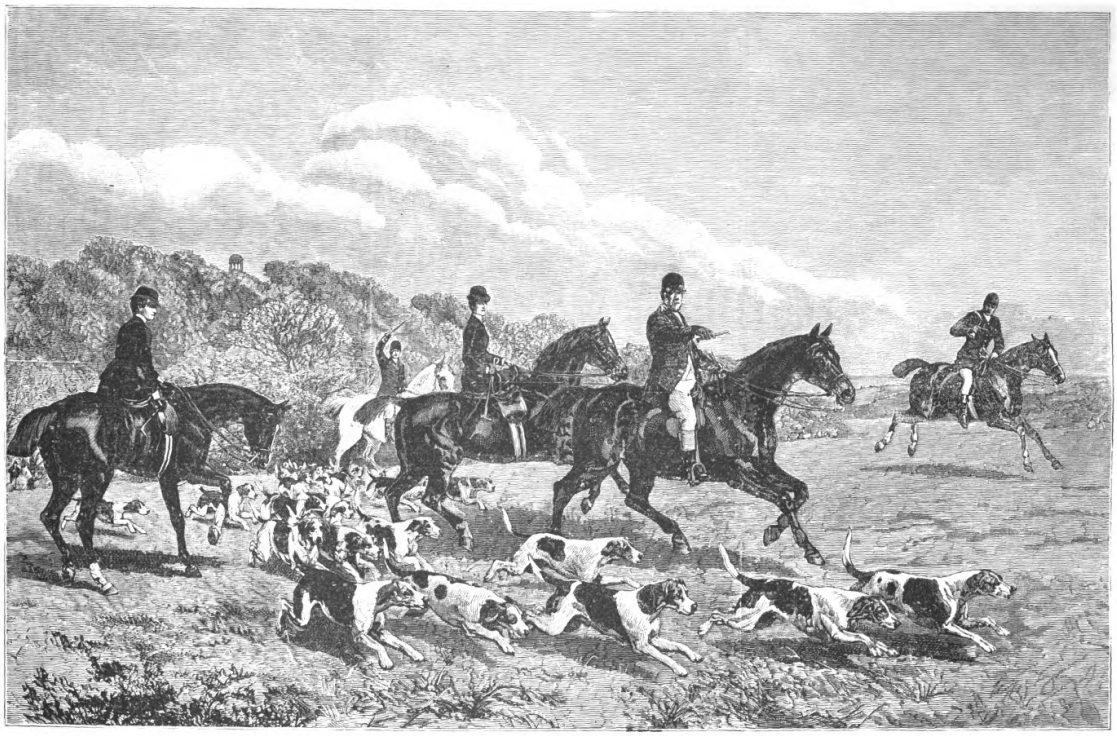
1. The Park, from Wentworth House. 2. The Well Gate. 3. Paddock Lodge. 4. The Stables. 5. The Mausoleum. 6. Waterfall in the Grounds.

THE FITZWILLIAM HUNT.

Earl Fitzwilliam commenced keeping hounds at Wentworth in 1860. The Fitzwilliam hounds from Milton, Northamptonshire, up to that time used to come for cub-hunting. For many years after his Lordship established a pack at Wentworth, it was usual to do the early cub-hunting on his Coolattin estate in Ireland, with part of the pack and two of the whips, under his own management; the other part of the pack hunting the Wentworth country. Of late years, since his Lordship gave up the "horn"—that is to say, hunting the hounds himself—this custom has been discontinued, and cub-hunting has usually begun about Doncaster race-week in the home coverts. Up to the second Monday in November, Lord Fitzwilliam hunts a portion of the Badsworth country, which, notwithstanding the fact that several of the coverts belong to the Fitzwilliam family, has, by fox-hunting laws, to be handed over to the Badsworth hunt. Probably, no country in England is hunted under such great difficulties, in consequence of its large population, railways, and other obstacles. Notwithstanding these drawbacks, his Lordship has always shown good sport, no expense having been spared in the breeding of his hounds; and the greater portion of his stud consists of thoroughbred horses. These are mostly bred by himself, and among the sires used in recent years have been Warlock, Burnton, Exchequer, Lecturer, King of Scots, Reveller, Xenophon, and others. One feature of this country is the number of fine gorse coverts which have been planted in suitable places entirely at his Lordship's expense, and without which it would be impossible to preserve foxes. Among his hunt servants have been Butler, Harry Ayres, Joe Oriell, James Roffey, George Kennett, and Will Dale, and the present efficient and popular huntsman is Frank Bartlett.

The hunting gentlemen of Sheffield, Rotherham, Doncaster, and the surrounding country, are greatly indebted to Lord Fitzwilliam for providing such excellent sport in their immediate locality, and for turning out a pack of hounds three days a week, with all their equipments, second to no other pack in the kingdom; and this entirely at his own cost, in every way. Were it not that Lord Fitzwilliam owns such extensive estates, and is liberal with his purse and a thorough sportsman, hunting could not be carried on in this locality.

There is no more exhilarating scene than to see the hounds meet on the lawn at Wentworth, with Lord Fitzwilliam and his sons and daughters mounted on most perfect hunters, and with the "four-in-hand" carrying Lady Fitzwilliam and her friends.



About a year ago it was decided by the hunting people to ask Lord Fitzwilliam if he would accept an oil painting of himself on horseback, with portraits of some of his favourite hounds, and he consented to sit for the same. When the project became known throughout the hunt, the subscriptions flowed in so rapidly that the committee found themselves in a position to include in the picture, besides his Lordship, the Ladies Alice and Albreda Fitzwilliam, the huntsman, Frank Bartlett, and his Lordship's faithful second horseman, George Treton. Mr. W. H. Hopkins was the artist selected to paint the picture, and this he has done most successfully, with the assistance of Mr. Havell, who is responsible for the portraits.

Steamers arrived at Liverpool last week with live stock and fresh meat from American and Canadian ports, bringing 3004 cattle, 2781 sheep, and 5150 quarters of beef.

The Jewish High Festival in celebration of the commencement of the new year of the Jewish calendar commenced on Thursday—an exceptionally early date. Last year it was thirteen days later, and in 1886 twenty-four days later.

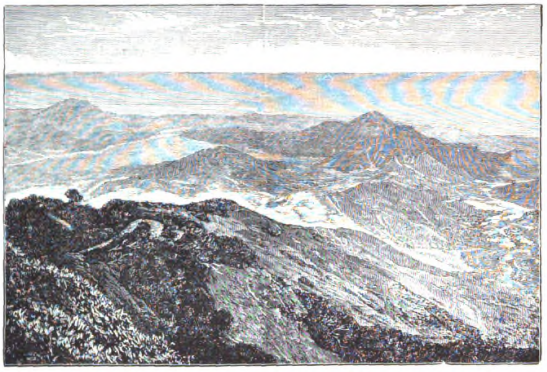
EARL FITZWILLIAM'S GOLDEN WEDDING.

Among the numerous presentations made to the Earl and Countess Fitzwilliam in celebration of their golden wedding, Sept. 10, 1888, not the least interesting is that from the miners and workpeople employed at the Fitzwilliam Collieries, Elsecar and Low Stubbin. This consists of an illuminated address, with a beautiful illuminated album, containing 1000 signatures of the subscribers, and a Norman cross, carved in oak, which reproduces the form of the ancient Sprotborough cross. The illuminated address is a very handsome and artistic piece of workmanship. The body of the address is inscribed in Old English Text, and above it are emblazoned the Fitzwilliam arms. The whole is enclosed in an elaborate and tasteful floral border, of modern design. At the top, and at the two sides, are vignettes, in sepia, one containing a view of Wentworth House, one a representation of the Norman cross, and the third a trophy of miners' tools. The address is placed in a handsome gilt frame, with the Fitzwilliam arms carved to form a centrepiece. The illuminated album is also a work of art. On the first page is a photograph of the framed and illuminated address: the second page bears an inscription recording the gift and its occasion; the names fill eleven pages, with a view of the collieries. The album is handsomely bound in cream morocco, with ornamental pierced gold corners and clasp, and a centrepiece engraved with the Fitzwilliam arms. It is enclosed in a morocco case with a lock, with gold mountings. The decorations of the address and album were designed and executed by Mr. R. C. Honey, of the firm of Parker and Honey, law-stationers, bookbinders, and lithographers, Bank-street, Sheffield. The carved-oak reproduction of the ancient Norman cross was executed by Messrs. Thornhill and Co., New Bond-street, London.

THE FITZWILLIAM HUNT: PICTURE PRESENTED TO EARL FITZWILLIAM ON HIS GOLDEN WEDDING.

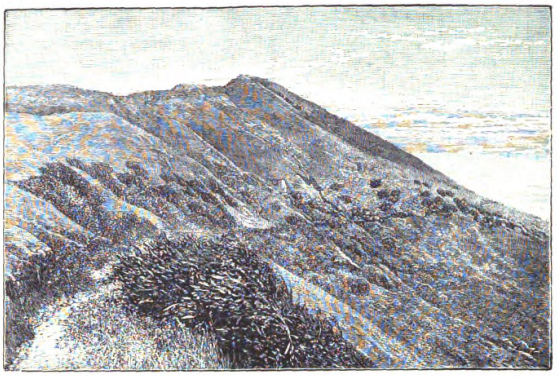
ASCENSION ISLAND.

It has at length been finally decided by the Admiralty to abandon the use of the isle of Ascension as a coaling-station for ships of the Royal Navy. Ascension, which has been a British naval station since 1820, having been first garrisoned in 1815 by a detachment of troops from St. Helena, and subsequently by a company of Marines, is well known to all officers of the naval service. It is situated in the South Atlantic Ocean, 900 miles from Africa, 760 miles from St. Helena, and nearly 3500 miles from England, the geographical position being in latitude 7 deg. 56 min. south of the Equator, and longitude 14 deg. 25 min. west of Greenwich. The island is but seven miles and a half long, from west to east, and six miles and a half broad, from north to south, with a surface of thirty-eight square miles. It is very rugged and barren, consisting of extinct volcanic craters, lava streams and beds, more or less decomposed, and ravines filled with scoria and pumice-stone. The Green Mountain, however, rising to a height of 2820 ft., is wooded and in some parts, towards the summit, has pieces of fertile soil cleared for cultivation. The climate is esteemed one of the most salubrious in the world; the air is very dry, and the heat is constantly tempered by the south-east trade-wind; in the hottest months the temperature ranges from 85 deg. on the shore to 76 deg. on the high land. There is little rain at any season, and the few springs discovered in the woods yield but a limited supply of fresh water. The sea-turtle come from Christmas to Midsummer (which is not summer in Ascension) to lay their eggs in the sand. They are caught and turned over, to prevent them from escaping, and are confined in ponds, from which they are sold to the ships; a turtle, weighing from 600 lb. to 800 lb., fetches a price of £2 10s. The eggs of a migratory bird, called the "wide-awake," are also collected and sold for food. There is no good harbour, but a bay on the west side of the island, often with a heavy swell and high surf, which makes landing troublesome in the earlier months of the year. On the shore of this bay is Georgetown, a little station, with store-houses, tanks, and a small fort, governed by a post-captain of the Royal Navy. The inhabitants, as well as the garrison, are under naval discipline, insomuch that the whole island is rated as a stationary vessel belonging to her Majesty's Fleet, and is often called, in joke, H.M.S. Flora, tender to the guardship at the Cape. All the work of building and road-making, and laying out gardens, has been done by the garrison of Royal Marines. Ascension was useful in former times as a dépôt for the squadron employed in suppressing the slave-trade between West Africa and Brazil. Since then, the Royal Naval Hospital established on the top of Green Mountain has been found beneficial, though its maintenance in such a situation is too costly, and the scarcity of water is a serious defect. The gardens of the hospital, and the "Home Gardens," have often been praised by visitors, and are very pleasant. The inhabitants of Ascension number about two hundred people, and probably but few families will remain when the patronage of the Royal Navy is taken away. It would then be a safe place of retirement for any gentleman of a solitary and contemplative disposition, who could there dine on turtle more cheaply than in the City of London.



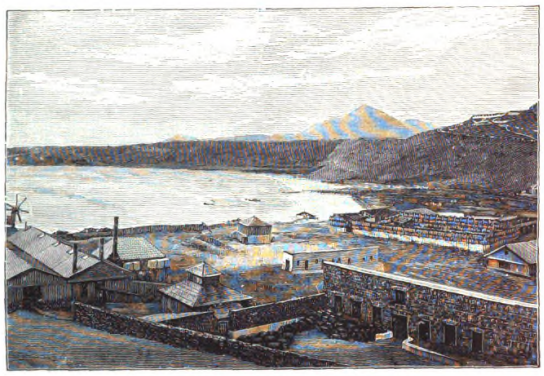
We are indebted to Surgeon Miller, R.N., of the Naval Hospital at Ascension, for sending us a series of photographic views, taken by himself.

The marriage of Colonel Frank Shirley Russell, of Aden, with Miss Philippa Baillie, younger daughter of the late Right Hon. Henry James Baillie, of Redcastle, and Lady-in-Waiting to the Duchess of Albany, took place in St. Margaret's Church, Westminster, on Sept. 1. Captain Burn Murdoch (Royal Dragoons) attended the bridegroom as best man; and the six bridesmaids were the Misses Eila and Ida Baillie, the Ladies Isabel and May Browne, and Miss May Colville, all cousins of the bride, and Miss Augusta Webb, of Newstead. The Duchess of Albany, accompanied by the Duke of Albany and Princess Alice, was present. The bride was led to the altar by her uncle, Colonel Hugh Baillie, who afterwards gave her away. The service was fully choral. The wedding presents to the bride include from the Duchess of Albany a gold bracelet set with diamonds and rubies, and an enlarged photograph of herself; the Duke of Albany, a silver tea-caddy; and Princess Alice of Albany, a piece of knitting worked by herself. The officers of the Royal Dragoons presented the bridegroom with a massive silver bowl.



"The Beginner's Guide to Photography," published by Messrs. Perken and Rayment, of Hatton-garden, treats clearly and concisely of the apparatus and requirements necessary to engage in the delightful pastime of photography, and will be found most useful to amateurs.

The Printers' fête at the Alexandra Palace, in aid of the funds of the Printers' Pension, Almshouse, and Orphan Asylum Corporation ("Drummond" Pension), will take place on Saturday, Sept. 8. The programme includes two variety entertainments, military tournament, athletic sports, Caxton Minstrels, grand English opera, Professor Baldwin's balloon ascent, a display of fireworks, and a quadrille party in the evening.



From statistics just published, dealing with the richest men living, we learn that there are about 700 with over a million sterling, of whom 200 reside in England, 100 in the United States, 100 in Germany and Austria, 75 in France, 50 in Russia, 50 in India, and 125 in other countries. The richest amongst those millionaires are the following:—Jay Gould, the American railway king, worth £55,000,000, annual income, £2,800,000; Mackay, £50,000,000, £2,500,000; Rothschild (England), £40,000,000, £2,000,000; Vanderbilt, £25,000,000, £2,250,000; J. B. Jones (United States), £20,000,000, £1,000,000; Duke of Westminster, £16,000,000, £800,000; J. J. Astor (United States), £10,000,000, £500,000; W. Stewart (United States), £8,000,000, £400,000; J. G. Bennett (United States), £6,000,000, £300,000; Duke of Sutherland, £6,000,000, £300,000; Duke of Northumberland, £5,000,000, £250,000; Marquis of Bute, £4,000,000, annual income £200,000.

MOURNING.

"In reply to many inquiries, we recommend the Maison Jay's. This house, long established, makes mourning a specialty, and is excelled by no other house in London or Paris for the beauty of the work, the quality of the materials, or the style of manufacture."

JAY'S, REGENT-STREET, LONDON.

WILLS AND BEQUESTS.

The will and three codicils of the late Gustavus Lambart Basset, Esq., have been proved by the executors and trustees, William Francis Higgins, Esq., and Edmund Chase Marriott, Esq. The will recites that under a family settlement (dated March 3, 1854), and under the will of John Francis Basset, the testator was tenant for life and his son tenant in tail of the Basset estates, which became the property of the Basset family in the twelfth century, and had since that time been held in the direct male line, and the testator desires that his son on coming of age shall resettle the estates in the manner indicated in the will. The testator bequeaths to his widow, Mrs. Basset, legacies, pecuniary and specific, in addition to the provisions made for her by marriage settlement. The testator further bequeaths to each of his trustees £1000, and to Mr. Marriott the further legacy of £1000 and his gold watch; to his aunt, the Hon. Jane Moreton, an annuity of £100; to Henrietta Price and Helène Price, and the survivor, an annuity of £120; to William Bond the elder, an annuity of £120; to his butler, Uriah Rice, an annuity of £80; to Mary Elizabeth Connor, £1 per week; to Edward Young, 5s. per week; to Walter Buckerfield, a legacy of £30 and an annuity of £25; to Jane Wilson, an annuity of £30. The residue of the testator's estate is bequeathed to the trustees of the will, upon trust, for his only son, Arthur Francis Basset, if he should attain the age of twenty-one and execute the resettlement directed by the will; but if he should die under twenty-one, upon trust, for Mrs. Basset, during her life, and, after her death, upon trusts corresponding to the present settlement of the Basset estates; and if he should attain the age of twenty-one and not execute the resettlement, then, upon trusts, for the benefit of the testator's friend William Henry Campion and his family; and if such trusts should fail, then, upon trust, to pay the annual sum of £600 to the Miners' Hospital at Redruth, and the annual sum of £300 to the Women's Hospital at Redruth, and to hold the residue, upon trust, for St. George's Hospital, Hyde Park-corner. The net value of the personal estate is sworn at £102,596 5s. 5d.

The will (dated March 8, 1888) of Mr. Joseph Sherwood, late of No. 61, Westbourne-terrace, Hyde Park, who died on June 27 last at Westgate-on-Sea, was proved on Aug. 21 by Carr Wigg and Thomas Henry Sherwood, the nephews, the executors, the value of the personal estate amounting to upwards of £95,000. The testator bequeaths £500 to the Clergy Ladies' Homes (Formosa-street, Maida-hill, and Westmoreland-road, Westbourne-park); £300 to the London Diocesan Deaconess Institution (Tavistock-crescent, Westbourne-park); £200 each to the Society for Promoting Christian Knowledge, the Society for the Propagation of the Gospel in Foreign Parts, the Society for Promoting the Employment of Additional Curates in Populous Places, the National Society for the Education of the Poor, King's College Hospital, and St. Michael's Convalescent Home (Westgate-on-Sea); £100 each to the Asylum for Female Orphans, the School for the Indigent Blind, the Asylum for Deaf and Dumb Children, the Friend of the Clergy Corporation, the Philanthropic School (Redhill), the Clergy Orphan Corporation, the Infant Orphan Asylum, the London Orphan Asylum, the Church Penitentiary Association, the Corporation of the Sons of the Clergy, the Curates' Augmentation Fund, St. John's Foundation School (Leatherhead), the Blue-coat School (Westminster), the British Orphan Asylum, the Governesses' Benevolent Institution, the National Benevolent Institution, the Foundling Hospital Benevolent Fund, the Asylum for Idiots (Earlswood), the Metropolitan Convalescent Institution, the City of London Truss Society, the Seaside Convalescent Home (Seaford), the East London Church Fund, and the Poor Clergy Relief Corporation; and considerable legacies, upon trust, for nephews and nieces, including £10,000, upon trust, for his niece Mrs. Sarah Gay and her children; and legacies also to friends, executors, late clerk, and servants. The ultimate residue of his real and personal estate he leaves to his nieces and nephews Mrs. Elizabeth Jane Oliver, Mrs. Anna Hedley, Carr Wigg, and Thomas Henry Sherwood, in equal shares.

The will (dated June 24, 1880), with a codicil (dated Sept. 8, 1885), of Mr. Frederick Vickers, late of Dykes Hall, Wadsley, Ecclesfield, York, steel manufacturer, who died on April 30 last, was proved on Aug. 25 last by Thomas Edward Vickers, the brother, one of the executors, the value of the personal estate amounting to upwards of £71,000. Subject to a legacy of £1000 and his household furniture and effects to his wife, Mrs. Maria Vickers, the testator leaves all his real and personal estate, upon trust, to pay half the annual income thereof to his wife during her life or widowhood, but in the event of her again marrying she is only to receive an annuity of £600. Subject thereto, he leaves all his property to his children, in equal shares.

The will (dated April 29, 1887) and four codicils (three dated Aug. 23, 1887; and one, March 19, 1888) of the Rev. George Edward Prescott, Rector of Digswell, Herts, who died on June 25 last, were proved on Aug. 13 last by Mrs. Caroline Mary Prescott, the widow, Charles Henry Prescott, and Henry Warner Prescott, the executors, the value of the personal estate exceeding £55,000. The testator bequeaths £1000, all his household furniture, plate, horses and carriages, and live and dead stock to his wife, Mrs. Caroline Mary Prescott; £20 each to the Clergy Orphan Association, the Poor Clergy Relief Association, the Friends of the Clergy Association, the Bishop of St. Albans Fund and the Herts Local branches of the Church Pastoral Aid Society, the Church Missionary Society, the Society for the Propagation of the Gospel in Foreign Parts, the Society for the Employment of Additional Curates, the Hertford General Infirmary, and the Herts Seaside Convalescent Homes; £1 each to the present members of the Digswell Coal and Clothing Club, and numerous legacies and annuities to relatives and servants. He devises the advowson, donation, right of patronage, and presentation of the living of Digswell to his nephew, Arthur Phillimore; and his messuages, hereditaments, marsh and other lands in the county of Kent, upon trust, for his wife, for life, and, at her death, to his grandnephew and godson William George Prescott Decie, and his heirs. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and, at her decease, between the children of his sister, Mrs. Harriet Phillimore (except Georgiana Phillimore), his late sisters, Lady Preston and Mrs. Preston, and his late brother, Colonel Prescott.

The will (dated Dec. 3, 1870) of Captain James St. Clair Doyle, late of No. 49, Cobham-street, Gravesend, formerly of the 53rd Foot, who died on July 15, was proved on Aug. 24 by Mrs. Anne Doyle, the widow and sole executrix, the value of the personal estate being sworn to exceed £30,000. The testator gives, devises, and bequeaths all his real and personal estate whatsoever and wheresoever to his wife, Mrs. Anne Doyle, absolutely.

The will (dated March 11 1886) and a codicil (dated June 30, 1887) of Mr. Joseph Withers, formerly of No. 1, Shorters'-court, Old Broad-street, stockbroker, and late of Burleigh House, Enfield, who died on July 12, were proved on Aug. 2, by Mrs. Emma Mary Withers, the widow, George John Braikenridge, and Henry John Winney, the executors, the value of the personal estate exceeding £29,000. The testator leaves all his property to his wife, Mrs. Emma Mary Withers, for her own use and benefit.

The will (dated May 2, 1876) of Mr. Robert Alexander Clarke, late of Moses Gate, No. 41, Bolton-place, Farnworth, Lancaster, who died on June 13 last, was proved on Aug. 23 by Mrs. Agnes Clarke the widow, John Holden Clarke and James Macfarlane Clarke the sons, and William Alexander Ferguson, the executors, the value of the personal estate exceeding £26,000. The testator directs that all his real and personal estate is to be converted into money, and then equally divided between all his children.

FOREIGN NEWS.

King Humbert unveiled at Ravenna on Sept. 1 monuments to the Martyrs to Liberty, and to Anita, wife of Garibaldi. On his Majesty's departure from the town there was another outburst of popular enthusiasm, and it was noticed that in the crowd were a number of Garibaldians, who wore red shirts. On the 3rd, King Humbert visited Faenza, where he received a hearty welcome. His Majesty afterwards returned to Forli, and, accompanied by the Crown Prince, the Duke of Aosta, and his son, the Count of Turin, proceeded to the railway station to meet Queen Margherita. On her Majesty's arrival the Royal party drove to the palace through the streets thronged with people, who cheered vociferously, and threw showers of flowers into the Royal carriage as it passed. The King and Queen afterwards appeared several times on the balcony. In connection with the manœuvres of the Italian army, King Humbert, the Queen, Crown Prince, and Minister for War, on the 4th, reviewed the troops on the parade-ground near Forli. The people cheered the soldiers and the Royal family.

The German Emperor left Potsdam early on Aug. 30, met the Crown Prince of Greece and Prince Henry, and inspected some infantry and cavalry, afterwards heading a squadron to the late Emperor's palace. His Majesty subsequently received the Austrian Archduke Karl Ludwig, the Archduchess, the King of Sweden, and other distinguished personages. The Emperor, accompanied by his future brother-in-law, the Crown Prince of Greece, went on Sept. 4 to the manœuvres near Jüterbogk. His Majesty returned in the afternoon to Potsdam, but the Crown Prince of Greece remained with the troops until the end of the week.—The christening of the youngest of the Hohenzollern Princes, the first born son of a reigning German Emperor, took place on Aug. 31 in Frederick the Great's Library in the Potsdam Palace, in exact accordance with the traditional usage of the House of Hohenzollern—the child receiving the names of "Oscar, Carl, Gustav, Adolf."—The betrothal of Princess Sophie, daughter of the Empress Frederick and third sister of the Emperor William, with the Duke of Sparta, Crown Prince of Greece, took place at Potsdam on Sept. 3. The Princess, who is, of course, a grand-daughter of Queen Victoria, is eighteen; while the Greek Crown Prince, who is a nephew of the Princess of Wales, is a little over twenty.—The Empress Frederick has been on a visit to the Prince of Wales and Princess Christian at Homburg.—Prince Bismarck has dispatched a telegram to the Pope, in which he explains the reasons of the approaching visit of the Emperor William to Rome. The Chancellor says that the alliance with Italy is indispensable to Germany, and that its object is to secure the predominance of peace principles in Europe.—The anniversary of the Battle of Sedan was celebrated at Berlin on Sept. 1 by a review of the Guards by the Emperor, in the presence of the King of Saxony and other distinguished visitors.

The Emperor of Austria paid a visit on Sept. 1 to the Czarina at the Villa Cumberland, at Gmünden. He subsequently called on the Princess of Wales. The distinguished visitors all lunched together, after which his Majesty took his departure. The Czarina left in the evening for Russia.—The Emperor Francis Joseph, the Crown Prince Rudolph, the Archduke Albrecht, the Austrian War Minister, and the Chief of the General Staff have been at Pisek, in Bohemia, where manœuvres with two complete Infantry Divisions and one brigade of the Landwehr were to have taken place on the 3rd. The rain of the last week, however, so completely converted the manœuvre ground into a lake that all operations were impossible. Under these circumstances, the Emperor contented himself with a march-past of the assembled troops. On the 4th the Emperor left Pisek for Budweis, in Bohemia, which has been completely flooded by the overflow of the Moldau. His Majesty has had a most enthusiastic reception in Bohemia.—The national rifle meeting of Austria, held in Vienna this year in honour of the Emperor's fortieth year of reign, was opened on the 2nd under most depressing conditions of weather. All the principal streets of the city were beflagged, and crowds assembled to witness the arrival of deputations of riflemen from every part of the country. But it rained incessantly.—The International Congress of Geologists and Engineering Miners assembled at Vienna on the 3rd. Of the 400 members the majority are Austrians and Hungarians; but there are also delegates from Germany, France, Belgium, and Italy.

The Emperor of Russia, with his younger son, Michael, returned to Peterhof on Sept. 3 from the Grand Duke Serge's country seat at Ilinskoe, near Moscow. The Empress, with the Heir-Apparent and his sister Xenia, also returned to Peterhof from Austria. The Czar, accompanied by the Czarina, has started on a two months' tour through the southern Governments of the Empire.—General Prjevalsky started on Aug. 30 on his exploring expedition in Central Asia. His intention is to penetrate as far as Lhassa, in Thibet, travelling by way of the Lob Nor Lake in Eastern Turkestan.

The King of Denmark, accompanied by his brother, Prince John of Glücksburg, returned to Copenhagen on Sept. 4, from Wiesbaden; they were received by the Queen and other members of the Danish Royal family, including the King of the Hellenes.

The Consistorial Court at Belgrade, to which was referred King Milan's petition for a divorce from Queen Natalie, has adjourned the proceedings for three months.

The Duke of Edinburgh arrived at Constantinople on Aug. 29, and, after being welcomed by Turkish Ministers on behalf of the Sultan, he landed, and was conveyed with his suite in Imperial carriages to Yildiz Kiosk, where the Sultan received him. Sir William White, the British Ambassador, gave a dinner in honour of the Duke of Edinburgh on the 30th. There were present at the banquet Kiamil Pasha, Said Pasha, the members of the Diplomatic Body, and some of the principal Court and State functionaries. After the dinner a reception was held at the Embassy. The illuminations on both banks of the Bosphorus, on the 31st, to celebrate the anniversary of the Sultan's accession, were on a grander scale than usual because of the presence of the Duke of Edinburgh. On Sept. 1 his Royal Highness dined with the Sultan, and attended the regatta. In the evening he dined at the Embassy. The Sultan has conferred upon the Duke the gold and silver medals of the Nichan-i-Imtiaz Order. His Royal Highness left Constantinople on the 2nd.

The United States House of Representatives have passed a Bill making it unlawful hereafter for Chinese labourers to return to the United States after having left the country.

Sir John Macdonald, the Premier, arrived at Ottawa on Aug. 30 from his recent tour. The Cabinet will shortly arrange for the discussion of the admission of Newfoundland into the Canadian Confederation.

The Queensland Ministry has resigned, in consequence of the refusal of the Governor to sanction the release, under the Offenders Probation Act, of a prisoner under sentence for larceny.

We learn from New Zealand that a serious earthquake took place on Sept. 1 throughout both islands. Five distinct shocks were felt, causing the inhabitants to flee from their homes. At Christchurch the cathedral spire was injured, and other buildings were damaged, but no lives were lost.

The great firework festival of the year is undoubtedly Brock's Benefit, at the Crystal Palace, which took place on Sept. 6, with, as usual, a long and varied day's enjoyment, ending with the great display and illumination for which the natural and artistic beauties of the Crystal Palace are so splendidly adapted.

The lists of the names of those persons liable to serve as special and common jurymen in England and Wales during the year are exhibited on the doors of every church, chapel, and other public places of worship over England and Wales, where they can be inspected by everyone, and where they will remain during the next two Sundays.

A SCENE IN NORTH DEVON.

HOME-TRAVEL.

"Perfect summer weather in England," says Hawthorne, "is the most delightful weather in the world"; and if sunshine and blue sky can be secured in September, what greater pleasure can a man desire than a walk, or drive, or a ride on horseback through some lovely English county? Which shall he choose? So beautiful and so varied is the scenery of this island that every taste can be gratified. And not only is there scenery to attract, but every town, every village, we had almost said every hamlet, has some association that links the present with the past. We learn history as we travel in England; the history which ought to have the greatest interest for us; and how pleasantly acquired is the knowledge gained in this way! When on a holiday, indeed, the delight to be won from Nature will be our first object. We ask for perfect freedom to wander where we list, with or without a definite purpose; we don't want to see sights or to gain acquaintance with all the "lions" of the guide-books. Independence is the happy traveller's first law; you mar his enjoyment if you tell him to visit some great house or picture gallery, a famous church, or half-ruined castle! Let him take his chance of seeing or not seeing, for it is what is unexpected in travel that gives the greatest delight to the traveller. The man who in his eagerness to get knowledge and to miss nothing follows with the minutest attention the directions of his Hand-book, is not the kind of companion I should choose in a tour about England. And, indeed, unless by special good fortune one finds a friend whose likes and dislikes harmonise with one's own, I feel inclined to agree with Milton that "solitude sometimes is best society."

The most wayward tourist is supposed to make his choice of locality before starting on his travels—though I know men, and have a fellow-feeling with them, who trust to what is called the chapter of accidents, and who, after starting, let us say, for a tour in Dorsetshire, find themselves at nightfall in Devon.

There is beauty enough in either county to fill eye and heart to overflowing through many a month's pilgrimage. Charles II. said of Dorset, which he knew only too well, that he had never seen a finer country in England or out of it; and assuredly the western part of the shire is worthy even of this eulogy. The coast line is very fine, and the county, though destitute of rivers, abounds in streams; the land is hilly, though not mountainous; the views in all directions are beautiful; and it has been justly said that few counties so thoroughly repay the pedestrian tourist. The fine scenery in the neighbourhood of Lyme is dear to all who know it; and don't we all remember (for, of course, every reader of this paper is familiar with Jane Austen) the youthful party that drove on a November day to the old town, and how one adventurous young lady, jumping off the Cobb, materially assisted the novelist's plot by hurting herself in doing so! "Persuasion" should be a popular volume among summer readers at Lyme.

This, however, is not the place to talk of books, though it is scarcely possible to visit North Devon without a thought of "Lorna Doone" and of Kingsley's "Westward Ho!" Emerson said that to know England well would take a century; to know Devonshire as it deserves to be known, even in its northern district, will need many a week of pedestrian travel. One of the finest bits of scenery in Devonshire is said to be the descent into Lynmouth by the Barnstaple road; but the scenery all round Lynton and Lynmouth is so superlatively beautiful that no single view can fairly claim precedence. I do not know anything even in the Lake country that will satisfy more fully the lover of nature. The Lyn, bounding over its rocks until, on reaching Lynmouth, the sea rushes up to meet it, has not the serene beauty of some of the South Devon rivers; but in its own vehement, eager way it is unrivalled. Sad to say, no poet has sung its charms; but no matter! A river that can never be forgotten by those who have once known and loved it may well be content with the affection that is more humbly expressed in prose. Lynmouth, it has been asserted, is, for a few summer months—and assuredly September may be included among them—the Paradise of England; but later on the narrow valley surrounded by lofty hills loses its sunshine, and with sunshine its joyousness departs. Lynmouth is but one spot among a hundred in Devonshire that may allure the rambler. When he has seen Clovelly, with its ladder-like street and lovely Hobby Woods; when he has boated on the Tamar and the Dart; when he has explored Dartmoor, through all its wildest recesses—then he will be able to say that he knows a little about Devon, and I am sure he will add also that he longs to know more.

Another English county in which a month of travel may be spent cheerily is Surrey—which has the smoke of London in one corner, while in another Nature seems to be far removed from the gloom and stir of town, so fair are its rural solitudes, its noble woods, its heath-covered commons, its half-wild, half-cultivated parks, and the prospects from its hills. In Surrey, near as it is to London, the traveller comes face to face with Nature, for there is many a spot in the little county where he may wander for some distance and hear no voices but hers. Let him find his way, for example, from Albury to Ewhurst, from Abinger to Leith Hill, from Hindhead to Blackmoor, and if he love solitude and his own thoughts he can enjoy them to the full.

Sussex, too, like Surrey, is a county full of natural charms, but being at the Londoner's door it is apt to be neglected. Its watering-places are familiar enough, but the characteristics of Sussex scenery are not to be found at Brighton or Bognor, at Eastbourne or Hastings. It is on the Downs and under their shadow that the lover of nature will find a rich reward. The "tremendous height" of these Downs appalled the poet Cowper a little unreasonably; and I don't agree with Gilbert White, who, however, seldom uses the wrong word in describing nature, when he called them a "chain of majestic mountains." The writer of Murray's "Hand-book of Sussex," however, says, with truth, that the South Downs, which extend for fifty-three miles in length, with an average height of about 500 feet, are quite as interesting as many parts of the Continent that enjoy a far higher reputation. Any tourist unfamiliar with these fine heights, and the out-of-the-world villages that nestle beneath them, should read Mr. Jennings's "Field-Paths and Green Lanes," a volume it is impossible to lay down without wishing to follow in the author's track.

Looking over the map, what happy memories cheer the man who has been accustomed from year to year to wander about England! He will agree with the saying of Thomas Fuller, that it is well to know his native land before going over the threshold. Would that leisure were as inexhaustible as the charms of our English scenery! But if the late summer and pleasant autumn time is not in too great a hurry to fade into winter, much lasting delight may be gained even from a few weeks of travel. Thanks to the railroad, it is easy, in a few hours, to reach the district we may select for our rambles; and whether it be Derbyshire, with its lovely dales, or Yorkshire, which in its vast space includes almost every variety of scenery; or the Lake country, with its thousand poetical associations; or the still wild border-land of which Scott has written so delightfully—whether the tourist choose Norfolk for its churches, or Somersetshire for the fine scenery of its Mendips and Quantocks, or Cornwall for its unrivalled coast views, he can hardly fail to gain a store of happy memories for winter hours. And such memories have no drawbacks, for we forget or laugh at the little annoyances to which all travellers are liable, and think only of the things of beauty that served to make the way cheery. J. D.

The Cheshire Agricultural Society's show opened at Chester on Aug. 31 in brilliant weather, under the presidency of the Duke of Westminster, with a total of 475 entries, a larger number than last year at Crewe; for although the entry of cattle, horses, sheep, and pigs show a slight falling off, the deficiency is more than made up in the splendid show of cheese and butter, seeds and vegetables, and farm produce. In the cheese classes there was a keen competition.

The three months during which the Inner Temple Gardens were open to the public nightly ended on Aug. 31, and it is satisfactory to state that, notwithstanding the large numbers of children who visited these gardens on every fine evening, there was not the slightest damage done to either plants, shrubs, or trees.—The gardens of Lincoln's Inn will remain open for the benefit of the poor children inhabiting the surrounding densely-populated districts until the end of September from five o'clock in the evening until dusk.

THE MANUFACTURING

GOLDSMITHS' & SILVERSMITHS' COMPANY,

Show-Rooms: 112, REGENT-STREET, LONDON, W. (Adjoining Stereoscopic Company)

Supply the Public direct at Manufacturers' Cash Prices, saving Purchasers from 25 to 50 per Cent.

HIGH-CLASS JEWELLERY. The Stock of Bracelets, Brooches, Earrings, Necklets, &c., is the largest and choicest in London, and contains designs of rare beauty and excellence not to be obtained elsewhere, an inspection of which is respectfully invited.

ORIENTAL PEARLS.—Choice strung Pearl Necklaces, in single, three, or five rows, from £10 to £5000; also an immense variety of Pearl and Gold mounted Ornaments, suitable for Bridesmaids and Bridal Presents.

PEARL and DIAMOND ORNAMENTS.—A magnificent and varied collection to select from.

BRIDAL PRESENTS.—Special attention is devoted to the production of elegant and inexpensive novelties suitable for Bridesmaids' Presents. Original designs and estimates prepared free of charge.

WEDDING PRESENTS.

COMPLIMENTARY PRESENTS.

CAUTION.—The Company regret to find that many of their Designs are being copied in a very inferior quality, charged at higher prices, and inserted in a similar form of advertisement, which is calculated to mislead the public.

They beg to notify that their only London retail address is 112, REGENT-STREET, W.

"A SUCCESSFUL BUSINESS." "We know of no enterprise of recent years which has been crowned with greater success than the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, who, just seven years ago, opened their show-rooms to place the productions of their workshops direct before the public, thus saving purchasers the numerous intermediate profits which are obtained by 'middle-men' on high-class goods. Such has been the appreciation by the public that the Company have now the largest business in England, and are quite supplanting the old-fashioned houses that pride themselves upon having been established so many decades, but have utterly failed to keep pace with the times, and find it impossible to depart from their long credit system, entailing bad debts, for which cash buyers have to compensate."—Court Journal.

DIAMOND ORNAMENTS.—A magnificent assortment of Rings, Stars, Sprays, Flies, Necklaces, &c., composed of the finest White Diamonds, mounted in special and original designs, and sold direct to the public at merchants' cash prices.

SAPPHIRES from Ceylon, but with London cutting, mounted alone, or with Diamonds, in a great variety of ornaments.

NOVELTIES.—A succession of Novelties by the Company's own artists and designers is constantly being produced to anticipate the requirements of purchasers.

CASH PRICES.—The Company, conducting their business both in buying and selling for cash, are enabled to offer purchasers great advantages over the usual credit houses. All goods are marked in plain figures for cash without discount.

APPROBATION.—Selected parcels of goods forwarded to the country on approval when desired. Correspondents, not being customers, should send a London reference or deposit.

COUNTRY CUSTOMERS have, through this means, the advantage of being supplied direct from an immense London stock, containing all the latest novelties, and which are not obtainable in provincial towns.

COLONIAL AND FOREIGN Orders executed with the utmost care and faithfulness under the immediate supervision of a member of the Company. Where the selection is left to the firm, customers may rely upon good taste and discretion being used, and the prices being exactly the same as if a personal selection were made.

TESTIMONIALS.—The numerous recommendations with which the Goldsmiths' Company have been favoured by customers, is a pleasing testimony to the excellence and durability of their manufactures.

OLD JEWELLERY, Diamonds, and Plate taken in exchange or bought for cash.

MEDALS.—Awarded Seven Gold and Prize Medals and the Legion of Honour, a special distinction conferred on this Firm for the excellence of their manufactures.

CATALOGUE containing thousands of designs, beautifully illustrated, sent post-free to all parts of the world.

GOLDSMITHS' AND SILVERSMITHS' COMPANY, 112, REGENT-STREET. CATALOGUE POST-FREE.

VALUABLE DISCOVERY for the HAIR. If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer;" for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all parasites or living animalcule, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Florilline removes instantly all odours arising from a foul stomach or tobacco smoke; being partly composed of honey, soda, and extracts of sweet herbs and plants, it is a perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

CHOCOLAT MENIER. AMSTERDAM EXHIBITION, 1883. Awarded the GRAND DIPLOMA OF HONOUR.

CHOCOLAT MENIER in ½ lb. and ¼ lb. PACKETS. For BREAKFAST, LUNCHEON, and SUPPER.

CHOCOLAT MENIER.—Awarded Twenty-Eight PRIZE MEDALS. Consumption annually exceeds 26,000,000 lb.

CHOCOLAT MENIER. Paris, London, New York. Sold Everywhere.

OBITUARY.

THE EARL OF BERKELEY.

The Right Hon. George Lennox Rawdon Berkeley, seventh Earl of Berkeley, died on Aug. 27. He was born in 1827, the youngest son of General Sir George Henry Frederick Berkeley, K.C.B., by Lucy, his wife, eldest daughter and coheiress of Sir Thomas Sutton, Bart., and succeeded to the earldom in 1882 at the decease of his cousin, Thomas Moreton Berkeley, who was sixth Earl of Berkeley, but did not assume the title. The nobleman whose death we record was formerly an officer in the army. He married, Feb. 22, 1860, Cecile, daughter of Count Edward De Melfort Drummond, and leaves a son and successor, Randal Thomas Moreton, Viscount Dursley, Lieutenant R.N., now eighth Earl of Berkeley.

SIR SAMUEL ROWE.

Surgeon-Major Sir Samuel Rowe, K.C.M.G., late Governor of Sierra Leone, died at Madeira, on Aug. 24, aged fifty-three. He was educated at Aberdeen University (M.B., 1855; L.S.A., L.M., and M.R.C.S., 1856), and entered the Army in 1862, became Surgeon in 1870, and Surgeon-Major in 1873. He served throughout the Ashantee War of 1873-74, and was present with the force under Colonel Festing at the defeat of the Ashantees in the two engagements at Elmina on June 13. For these services he was several times mentioned in despatches, and given a medal with clasp. He was Administrator of the Gambia, 1875 to 1876; Commander-in-Chief of the West African Settlements, 1876 to 1881; Governor of the Gold Coast Colony, 1881 to 1882; and Governor and Commander-in-Chief of Sierra Leone from 1884 up to the time of his death. Sir Samuel was created a C.M.G. in 1874 and a K.C.M.G. in 1880.

MAJOR-GENERAL LYNCH.

Major-General William Wiltshire Lynch, C.B., of Pareora, near Guildford, Surrey, died of cholera on Aug. 4 at Allahabad, while in command of the Allahabad Division of the Bengal Army. He was born in 1831, and was educated at King's College, London. He entered the Army in 1850, became Captain in 1858, Major in 1861, Lieutenant-Colonel in 1871, Colonel in 1877, and Major-General in 1887. He served in the Persian Expedition of 1857, and in the Indian Mutiny of 1857-58. He was mentioned in despatches, received three medals with clasps, was thanked by Governor-General of India, and was given a year's service. He was Brigade-Major of the Chatham District, 1866 to 1870; Assistant Military Secretary West Indies, 1870 to 1872; Deputy Judge-Advocate, 1875 to 1876; and Assistant Adjutant and Quartermaster-General at Aldershott, 1886 to 1887. He married, in 1876, Mary Florence, eldest daughter of the late Mr. J. D. Maclean, of Queensland, Australia.

We have also to record the deaths of—

The Rev. Augustus William Gurney, M.A., Vicar of Little Hereford, Tenbury, on Aug. 28, aged sixty-two.

Colonel Henry Albert Platt, late of Lincolnshire Regiment, at 12, Archway-road, Highgate, on Aug. 28, aged fifty-three.

Mr. Charles Brownlow Brind, Assistant-Commissioner Indian Civil Service, accidentally drowned in Upper Burmah on July 27.

Major the Hon. Robert Baillie, on Aug. 29, aged eighty-one. He was brother of George, tenth Earl of Haddington, and uncle of the present Peer.

The Venerable John Wright Bowles, M.A., Archdeacon of Killaloe and Incumbent of Nenagh, suddenly on Aug. 24, aged sixty-four.

Lady Reid (Lavinia Lucy), wife of General Sir Charles Reid, G.C.B., and eldest daughter of the late Captain John Fisher, at 97, Earl's-court-road, on Aug. 24, aged fifty-nine.

Louisa Anne Erskine, Lady Hamilton, wife of General Sir Frederick William Hamilton, K.C.B., and daughter of Sir Alexander Anstruther, formerly Judge in Madras, on Aug. 29, at Pitcorthie, Fife.

Captain Alfred Nelson Fairman, R.N., only son of the late Colonel William Blennerhasset-Fairman, at 14, Charleville-road, S.W., on Aug. 29, aged eighty-two. He entered the Navy so far back as 1818, and obtained his first commission in 1829.

Colonel Duncan Scott Pemberton, Royal Artillery, at Cashmere, on Aug. 23. He entered the Army in 1856, and became Colonel in 1885. He served with distinction at the siege of Delhi, for which he received a medal with clasp, and in the Boer war of 1881.

The Hon. Mrs. Henley (Georgiana Caroline Mary), wife of the Hon. Anthony Ernest Henley, second son of the present Lord Henley, and only daughter of Lieutenant-Colonel Richard Michael Williams, brother of Sir Frederick Williams, second Baronet, of Tregullow, at Southend, Essex, on Aug. 26.

M. Chevreul, the eminent French chemist, celebrated on Aug. 31 his 102nd birthday. On Sept. 4 he visited the Sanitary Exhibition at the Palace of Industry. Arm-in-arm with a friend he mounted the stairs and walked through the exhibition. He is in excellent health.

Mr. Gladstone's addresses at Wrexham on Sept. 4 proved that he retains unimpaired the faculty of making eloquent and interesting speeches on any subject, from the Welsh leek to King Bomba. In his growing friendliness for Sir Edward Watkin, Mr. Gladstone seized the opportunity to express the indebtedness of Wales to the hon. Baronet for using his influence to increase railway communication with the Principality. Mr. Gladstone's speech to the large gathering of Liberals at Wrexham amounted to little more than a repetition of the charge that King Bomba did not, as a rule, treat political convicts as badly as he alleged the Government treat Irish political prisoners. Mr. Osborne Morgan, from his own personal observation, corroborated the right hon. gentleman on this point. Proceeding to the Eisteddfod, Mr. Gladstone delivered a wonderful panegyric on Welshmen, and quoted Shakspeare in praise of the Welsh as "trusty, loving, and hardy."

THE COURT.

Her Majesty, who is at Balmoral, takes walks and drives daily. On Aug. 29 the Duke de Chartres (who is staying at Invercauld) dined with the Queen and Royal family. The Grand Duke of Hesse went out deer-stalking. Sir Archibald and the Hon. Lady Campbell had the honour of dining with the Queen and Royal family. On the 31st the Queen went out in the morning with Princess Beatrice and Princess Alice of Hesse, and her Majesty in the afternoon drove with Princess Frederica and Princess Alice. Princess Beatrice and the Grand Duke of Hesse drove to the Glassalt Shiel with Sir Archibald and the Hon. Lady Campbell. Princess Frederica dined with the Queen and Royal family on Sept. 1. The Duke of Hesse goes out deer-stalking nearly every day. Divine service was conducted at the castle on Sunday morning, Sept. 2, in the presence of the Queen, the Royal family, and the Royal household, by the Rev. W. W. Tulloch, B.D., of St. Maxwell parish, Glasgow. The Rev. Archibald Campbell and the Rev. W. Tulloch had the honour of dining with the Queen and Royal family. On Monday morning, the 3rd, her Majesty drove and walked out attended by Lady Southampton, and in the afternoon drove with Princess Beatrice and the Hon. Lady Campbell, of Blythswood, attended by Lady Southampton and the Hon. Harriet Phipps, to the Glen Gelder Shiel. Princess Beatrice in the morning rode, attended by the Hon. Rosa Hood. The Grand Duke of Hesse went to a grouse drive, at Invercauld, attended by Major Sir Fleetwood Edwards, K.C.B.

TRADES UNION CONGRESS.

The twenty-first annual Trades Union Congress was commenced at Bradford on Aug. 3. Mr. George Shipton, who opened the proceedings in the absence, through illness, of Mr. Crawford, M.P., Chairman of the Parliamentary Committee, referred, in the course of his remarks, to the Sugar Bounties Convention, and urged the delegates to repudiate the idea of cheapness, regardless of the conditions by which that cheapness was produced. Mr. J. Wilson submitted that the Chairman was out of order in alluding to this subject; but Mr. Shipton justified his allusion on the ground that he was acting in accordance with precedent. Mr. Shaftoe, of Bradford, being elected president, introduced Alderman Morley, Mayor of Bradford, who welcomed the congress to the town. The report of the Parliamentary Committee, which was read by Mr. Broadhurst, M.P., touched upon the various legislative proposals of the past Session dealing with labour questions, and entered at considerable length upon the House of Lords' inquiry into the sweating system. Mr. Shaftoe gave the opening address on the 4th, and alluded to the saving of 40 per cent in human labour which had been effected by machinery. This, he said, pointed to a reduction in the hours of labour, and remarked that the railway monopoly was a grievous sinner in the matter of overwork. The labour party was meant for the redemption of labour, and the Trades Unions would never be the slaves of parties. Questions connected with the operation of the Factory Act and the Employers' Liability Act were afterwards discussed.

The Rev. David Evans, Vicar of Abergele, has been appointed to the deanery of St. Asaph, vacant by the resignation of Dean James, formerly head-master of Rossall School.

IMPORTANT TO ALL LEAVING HOME FOR A CHANGE.

"Among the most useful medicines that have been introduced within the last century is **ENO'S 'FRUIT SALT.'** There is no doubt that where it has been taken in the earliest stage of a disease, it has, in many instances, prevented what would otherwise have been a severe illness. The effect of **ENO'S 'FRUIT SALT'** upon a disordered and feverish condition of the system is marvellous. As a nursery medicine the **'FRUIT SALT'** is invaluable; instead of children disliking it, they look upon it rather in the light of a luxury. As a gentle aperient and a corrective in cases of any sort of over-indulgence in eating or drinking, **ENO'S 'FRUIT SALT'** is all that is needful to restore freshness and vigour. In cases of Nervous Headache and Debility it is especially useful, and should be taken in all cases where persons suffer from a sluggish condition of the Liver."—*Young Lady's Journal.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

CORPULENCY.

Recipe and notes how to harmlessly, effectually, and rapidly cure Obesity without semi-starvation dietary, &c. "Sunday Times" says:—"Mr. Russell's aim is to *eradicate*, to *cure* the disease, and that his treatment is the true one seems beyond all doubt. The medicine he prescribes *does not lower but builds up and tones the system.*" Book, 116 pages (8 stamps).

GUILDEROY. By OUIDA.—On Sept. 15 will commence a new story, entitled "Guilderoy," by Ouida, the most famous novelist of modern times, conceived in Ouida's best style, with a well-defined plot, clearly-drawn characters, and marked by a subtle and refined analysis of the mingled good and evil in the human heart. In Lord Aubrey, who acts as a foil to the selfish egotism of his cousin, Guilderoy, we are furnished with an admirable picture of a perfect English gentleman, who contrives amid the world's muddy ways to wear throughout the "white flower of a blameless life." In Gladys Vernon, the heroine, we have a touching picture of a high-minded, virtuous, and forgiving wife, and in the guilty intimacy of the weak and erring Guilderoy with the Duchess Soria, a terrible warning of the evil power passion exercises over man when its object is a beautiful but evil-minded woman. "Guilderoy," according to the universal admission of all who have read it, is the most attractive of the many entrancing pictures of modern life and morals with which Ouida has bewitched her millions of readers.

"THE GUN OF THE PERIOD." TRADE MARK. REGD.
HONOURS, PARIS, 1878.
DIPLOMA & MEDAL, SYDNEY, 1879, AND CALCUTTA, 1883-4.

With intercepting Safety Bolt, rendering an accidental discharge impossible.

G. E. LEWIS'S TREBLE GRIP, combined with Anson and Deeley's Locking, Cocking, and Automatic Safety Bolt, is the most perfect weapon ever placed in the hands of the sportsman. The opening of this gun cocks it, and bolts the triggers and tumblers automatically. Prices from 20 to 40 guineas. A special plain quality, £16. Express Rifles, from 12 guineas. "The Gun of the Period," wherever shown, has always taken honours. Why buy from Dealers when you can buy it at half the price from the Maker? Any gun sent on approval on receipt of P.O.O., and remittance returned if, on receipt, it is not satisfactory. Target trial allowed. A choice of 2000 guns, rifles, and revolvers, embracing every novelty in the trade.—G. E. LEWIS, Gun Maker, 32 and 33, Lower Loveday-street, Birmingham. Estab. 1850.

NUBIAN
LIQUID WATERPROOF
BLACKING

No brushes required. Applied with sponge attached to the cork. Gives a brilliant polish, equal to patent leather, to Boots, Shoes, Harness and Leather articles, which last a week in all weathers. Must can be washed off and polish remains. Sold everywhere.

OBSERVE!

I AM

The Spirit of Health,

and my message is to the Wise. I crown, with a fadeless wreath, those who obey my laws and avail themselves of my counsels. The flowers that I give do not wither, and the fragrance of my roses is perpetual. I bring bloom to the cheek—strength to the body—joy to the heart. The talisman with which I work never fails. Vast numbers have felt its power, and testified to its virtues. It is

PAMPHLET and ADVICE FREE, Personally or by Letter.

Can only be obtained from HARNESS' Electropathic Establishment, 52, OXFORD-STREET, London, W.

HARNESS' ELECTROPATHIC BATTERY BELT

The only Guaranteed Genuine Galvanic Curative Appliance recommended by the Leading Medical and Scientific Authorities.

LADIES Suffering from Diseases peculiar to their sex, should read Mr. HARNESS' new Pamphlet, entitled "Electrisation," gratis and POST-FREE.

IF YOU ARE SUFFERING from any slight derangement, with the cause of which you are acquainted, you will find that HARNESS' ELECTROPATHIC BELT affords a perfect means for the self-application of Curative Electricity. It is comfortable to wear, produces no shock, and is absolutely certain to do good in every case. The thousands of testimonials in favour of HARNESS' ELECTROPATHIC BELT speak for themselves. A large number of them are published in "HARNESS' GUIDE TO HEALTH" (gratis and post-free); but sufferers are invited to call, if possible, at 52, OXFORD-STREET, London, W. (corner of Rathbone-place) and convince themselves by personally inspecting the originals. IF YOU HAVE ANY REASON to fear that your sufferings are serious or complicated, you are recommended to call; or, if you reside at a distance, to write for a private "Advice Form"; which will be sent you by post (with Pamphlet), free of charge.

ALL IN SEARCH OF HEALTH should wear Harness' world-famed Electropathic Belt.

MR. C. B. HARNESS, Consulting Medical Electrician (President of the British Association of Medical Electricians), attends daily at 52, OXFORD-STREET, London, W., and gives ADVICE FREE OF CHARGE on all matters relating to Health and the application of Curative Electricity. If you cannot call, write for Private Advice Form, and full particulars of Mr. HARNESS' Celebrated

GENTLEMEN Suffering from BRAIN-FAG and Nervous Disorders, Impaired Vitality, &c., should read Mr. HARNESS' new Pamphlet, entitled "Galvanic Electricity," gratis and POST-FREE.

"ELECTROPATHIC" TREATMENT.

Mr. HARNESS should be consulted at once, either personally or by letter, by all who suffer from

Rheumatism,	Kidney Diseases,	Neuralgia,
Lumbago,	Epilepsy,	Female Disorders,
Sciatica, Gout,	Paralysis,	Liver Complaint,
Nervous Exhaustion,	Spinal Weakness,	Consumption,
Sleeplessness,	Indigestion,	General and Local Debility,
Brain Fag.	Constipation,	Functional Disorders, &c.

HARNESS' ELECTROPATHIC APPLIANCES

Promptly, Absolutely, and Permanently CURE.

MEN AND WOMEN

Who wear HARNESS' world-famed ELECTROPATHIC BELT find that it promptly Restores Impaired Vital Energy, Invigorates the Debilitated Constitution, Stimulates the Organic Action, Promotes the Circulation, Assists Digestion, and promptly Renews that Vital Energy, the loss of which is the first symptom of decay. Healing Properties are Multifarious; it Stimulates the Functions of Various Organs, Increases their Secretions, Gives Tone to Muscles and Nerves, Relaxes Morbid Contractions, Improves Nutrition, and Renews Exhausted Nerve Force. Acting Directly on the System, it Sustains and Assists its Various Functions, and thus Promotes the Health and Vigour of the entire Frame.

HARD FACTS. Every advertised article is not a fraud and a delusion. Thousands of Patients gratefully remember the day they saw our advertisement, and gave the natural and rational system of ELECTROPATHY a trial.

HARD FACTS. The few Testimonials in favour of Electropathy published hereunto are not written to order nor by a few personal friends—they are from utter strangers, are taken indiscriminately from thousands of unsolicited reports received, which may be seen by anyone interested at Mr. C. B. HARNESS' Consulting Rooms, 52, OXFORD-STREET, London, W.

HARD FACTS. Electricity is not simply something to make the muscles contract and jump. The healing properties of Electricity, as exhibited under Harness' world-famed "Electropathic" Treatment, are multifarious.

Pamphlet and Advice Free, personally or by Letter.

NOTE ONLY ADDRESS; and if you want to be permanently and speedily Cured, without medicine, DISCARD PREJUDICE; call and inspect the original testimonials, and personally examine Mr. HARNESS' numerous Curative Electrical Appliances, all of which are guaranteed genuine.

THE FOLLOWING ARE A FEW EXTRACTS from the thousands of unsolicited

TESTIMONIALS

received by Mr. Harness. The public are invited to call and inspect the Originals at the Electropathic Consulting Rooms, 52, Oxford-street, W.:—

"BETTER IN EVERY WAY."

CONSTIPATION & LADIES' AILMENTS.—"Portmore House, Weybridge.—Dear Sir,—Since wearing Harness' Electropathic Belt my health has been better in every way, and I would not like to be without it. Before I wore the Belt I suffered such pain every month from my waist to the knees, which often went to my head and affected my eyesight for a little time; but I am happy to say these pains have never returned. I tried all sorts of medicine with no good results, but from wearing your Electropathic Belt I am now in the best of health, and cannot thank you too much for it.—Yours truly, H. JONES."

"HAVE EVERY CONFIDENCE."

NERVOUS DERANGEMENT.—"5, New Steine, Brighton.—Dear Sir,—I beg to acknowledge with many thanks the benefit I have derived from wearing your Electropathic Belt. I have every confidence in recommending your appliances and treatment whenever I have an opportunity.—Yours truly, M. GREEN."

"DISEASE ENTIRELY LEFT ME."

EPILEPSY.—ARTHUR HIPWELL, Esq., Wood-road, Geddington, Kettering, June 4, 1888, writes:—"I cannot speak too highly of your Electropathic treatment, it has been a great boon to me. I used to have the fits several times a day, but now I have none, and the peculiar sensations incidental to this distressing disease entirely left me after wearing your appliances."

"COMPLETELY CURED."

SCIATICA.—MR. R. J. WATSON, Proprietor, *Harwich Free Press*, 13, Market-street, Harwich, writes:—"Harness' Electropathic Belt has completely cured me of sciatica. After wearing it for a week I got relief, and have gradually been getting better, and am now quite free from pain."

"NERVOUS ENERGY AUGMENTED."

PAINS IN THE BACK.—The Rev. R. ANTHIM, Vicar of Slapton, King's Bridge, South Devon, writes:—"The pain across the loins has quite left me. My nervous energy is greatly augmented since wearing Harness' Electropathic Belt."

"INVALUABLE."

NERVOUS PROSTRATION.—MRS. POWELL, 4, Dulwich-road, London, S.E., writes:—"All my ailments are gradually yielding to your invaluable Electropathic appliances."

"BETTER IN EVERY WAY."

SLUGGISH LIVER.—MRS. M. ANDERSON, Mortimer-street, Herne Bay, Kent, writes:—"I was suffering from a *torpid, inactive* liver, accompanied by *Constipation* and *Indigestion*. After wearing the Electropathic Belt I am much better in every way; the functions are regular, my appetite has improved, and the wretched depressed feeling I used constantly to have has completely passed away."

"A NEW MAN."

PARALYSIS.—ROBERT ROTHWELL, Esq., 9, Cooke-st., Hulme, Manchester, June 8, 1888, writes:—"The Electropathic Belt my father purchased for *loss of nerve power and paralysis* has made a new man of him, and it was only the other day that he told me he would have been in his grave long ago if it had not been for your valuable Electropathic treatment."

RESIDENTS AT A DISTANCE, and those unable to call, should write for "Private Advice Form," which will be sent, together with Pamphlet and Copies of Testimonials, post-free to any address on application to

THE GOVERNOR OF VICTORIA VISITING THE BRITISH SECTION.

READING THE QUEEN'S TELEGRAM.

PROCESSION OF GOVERNORS OF AUSTRALIA UP THE GRAND AVENUE OF NATIONS.

OPENING OF THE MELBOURNE EXHIBITION.—FROM SKETCHES BY OUR SPECIAL ARTIST, MR. MELTON PRIOR.

OUR NOTE BOOK.

BY JAMES PAYN.

I hope one of the good fellows who took charge of the sixty Polytechnic boys on their month's holiday on the Continent the other day will give the world his reminiscences of it. It is a long time since the delightful Voyages en Zigzag" appeared, and though the Boy has not changed (it is not in the power of any Polytechnic upon earth to change him) the conditions of travel have greatly altered since that time. The book should have illustrations, of course—instantaneous photographs of what its French author called their "scenes of anarchy" (bolsterings and the like), while to the *édition de luxe* might also be attached a phonograph, stating exactly what they said in commendation of the sublime scenery and foreign "tuck." Travels among savages may be exciting, but think of travels *with* savages! "The Boy Abroad, and How he Made himself at Home There," would be an excellent title. They did it for five pounds apiece, too, and seem to have stolen nothing but a few cherries. Why are not all young persons taught to make their money "go" this distance? The sunburn on our boy's cheek, which delights his mother so, disappears when his holiday is over; but however short it may have been, and however ample his allowance, we never see "the colour of our money" again. If the Polytechnic can teach its pupils economy, it can teach them anything. I had once a lesson there, on another subject, myself (from the Electrical Eel), which I never forgot; but that was under the old regime. The present institution seems a still more admirable one; and it speaks well, indeed, for the courage and conduct, as well as kindness, of its promoters that they should have played "the schoolmaster abroad" with such complete success. They certainly do not share what is said to be the weakness of the present age—the shrinking from responsibility. I once took charge of *one* boy on his travels abroad (from Saturday to Monday), and that is why (though I am quite young) my hair is grey.

It would be an exaggeration to say that I never knew a youth who made his allowance go a long way, but the experience in question was rather an exceptional one. His father, a man of wealth, but who hated extravagance, sent him, when he was seventeen or so, to improve his mind by a month's travel on the Continent; ten shillings a day, including his railway fare, was considered to be ample, so off he went with thirty pounds in his pocket. Three days afterwards he found himself at Wiesbaden with *only two* pounds left. It was no use to him (as he afterwards explained to me) for pursuing his journey; whether he lost it at the tables at the Kursaal, or spent it on his necessities, he would, all the same, have had to write home for more; so he tried the tables, and won a hundred pounds. Being an intelligent lad, he was satisfied with that achievement; went to Paris and other places, living like a fighting-cock everywhere, and returned home at the month's end with thirty shillings in his pocket. Great were the rejoicings over him (for it had been whispered that he was inclined to be prodigal), and enormous the satisfaction with which his parent dilated upon his economy; he was a lad "with his wits about him" (he *was!*) and who "knew how to husband his resources." Not a word did that youth ever whisper about those tables at Wiesbaden, and it was felt quite a loss to economical science that his accounts had been lost, where, no doubt, every item of expenditure had been set down in its proper place. The worst part of the business was that the example of financial success he had set caused all the fathers in the neighbourhood to send *their* sons abroad on ten shillings a day; somehow or other they had not "the head for travel" which our young friend had shown himself to possess, and, instead of exhibiting a reserve fund of thirty shillings, they had to telegraph for funds to bring them home.

In China a gentleman has only to commit suicide upon his enemy's doorstep to make that individual miserable for life: his blood is for the future on the householder's head, and, what is more material, the maintenance of his family upon his shoulders. This custom, in the Flowery Land, where folk do not mind putting themselves (or, indeed, other people) to death upon the smallest provocation, is found to be inconvenient: yet, strange as it may seem, we are gradually adopting it in England. The law, it is true, is not so exacting, nor are Englishmen so ready to sever their "mortal coil" (as the poets term the jugular vein), as Chinamen; but, when they do so, it has now become almost customary with them to leave a statement behind them, explaining their reasons for departure, and pointing out with vindictive finger the person at whose door they wish the catastrophe to be laid. Sometimes, of course, the terrible punishment which this involves is a just one; but sometimes it is not so—as, considering the vehemence of passion which often drives the accuser to leave this world, is not to be wondered at; whether sound or unsound, his state of mind can hardly be a judicial one. In old times this habit was almost unknown among us, except in the best families, which were accustomed to be anathematised, root and branch, by some wronged retainer, and, if we are to believe in ancestral legends, with excellent effect (no male child ever reaching his majority from that moment, and no female being unprovided with a hump, like a dress-improver in the wrong place); but now there is no family, however humble, which is not subject to these post-mortem maledictions. It is noticeable that they are of two kinds: one in which individuals are denounced by their full name and address, as though the writer were making his will, and exceedingly anxious that they should not be excluded from its benefits; and the other, wherein he only mentions them by their initials—a sort of half measure by which he leaves them to their own unpleasant reflections, but spares them the indignation of the world. This milder method is, however, accompanied by the disadvantage of innocent persons with the same initials—since there is always plenty of malicious guessing—being identified with the wrongdoers, and suffering, like Mr. Besant's hero, who was "haunted" by a misinformed spectre for a deed which he had never done. I note this week no less than three initial denunciations. One poor fellow is so soft-hearted in his revenge as to confine himself to writing the letters A. B. C., like a proposition in Euclid. The terms in which he expresses himself are also exceedingly vague. "If I had of been something like done to by one who could I should not have taken to what I have been forced into." Whatever may be said against this unfortunate person—of whom nothing good or bad, however, seems to be known by anybody—no one can accuse him of being a Grammarian.

That large class of our fellow-creatures whose chief topic of conversation is "the weather" must have had a hard time of it, as regards variety, this summer. In Vienna, however, they have got a weather *plant* to talk about, which must be a great relief. It is, we are told, "a legume"—a piece of information which, to many people, will have the advantage of not disclosing too much at once, and thereby spoiling the story; its botanical name is the *Abrus peregrinus*, but it is also called the "paternoster pea," which, to *my* ear at least, sounds much more familiar. It is published—I mean grown—chiefly in Corsica and Tunis; but they seem to have an *édition de luxe* of it in Vienna. "Thirty-two thousand trials of it in two years," writes an extremely cautious disciple of science, "tends to prove its infallibility." On the leaves of its upper branches one can read the state of the weather forty-eight hours in advance, but in those of the lower it is inscribed for three days to come. To us in England, it would have been useless; for we have been able, by reasoning from analogy, to say "wet" for the last three months, and the prophecy has never failed. Meteorologists tell us that the notion of a change of climate here is all rubbish; but certainly there have been seasons even in Scotland, where not only sunshine seems to have occurred, but people got so spoilt as to look for the most delicate gradations of favourable weather, and, when they didn't get them, to apply for them (it strikes one rather peremptorily) to the proper quarter. In one of the northern counties of Scotland, says Dean Ramsay, the minister, in his Sabbath sermon, expressed the needs of his agricultural parishioners for a wind *to* raise the corn for the sickle with a very detailed particularity. "O Lord, we pray Thee to send us wind; no' a rantin', tantin', tearin' wind, but a noughin', soughin', wiruin' wind." "More expressive words," remarks the Dean, "cannot be found in any language," nor, it may be added, words more suggestive of dictation. Our poor farmers in England would certainly have been thankful this summer for much less: a few hours of sunshine, for example, on alternate days. It is hard to have one's holiday spoilt by the weather, but how much worse one's harvest!

I am not an Alpine climber myself; I could never get over the Mauvais Pas at Chamounix, nor even the "precipice path" at Dolgelly. It is said that mountain air has all the effect of champagne, and when the mountain is steep it certainly makes my head go round. But I have known a good many climbers—human "creepers" that can cling to anything, and, when there is nothing to cling to, "hang on by their eyelids;" yet one of the very boldest who once looked with me at Beachy Head from the sea acknowledged that it was beyond him. "I am not a gull, Sir," he observed, in a tone which seemed to imply (though quite unnecessarily, for I was not thinking anything of the kind), "I am not a fool." And now a Belgian has accomplished it. Six hundred feet of sheer cliff, with only an interstice here and there for a finger-nail! I should like to know what his feelings were (I know what his "view" was) when within ten feet of the top. Of course his example will set our own cliff-climbers at work, and before the year is out there will be plenty of vacancies in the Alpine Club. I should not wonder if the thing was taken up professionally by some Baldwin of the cliffs. "On Saturday, the — inst., Professor Sharptoe will ascend Beachy Head from the sea at two p.m.; special steamers (half the fare to go to the Professor, or his widow) will run from London Bridge direct." When this feat begins to pall, the Professor will only have to take some lady or gentleman on his back to attract new thousands.

The virtues of hot water have had a great development of late years. People of fashion, whose digestions have been impaired, fancy that they still can eat half-a-dozen courses at dinner, if the water they drink with them is only hot enough. "I must trouble you," they whisper to their hostess, "to let it be very hot; merely warm water, you know, has—ahem!—an unpleasant effect." The water is, therefore, brought as if for shaving purposes, and generally cracks the tumbler. The broken glass in one's pantry which the butler used to attribute to "the cat," is now set down to the guests who adopt this new regime. Another purpose for which it is used is to send people to sleep at night. It is a little inconvenient to have to supply boiling water in the small hours of the morning to one's wakeful visitors; but, to do them justice, most of them bring spirit lamps and kettles of their own. I have a private suspicion that they put something *in* the water, to induce somnolency; but, as they bring this with them also, that is not my business. The Russians have now discovered that hot water has a quieting effect upon prisoners who are insubordinate—by means of a short hose, specially made to resist the heat, and attached to a steam-pipe nozzle, they squirt boiling water upon the offenders, and at once produce peace and quietness (by par-boiling). The proverbial phrase of being "in hot water" has, therefore, not so much lost its meaning in Russia as obtained a precisely contrary signification. This will, probably, form a supplementary chapter in the next edition of "The Language of Thought," and need not therefore be here enlarged upon.

The Duke of Cambridge made his annual inspection on Sept. 10 of the troops at Woolwich. Next day he proceeded to Edinburgh, in order to commence a tour of inspection in Scotland and the northern counties.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Sept. 11.

On returning to Paris from pseudo-holiday wanderings in summerless lands it is a relief to find that Parisian matters in general have undergone very little change, and that although one may not have seen a newspaper for two months past, very little effort is needed to enable one to catch up and realise the political situation. The pivot on which the thoughts of men turn is still Boulanger, who has found a new means of advertising himself. He is lost. The most assiduous reporters cannot discover his whereabouts. Where is Boulanger? is the question of the day, which has taken the place of the antiquated puzzle, Where is the Bulgarian? Meanwhile, as usual, President Carnot is making a triumphant progress, this time through Normandy, the Ministers are airing their rhetoric all over the country, and the sessions of the departmental councils have transferred political interest from Paris to the provinces. The manifestations of opinion thus obtained are important, because they represent the average opinion of the country. The burden of all the speeches is the sacred obligation, or rather the imperious necessity, imposed upon all Republicans to forget their quarrels and to unite in one supreme and common effort to save the Republic and secure it from the enterprises of reaction or dictatorship. The difficulty is to reconcile the Radicals and the Opportunists even temporarily, and in the general confusion the platform of discussion has become the reform of the system of voting. In his day, Gambetta used to declare that the cause of all the evil was the *scrutin d'arrondissement*, and now the heirs of Gambetta declare that France is in a mess because the system of voting is the *scrutin de liste*, and not the *scrutin d'arrondissement*. What will come of all this raging and reforming? And what about this sacro-sanct principle of universal suffrage, which we have been taught to look upon as the bulwark of liberty and democracy, and which proclaims Boulanger a new Cæsar, preferring a déclassé soldier to Bourbons and Bonapartes alike? No wonder that Republicans and Conservatives feel equally at a loss!

The Parisians are reading with avidity details about the swindler, Allmayer, who escaped from Mazas more than a year ago, and who has since been continuing his exploits in Paris and in various towns in France. Although Allmayer has no blood on his hands, he is having an immense *succès de curiosité*, which he deserves to a certain extent, for he is the very incarnation of the modern adventurer—good-looking, elegant in dress and manners, capable of playing to perfection the rôle of a gentleman, and possessing the multitude of physical gifts and acquired talents that are necessary for one who wishes to be a Casanova and to satisfy intensely his unreasoning instincts. After all, however, this Allmayer is not a very great adventurer, audaciously as he has played with magistrates and gendarmes; he has not the gift of languages; he has not dared to travel; his field of action is limited to Aix-les-Bains and the casinos of Norman seaside resorts.

France will soon be as thickly populated with statues as was ancient Italy. On Saturday, at Pontivy, in Morbihan, was unveiled a statue to Dr. Guépin, who had been a militant Republican ever since the Restoration. On Sunday, at Lorient, MM. Ernest Renan and Jules Simon presided over the inauguration of a statue of Brizeux, the Breton poet, author of a delicate poem, "Marie," who died in 1858. On Sept. 22 will be inaugurated, at Nantua, in the Department of Ain, his native town, a statue of Bandin, the deputy who was killed on a barricade on the day of Napoleon's *coup d'état*. On Sept. 17 his native town of Montbard (Côte d'Or) will raise a statue to the memory of the natural historian, Buffon; and on Sept. 30 Landrecies, in the Nord, will unveil a statue of the great coloniser Dupleix, Governor-General of India from 1730 to 1750. Is it not strange that money should be forthcoming for all these statues, and that in this material age people should be animated with those pious sentiments of sympathy, gratitude, or civic pride which cause them to send in their subscriptions?

One of the features of the Exhibition of 1889 will be a complete Breton town, constructed at the Trocadéro, and comprising reproductions of the most famous houses, monuments, and curiosities of Brittany.

Since M. Grévy has left the Elysée, the office of public executioner has not been a sinecure in France. Within the past few days two criminals have been guillotined, the Corsican bandit Rocchini and the man Schumacher, who strangled his benefactress for the sake of obtaining a few francs. T. C.

The marriage of the Duke of Aosta, brother of the King of Italy, with his niece, Princess Marie Letitia, daughter of Prince Napoleon, took place on Sept. 11 at Turin. The religious ceremony was held in the chapel of the Santissimo Sudario, the Archbishop of Turin officiating. The occasion was celebrated by a grand flower festival. The bridal procession proceeded to the Place Victor Emmanuel, each Royal carriage being preceded by thirty cavaliers in costumes of the beginning of the last century. The scene was most brilliant. Our last issue contained portraits of the Royal pair.

On Monday morning, Sept. 10, the Emperor William attended a parade of the Third Army Corps on the Tempelhof Common. After the review, which was a most brilliant military spectacle, his Majesty rode back to Berlin at the head of the Colours Company of the 8th Infantry Regiment. Thousands of people lined the road, and the cheers given for the Emperor were unceasing. The Emperor William left Berlin for Bremerhaven in the evening, in order to attend the naval manœuvres to be held there.

The Czar and Czarina, accompanied by their children, arrived at Elizabetgrad, in the south of Russia, on Sept. 7, and, proceeding to the Cathedral, were welcomed by the Archbishop of Odessa. Next day, they were present at the military manœuvres, and visited some of the public institutions.—The great annual fair at Nishni Novgorod was officially closed on Sept. 6. Business, on the whole, showed an improvement, as compared with last year.

Some loss of life and considerable destruction of property have been been caused by an earthquake near Patras, Greece. All the villages in a large district have suffered severely.

The letter of President Cleveland formally accepting the Democratic candidacy for the Presidency has been published. It is devoted almost exclusively to the subject of the tariff, and makes no mention of the fisheries question.—The American Senate has voted in favour of the Bill for excluding Chinese immigrants from the United States; but the number voting was not sufficient to pass the Bill, and another vote must be taken. The House of Representatives have passed the Retaliation Bill with practical unanimity, the numbers being—ayes, 174; nays, 4.—The death at New York of Mr. Lester Wallack, the well-known actor, and former proprietor of Wallack's Theatre in that city, is announced.—The reports of the American crops show a considerable amount of damage arising from weather and insects to cotton, wheat, oats, and barley. Indian corn is stated to be a fine crop.

OPENING OF THE MELBOURNE EXHIBITION.

Our Special Artist, Mr. Melton Prior, having made his passage from England to Australia, "Across Two Oceans," the Atlantic and the Pacific, arrived at Melbourne, from San Francisco, in time for the opening of the International Exhibition, which has been got up to celebrate the memorable centenary of the foundation of the first of the Australian Colonies—not that of Victoria, which has the city of Melbourne for its capital, but New South Wales—which is nearly half a century older.

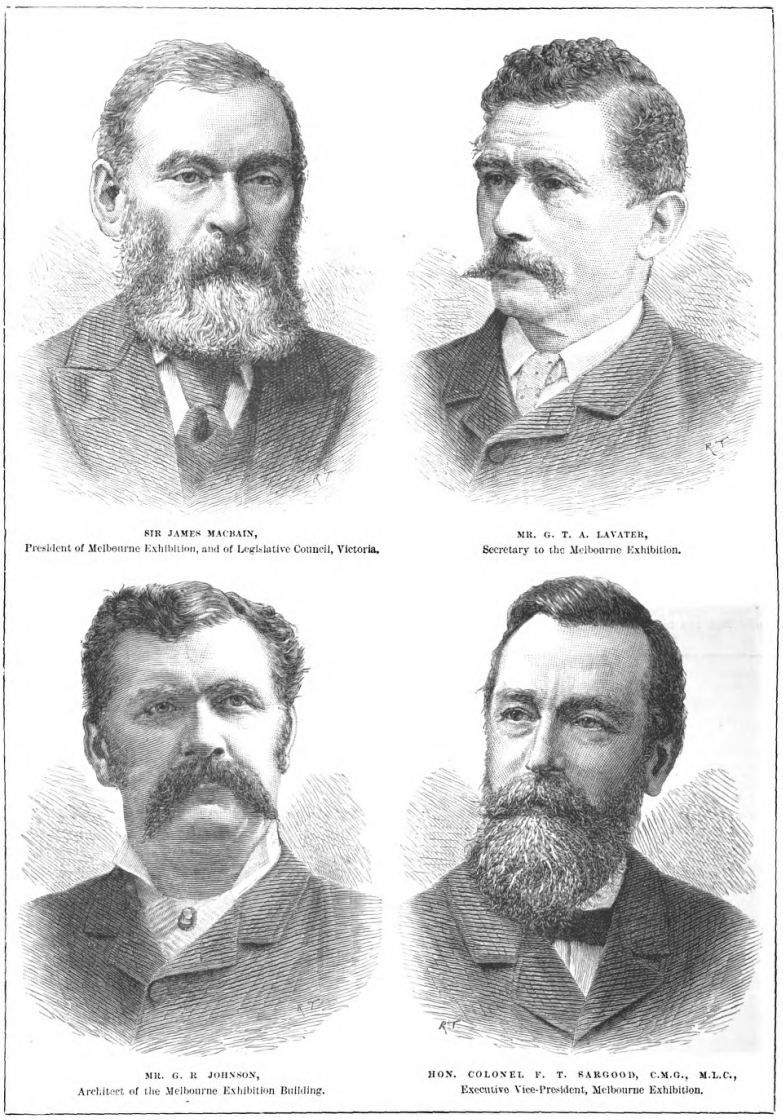
It was one hundred years ago that the great island, which Torres called "Terra Australis," and which Flinders afterwards shortened to "Australia," was taken possession of by Captain Cook for the British Crown. He cast anchor in Botany Bay, a few miles to the southward of Sydney Harbour. Previously to this, Dampier, Tasman, Carpenter, and others had examined the coasts. The history of the Australian Colonies begins with the landing of the first shipload of convicts at Botany Bay, in 1788, under the command of Captain Phillip. In 1795 Governor Hunter formed settlements on the Hawkesbury. During Governor King's term of office, about 1803, Macarthur started wool-growing at Camden, with a couple of Spanish merino sheep, given him by George III. In 1803 a settlement was formed in Tasmania by Judge-Advocate Collins. Hobart Town was founded, and in 1829 separation from New South Wales was effected. In 1815 Governor Macquarie built a road across the Blue Mountains, and thus opened up a highway for the squatters. The first quarter of a century was occupied with the inland explorations of Oxley, Cunningham, Hume, Hovell, Sturt, Macleay, and Mitchell. But in 1802, Port Phillip was discovered by Lieutenant Murray, and Mr. Charles Grimes, Surveyor-General of New South Wales, entering Port Phillip on a surveying expedition, sailed up the river Yarra. This was the first trip, probably, made by a white man. It appears, from the records available, that thirty-two years elapsed before the second white man went on a similar trip. The first attempt at settlement was made by the Hentys, of Launceston, Tasmania, who, in 1834, established a whaling-station at Portland Bay. In the year following, John Batman formed a settlement on the western shore of Port Phillip; and Melbourne practically commenced its existence from that date. In 1851, the Port Phillip district was merged in the newly-constituted separate Colony of Victoria, and Mr. C. J. Latrobe, who had been Superintendent of the district, became the first Governor.

The territory of Victoria extends from the 34th to the 39th degree of south latitude, and from 141 deg. to 150 deg. east longitude. It is separated from New South Wales by the river Murray, and by a line from Forest Hill to Cape Howe, whilst the 141st meridian of longitude separates it from South Australia on the south-west. Its extreme length is 480 miles, its breadth 240, and its area 87,884 square miles, or 56,245,760 acres. The territorial divisions consist of four districts and thirty-seven counties. Gipps Land is characterised by colossal mountains, chiefly of volcanic formation, magnificent streams, and fertile plains. The Murray district is also mountainous, and well watered; some parts are noted for auriferous wealth, others are adapted to agriculture; in the north-east are extensive pastoral plains. Wimmera district, covering about 25,000 square miles of the north-west of the colony, and Loddon district, occupying the north central portions, are chiefly adapted to pastoral pursuits. The climate of Victoria is generally healthy and pleasant. Victoria had a population of 1,003,043 at the census of 1886.

The city of Melbourne, which was incorporated in 1842, stands on the north bank of the river Yarra, six or seven miles from the sea at Hobson's Bay. It is encircled by populous suburbs—some of them, indeed, are called cities—the number of inhabitants ranging from 5000 to 26,000. The total population of Melbourne and the suburbs is estimated at 371,630. The city streets, which aggregate 100 miles in length, are straight, and run at right angles through the entire length and breadth of the town. The main thoroughfares are Collins-street, Bourke-street, Flinders-street, Swanston-street, and Elizabeth-street, all with cable tramways. The most important public edifices are the Parliament Houses, the Treasury, the Law Courts, the University, the Public Library, the National Museum, the Townhall, the Mint, and the two cathedrals, the latter not being completed. Some of the banks, insurance companies, and woolbrokers occupy magnificent buildings, bluestone and freestone being the material mostly used. The Governor's residence, on the south side of the Yarra, is a large mansion, occupying one of the most elevated sites. The Botanic Gardens, which have an area of 109 acres, are tastefully laid out. The water supply of Melbourne is obtained from the Yan Yean reservoir, in a valley among the Plenty Ranges, eighteen miles from the city.

The International Exhibition at Melbourne to celebrate the centenary of the Australian Colonies was opened on Aug. 1, with great ceremony, by Sir Henry Brougham Loch, G.C.M.G., K.C.B., the Governor. His Excellency, with Lady Loch and a number of their guests, entered the city by way of New Prince's Bridge, under a salute from the batteries. An immense procession was formed, and accompanied the Governor's party to the Exhibition buildings, marching through Collins-street and other thoroughfares. The procession was headed by a number of seamen, marines, and men of the naval brigade, followed by rifles, artillerymen, and militia. Then came the fire brigades and trades and Friendly Societies, which had mustered several thousands strong, with banners flying and bands playing. The streets were thickly lined with people, who displayed great enthusiasm; and the whole route presented a brilliant appearance, the windows being crowded with spectators, who cheered heartily, and the houses profusely decorated with flags.

The specially-invited guests, to the number of 7000, had previously assembled inside the Exhibition building, at the entrance of which a guard of honour, with colours, was drawn up. The Grand Avenue of Nations, 1350 yards long, was lined with troops, while the seamen of the Imperial fleet were drawn up round the Grand Hall.



The Governor entered the Exhibition by the north door, where he was received by Sir J. MacBain, the President, the Hon. F. T. Sargood, the Executive Vice-President, the Executive Commissioners, and the members of the Ministry, his arrival being heralded by a flourish of trumpets. His Excellency was then conducted to the dais by the distinguished persons present, the procession being in the following order:—The Marshal of Ceremonies, the Deputy-Marshals, the Imperial Naval and Military officers, the officers of the foreign ships of war, the various Colonial commandants, the Ceremonial Committee, the Mayor of Melbourne, the Colonial Judges, the executive commissioners and the secretary, the members of the Australian Cabinets, the Colonial Chief Justices, the Speakers of the various Legislative Assemblies, the Hon. Duncan Gillies, the Victorian Premier; Sir W. Foster Stawell, the Lieutenant-Governor of Victoria; the Hon. F. T. Sargood, the executive vice-president; Sir J. MacBain, the president of the Exhibition; Admiral Fairfax, commander on the Australian station; the Aides-de-Camp of the Governor; the Governor, with Lady Loch and family; the other Governors and their wives; the Presidents and Vice-Presidents of the Colonial Courts, and the foreign Consuls and Commissioners. The Governors of Australasian Colonies present, besides Sir Henry Loch, were Lord Carington, Governor of New South Wales; Sir W. F. Drummond Jervois, Governor of New Zealand; Sir Anthony Musgrave, Governor of Queensland; Sir W. C. F. Robinson, Governor of South Australia; and Sir Robert Hamilton, Governor of Tasmania.

As the procession passed up the Grand Avenue of Nations the National Anthems of America, Germany, Austria, and France were played by bands stationed in each of the courts named, and when the Grand Hall was reached the British National Anthem was sung, Mr. F. H. Cowen conducting. The President then offered prayer, and the "Old Hundredth" was sung in a very impressive manner, after which the "Song of Thanksgiving," specially composed for the occasion by Mr. Cowen, was brilliantly rendered by an orchestra of 100 performers and a chorus of 800 voices.

Sir J. MacBain read an address to his Excellency, welcoming him to the Exhibition and conveying an assurance of the Colony's loyalty. The President then thanked the various Governments, exhibitors, and peoples for their flattering responses to the invitation to participate in the Exhibition, and, after presenting the Governor with the official catalogue, concluded his speech by expressing the hope that the inspection of so many products of the world's thought and labour might educate the people to higher enterprises in art and industry in the future, to the enhanced prosperity and happiness of all. He then handed to his Excellency a beautifully-wrought golden key, and requested him to declare the Exhibition open.

At the conclusion of the ceremony, the Governor dispatched a telegram to the Queen informing her Majesty that the Exhibition was open. A telegram was also sent to the Prince of Wales. The arrangements for the ceremony are much commended. There was an immense attendance at the Exhibition.

Our large Engraving shows the scene when the Governor, in the Queen's name, declared the Exhibition open; other Illustrations are those of the Governors of the several Colonies of Australia, Tasmania, and New Zealand, walking in the procession; and that of the Governor of Victoria inspecting the British section. We also give the Portraits of Sir James MacBain, President of the Legislative Council of Victoria, who is President of the Exhibition Commissioners; Colonel the Hon. F. T. Sargood, the Executive Vice-President; Mr. G. T. A. Lavater, the Secretary; and Mr. G. R. Johnson, architect of the Exhibition building, which has been prepared for this occasion at a cost of nearly £150,000, and is situated in the Carlton-gardens, a central position in the city.

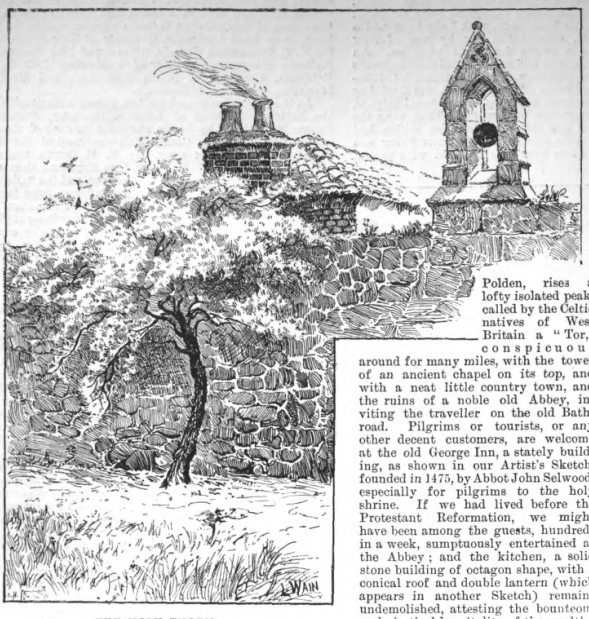
SIR JAMES MACBAIN,
President of Melbourne Exhibition, and of Legislative Council, Victoria.

MR. G. T. A. LAVATER,
Secretary to the Melbourne Exhibition.

MR. G. R JOHNSON,
Architect of the Melbourne Exhibition Building.

HON. COLONEL F. T. SARGOOD, C.M.G., M.L.C.,
Executive Vice-President, Melbourne Exhibition.

The annual show of the Royal Manchester, Liverpool, and North Lancashire Agricultural Society, whose area embraces Lancashire, Cheshire, Denbighshire, and Flintshire, has been held at Lancaster. Of the £2250 offered in prizes, over £500 was given by local contributors. The Hereford cattle-breeders gave £50 in prizes, and the Lancashire and Cheshire Beekeepers' Association gave £20. There were 250 horses, 200 cattle, 300 sheep and pigs, 436 pens of poultry, 230 dogs, 104 entries of cheese, and 72 entries of butter. There was a large display of implements, machinery, and appliances.



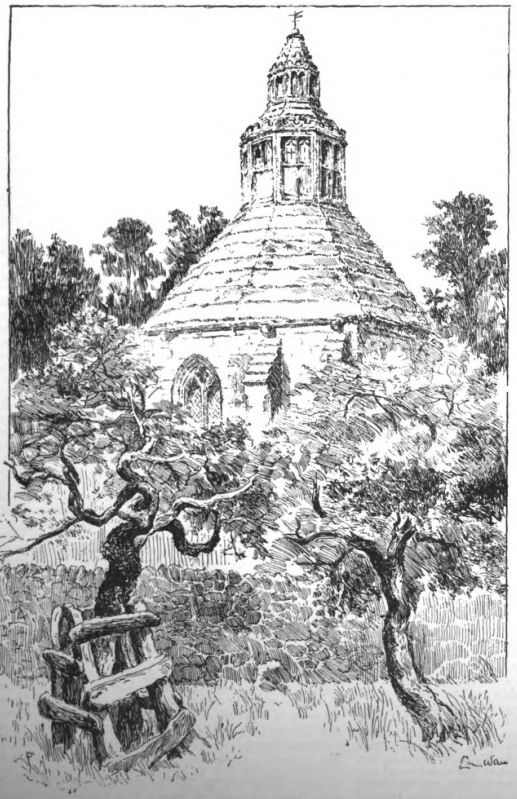
"Brock's benefit" at the Crystal Palace took place on Sept. 6, and the display of fireworks was one of great splendour.

Classes for all-round readings from Shakspeare and other great authors, and for speaking in song, will reopen on Sept. 25, at Mrs. Dallas-Glyn's residence, 13, Mount-street, Grosvenor-square.

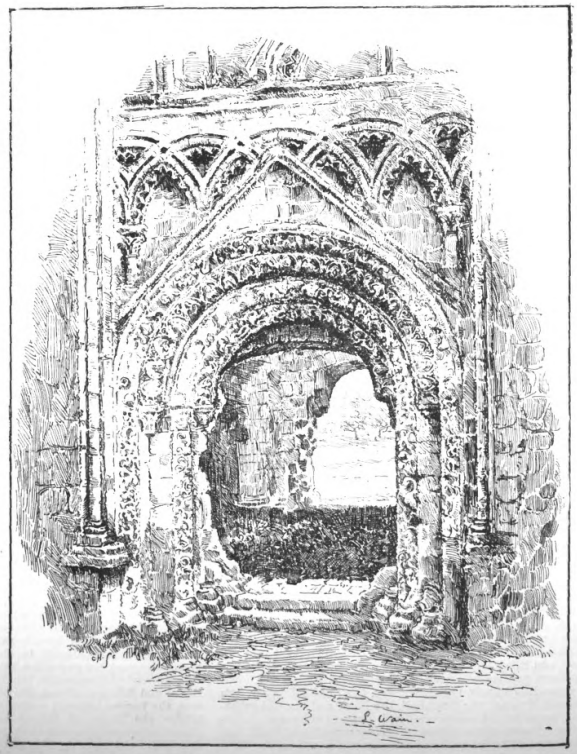
Subject to the approval of the Board of Trade, it has been decided to erect a new promenade pier at Dover, at a cost of about £25,000. It will run out a distance of 750 ft. from the promenade, and will be a handsome structure, with a commodious pavilion and a stage large enough for concert purposes.

Her Majesty's Government have awarded a gold medal to Mr. Antonio Dionisio Lussich, in recognition of the services rendered by his firm to the crews of the following vessels, wrecked on the English Bank outside the Port of Montevideo—viz., Mabel, of Swansea, Sept. 6, 1886; Amoor, of Liverpool, June 11, 1887; Livingstone, a Canadian vessel, October, 1887.

SKETCHES AT GLASTONBURY, VISITED BY THE BRITISH ASSOCIATION.



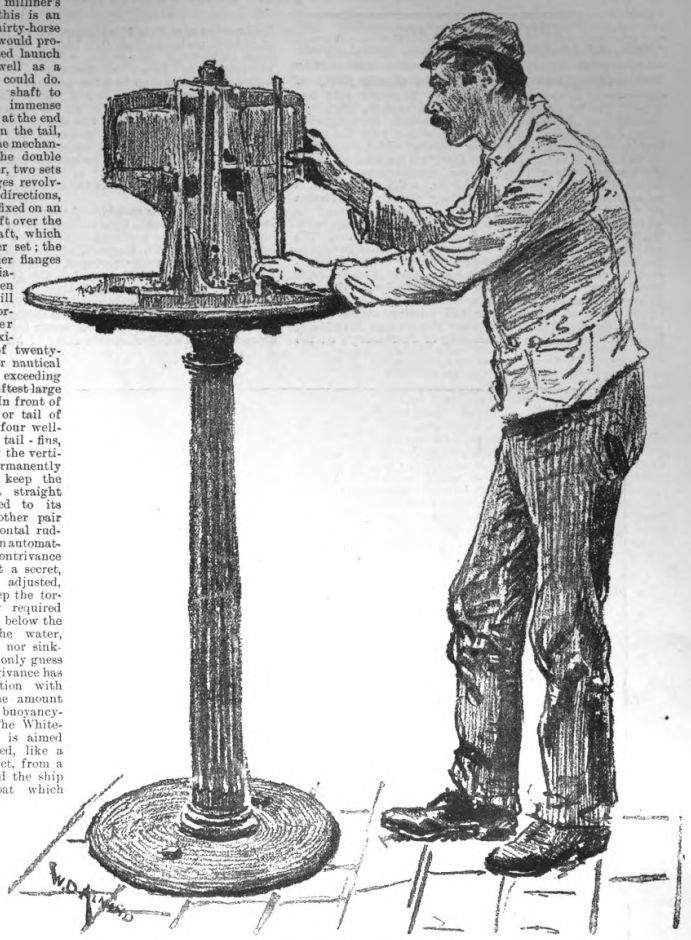
THE HOLY THORN.



The Congress of the British Association covers a variety of pleasant excursions, which may have an interest that is topographical and historical or antiquarian, if not exactly scientific. To which section of the modern sciences, expressly represented by this Association, belongs the determination of the locality of the fabulous Isle of Avalon, famed in the Arthurian Legend? or the mediæval religious myth of St. Joseph of Arimathea planting the first Christian church on this island among the Somerset marshes and lakes? or the miraculous Christmas flowering, year after year, of the sacred Glastonbury Thorn?

Six miles south-west of the quiet little episcopal city of Wells, in the wide plain of soft and moist verdure that spreads between the Mendip limestone hills and the moorlands of Polden, rises a lofty isolated peak, called by the Celtic natives of West Britain a "Tor," conspicuous around for many miles, with the tower of an ancient chapel on its top, and with a neat little country town, and the ruins of a noble old Abbey, inviting the traveller on the old Bath-road. Pilgrims or tourists, or any other decent customers, are welcome at the old George Inn, a stately building, as shown in our Artist's Sketch, founded in 1475, by Abbot John Selwood, especially for pilgrims to the holy shrine. If we had lived before the Protestant Reformation, we might have been among the guests, hundreds in a week, sumptuously entertained at the Abbey; and the kitchen, a solid stone building of octagon shape, with a conical roof and double lantern (which appears in another Sketch) remains undemolished, attesting the bounteous ecclesiastical hospitality of the wealthy monks. The Abbey, founded by Saxon Kings, and further endowed by the Normans and the Plantagenets, had been magnificent, its buildings, cloisters, courts, and gardens occupying sixty acres of ground. Of the grand church and its five chapels, in the finest style of later Norman architecture, only some pieces of walls, pillars, arches of windows and other remains are to be seen; except the beautiful porch of St. Joseph's Chapel, with its doorway and characteristic ornamentation, which our Artist has sketched. Outside of the building a thorn-tree is growing, said to be an offshoot, by continued grafting, of the original Holy Thorn, which was once a dry hawthorn stick, the walking-staff of Joseph during his long journey from Palestine. He and his twelve companions, having arrived in Britain, sent by St. Philip the Apostle to convert this heathen nation and to cast out the Druid superstition, found their way to "Yniswytryn," as the place was then named. They were all weary; so here on "Weary-all Hill," so called to this day, Joseph stuck his walking-stick into the earth, and it blossomed into flower.

THE ABBOT'S KITCHEN.

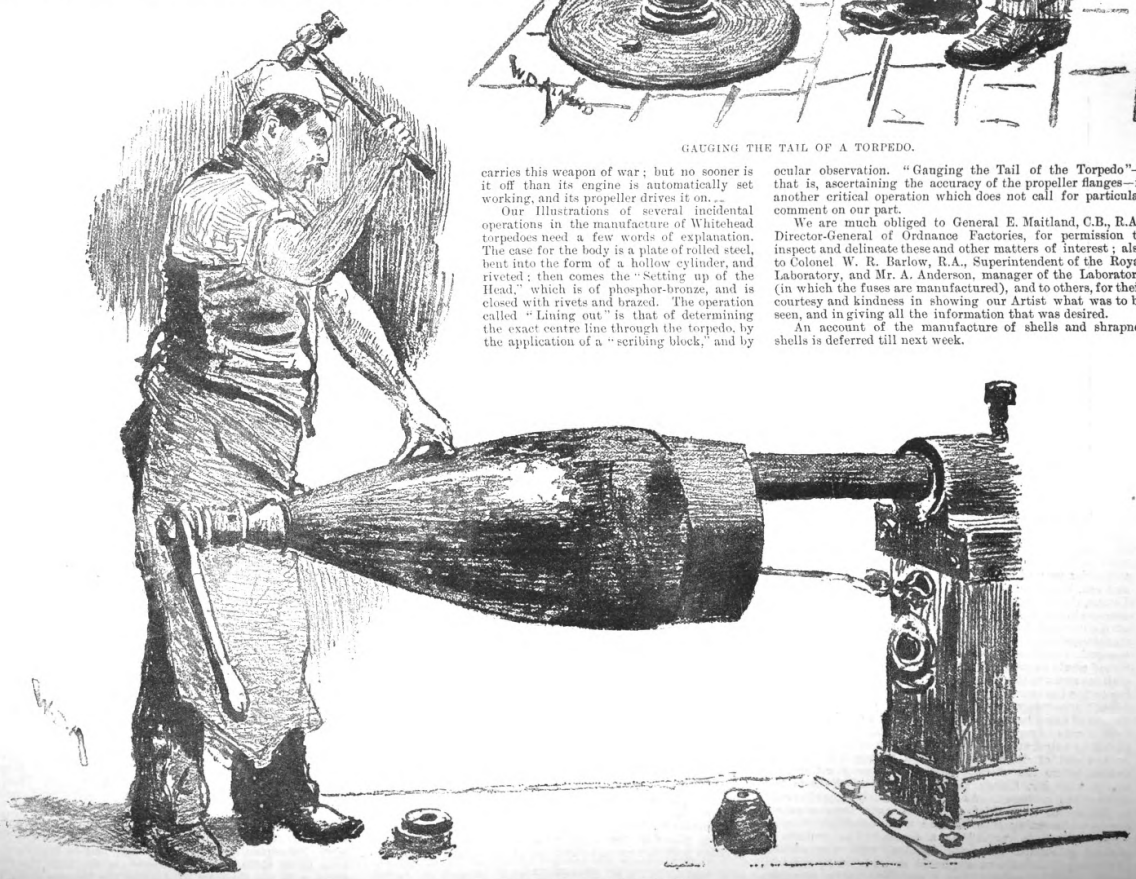


NORMAN PORCH, ST. JOSEPH'S CHAPEL.

WOOLWICH ARSENAL: TORPEDOES AND SHELLS.

The Government manufactory of Ordnance at the Royal Arsenal, Woolwich, comprises the production not only of guns for the armament of forts and batteries, for the Royal Navy, and for the Field and Horse Artillery, but that of shells of various descriptions to be discharged from the guns, and of torpedoes, the modern instrument for destroying hostile ships. Many of our readers will feel some interest in the construction of these implements of warfare, and by permission of General Maitland, C.B., Director-General of Ordnance Factories, our Artist, Mr. W. D. Almond, has been allowed to make a few Sketches of the work going on there, in explanation of which the following statements may be found sufficient for the ordinary reader.

The manufacture of Whitehead torpedoes is carried on in a fine new building, certainly one of the most spacious, lightest, and most convenient workshops in or near London, recently erected at the eastern side of the Arsenal grounds, near the Marshes. Submarine mine apparatus is prepared at Chatham; this factory at Woolwich is devoted entirely to Whitehead torpedoes, of which it makes about two hundred and fifty in a year, all of one pattern; but they are made also for our Government by a private firm, Messrs. Greenwood and Batley, of Leeds. The Whitehead torpedo is a wonderful machine, whatever may prove hereafter to be its actual value in naval warfare. The destructive power of its head, which is charged with 70 lb. of wet gun-cotton, to be ignited by a primer and detonator on striking the side of a ship, is not the most wonderful feature of this machine. It may be regarded as a mechanical swimming fish, rivalling in its independent alacrity the living creatures of the sea, with an automatic locomotive faculty, exerted for a short time, hardly surpassed by any marine animal. The reader must imagine a fish made of metal, 14 ft. 6 in. long and fourteen inches in diameter, somewhat resembling a very large shark in general outline. Its head, of phosphor-bronze, though it opens no dreadful jaws full of sharp teeth, can bite an immense hole in the timber or iron side of the stoutest ship; for its skull or brain-pan is charged with explosive matter that will rend anything, even a solid rock, with which the detonator comes in contact. The middle part or body of the fish, made of Whitworth steel, contains what one might call its heart and lungs, and the source of its muscular activity for swimming. This force of the torpedo as a locomotive engine is the elasticity of condensed air, filling the air-chamber of the breast, and having a force equivalent to the pressure of 1350 lb. on the square inch. Behind the air-chamber is the "buoyancy-chamber," of sheet steel, which enables the torpedo to float. In front of this are placed the engine and gear, worked by the power of the compressed air, to drive the screw-propeller at the tail of the vessel, if a torpedo may be called a vessel. These engines, which are elsewhere employed also for working the machinery of the electric light and for various other purposes, are patented and manufactured by Mr. P. Brotherhood, of Belvedere-road, Lambeth. We do not know the mechanical construction of the engine; but its external appearance is remarkably unassuming; one sees only a cluster of small cylindrical cases, placed obliquely crosswise, and painted red, with a small wheel outside; the whole thing is very compact, and might be lifted with one hand and put into a common milliner's bonnet-box; this is an engine of thirty-horse power, which would propel a good sized launch or boat as well as a steam-engine could do. It causes the shaft to revolve with immense rapidity; and at the end of the shaft, in the tail, as it were, of the mechanical fish, is the double screw propeller, two sets of spiral flanges revolving in opposite directions, one set being fixed on an outer tube-shaft over the inner solid shaft, which bears the other set; the screw-propeller flanges having a diameter of thirteen inches. This will give to the torpedo, under water, a maximum speed of twenty-seven knots or nautical miles an hour, exceeding that of the swiftest large steam-ships. In front of the propeller, or tail of the fish, are four well-proportioned tail-fins, one pair being the vertical rudders, permanently adjusted, to keep the torpedo in a straight course directed to its object; the other pair are the horizontal rudders, acted upon automatically by a contrivance which is kept a secret, and, when adjusted, serving to keep the torpedo at any required certain depth below the surface of the water, neither rising nor sinking. We can only guess that this contrivance has some connection with regulating the amount of air in the "buoyancy-chamber." The Whitehead torpedo is aimed and discharged, like a military rocket, from a tube on board the ship or torpedo-boat which carries this weapon of war; but no sooner is it off than its engine is automatically set working, and its propeller drives it on.

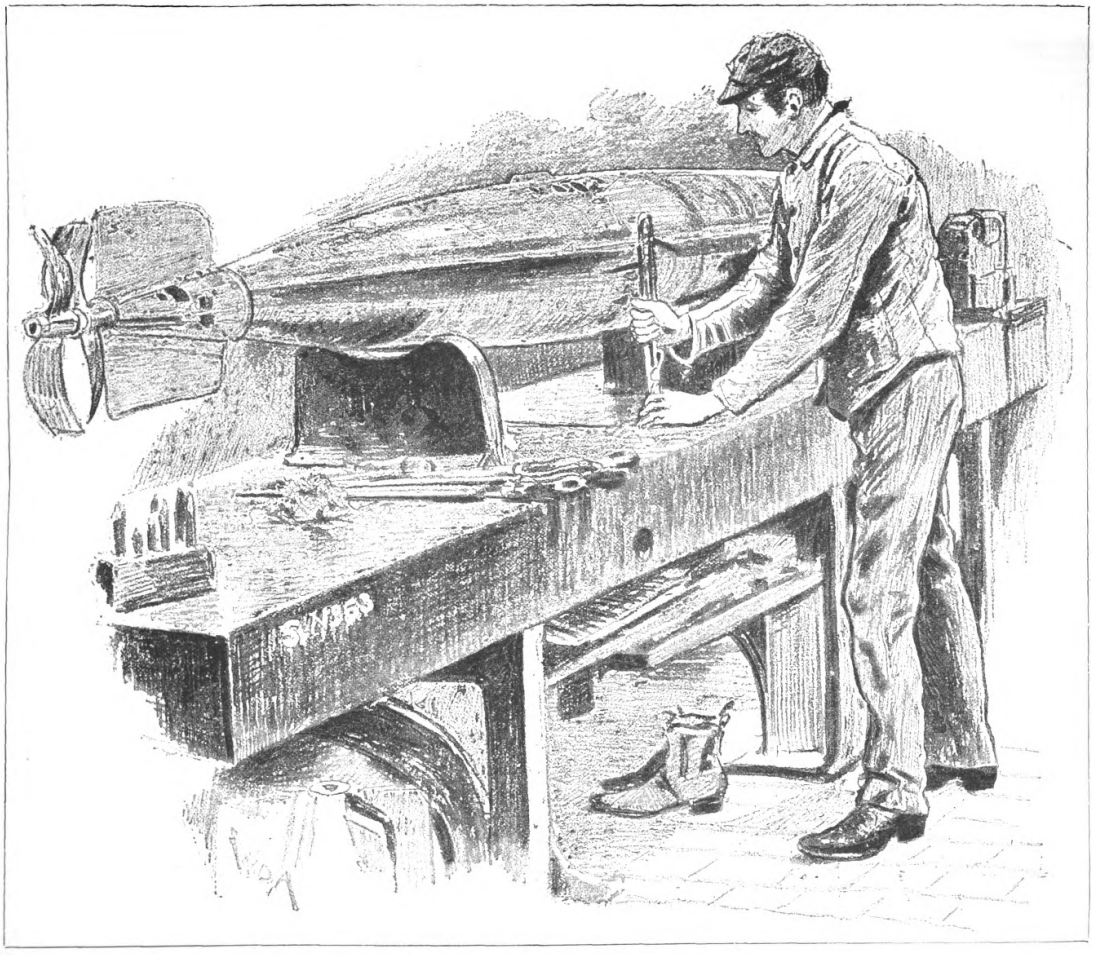


GAUGING THE TAIL OF A TORPEDO.

Our Illustrations of several incidental operations in the manufacture of Whitehead torpedoes need a few words of explanation. The case for the body is a plate of rolled steel, beat into the form of a hollow cylinder, and riveted; then comes the "Setting up of the Head," which is of phosphor-bronze, and is closed with rivets and brazed. The operation called "Lining out" is that of determining the exact centre line through the torpedo, by the application of a "scribing block," and by ocular observation. "Gauging the Tail of the Torpedo"—that is, ascertaining the accuracy of the propeller flanges—is another critical operation which does not call for particular comment on our part.

We are much obliged to General E. Maitland, C.B., R.A., Director-General of Ordnance Factories, for permission to inspect and delineate these and other matters of interest; also to Colonel W. R. Barlow, R.A., Superintendent of the Royal Laboratory, and Mr. A. Anderson, manager of the Laboratory (in which the fuses are manufactured), and to others, for their courtesy and kindness in showing our Artist what was to be seen, and in giving all the information that was desired.

An account of the manufacture of shells and shrapnel shells is deferred till next week.



SETTING UP THE HEAD OF A TORPEDO.

THE PLAYHOUSES.

"Hyde and Jekyll," drama, melodrama, farcical comedy, drawing-room drama, English opera, opéra bouffe, ballet divertissement, marionettes — there are already plenty of amusements to choose from in town. The cry is, still they come! The Strand offers "Kleptomania" and the brightened burlesque of "Aladdin" on the Fifteenth of September. Drury-Lane reopens on the Twenty-second with the grand new spectacular drama of "The Armada," which the authors further describe as "a romance of 1588." On the Twenty-fourth, the brand-new Court Theatre, near Sloane-square, under the direction of Mrs. John Wood and Mr. Arthur Chudleigh, is to be inaugurated with Mr. Sydney Grundy's adaptation of "Les Surprises du Divorce," entitled "Mamma," in which the popular comédienne, Mrs. Wood, appears with Mr. Hare, Mr. Arthur Cecil, and an excellent company. The same evening witnesses the return of Mr. Thomas Thorne to the Vaudeville with "Joseph's Sweetheart." On the Twenty-seventh, the Opéra Comique reopens with Madame Julia Woolf's new "romantic comic opera," "Carina." The new Gilbert-Sullivan opera, having for theme an historical romance in the Tower of London, is in full rehearsal at the Savoy. And Mr. George R. Sims, Mr. Henry Pettitt, and Herr Meyer Lütz have been actively collaborating at Scarborough on the forthcoming new Gaiety burlesque, which is to be "Faust" in a fresh garb. Enough fare here in all conscience for the most enthusiastic theatregoer, without reckoning the new playhouses, the Lyric, the Shaftesbury, and the Garrick, which will also be open in a few months!

The representation of Mr. H. Rider Haggard's weirdly supernatural romance of "She" on the stage may be regarded as an arduous undertaking. The wealth of imagination and poetic sentiment in that powerful story of a female "Claudian" demanded the seductive accompaniments of sensuous music, in addition to artistic acting, and the perfection of scenic illusion, such as Mr. Irving has accustomed us to at the Lyceum, to render the dramatic version of "She" a certain triumph.

Cheerfully making molehills of the mountains of difficulties in her way, Miss Sophie Eyre fulfilled her promise, and on the Sixth of September produced the elaborate drama of "She," by permission of Mr. Haggard, at the Gaiety. The strong and intensely dramatic prologue, written by Mr. Edward Rose with notable skill, may be said to have begun the story of "She" at the very beginning. It transported us to the ancient African city of Kor, two thousand years back. There, the Queen Ayesha stabbed the Greek priest Kallikrates, because he would not return her love, and brought down upon herself the terrible curse of his wife Amenartas (Miss Fanny Enson). This prologue, admirably constructed by Mr. Rose, was powerfully acted, and started "She" well on her life through the centuries. Therefrom, two thousand years being supposed to elapse, the course of Mr. Haggard's stirring tale was pretty closely followed. The strange legend inscribed on the potsherd and papers was interpreted at his Cambridge rooms by Leo Vincey with the aid of his guardian, Horace Holly. Finding himself heir to the vengeance of his ancestress, Amenartas, Leo Vincey there and then determined to set sail for the far distant African city to wreak vengeance on the Queen of Kor for the murder of Kallikrates. With remarkable rapidity, the voyage and the wreck were forcibly illustrated, and the cannibalistic Amahagger people introduced. In accordance with the peculiar habits of the Amahaggers, the fair Ustane fell in love at first sight with stalwart Leo Vincey, who reciprocated her fondness; and Leo's low-comedy valet, Job, inspired another native with affection. This second act, undeniably picturesque, was brought to an effective close by the endeavour to "hot-pot" Mehomed, the Arab captain of the wrecked dhow, by a vigorous fight between Leo and his party and the natives, and by the sudden appearance of the radiant figure of "She," before whom all the Amahaggers quailed. With undoubted power did Miss Sophie Eyre from first to last enact the supernatural part of "She-who-must-be-obeyed," doomed by the curse of Amenarta

"LINING OUT" A TORPEDO (MAKING A CENTRE LINE).

to live for ages. As Queen, arrayed in flowing white garments and veil, Miss Eyre was commanding. As the jealous rival of Ustane, the accomplished actress was intensely earnest in her vituperation and fell revenge; and as the impassioned lover of Kallikrates' descendant, Leo Vincey, she was suddenly transformed into the arch enchantress again, soft-voiced and honeyed. Considerable curiosity existed as to how the death of "She" would be managed. After guiding Leo and Holly over the perilous rocks to the "Cavern of the Fire of Life," and imparting to Leo the secret of prolonging life by inhaling the flame, "She" apparently passed through the pillar of fire, but, instead of being turned to the mummy of a monkey, as in the book, Queen Ayesha became transformed into a grey and shrieking witch, and fell dead at the feet of Leo and Holly. At the end of "She," Mr. William Sidney led Miss Clo. Graves before the curtain, that clever young writer being named with Mr. Sidney as joint author of the acts succeeding the prologue. As Mr. H. Rider Haggard stated, in the course of a brief speech he made from a private box, complimenting Miss Eyre on the production, there are "possibilities" in "She" as a drama. The excision of phrases calculated to excite derision, with the addition of the embellishments we suggested in our opening remarks, would possibly make "She" an exceedingly attractive play. It was assuredly capably acted by Miss Eyre, by Miss Mary Rorke as Ustane, Miss Fanny Enson as Amenartas, Mr. Edmund Maurice as Kallikrates and Leo, Mr. Julian Cross as Holly, Mr. James East as timid Job Round, Mr. E. Cleary as Mehomed, Mr. H. Maxwell as the white-bearded Billali, Mr. Edmund Gurney as the Chief Ugogo, and by the Amahaggers whom Mr. John D'Auban trained.

"When in doubt, play 'The Ticket-of-Leave Man'!" That seems to be the standing rule at the Olympic, which Miss Agnes Hewitt reopened on the Eighth of September with a remarkably bright and interesting revival of Tom Taylor's powerful drama. It was very strongly cast. Miss Agnes Hewitt was a prepossessing and charming May Edwards, Mr. Henry Neville renewed his youth as Robert Brierly. Injunction scorning, Mr. Charles Sugden played Jem Dalton with quiet force. Mrs. Stephens, the original Mrs. Willoughby, was missed; but Mrs. Huntley made a good substitute in that mirth-moving part. Miss Jennie Lee was rather too demonstrative as Sam Willoughby. Mr. J. P. Burnett was the Hawkshaw, and Mr. F. Motley Wood, Melter Moss. Mr. Compton Coutts's quaint Green Jones well matched the vivacious Emily St. Evremond of Miss Helen Ferrers (a sister of Miss Fortescue). Mr. Jerome St. Jerome, author of one of the most sympathetic one-act pieces on the stage, "Barbara," furnished a neatly-written poetical "curtain-riser" in "Pity is Akin to Love."

The Duchess of Albany and family arrived at Ballater by Queen's Messenger train on the morning of Sept. 11. Her Royal Highness drove to Birkhall.

THE COURT.

Prince Albert of Schleswig-Holstein, who is staying at Glen Muich, dined on Sept. 6 with the Queen and Royal family at Balmoral, and Viscount Cranbrook and Mr. Mackenzie of Kintail also had that honour. The Queen, accompanied by Princess Beatrice and the Grand Duke of Hesse, went out on the morning of the 7th, and her Majesty in the afternoon drove with Princess Alice of Hesse, attended by the Dowager Lady Churchill. The Grand Duke of Hesse took leave of the Queen and left the castle for London and Germany. On the morning of the 8th, the Queen again went out with Princess Beatrice. Divine service was performed at the castle on Sunday morning, the 9th, in the presence of the Queen, the Royal family, and the Royal household. The Rev. A. Campbell officiated. In the afternoon her Majesty drove with Princess Alice of Hesse to the Mains of Abergeldie, and visited Princess Frederica. Princess Beatrice joined the Queen there, and drove home with her Majesty.

The Prince of Wales arrived in Vienna on Sept. 10. In the course of the day the Emperor called on his Royal Highness. Subsequently, the Crown Prince had an interview, and both these visits were returned. On the 11th the Prince dined with the Emperor of Austria, the banquet being held in honour of the Czar's fête day. His Royal Highness afterwards left Vienna for Bel'ovar with the Emperor and the Crown Prince.

THE RISING IN ZULULAND.

The prompt energy of General Smyth, and the experience and ability of his staff, have succeeded, so far as can be judged from the news up to this date, in stopping what at first promised to be another of those "little wars" which have made South Africa so great a drain on the British Exchequer. There have, however, not been wanting several exciting engagements with the enemy in this latest Zulu outbreak.

In the midst of steeply undulating grassy downs is situated the head-quarters station of the Resident Commissioner of the Lower Umvolosi, Mr. Pretorius. Early in June, this representative of the paramount British authority was besieged by several thousand insurgent Zulus. He had with him five or six whites, fifty native police, and several hundred native allies. He made two successful sallies, though losing, perhaps, fifty of his native allies killed. The General arrived in Zululand towards the end of June, and at once sent a flying column of regular cavalry, mounted rifles, and infantry, under Major M'Kean (Inniskilling Dragoons) and Captain Baden-Powell (13th Hussars), who successfully relieved Mr. Pretorius, built a fort, left a hundred infantry in garrison, and dispersed the insurgents.

The military head-quarters were fixed at Ekowe, or Etchowe, a place notable for the siege there sustained by Colonel Pearson (now General Sir Edward Pearson) in the great Zulu war. In one of our Sketches, General Smyth, with his chief of the staff, Colonel Curtis, C.M.G., is taking the verbal report of a mounted messenger, whose Zulu orderly holds the horses on which they have just reached head-quarters. On one occasion a flying column was dispatched to relieve a beleaguered police fort at Nwandwe, at which a loyal Zulu tribe had taken refuge. The station had to be abandoned, and the natives were brought away to a place of security. We give a Sketch, by one who was there, of an incident common on that march, when the Inniskillings frequently helped the native women along by relieving them of their baby burdens, showing that dragooning in Zululand is not inconsistent with kindly feeling.

The telegrams do not tell us much of the work done by the Native Contingent, which the Civil authorities seem always attempting to raise; but the General made special arrangements with the well-known "Zulu Englishman" John Dunn, who supported our expedition with 2000 of his tribesmen. We give the Sketch-portrait of this useful Chief in the act of leading off one impi of his followers on the war-path, while some of those who remain perform the usual ceremony of a farewell war-dance.

NEWS FOR THE GENERAL.

MR. PRETORIUS'S FORT.

JOHN DUNN AND HIS IMPI.

DESTRUCTIVE VOLCANIC ERUPTION IN JAPAN.

The recent eruption of a volcano in the Bandai-san mountain range, which is situated in the principal island of Japan, above Lake Inawashiro, about 150 miles north of Yokohama, proved terribly destructive, causing the loss of nearly 600 lives, demolishing 200 houses, and devastating a very large extent of land. In July, soon after this disaster occurred, an English party from Yokohama, consisting of General Palmer, R.E., Captain Brinkley, R.A., Mr. Henry Norman, Mr. Trevethick, and Mr. Edgar Abbott, went to view the effects of the eruption. Mr. Edgar Abbott made the Sketches with which he has furnished us; one of which shows the view from the centre of the valley, looking up at the crater wall, a newly-formed cliff 600 ft. high, behind which, to the right hand, steam appears issuing from the crater. Quite one-third of this part of the mountain, in front of the cliff, was blown away by the eruption, and here 250 people were buried alive by the enormous mass of mud, rocks, and earth, and volcanic substance. The other Sketch is that of the villages of Kawagami and Kigasaka, with a mine and some huts on the slope of the hill to the left hand, and with a vast heap of mud and stones that issued from the side of the mountain, and beneath which 157 persons lost their lives belonging to these unfortunate villages.

An interesting description, written, we believe, by General Palmer, was published in the *Times* of Sept. 11, from which we learn that the Sho Bandai-san Mountain, 5800 ft. high, was by this volcanic eruption, on July 15, almost in the twinkling of an eye, "blown into the air and wiped out of the map of Japan," and a deluge of falling earth and rocks, mud or hot sand and dust, fell upon a dozen upland hamlets, pouring down the neighbouring valleys to a distance of five or six miles. The river Nagase, which flowed along the foot of the mountain range, to the left hand in our View, is now blocked up by a barrier of mud 200 ft. high, and it is expected that the whole of the Nagasegawa valley will be converted into a lake, as many pools have already formed. No lava has been ejected, or any of the burning cinders discharged by some volcanoes; the explosion was that of subterranean steam, as in the Tarawera eruption of New Zealand. The Mikado and the Imperial Government are making great efforts to relieve the surviving families and the distressed people of the district.

The Manchester City Council has applied to the Board of Trade for leave to borrow nearly half a million of money to be spent on sewerage works. Ninety-four acres of land have been bought as a place for the deposit of refuse.

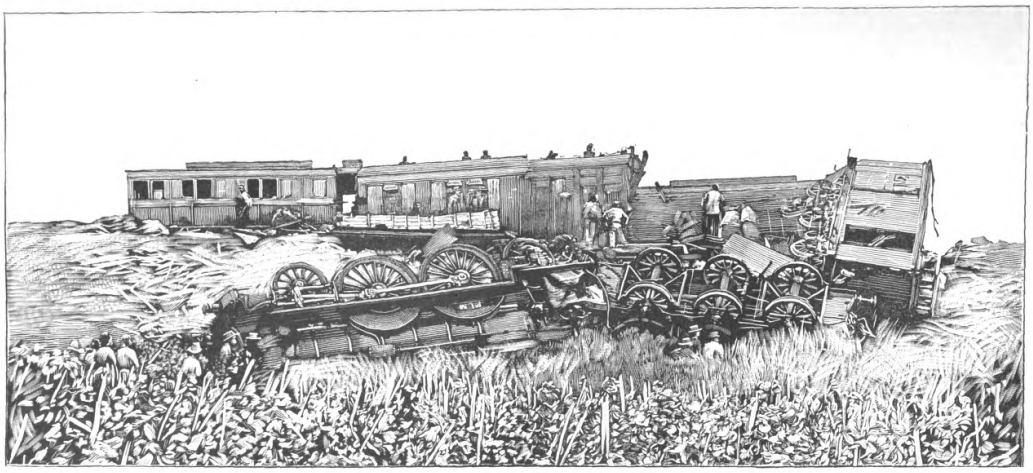
A memorial to the late Lord St. John has been erected in the chancel of Bletsoe Church, Bedfordshire, in the shape of a beautiful three-light window, representing the "Angel at the Tomb," with the text, "He is not here, for He is risen." The inscription at the foot is—"In memory of St. Andrew, 15th Baron St. John, of Bletsoe, born Oct. 5, 1840, died Nov. 2, 1887. Erected by his wife and children." The work was designed and executed by Messrs. Mayer and Co.

SCIENCE JOTTINGS.

LINKED LIVES.

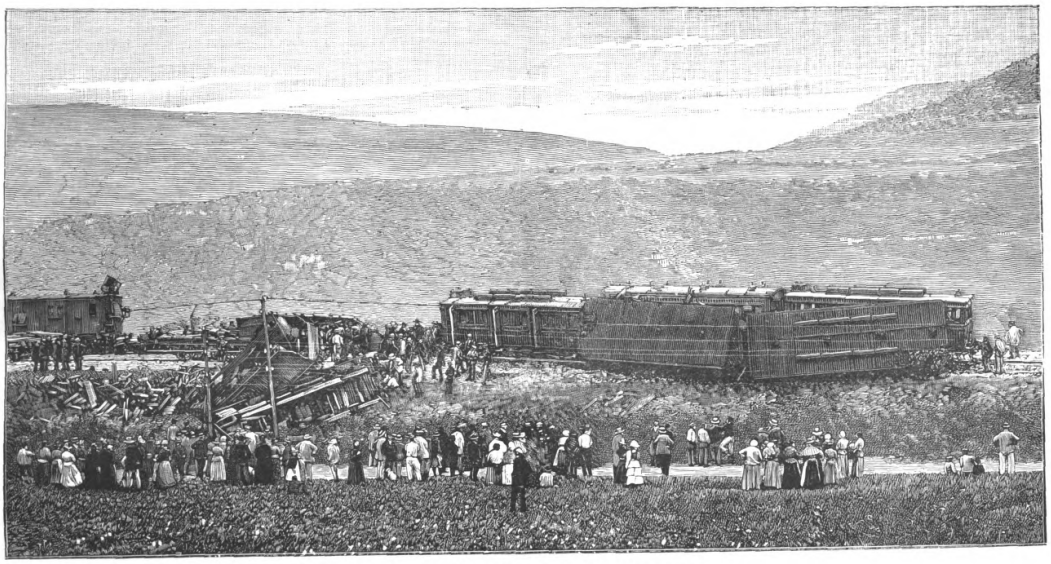
Somewhere or other, I fancy, I have heard of a story, or novel, which bore the title I have chosen for this paper. Doubtless the tale in question, if it possesses an existence at all, deals with existences which are bound together by one or other of the ties that link human lives in the bonds of friendship, love, trust, or their opposites—love, hate, and even crime itself. In the lower life that pulsates around us, all unsuspected and unknown, one comes across not a few illustrations of "linked lives." Animals seem to be tied by mystic bonds to other and often widely different animals; plants are often bound to other plants in ties of close but apparently meaningless relationship; while animals and plants may be associated by bonds that literally no man may put asunder. There is a well-known case of linked lives seen in the association of a well-known hermit-crab with an equally well-known sea-anemone—the Cloak species. The latter is stuck firmly on the whelk-shell within which Mr. Pagurus, as the hermit-crab is named, ensconces himself. When this crustacean anchorite moves about, he carries his friend the anemone on the roof of his house. It is not exactly a repetition of the sore perplexity of Sinbad, with his Old Man of the Sea, but it is something nearly approaching to the case of that famous mariner. Between the two animals there is some association or other, deeper than a mere accidental companionship can explain. You never find this species of hermit-crab without the anemone reposing peacefully on its shell, like a mahout on his elephant's back. The companionship is invariable in its character; nay, more, it is a matter of one-sided esteem, apparently, on the part of hermit Pagurus. For he has been seen to feed the anemone with his big claws, which bar the entrance to his shell when he has withdrawn into his abode. When Pagurus removes to a new shell his anemone-friend is not left in the lurch. It is detached by the crab from the old shell, and placed triumphantly on the new one. I have called this esteem a one-sided affair; for, considering what a sea-anemone is—an almost nerveless creature, while the crab is at least respectably organised as to nerves and senses—we can hardly suppose the former has much to say in the matter of the domestic and other arrangements included in its co-tenancy with the crab.

INNISKILLINGS TO THE RESCUE.



But the anemone race returns the compliment, not exactly to the crab-kind but to the fishes, in the matter of linked lives. A big tropical anemone is known which gives shelter to small fishes within its body. The fishes have been seen to swim freely in and out of their strange shelter. Now, to a sea-anemone all that enters its mouth, or comes within reach of the feelers that surround that aperture, is fair game in the way of food. An ordinary anemone engulfs and digests the crab or periwinkle that has been unfortunate enough to stumble across its feelers. So it is, I confess, a somewhat inexplicable fact that other anemones should, in the manner noted, act as willing hosts to fish-guests. Perchance, on the theory of that habit which becomes second nature, this association may be reasoned out. That which began as a chance companionship, became strengthened into a permanent one. We can go no further in arguing out such a case as that before us, because there appears to be no advantage save, perhaps, that of shelter enjoyed by the fish, and no return at all, apparently, given by the fish to its gelatinous host. That there are creatures living in or upon other creatures, on the principle of Dean Swift's fleas, is, of course, a well-known fact. These are the "parasites" of zoology and botany. We can very well understand an animal or plant becoming not only a lodger but a boarder also, on another animal or plant; and, like certain discontented tenants in these latter days, not only paying no rent, but dishonestly absorbing the nutriment manufactured by the host for its own use. Parasites, we can appreciate, as to the selfishness of their motives. They live rent-free, often in the very kitchen of their host, and are the gainers in the sense of the easy life they lead, although Nature does work out her revenges by making the idle parasite mostly a rudimentary being, and by depriving it of the organs which other independent and honest-living animals possess. "Linked lives" of this latter nature are not difficult to comprehend.

Within recent years, an idea has been gaining ground in the minds of natural historians that many examples of linked lives are to be discovered in quarters where their existence could scarcely have been suspected. For instance, what are we to think of the case of those well-known plants the cycads? In certain species grown in pots, branches shoot upwards from the roots, showing a different structure from the ordinary root-processes of the plant. In these peculiar roots are discovered collections of a species of the lowest forms of plants (or algæ) known by the name of Nostoc. Into the cycad-roots these lesser neighbours creep and multiply. They tinge the layer of the root where they are found with a blue colour, and they even cause alterations in the root-structure itself. Nothing is known of the reason of these linked lives of high and low plants. All we can say is that the association is constant and continuous; its object is unknown. Again, the well-known lichens seem now to be capable of being resolved by botanists each into two distinct kinds of plants leading thuswise their linked lives. The apparently uniform and single lichen really consists of a fungus *plus* an alga, or lowest form of plant-life. It would seem, in truth, that the latter plays the part of lion's provider to the fungus, and that it supplies the fungus with food; but none the less is it a striking fact in modern botany to find that the lichen resolves itself to-day into two distinct but closely-united plants.



Among the animal denizens of the pools we find the little green hydras, each consisting of a minute tubular body, attached to the waterweed by an extremity, and having a mouth and tentacles at the free end of the body. Now, certain species of hydras are coloured green, and of late it has been suggested that this green hue (which is certainly due to the presence of the green colouring matter of plants) is really contributed by microscopic algæ; and these, doubtless, live on the waste matters which are excreted or given off from the animal whose tissues they inhabit. These green algæ perform a service to the lichens and fungi of reverse nature. These latter are not green, and cannot, therefore, feed as do green plants. The little algæ, however, can, and do, manufacture food-stuffs from the carbonic acid gas of the air, and, in truth, supply the fungus with ready-made nutriment. The truth is, that probably when we have become better accustomed to regard linked lives in nature and their meanings, we shall discover many additional examples of such relationships. The whole subject is only a new phase of the old interdependence of life. The lion cannot live without the antelope; and the antelope, in its turn, cannot exist where there are no grasses to eat. The linked lives here include the grass, the antelope, and the lion, in a cycle wherein is no break or gap at all. When the lion dies, his elements go back to the world of non-living matter to feed the grasses, and thus the cycle revolves. So far from linked existences being rarities of nature, they would seem in this broad sense to represent the ordinary method of life's working—so true is it that nothing either in lower nature or in human life stands utterly solitary and alone. ANDREW WILSON.

RAILWAY COLLISION IN FRANCE.

The terrible accident of Sept. 5, on the Paris, Lyons, and Mediterranean Railway, by which twelve persons were killed and forty others were injured, several English travellers being among those who suffered, was a disaster that must have caused much anxiety at this period of the tourist season. It took place at Velars, five miles from Dijon, where the express train coming from Italy by the Mont Cenis tunnel route, and going to Paris, having passed Mâcon and Dijon, ran off the rails, obstructing both lines, and was run into, a few minutes afterwards, by the express-train coming from Paris on the way to Geneva. This happened in the night, or about half-past two in the morning. The collision was extremely violent, as the express-train from Paris, being late, was going at full speed down an incline; both engines were knocked over the embankment, eight carriages of the other train were crushed to pieces, and few of the passengers escaped some hurt. Among those killed was Miss Edith Marriott, of Cromwell-road, London, while Captain Edward Marriott was seriously injured; Mr. M. Bachet, of Asnières, near Paris, with his wife and brother, all killed; a French gentleman named Lorette, on his way, accompanied by his wife, to visit a sick son at Belley; a French officer and his child, while his wife remained unhurt by their side; and the driver and guard of the train. One, who seems to have been looking out of the carriage window, had his head cut sheer off by the other train dashing close past the carriage. Those in the sleeping-car were not much hurt, if at all. Among those injured were Miss Muriel, of Chester, a lady governess, Miss Green, and Mr. and Mrs. Blumberg, of London, and Mr. E. L. Owen, a young English student.

CHAPTER XX.

BENJAMIN'S WARNING.

Once I have so much to tell, before long, of Benjamin's evil conduct, it must in justice be recorded of him that at this juncture he endeavoured, knowing more of the world than we of Somerset, to warn and dissuade his cousins from taking part in any attempt which should be made in the West. And this he did by means of a letter written to his father. I know not how far the letter might have succeeded, but, unfortunately, it arrived two or three days too late—when our boys had already joined the insurgents.

"Honoured Sir," he wrote, "I write this epistle, being much concerned in spirit lest my grandfather, whose opinions are well known, not only in his own county but also at the Court, should be drawn into, or become cognisant of, some attempt to raise the West Country against their lawful King. It will not be news to you that the Earl of Argyll hath landed in Scotland, where he will meet with such a reception which will doubtless cause him to repent of his rashness. It is also currently reported, and everywhere believed, that the Duke of Monmouth intends immediately to embark and cross the sea with the design of raising the country in rebellion. The Dissenters, who have been going about with sour looks for five-and-twenty years, venture now to smile and look pleased in anticipation of another civil war. This may follow, but its termination, I think, will not be what they expect.

"I have also heard that my cousin Humphrey, Dr. Eykin's favourite pupil, who hath never concealed his opinions, hath lately returned from Holland (where the exiles are gathered), and passed through London accompanied by Robin. I have further learned that while in London he visited (but alone, without Robin's knowledge) many of those who are known to be friends of the Duke and red-hot Protestants. Wherefore, I greatly fear that he hath been in correspondence with the exiles, and is cognisant of their designs, and may even be their messenger to announce the intentions of his Protestant champion. Certain I am that should any chance occur of striking a blow for freedom of worship, my cousin, though he is weak and of slender frame, will join the attempt. He will also endeavour to draw after him everyone in his power. Therefore, my dear father, use all your influence to withstand him, and, if he must for his own part plunge into ruin, persuade my grandfather and my cousin Robin to stay quiet at home.

"I hear it on the best authority that the temper of the country, and especially in your part of it, hath been carefully studied by the Government, and is perfectly well known. Those who would risk life and lands for the Duke of Monmouth are few indeed. He may, perhaps, draw a rabble after him, but no more. The fat tradesmen, who most long for the conventicle, will not fight, though they may pray for him. The country gentlemen may be Protestants, but they are mostly for Church and King. It is quite true that his Majesty is a Roman Catholic, nor hath he ever concealed or denied his religion, being one who scorns deception. It is also true that his profession of faith is a stumbling-block to many who find it hard to reconcile their teaching of Non-Resistance and Divine Right with the introduction of the Mass and the Romish Priest. But the country hath not yet forgotten the sour rule of the Independent; and rather than suffer him to return, the people will endure a vast deal of Royal Prerogative.

"It is absolutely certain—assure my grandfather on this point, whatever he may learn from Humphrey—that the better sort will never join Monmouth, whether he comes as another Cromwell to restore the Commonwealth, or whether he aspires to the Crown and dares to maintain—a thing which King Charles did always stoutly deny—that his mother was married. Is it credible that the ancient throne of these Kingdoms should be usurped by the base-born son of Lucy Waters?

"I had last night the honour of drinking a bottle of wine with that great lawyer, Sir George Jeffreys. The conversation turned upon this subject. We were assured by the Judge that the affections of the people are wholly with the King; that the liberty of worship which he demands for himself he will also willingly extend to the country, so that the last pretence of reason for disaffection shall be removed. Why should the people run after Monmouth, when if he were successful, he could give no more than the King is ready to give? I was also privately warned by Sir George that my grandfather's name is unfavourably noted, and his actions and speeches will be watched. Therefore, Sir, I humbly beg that you will represent to him and to my cousins, and to Dr. Eykin himself, first the hopelessness of any such enterprise and the certainty of defeat; and next the punishment which will fall upon the rebels and upon those who lend them any countenance. Men of such a temper as Dr. Comfort Eykin will, doubtless, go to the scaffold willingly with their mouths full of the texts which they apply to themselves on all occasions. For such I have no pity, yet for the sake of his wife and daughter I would willingly, if I could, save him from the fate which will be his if Monmouth lands on the West. And as for my grandfather, 'tis terrible to think of his white hairs blown by the breeze while the hangman adjusts the knot; and I should shudder to see the blackened limbs of Robin stuck upon poles for all the world to see.

"It is my present intention, if my affairs permit, to follow my fortunes on the Western Circuit in the autumn, when I shall endeavour to ride from Taunton or Exeter to Bradford Orcas. My practice grows apace. Daily I am heard in the Courts. The Judges already know me and listen to me. The juries begin to feel the weight of my arguments. The attorneys besiege my chambers. For a junior I am in great demand. It is my prayer that you, Sir, may live to see your son Chancellor and a Peer of the realm. Less than Lord Chancellor will not content me. As for marriage, that might hinder my rise; I shall not marry yet. There is in your parish, Sir, one who knows my mind upon this matter. I shall be pleased to think that you will assure her—you know very well whom I mean—that my mind is unaltered, and that my way is now plain before me. So, I remain, with dutiful respect, your obedient son,

"B. B."

This letter arrived, I say, after the departure of Robin with his company of village-lads.

When Mr. Boscorel had read it slowly and twice over so as to lose no point of the contents, he sat and pondered a while. Then he arose, and with troubled face he sought Sir Christopher, to whom he read it through. Then he waited for Sir Christopher to speak.

"The boy writes," said his Honour, after a while, "according to his lights. He repeats the things he hears said by his boon companions. Nay, more, he believes them. Why, it is easy for them to swear loyalty and to declare in their cups where the affections of the people are placed."

"Sir Christopher, what is done cannot be undone. The boys are gone—alas!—but you still remain. Take heed for a space what you say as well as what you do."

"How should they know the temper of the country?" Sir Christopher went on, regardless. "What doth the foul-mouthed profligate Sir George Jeffreys know concerning sober and godly people? These are not noisy Templars; they are not profligates of the Court; they are not haunters of tavern and pot-house; they are not those who frequent the play-house. Judge Jeffreys knows none such. They are lovers of the Word of God; they wish to worship after their fashion; they hate the Pope and all his works. Let us hear what these men say upon the matter."

"Nay," said Mr. Boscorel; "I care not greatly what they say. But would to God the boys were safe returned."

"Benjamin means well," Sir Christopher went on. "I take this warning kindly; he means well. It pleases me that in the midst of the work and the feasting, which he loves, he thinks upon us. Tell him, son-in-law, that I thank him for his letter. It shows that he hath preserved a good heart."

"As for his good heart"—Mr. Boscorel stroked his nose with his forefinger—"so long as Benjamin gets what he wants—which is Benjamin's mess, and five times the mess of any other—there is no doubt of his good heart."

"Worse things than these," said Sir Christopher, "were said of us when the civil wars began. The King's troops would ride us down; the country would not join us; those of us who were not shot or cut down in the field would be afterwards hanged, drawn, and quartered. Yet we drove the King from his throne."

"And then another King came back again. So we go up, and so we go down. But about this expedition and about these boys my mind misgives me."

"Son-in-law," Sir Christopher said solemnly, "I am now old, and the eyes of my mind are dim, so that I no longer discern the signs of the times, or follow the current of the stream; moreover, we hear but little news, so that I cannot even see any of those signs. Yet to men in old age, before they pass away to the rest provided by the Lord, there cometh sometimes a vision by which they are enabled to see clearly when younger men are still groping their way in a kind of twilight. Monmouth hath landed; my boys are with him; they are rebels; should the rising fail, their lives are forfeit; and that of my dear friend Dr. Comfort Eykin's—yea, and my life as well belike, because I have been a consenting party. Ruin and death will in that event fall upon all of us. Whether it will so happen I know not, nor do I weigh the chance of that event against the voice of conscience, duty, and honour. My boys have obeyed that voice; they have gone forth to conquer or to die. My vision doth not tell me what will happen to them. But it shows me the priest flying from the country, the King flying from the throne, and that fair angel whom we call Freedom of Conscience, returning to bless the land. To know that the laws of God will triumph—ought not that to reconcile a man, already seventy-five years of age, to death, even a death upon the gallows? What matter for this earthly body so that it be spent until the end in the service of the Lord?"

CHAPTER XXI.

WE WAIT FOR THE END.

I have said that my father from the beginning unto the end of this business was as one beside himself, being in an ecstacy or rapture of mind, insomuch that he heeded nothing. The letters he sent out to his friends the Nonconformists, either brought no answer or else they heaped loads of trouble, being intercepted and read, upon those to whom they were addressed. But he was not moved. The defection of his friends and of the gentry caused him no uneasiness. Nay, he even closed his eyes and ears to the drinking, the profane oaths, and the riotous living in the camp. Others there were, like-minded with himself, who saw the hand of the Lord in this enterprise, and thought that it would succeed by a miracle. The desertions of the men, which afterwards followed, and the defection of those who should have joined—these things were but the weeding of the host, which should be still further weeded—as in a well-known chapter in the Book of Judges—until none but the righteous should be left behind. These things he preached daily, and with mighty fervour, to all who would listen; but these were few in number.

As regards his wife and daughter he took no thought for them at all, being wholly enwrapped in his work; he did not so much as ask if we had money—to be sure, for five-and-twenty years he had never asked that question—or if we were safely bestowed; or if we were well. Never have I seen any man so careless of all earthly affections when he considered the work of the Lord. But when the time came for the army to march, what were we to do? Where should we be bestowed?

"As to following the army," said Robin, "that is absurd. We know not whither we may march or what the course of events may order. You cannot go home without an armed escort, for the country is up; the clubmen are out everywhere to protect their cattle and horses, a rough and rude folk they would be to meet; and the gipsies are robbing and plundering. Can you stay here until we come back, or until the country hath settled down again?"

Miss Blake generously promised that we should stay with her as long as we chose, adding many kind things about myself, out of friendship and a good heart; and so it was resolved that we should remain in Taunton, where no harm could befall us, while my father still accompanied the army to exhort the soldiers.

"I will take care of him," said Barnaby. "He shall not preach of a morning till he hath taken breakfast, nor shall he go to bed until he hath had his supper. So long as the provisions last out he shall have his ration. After that I cannot say. Maybe we shall all go on short commons, as hath happened to me already; and, truth to tell, I love it not. All these things belong to the voyage, and are part of our luck. Farewell, therefore, mother. Heart up!—all will go well! Kiss me, Sis; we shall all come back again. Never fear. King Monmouth shall be crowned in Westminster. Dad shall be Archbishop of Canterbury, and I shall be Captain of a King's ship. All our fortunes shall be made, and you, Sis, shall have a great estate, and shall marry whom you please—Robin or another. As for the gentry who have not come forward, hang 'em, we 'll divide their estates between us and so change places, and they will be so astonished at not being shot for cowardice that they will rejoice and be glad to clean our boots. Thus shall we all be happy."

So they marched away, Monmouth being now at the head of an army seven thousand strong, and all in such spirits that you would have thought nothing could withstand them. And when I consider, and remember how that army marched away, with the cheers of the men and the laughter and jokes of the young recruits, the tears run down my cheeks for thinking how their joy was turned to mourning, and life was exchanged for death. The last I saw of Robin was that he was turning in his saddle to wave his hand, his face full of confidence and joy. The only gloomy face in the whole army that morning was the face of Humphrey. Afterwards I learned that almost from the beginning he foresaw certain disaster. In the first place, none of those on whom the exiles of Holland had relied came into camp. These were the backbone of the Protestant party—the sturdy blood that had been freely shed against Charles I. This was a bitter disappointment. Next, he saw in the army nothing but a rabble of country lads, with such officers as Captain Hucker, the Serge-maker, instead of the country gentlemen, with their troops, as had been expected; and from the beginning he distrusted the leaders—even the Duke himself. So he hung his head and laughed not with the rest. But his doubts he kept locked up in his own heart. Robin knew none of them.

It was a pretty sight to see the Taunton maids walking out for a mile and more with their lovers who had joined Monmouth. They walked hand-in-hand with the men; they wore the Monmouth favours: they had no more doubt or fear of the event than their sweethearts. Those who visit Taunton now may see these women (now grown old) creeping about the streets lonely and sorrowful, mindful still of that Sunday morning when they saw their lovers for the last time.

When I consider the history of this expedition I am amazed that it did not succeed. It was, surely, by a special judgment of God that the victory was withheld from Monmouth and reserved for William. I say not (presumptuously) that the judgment was pronounced against the Duke on account of his sinful life, but I think it was the will of Heaven that the country should endure for three years the presence of a Prince who was continually seeking to advance the Catholic religion. The people were not yet ripe, perhaps, for that universal disgust which caused them without bloodshed (in this island at least) to pull down King James from his throne. When, I say, I consider the temper and the courage of that great army which left Taunton, greater than any which the King could bring against it; when I consider the multitudes who flocked to the standard at Bridgwater, I am lost in wonder at the event.

From Sunday the 21st, when the army marched out of Taunton, till the news came of their rout on Sedgemoor, we heard nothing certain about them. On Tuesday the Duke of Albemarle, hearing that the army had gone, occupied Taunton with the Militia, and there were some who expected severities on account of the welcome given to the Duke and the recruits whom he obtained here. But there were no acts of revenge that I heard of—and, indeed, he did not stay long in the town. As for us, we remained under the shelter of Miss Blake's roof, and daily expected news of some great and signal victory. But none came, save one letter. Every day we looked for this news, and every day we planned and laid down the victorious march for our army.

"They will first occupy Bristol," said Miss Blake. "That is certain, because there are many stout Protestants in Bristol, and the place is important. Once master of that great city, our King will get possession of ships, and so will have a fleet. There are, no doubt, plenty of arms in the town, with which he will be able to equip an army ten times greater than that which he now has. Then with—say, thirty thousand men—he will march on London. The Militia will, of course, lay down their arms or desert at the approach of this great and resolute army. The King's regiments will prove, I expect, to be Protestants, every man. Oxford will open her gates, London will send out her train-bands to welcome the Deliverer, and so our King will enter in triumph and be crowned at Westminster Abbey, one King James succeeding another. Then there shall be restored to this distracted country"—being a schoolmistress Miss Blake could use language worthy of the dignity of history—"the blessings of religious freedom; and the pure Word of God, stripped of superstitious additions made by man, shall be preached through the length and breadth of the land."

"What shall be done," I asked, "with the Bishops?"

"They shall be suffered to remain," she said, speaking with a voice of authority, "for those congregations which desire a prelacy, but stripped of their titles and of their vast revenues. We will not persecute, but we will never suffer one Church to lord it over another. Oh! when will the news come? Where is the army now?"

The letter of which I have spoken was from Robin.

"Sweetheart," he said, "all goes well so far. At Bridgwater we have received a welcome only second to that of Taunton. The Mayor and Aldermen proclaimed our King at the High Cross, and the people have sent to the camp great store of provisions and arms of all kinds. We are now six regiments of foot with a thousand cavalry, besides the King's own body-guard. We have many good friends at Bridgwater, especially one, Mr. Roger Hoar, who is a rich merchant of the place, and is very zealous in the cause. Your father preached on Sunday evening from the text, Deuteronomy vii. 5—"Ye shall destroy their altars and break down their images and cut down their groves and burn their graven images with fire." It was a most moving discourse, which fired the hearts of all who heard it.

"They say that our chief is downhearted because the nobility and gentry have not come in. They only wait for the first victory, after which they will come in by hundreds. But some of our men look forward to depriving them of their estates and dividing them among themselves: and already the Colonels and Majors are beginning to reckon up the great rewards which await them. As for me, there is but one reward for which I pray—namely, to return unto Bradford Orcas and to the arms of my sweet saint. Lord Churchill is reported to be at Chard; there has been a brush in the Forest of Neroche between the scouts, and it is said that all the roads are guarded so that recruits shall be arrested or at least driven back. Perhaps this is the reason why the gentry sit down. Barnaby says that so far there have been provisions enough and to spare; and he hopes the present plenty may continue. No ship's crew can fight, he says, on half rations. Our march will be on Bristol. I hope and believe that when we have gotten that great town our end is sure. Humphrey continueth glum."

Many women there were who passed that time in prayer, continually offering up supplications on behalf of husband, brother, lover, or son. But at Taunton the Rector, one Walter Harte, a zealous High Churchman, came forth from hiding, and, with the magistrates, said prayers daily for King James II.

To tell what follows is to renew a time of agony unspeakable. Yet must it be told. Farewell, happy days of hope and confidence! Farewell, the sweet exchange of dreams! Farewell

DRAWN BY A. FORESTIER.

The last I saw of Robin was that he was turning in his saddle to wave his hand, his face full of confidence and joy.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

well to our lovely hero, the gracious Duke! All the troubles that man's mind can conceive were permitted to be rained upon our heads—defeat, wounds, death, prison—nay, for me such a thing as no one could have expected or even feared—such a fate as never entered the mind of man to invent.

When the Duke marched out of Bridgwater, across Sedgemoor to Glastonbury, the weather, which had been hot and fine, became cold and rainy, which made the men uncomfortable. At Glastonbury they camped in the ruins of the old abbey. Thence they went to Shepton Mallet, the spirits of the men still being high. From Shepton Mallet they marched to a place called Pensford, only five miles from Bristol. Here they heard that the bridge over the Avon at Keynsham was broken down. This being presently repaired, the army marched across. They were then within easy reach of Bristol.

And now began the disasters of the enterprise. Up to this time everything had prospered. Had the Duke boldly attacked Bristol—I speak not of my own wisdom, having none in such matters, but from others' wisdom—he would have encountered no more than twenty companies or thereabouts of Militia, and a regiment of two hundred and fifty horse. Moreover, Bristol was full of Dissenters, who wanted nothing but encouragement to join the Protestant Champion. Not only the Duke's friends, but also his enemies, agree in declaring that it wanted nothing but courage to take that great, rich, and populous city, where he would have found everything that he wanted—men and money, arms and ammunition. I cannot but think that for his sins, or for the sins of the nation, a judicial blindness was caused to fall upon the Duke, so that he chose, of two ways open to him, that which led to his destruction. In short, he turned away from Bristol, and drew up his forces against Bath. When he summoned that city to surrender, they shot his herald, and scoffed at him. Then, instead of taking the town, the Duke retired to Philip's Norton, where, 'tis said, he expected some great reinforcements. But none came; and he now grew greatly dejected, showing his dejection in his face, which could conceal nothing. Yet he fought an action with his half-brother, the Duke of Grafton, in which he was victorious, a thing which ought to have helped him. In this action Lieutenant Blake, Miss Blake's cousin, was killed. From Philip's Norton the army marched to Frome, and here such was the general despondency that two thousand men—a third of the whole army—deserted in the night and returned to their own homes. I think, also, it was at Frome that they learned the news of Lord Argyll's discomforture.

Then a council was held, at which it was proposed that the army should be disbanded and ordered to return, seeing that the King had proclaimed a pardon to all who would peacefully lay down their arms and return home, and that the Duke, with Lord Grey, and those who would be certainly exempted from that pardon, should make the best of their way out of the country.

Alas! here was a way open to the safety of all those poor men; but again was the Duke permitted to choose the other way—that, namely, which led to the destruction of his army and himself. Yet they say that he himself recommended the safer course. He must have known that he wanted arms and ammunition; that his men were deserting; and that no more recruits came in. Colonel Venner, one of his principal men, was at this juncture sent away to Holland in order to get assistance in arms and money. And the King's proclamation of pardon was carefully kept from the knowledge of the soldiers.

On July the 4th the army returned to Bridgwater, and now Dr. Hooke, chaplain to the army, and some of the officers were sent away secretly in order to raise an insurrection in London and elsewhere; the only hope being that risings in various parts would call away some of the King's forces from the West. Some of the Taunton men in the army rode from Bridgwater to see their friends. But we women (who, for the most part, remained at home) learned no news save that as yet there had been no signal *victory*: we did not hear of the large desertions nor of the Duke's despondency. Therefore, we continued in our fool's paradise and looked every day for some great and crowning mercy. Those who are on the side of the Lord are always expecting some special interference; whereas, they ought to be satisfied with being on the right side, whether victory or defeat be intended for them. In this enterprise I doubt not that those godly men (there were, I dare say, some godly men) who fell in battle or were afterwards executed, received their reward, and that a far, far greater reward than their conduct deserved—for who can measure the short agony of death beside the everlasting life of glory and joy unspeakable.

The last day of this fatal expedition was Sunday, the fifth day of July: so that it took no more than three weeks in all between its first beginning and its failure. Only three weeks! But how much longer was it before the punishment and the expiation were concluded? Nay, are they even yet concluded when thousands of innocent women and children still go in poverty and mourning for the loss of those who should have worked for them?

In the morning my father preached to the soldiers on the text (Joshua xxii. 22), "The Lord God of Gods, the Lord God of Gods, He knoweth, and Israel He shall know if it be in rebellion or if in transgression against the Lord save us not this day."

And now the time was come when the last battle was to be fought.

The Earl of Feversham, who had been at Somerton, marched this day across Sedgemoor, and encamped at Weston Zoyland, which is but five or six miles from Bridgwater.

Now it chanced that one William Sparke, of Chedzoy, hearing of this advance, climbed the church tower, and, by aid of a spying-glass, such as sailors use at sea, he discerned clearly the approach of the army and its halt at Weston. Being a wellwisher to the Duke, he sent one of his men, Richard Godfrey by name, with orders to spy into and learn the position and numbers of the Earl's army, and to carry his information straightway to Bridgwater. This duty the fellow promised, and most faithfully performed.

The Duke had already learned the approach of Lord Feversham, and, being now wellnigh desperate with his continued losses, and seeing his army gradually wasting away, with no fresh recruits, he had resolved upon not waiting to be attacked, but on a retreat northwards, hoping to get across the bridge at Keynsham, and so march into Shropshire and Cheshire, where still he hoped to raise another army. But (says he who hath helped me with this brief account of the expedition) the retreat, which would have been harassed by Lord Feversham's horse, would have turned into flight; the men would have deserted in all directions; and when the remains of the army arrived at Keynsham Bridge they would certainly have found it occupied by the Duke of Beaufort.

The carriages were already loaded in readiness for this march; it was to begin at nightfall; when the arrival of the man Godfrey, and the news that he brought, caused the Duke to change everything. For he now perceived that such a chance was offered him as had never before occurred since his landing: viz., a night surprise, and if he were fortunate, the rout of the King's best troops.

It is said that had the Duke shown the same boldness in the matter of Bristol that he showed in this night attack, he would have gained that city first and his own Cause next. Nor did it appear at all a desperate attempt. For though Lord Feversham had 2500 men with him, horse and foot, with sixteen field-pieces, the Duke had nearly 3000 foot (counting those armed with pikes and scythes) and 600 horse with four field-pieces, and though the King's troops included many companies of Grenadiers, with a battalion of that famous regiment the Coldstream Guards, and some hundred horse of the King's regiment and dragoons, the Duke had with him at least 2000 men well armed and resolute, as the event showed. Besides this, he had the advantage of the surprise and confusion of a night attack. And, in addition, the camp was not entrenched, the troopers had all gone to bed, the foot-soldiers were drinking cider, and the officers were reported to be all drunk.

Therefore, it was resolved that the intended flight into Shropshire should be abandoned, and that the whole matter should be brought to an issue that very night.

Had the attack succeeded, all might yet have gone well with the Duke. His enemies boasted that his raw country lads would be routed at the first charge of regular soldiers; if he proved the contrary, those who had deserted him would have returned; those who held aloof would join. It was not the Cause which found men lukewarm; it was the doubt—and nothing but the doubt—whether the Duke's enterprise would be supported. And I have never heard that any found aught but commendation of the boldness and spirit which brought us the battle of Sedgemoor.

All that day we spent in quiet meditation, in prayer, in the reading of the Bible, and in godly discourses, and herein I must commend the modesty as well as the piety of Miss Susan Blake, in that she invited my mother as her elder and the wife of an eminent minister to conduct the religious exercises, though as the hostess she might have demanded that privilege. We stirred not abroad at all that day. The meeting-houses which had been opened when the Duke marched in were now closed again.

In the evening, while we sat together discoursing upon the special mercies vouchsafed to the people of the Lord, a strange thing happened. Nay, I do not say that news may not have reached Taunton already of the Duke's intentions, and of the position of the King's forces. But this seems incredible, since it was not known—except to the Council by whom it was decided—till late in the afternoon, and it was not to be thought that these would hurry to spread the news abroad, and so ruin the whole affair. The window being open, then, we could hear the voices of those who talked in the street below. Now, there passed two men, and they were talking as they went. Said one—and these were the words we heard—

"I tell thee that the Duke will have no more to do than to lock the stable doors, and so seize the troopers in their beds."

We all started and listened. The voice below repeated,—

"I say, Sir, and I have it first hand, that he hath but to lock the stable doors and so seize all the troopers in their beds."

Then they passed on their way.

Said my mother: "My husband hath told me that not only may the conscience be awakened by a word which seemeth chance, but the future may be revealed by words which were perhaps meant in another sense. What we have heard this evening may be a foretelling of victory. My children, let us pray, and so to bed."

(*To be continued.*)

The Cutlers' Feast at Sheffield was held on Sept. 6, the Master Cutler presiding. Lord C. Beresford, M.P., in responding for the Navy, urged the need of better organisation and more ships. Among the other speakers were the Duke of Rutland, Lord Ashbourne, and Sir Charles Tupper, who referred at some length to the Fisheries question.

During the first eight months of this year 118,297 English, 26,972 Scotch, and 58,801 Irish emigrants left the kingdom, a total of 204,070. Of these, 145,719 went to the United States, 29,193 to British North America, and 19,359 to Australasia. Last month the numbers were 19,504 English, 3960 Scotch, and 6645 Irish; of whom 21,537 went to the United States, 3840 to British North America, and 3236 to Australasia.

A new life-boat, the gift of an anonymous donor, and presented to the Ramsey Station, Isle of Man, by the Life-Boat Institution, through the Manchester branch, in place of the old boat presented twenty years ago, was publicly launched on Sept. 6. The Bishop of Sodor and Man conducted a short service, gave an address on the work of the institution, and named the new boat—Mary Isabella—which was safely launched. Subsequently, it was tested, and on being capsized in the harbour it righted itself in two seconds. The old boat, which has been instrumental in saving 116 lives, is to be placed in the public park lake.

The lists of certificates granted by the Oxford and Cambridge Schools Examination Board show that for the higher certificates there were 1115 candidates at the last examination, of whom 40 girls were for letters only, and the results arrived at were that 637 gained the higher certificates and 49 obtained letters. Of those who have passed, 839 offered for Latin, 583 of whom passed, 33 with distinction; 783 offered in Greek, 590 of whom passed, 42 with distinction; 554 offered in French, 437 gaining certificates, 71 with distinction; 114 offered in German, 85 passing, 28 with distinction; 1053 offered in elementary mathematics, of whom 736 passed; while 437 offered for additional mathematics, 233 passing, 54 with distinction.

The marriage of Mr. W. Arthur Wigram, son of the late Mr. W. Knox and the Hon. Mrs. Wigram, with Edith, second daughter of Colonel the Hon. W. P. and Lady Emma Talbot, was celebrated in Esher Church, Surrey, on Sept. 6. The bride, who was given away by her father, was attended by six bridesmaids—namely, Miss Helen Talbot, her sister; Misses Margaret and Madeline Wigram, sisters of the bridegroom; Miss Agnes Bateman, Miss Florence Wigram, and Miss L. Kerr. The jewels worn by the bride included diamond stars, the gift of the Earl of Derby; pearl and diamond brooch, from her father; diamond flower, from the Earl and Countess of Lathom; gold bracelet, set with pearls, from the Countess of Derby; gold and pearl bangle, from the Countess of Crawford; diamond bee from the Hon. Mrs. Wilbraham; and diamond ring, from Lord and Lady Stanley of Preston.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

SEPTEMBER 15, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny;* THIN EDITION, *One Penny.* To Australia, Brazil, Cape of Good Hope, China (*viâ* United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence;* THIN EDITION, *One Penny.* To China (*viâ* Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny;* THIN EDITION, *Three-halfpence.*

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

SKETCHES IN BARBADOES.

Our Special Artist, Mr. Melton Prior, who is roving "Across Two Oceans" for sketches of shores and islands of the West Indies, of South America, Central America, and North America, with the Pacific coast, and beyond the farther Ocean to Australia, used his pencil while at Barbadoes to delineate a few scenes in the tidy little sugar-growing island, which have been engraved and kept in hand till now. In the way of comments on these subjects we might refer to Mr. Froude and the late Canon Kingsley, the authors of two interesting books on the West Indies, which almost everybody may have read; but Mr. Melton Prior has written his own account of his observations. After paying his respects to the Governor of Barbadoes, Sir Charles Cameron Lees, who received him very kindly, remembering him as our Artist in the Ashantee Expedition in 1873 and 1874, he was shown over Government House, and the grounds, which are full of trees and shrubs. The one most interesting was the "cannon-ball tree," which the late Lady Brassey describes. There is another very curious tree in the island, which is called the "bearded fig-tree," from the fact that the branches throw out shoots, or creepers, resembling long grizzly beards, and these on reaching the ground take root, and in a very short time grow to a large size and form props, or supports, to the tree itself. It seems an extraordinary provision of Nature, as the tree is very heavily overweighted at the top, and would soon fall but for these props.

On leaving Government House, our Artist called on Colonel Elliott, the head of the police, who kindly offered to drive him round the island and show him all its beauties. Accordingly, early next morning, in company with Mr. Tufnell, the vice-chairman of the Royal Mail Steam-packet Company, after having partaken of breakfast, they started off in an American buggy, with a pair of ponies, for what promised to be a delightful drive; and so it turned out.

The whole of the island of Barbadoes is under cultivation of some kind; and in times gone by, that of the sugar-cane was the sole industry. But since competition with the beet-root, the sugar-cane growers have scarcely realised enough profit to pay for the necessary labour, and the natives have taken to growing coffee and cocoa. Mr. Prior says:—One of the things that struck me most was the immense amount of vegetables that are raised in the island. Every kind is to be seen under cultivation—magnificent French beans, peas, cabbages, spinach, and potatoes—not only for the supply of the island, but for export in the West Indies; and this, I was told, gave the most profitable returns for the labour of tilling the soil. Water, however, is very scarce; and at times not only does everything dry up and wither, but the people are often troubled for water for household use, and have to travel great distances for the precious liquid, got from stagnant pools, many of which we passed in our drive.

The ordinary work-people in the cultivation of the soil are women, who are to be seen in every field hard at work, their long flowing dress tucked up at the waist. In the cane or vegetable field they have spade or hoe in hand, working in a manner that should be a disgrace to the lazier sex.

In the parish of St. John's the soil is reddish, and though good of its kind, is not at all deep, so that, little more than a spade down, you come to solid rock. Nevertheless, as we approach the Bulkley sugar-mills, we see magnificent mahogany and flambeaux trees lining the road and standing in clumps, also the stately palms. There is the cabbage and the cocoa palm. The spike at the top of the cabbage-palm, which is in reality a new leaf coming out, always points towards the East, whatever part of the island you are in, and in all the West Indies. The stem of the cabbage-palm is quite straight, while the cocoanut-palm is always bent.

Windmills abound throughout the island. We see natives of all sizes and sexes carrying the sugar-cane to be crushed, as in England the corn is ground by mill-owners for the small growers.

We also pass by fields of corn, not to be confounded with the well-known Indian corn or maize; it grows quite differently. The head of it is a large clump of small seeds with brown husks, the size of a split pea, each containing a little ball of flour.

The characteristic and universal white costume of the female natives of Barbadoes is in striking contrast to the brilliancy of colour in the Indian, Burmese, or Eastern native generally; in fact, what with the white roads and the white dresses, the eye becomes quite tired of white, and longs for colour. The roads all over the island are made of a rock or stone that is quite soft when dug out, but which becomes very hard after exposure to the air. The houses in the towns are built of this rock, and the older the house is, the harder is the stone; it very much resembles chalk when first dug out of the quarry, but very soon becomes as hard as granite.

Approaching the parish of Saint George's by the road on high ground—we can almost imagine we are in Hampshire but for the absence of the hedges—we now pass the residence of Mr. Archibald Pyle, the Speaker of the House of Commons of Barbadoes; and so English are the house and grounds that once more we are reminded of old England. In the distance are what appear like little country farmsteads dotted all about, but on close inspection they turn out to be sugar-cane crushing-mills, with the owners' and labourers' houses.

Still driving on through lanes of sugar-cane, which forms the only hedges in the island, we pass the residence of Mr. Sealy, which is seven miles from town. Orchards abound, and enormous quantities of shaddocks and tree fruits of all kinds are growing in them. Demerara people may well boast of Georgetown in comparison with Bridgetown; but the country in Barbadoes is very charming, while that around Georgetown consists simply of mud flats.

We now arrive at St. John's Church, and as we descend from the carriage, we almost step on to a tombstone under the porch, with an inscription recording the death of a young married lady in 1666. There is a beautiful pulpit in this little country church—made of different kinds of Barbadian woods, exquisitely carved by native workmen. Close by this church, and between us and the sea, is a spring which supplies Bridgetown with water and which is conveyed over fifteen miles in pipes.

Leaving the church we continue our drive, and come up with women and donkey-carts laden with sugar-cane. The women had been to some sugar estate and have bought sugar-cane, which they retail in the town at a halfpenny a stick, this being a very favourite food or sweetmeat of the natives. The sticks are about four feet long; the leaves of the sugar-cane are collected and piled in enormous heaps and allowed to rot, which is said to make the very finest manure. It is also used when green as food for horses and cattle.

Very soon we come in sight of Bissex-hill Police-station. I only mention this from the fact that a curious custom is observed here, and at all police-stations throughout the island. Clocks are very scarce, and to enable the country folk to know the time a black ball is run up at a quarter to nine; at nine o'clock precisely, a signal is given from the head police-office in Bridgetown, and the black balls drop all over the country, and children may then be seen running to school.

AUSTRALIAN CITY AND SUBURBAN INVESTMENT AND BANKING COMPANY, LIMITED.

REGISTERED UNDER "THE COMPANIES' STATUTE, 1864."

CAPITAL £5,000,000, IN 2,500,000 SHARES OF £2 EACH.

First Issue: 1,400,000 Shares, of which 900,000 are Issued Paid Up to £1, in Part Payment of Purchase Money, and 500,000 Shares are now Issued for Subscription, Payable—5s. on Application; 5s. on Allotment; 5s. at Three Months; 5s. at Six Months.
The various Instalments of Shares may be Paid under Discount at the Rate of Six Per Cent per Annum.

Directors:

THE HON. ALFRED DEAKIN, M.P., Chairman. | ORLANDO FENWICK, Esq., J.P.
THE HON. JAMES BELL, M.L.C. | J. M'A. HOWDEN, Esq.
G. W. TAYLOR, Esq., J.P., will join the Board after Allotment.

POWER IS TAKEN TO APPOINT A DIRECTORATE IN LONDON.

General Manager: FREDERICK PALMER, Esq.

Bankers:

COMMERCIAL BANK OF AUSTRALIA, LIMITED.
NATIONAL BANK OF AUSTRALASIA.

Registered Offices: No. 20, COLLINS-STREET WEST.

Solicitors: MESSRS. FINK, BEST, and P. D. PHILLIPS.

Brokers:

THE MERCANTILE, FINANCE, TRUSTEES, AND AGENCY COMPANY OF AUSTRALIA, LIMITED, 46, ELIZABETH-STREET.

THIS COMPANY is formed to acquire from G. W. TAYLOR, ESQ., the extensive properties set out in the Schedule hereafter appearing, and comprising the magnificent area of 35,024 Acres, OR THEREABOUTS, and to carry on the business of a PROPERTY, FINANCE and BANKING COMPANY, as empowered by its Memorandum of Association annexed.

LAND INVESTMENT is known in all countries to be the most assured and permanent of all investments, and property secured within a reasonable radius from any great centre, and possessing facilities for easy communication, must always command an adequate return. In connection with the commercial metropolis of Australia this must always be so. This continent has now a limited but ever-increasing population, but it has few places marked out by Nature for great centres. Melbourne, by its position, climate, and other natural advantages, occupies the prominent place, and is so situated that it must grow with the growth of the country and commonwealth. Consequently any institution based upon landed property, possessing the above characteristics, must participate in the steady advancement which necessarily follows the increase of population and growth of the nation.

Unlike other INVESTMENT and FINANCE COMPANIES, this one begins operations under more than ordinarily favourable auspices through having already secured the Properties referred to.

THE PROPERTIES have been specially selected with regard to the future development of favoured districts upon a comprehensive scale, and combine in one company the advantages arising from large interests in various localities.

Situated in the leading progressive suburban districts, large interests are held along the sea coast from BRIGHTON to MORDIALLOC—in the east in CAULFIELD, GLEN IRIS, OAKLEIGH, and the surrounding neighbourhood; in the north-east PRESTON is well represented; in the north ESSENDON, PASCOE VALE, and the adjacent country commands a leading place. Valuable areas are also held in LILLYDALE, DANDENONG, BERWICK, BACCHUS MARSH, and other advancing neighbourhoods within easy distance from the metropolis. On the whole, there is such a variety and selection that has, perhaps, never before been attained.

Under one administration, every want can be supplied—SEASIDE RESORTS, SUBURBAN and COUNTRY RESIDENCES may be obtained upon reasonable terms—ample powers being taken for granting special facilities to those acquiring any portion of the company's property, and giving them every advantage in connection with their improvements.

In the Articles of Association full powers are taken to carry on the business of a PROPERTY, MORTGAGE, and LAND BANK, in addition to providing for all requirements in connection with the development, improvement, and gradual disposal of this great Estate.

The organisation of this Company for business is complete, and no delay will take place in its beginning its operations. For its obligations in connection with these purchases, COMPLETE FINANCIAL ARRANGEMENTS have been made.

THIS COMPANY is launched under exceptional circumstances through the very large interest which Mr. Taylor retains in it. In addition to retaining so large an interest THE VENDOR GUARANTEES A DIVIDEND OF EIGHT PER CENT PER ANNUM FOR THREE YEARS, lodging with the Company 250,000 Shares as security.

THE POSSIBILITIES of this Company may oe measured by the operations of existing LAND and PROPERTY INVESTMENT COMPANIES upon a more limited scale, which have been highly successful, as indicated by the following schedule of the leading institutions:—

Name.	Paid up Value of Share.	Market Price.	Last Dividend, per Cent per Annum.
	£ s. d.	£ s. d.	
Australian Property and Investment Company	5 0 0	11 7 6	17½
Colonial Investment and Agency Company	1 0 0	2 16 6	25
Freehold Investment and Banking Company	3 0 0	15 7 6	23
General Land Company	5 0 0	12 10 0	30
Henry Arnold Company	5 0 0	14 0 0	15
Real Estate Bank	2 10 0	8 10 0	30
Victorian Land Company	0 10 0	2 0 0	12½

THE WHOLE OF THESE PROPERTIES, which have been valued by Messrs. FRASER and COMPANY, LIMITED, and Messrs. GEMMELL, TUCKETT and COMPANY, as per copy valuation annexed, which amounts to £4,524,416 1s. 4d. as security, have been secured for the sum of £3,850,000.

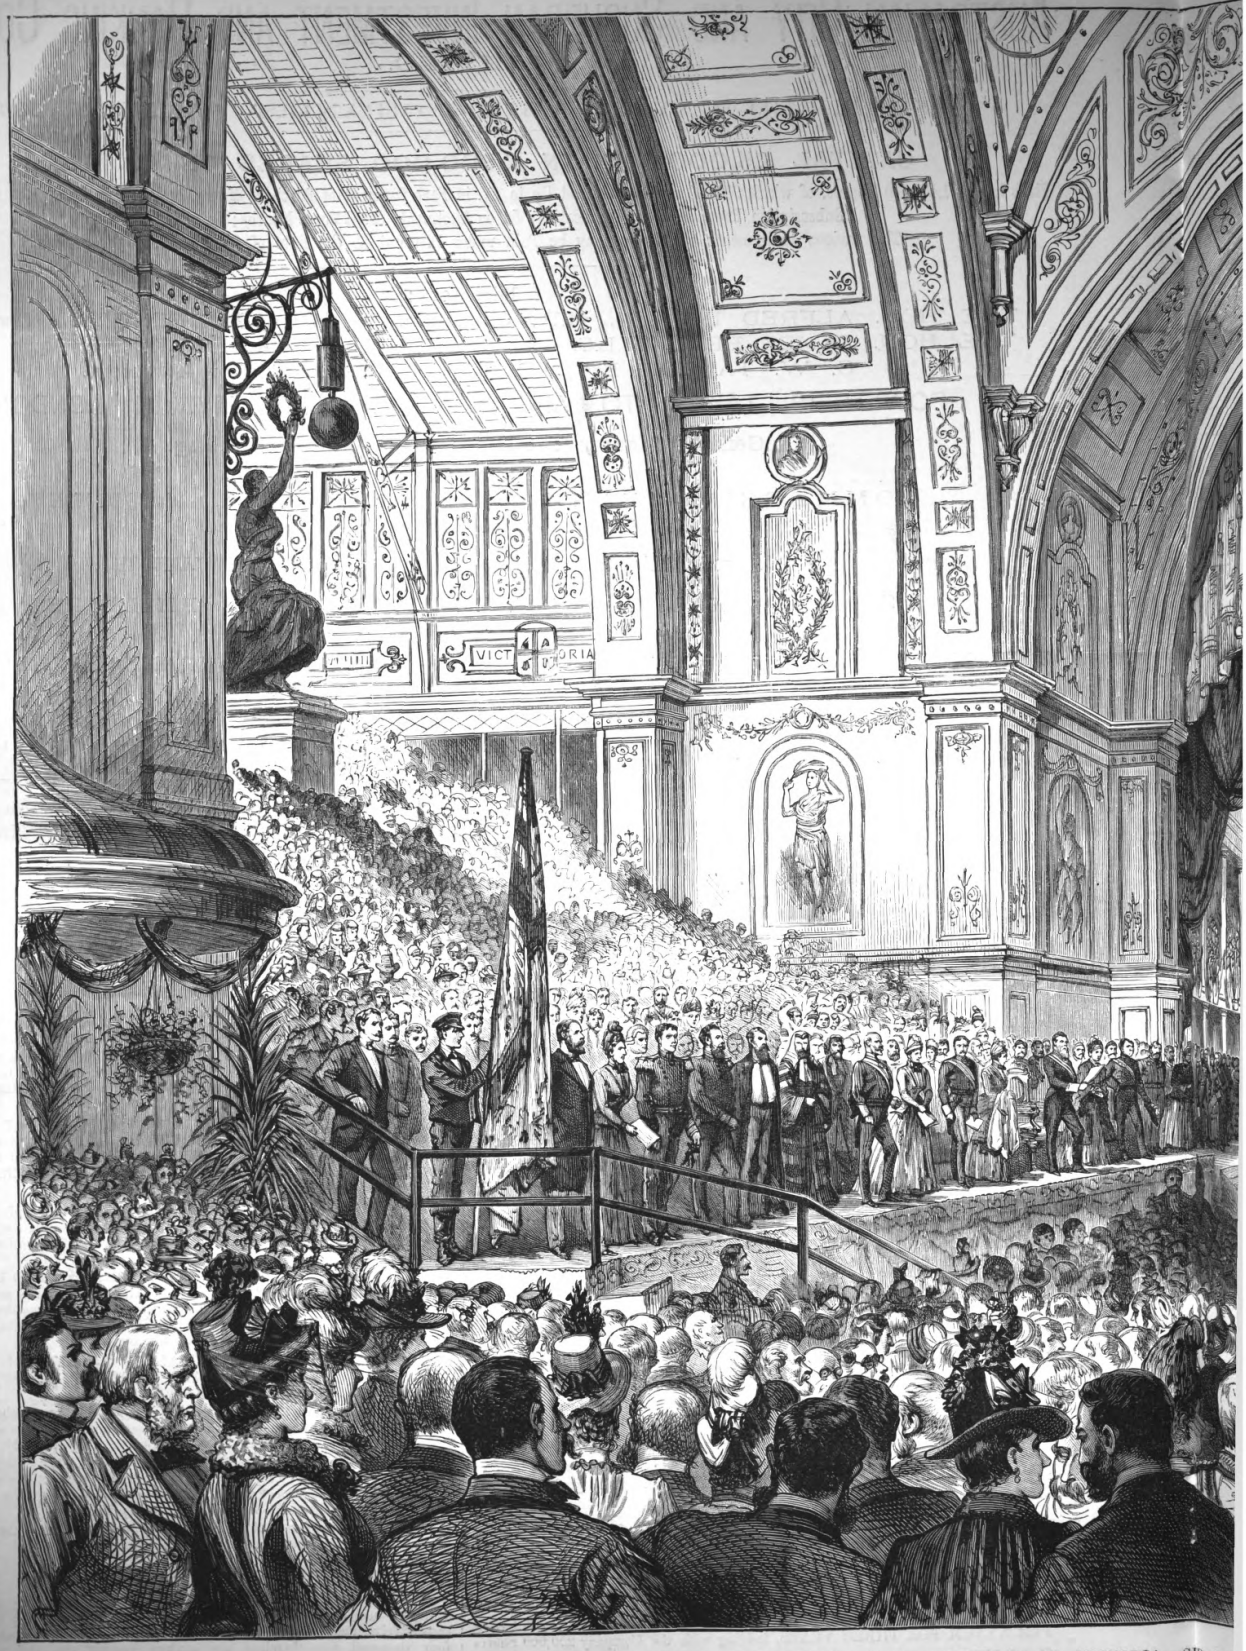
THE DIRECTORS HAVE FURTHER ARRANGED THAT THE SUM OF £500,000 SHALL BE RETAINED BY THE COMPANY out of the purchase money, which shall constitute a RESERVE for the benefit of all the Shareholders. This AMOUNT may be applied by the Directors in FURTHERANCE OF THE COMPANY'S OBJECTS.

A SPECIAL APPROPRIATION is made by the vendor of £50,000 for the construction of either RAILWAYS OR TRAMWAYS through or adjacent to the properties of the Company which may, by this means, in the opinion of the management be best advanced.

THESE SPECIAL APPROPRIATIONS to RESERVE AND FOR RAILWAY PURPOSES make a TOTAL of £550,000. The company thus starts at once with a LARGE RESERVE, in addition to the large deduction from the VALUATIONS OF TWO OF THE LEADING VALUATORS, whose certificates are attached, and upon unequalled conditions as to its future operations.

THERE ARE NO PREFERENTIAL OR FULLY PAID UP SHARES, AND THE VENDOR PAYS ALL CHARGES EXCEPTING USUAL BROKERAGE AND LEGAL EXPENSES.

It is proposed at a later stage to offer an issue of shares upon the London market, and power is taken to establish a London directorate, as well as machinery for the investment of British capital in the business of the Company. Mr. G. W. Taylor is going to London shortly, and his services will be utilised there to the best advantage.



Detail Plans of the Properties and Memorandum and Articles of Association of the Company may be inspected at the offices of the Company, No. 20, Collins-street West, where all additional information will be supplied.

Prospectuses and forms of application may be obtained from the brokers, or from any members of the stock exchanges of Melbourne.

VALUATORS' CERTIFICATE.

We have carefully inspected the whole of the properties contained in this schedule, and declare the marketable value to be the amount set opposite each respectively, and making a total of four millions five hundred and twenty-four thousand four hundred and sixteen pounds one shilling and fourpence (£4,524,416 1s. 4d.). (Signed) FRASER AND CO., LIMITED.
(Wm. Lamb Smith, Managing Director.)

Melbourne, 29th June, 1888. (Signed) GEMMELL, TUCKETT, and CO.

OPENING OF THE MELBOURNE EXHIBITION: THE GOVERNOR OF VICTORIA, SIR H.

FROM A SKETCH BY OUR SPECIAL ARTIST,

IR H. B. LOCH, DECLARING THE EXHIBITION OPEN IN THE QUEEN'S NAME.

ARTIST, MR. MELTON PRIOR.

NOVELS.

Eve. By the Author of "John Herring," "Mehalah," &c. Two vols. (Chatto and Windus).—The harsh drawing of characters, and the grotesque fatalism of the plot, in some of this author's stories, affect us like an uncomfortable dream. He has a forcible grasp of strange situations, and works out the predestined course of errors and consequent sufferings with relentless energy; but there is no harmony in his lights and shadows, as of open daylight; it is a phantasmagoria of violent action, of implacable conflict, unrelieved by the softening influences that temper human life. A quaint company of persons more or less related to each other by ties of kindred is here presented. There is not one "Eve," but three, of successive generations, though only the youngest is living. Her grandmother, the first Eve, was a strolling actress, whose beauty, when she danced in Totnes Marketplace, fascinated Ezekiel Babb, the woollen-manufacturer of Buckfastleigh. Having been taken by him to wife, she ran away from him, leaving her child, the second Eve, who ran away from her father seventeen years later to become an actress in her turn. This second Eve, while travelling with the theatrical company, fell sick on the road between Launceston and Plymouth, and was left in the house of Mr. Ignatius Jordan, a retired, studious, helpless widower, occupying Morwell Lodge, on the banks of the Tamar. She remained with him, though not legally married, giving birth to the third Eve, whom we find a pretty, silly, childish girl, with an "artistic temperament," fond of gay dressing, of music and dancing, and eager to go to town and to see theatres, or even to figure on the stage. The vein of such frivolity and vanity, running through all these three Eves, is extremely obnoxious both to old Ezekiel Babb, a hard miser and a fanatical Calvinist, and to Mr. Jordan, an austere Roman Catholic, devoted to rustic seclusion, and of a gloomy, dismal temper. Eve the second, whom he had treated as a wife, having privately exchanged with her some religious vow of mutual fidelity in a ruined ancient chapel, suddenly disappears just at the beginning of this story. He allows it to be supposed that she has, like Eve the first, eloped from her home with an actor; but the truth is that he has shot her dead, in a fit of jealousy; and we see him first, an hour after, cleaning his gun, which he lays down across the cradle of her babe, the innocent and unconscious Eve the third. Just then, old Babb comes in, to ask what has become of his daughter; and Mr. Jordan lends him fifteen hundred pounds, without security, to buy some fields, on a bare promise of repayment after seventeen years. This money is intended for the dowry of the infant Eve, No. 3, who grows up in Mr. Jordan's melancholy old house, tenderly cared for by her elder half-sister Barbara, a wise, brave, and steadfast young person. Now the "dramatis personæ" are reinforced by three new characters, arriving by the lonely road over Dartmoor, and introduced to those two young ladies by the stumbling of a horse, which consigns a young man, grievously hurt, to Miss Jordan's nursing care. These three brothers, Jasper, Martin, and Watt, are Miss Eve's uncles, little as she knows it; for they are the sons of old Ezekiel Babb and of Eve the first. The unfortunate second Eve was their sister; but it is some time before even Mr. Jordan knows who they are, for Buckfastleigh is distant, and he never had much correspondence with old Mr. Babb. The trio is oddly assorted: Jasper is good, unselfish, and discreet; Martin is a handsome rascal, who has robbed his father of the £1500 put by to repay Mr. Jordan's loan, has been prosecuted for the theft and sent to penal servitude, but has escaped from Prince's Town prison; Watt is a Flibbert-i'-gibbet, and an elfin imp, one of those ugly dwarfs known in romantic fiction who lurk among trees and caves, hooting like owls, and pop out to frighten the girls by making faces and uttering hideous threats. But he plays the fiddle, and can talk of the Italian opera; he adores Martin, who is an eloquent tragedian and has fine eyes and an aquiline nose; while Jasper, who is also musical, assists Watt in contriving Martin's escape from prison. Jasper does more: the convict's prison dress being left at Morwell, while Jasper is lying there with a broken head, he tells Miss Jordan that it belongs to him, in order to divert pursuit from his brother Martin. Some novelists do not perceive that deceit is not the less immoral when an innocent person takes on himself the reproach of crime in order to screen the guilty. Miss Jordan, hating and dreading Jasper at first, will not betray his secret, and cannot therefore prevent her father engaging him as confidential steward. Eve, who has not an ounce of heart or brains, soon runs wild, to the distress of her father and sister, puts on a stage-dancer's fancy costume, which had been left by her mother, and skips about to the sound of her tambourine. She can sing all the airs in Mozart's "Don Giovanni" and Weber's "Preciosa," and is mad for the opera; worse than all, she secretly meets the unprincipled Martin, who does not know that she is his niece, and who persuades her to elope with him. An attempt is made to bind her in matrimonial captivity to Mr. Coyshe, the country doctor, who is a conceited professional braggart and sordid fortune-hunter, but this proposal is a failure. The prison warders, police, and parish constables, summoned by Mr. Jordan, presently surrounding the house, seize Martin and lock him up; but they are made drunk, one regrets to see, by the connivance of the virtuous Barbara, who is now in love with Jasper, and Martin gets away by a hole in the roof. Mr. Jordan, who has accidentally wounded himself with a scythe, stealthily arises, loads his fatal old gun, and crawls to a rock overhanging the Tamar, in pursuit of Martin and Eve. He shoots Martin, who grasps Eve and falls over the precipice with her. People come to look after them; Watt is killed in descending the rocks; Mr. Jordan dies on the spot, after confessing his murder of Eve the second; but Eve the third is saved alive, though doomed to be a hopeless cripple. Jasper and Barbara marry, a short time afterwards, the family curse having spent its fury, and Morwell becomes a home of peace, with another baby in it, bearing still the name of "Eve."

The Academician. By Henry Erroll, Author of "An Ugly Duckling." Three vols. (R. Bentley and Son).—That extreme moral depravity, of a base and sordid quality, is compatible with the fine æsthetic perception, the creative imagination, and the consummate technical skill of a great artist, will scarcely be denied. The wicked lives of several of the famous Italian painters and sculptors of the Renaissance period were conspicuous even amidst the almost unequalled general immorality of their age and country. In portraying the character of an imaginary villain, standing high in the ranks of modern English artists, and enthusiastically devoted to the successful practice of his noble profession, the clever author of this story has undertaken a naturally painful subject. Yet we cannot say that it is an absolute outrage to conceive of such a man as Stephen Baring, an eminent member of the Royal Academy in London of the present day, being not merely a vicious egotist, a cunning hypocrite and dissembler, addicted to coarse and vile habits of secret profligacy, but a greedy miser, a domestic tyrant, and capable of intending the most heinous crimes. It is but too true that the talent for no professional career, not the holiest and most exalted in public esteem, is a positive security against private vice in its unfaithful possessor. The gallant soldier, the eloquent and sagacious statesman, the scientific physician, the seeming saintly priest, the scholar, the philosopher, may possibly be one of the meanest of mankind. Such a deplorable example is "the Academician" of this rather unpleasant fiction, which has a plot contrived with much strength of grasp, and not deficient in romantic interest, but in which the really attractive characters are those of women, represented as struggling against the selfishness and injustice of men. "Henry Erroll" must be a lady writer, though she affects a knowledge of male dissipation which many novelists of the more refined sex would prefer to disavow. The plot is not too complicated for summary recapitulation. Mabel Moore, a noble-minded young person with aspirations to the study and mission of Art, living in the house of her stepfather and her mother, Mr. and Mrs. Chesham, has a friend, Constance Durant, an orphan heiress of £20,000, a pretty, childish, innocent girl, who becomes the wife and victim of Mr. Baring, R.A., a man nearly old enough to be her father. As there is no marriage settlement, and nothing is known of the Married Women's Property Act, Mr. Baring takes every shilling of her money, and keeps his wretched, squalid household under the control of a grim old aunt in the dirty kitchen, who grudges cold mutton or red herring, or a tallow candle for the bed-room, to the unhappy young wife. No society or amusement is allowed her, and she finds herself a starved, penniless, neglected prisoner in her husband's home, a fine town mansion which he has built, with a grand studio and show-rooms containing artistic adornments, splendid hangings, and rare old-fashioned carved-oak furniture, merely to attract customers for his paintings. It might be objected to the likelihood of this manner of living, that a very shrewd London artist, eager to win fame and fortune, would see the advantage of a handsome employment of the large additional income brought to him by this marriage, and of the charming presence of his wife; he would furnish the drawing-room for her, give nice dinners, attend to dress, invite fashionable company, and practise the social arts of pleasing which help towards professional success. Mr. Baring, however, sticking to his former tastes and habits as a rude "Bohemian" and a grubby old bachelor, content for his own part with a ragged coat, a scrap of any cheap food, a pipe of tobacco, and a glass of whisky-and-water, denies Constance everything of comfort or elegance to which she has been used. We do not think a man of his worldly ambition would adopt such a course, under the circumstances, however selfish, cruel, and avaricious he might be; and, though he has no love for his wife, he is very anxious to avoid scandal when she attempts to run away from him. Presently, wishing to get rid of her, but afraid to commit a murder, he engages as her lady's maid a person named Mary Reid, a cast-off mistress of his youth, who conspires with him, while they are in Paris, to carry her to London and shut her up in strict confinement, under the threat of being put in a lunatic asylum, when he gives out that she has died of cholera and is buried in the cemetery of Père La Chaise. On his return to London, this artful monster of the Royal Academy makes love to Mabel Moore, whose face he admires and whose companionship would be serviceable in his professional business. She regards Baring with worshipping reverence, as she does not believe that he has ever treated Constance unkindly; but a previous attachment to Hubert Durant, the brother of Constance, prevents her accepting Baring's offer of marriage. It is an amazing notion that a man in Baring's position should propose to run the risk of bigamy while his lawful wife, whom everybody had known, was in London forcibly detained by his accomplice in a private dwelling. The situation could not last long, in any case; Mary Reid, in a secret conference with Baring, declines or evades a suggestion that she should contrive the death of Constance; but that unfortunate young lady becomes very ill, and a medical man is called in, who happens to be her own cousin, Dr. Harry Lockyer. Her brother Hubert's suspicions have already been aroused, and with the aid of a French colleague, Victor Barthélemy, inquiries are being made which tend to disprove Baring's story of her death in Paris. She is now released, but in a dying condition, from the clutches of Mary Reid, and Baring's wickedness is exposed, though his punishment is described no farther than Mabel's showing him, with silent anger, the dead body of his betrayed and almost murdered wife. The relations between Mabel and Hubert are of secondary importance; but it may be observed that Hubert, being also an artist, has fallen into disgrace with Mabel by abusing his talents, as the Frenchman's instigation, in producing sensational pictures of a bad and corrupt style; and that he is not forgiven until after some time and due repentance of his fault. In the Chesham family there is a husband whose pompous egotism and valetudinarian caprices, obsequiously served by a timid wife, are humorously portrayed; so that the balance of merits as between the two sexes is vastly against the men, and in favour of the women, except Mary Reid, in the summing up of this remarkable novel. In its predecessor, "The Ugly Duckling," we judged it to be all the other way.

The Mystery of Askdale. By Edith Heraud. One vol. (Digby and Long).—The daughter of that well-known literary veteran, the late Mr. J. A. Heraud, poet, critic, and philosopher, Miss Heraud has earned for herself a share of public esteem in dramatic and literary circles, predisposing some readers to a favourable reception of this short story. Its theme, if not quite new, being the concealed existence of a lady dwelling in the shut-up apartments of a large country-house, and by rumoured occasional glimpses of her presence giving rise to a belief that the mansion is haunted by a ghost, has been skilfully treated by the authoress, and is combined with the incident of a blind girl recognising by his voice the man who killed her father some years before. Mrs. Sedley, whose ghost was long supposed to abide in the rooms that she had inhabited in her lifetime, was the victim of false suspicions of infidelity to her husband, the Squire of Askdale. She died in childbirth, after being expelled from his house; but her child, a daughter, was reared in secret by Mrs. Grantley, the housekeeper, who brought her up in those rooms, Mr. Sedley being kept ignorant of the fact. The blind girl, Agatha, niece of the wife of a neighbouring innkeeper, constantly visited Mrs. Grantley, and was the hidden young lady's companion. Agatha was with her father, Paul Lemiere, when he was carrying a sum of money from the bank, and when he was knocked down by one of two robbers on a lonely road. Hearing again the murderer's voice, as a stranger calls at the inn, she tracks him to a cottage, where he, one Robert Landon, with his accomplice, is devising a new villainy. This Landon, formerly steward to Mr. Sedley, and cousin to Mrs. Sedley, against whom he had then intrigued, being now aware of the existence of the daughter, and having the means of proving her legitimacy, designs to carry her off that he may extort ransom. How the plot is baffled, how the family mystery is revealed, how the Squire owns his daughter, how Agatha's eyesight is restored by a surgical operation, and what happy marriages are promised in conclusion, let Miss Heraud tell in her own way. The reader will find in this tale rather interesting occupation for a couple of hours.

NEW LIBRARY OF THE PEOPLE'S PALACE, MILE END-ROAD.

PROGRESS OF THE PEOPLE'S PALACE.

Perhaps the lamented Prince, the late Duke of Albany, was right in saying that "the greatness of a nation must be measured, not alone by its wealth and apparent power, but by the degree in which its people have learned together, in the great world of books, of art, and of nature, pure and ennobling joys." If this be true, the establishment of the People's Palace in East London was a greater national benefit than the annexation of a new province to the British Empire. No territorial conquest in our times has been immediately followed by such ready and glad acceptance on the part of a vast population, as this social conquest of frank goodwill and liberal assistance, of wise design, comprehensive knowledge, and diligent administration—above all, of genuine human sympathy—by which Sir Edmund Hay Currie and his colleagues of the Beaumont trust have won the hearts, and are effectually improving the minds, of myriads of the working classes. Three hundred thousand visitors, each paying twopence in the day-time or one penny in the evening, have within six weeks come to see the exhibition of paintings, opened early in August by the Duchess of Albany, which was closed on Sept. 15; an Exhibition which any lover of modern Art would think it worth while to see, comprising fifteen of the works of Mr. G. F. Watts, R.A., and others by Sir J. E. Millais, R.A., Mr. Alma Tadema, R.A., Mr. W. B. Richmond, A.R.A., the late Mr. Poole, R.A., Mr. Faed, R.A., Mr. Calderon, R.A., Mr. H. Moore, A.R.A., Mr. McWhirter, R.A., Miss Clara Montalba, and many more artists of recognised merit. The Catalogue itself, with its admirably written copious notes, giving clear, exact, and impressive explanations of the subject of every picture, is delightful and instructive reading; and it proves that the managers of this exhibition have taken more thought and pains than was ever done before to aid the understanding of such works. In so doing, they have paid a high and deserved compliment to the serious intelligence of English men and women of the working classes, who would not be content, like too many ignorant visitors to the Royal Academy and other fashionable exhibitions, with the mere pleasure of the eye.

This exhibition was placed in the Queen's Hall and in the New Library: we have now to speak of the latter building, which was completed and opened a few months ago. The Queen's Hall—or the Hall of Queens, adorned as it is with the statues of twenty-two Queens famous in the world's history—is already known to be one of the finest halls in London, unsurpassed at least in the completeness of its decorations.

Its magnificence was worthy of a hall in which Queen Victoria met her people on the day of its opening; but it was the idea of the founders of the People's Palace, though building in Whitechapel, that nothing could be too good for the people; and when that splendid hall is filled, as it often is, with an audience of 5000 persons, men, women, and children, intently listening to fine music—if it be only that of the organ, admirably played by blind Mr. Hollins, a pupil of the Norwood School for the Blind—no one can deny that it is occupied for a worthy purpose. The collection of books, numbering at present about 20,000 volumes, has been removed from the Queen's Hall into the New Library built at the rear, the interior of which is shown in our Illustration. It is octagonal in shape, 75 ft. long and broad, and 52 ft. high from floor to roof; the design is singularly elegant and agreeable, doing much credit to the architect, Mr. E. R. Robson, of Palace-chambers, Bridge-street, Westminster, who was also the architect of the Queen's Hall and the other buildings of the People's Palace. For practical use as a Public Library, it is planned like the Reading-room of the British Museum; but newspapers, reviews, and magazines are laid on its tables; while the dispensation of books, from an enclosing counter in the centre, is managed by young ladies, under the direction of Miss Black. Below the Library, there will be another reading-room of equal extent, and there will be a smaller reading-room at the side. If the pictures, the sculpture, and the music are appreciated by the visitors to the People's Palace, as we have seen, not less freely and constantly do they avail themselves of the Library and Reading-room. Hundreds come to read in the evenings; and on Sunday, when of course there is no charge for admission, there will be 1400 or 1500 in the morning, and twice or thrice as many in the evening, to look at the pictures, to hear the organ, or to read; and by far the greater part of these are genuine working men.

Such is the provision for intellectual entertainment, apart from direct teaching, at the People's Palace; but there is a great deal more, a great variety of rational and wholesome recreations, through the association of members in 'the Palace Institute," and in their different "clubs," the chess and draughts playing club, the debating society, the choral society, the orchestral and military bands, the Art Society and the sketching club, the literary club, the dramatic club, the photographic society, and the Girls' Social Club; not to mention the cricket, lawn-tennis, football, swimming, Harriers', Ramblers', cyclists', billiard-players', gymnastic, boxing, and other clubs; each of which clubs is managed by its own members without interference. The gymnasium, under an excellent teacher, is doing much for the physical and athletic training of boys and men; and there is a separate gymnasium for women or girls. The swimming-bath, 90 ft. long, the gift of Lord Rosebery, is one of the best in London, and the cheapest in England artificially provided; the water is changed daily, and the floor and sides of the bath scrubbed, as is scarcely done in any other for public use.

We have not yet told half what there is in this marvellous People's Palace, and must defer some account of the department of direct instruction, which might be styled the People's Palace College; the Technical and Handicraft Schools, endowed by the Drapers' Company of London, already attended by four hundred pupils; the Science classes, the Art and Design classes, the laboratories for chemistry and electricity, the engineers', carpenters', smiths', and metal-workers' shops, the music classes, the grammar, writing, arithmetic, French, and German classes, and the classes for girls, in needlework, dress-making, millinery, and cookery. The eastern wing, with upper floors and corridors, is approaching completion, at the cost of the Drapers' Company, and will be opened some time in October. During the summer months the People's Palace and its rather extensive grounds—which will ultimately be converted into a pleasant garden—with the gymnasium and several large temporary buildings, have been the scene of a daily and nightly festival, attracting several hundred thousand visitors, whole families coming together. In one building, 200 ft. long, beautiful plants and flowers were arranged on both sides, forming a delightful promenade; and here, at Christmas, will be a wondrous imitation of an ice-cave, with a Santa Claus bestowing pretty gifts on all children good or naughty. The spacious gymnasium, with an orchestra at one side, became a promenade concert-hall, illuminated at night by variegated Chinese lanterns. A steam merry-go-round, with beautiful horses to ride, to the sound of steam-organ music, afforded great delight to the youngsters. The People's Palace has witnessed continual opportunities of enjoyment for several months past, and at a price within reach of the poorest of the labouring classes.

IMPERIAL BRITISH EAST AFRICA COMPANY.

The *Gazette* publishes the charter granted to the Imperial British East Africa Company, upon a petition to her Majesty in Council. The charter is granted to Mr. William Mackinnon, Lord Brassey, General Sir Donald Stewart, Sir John Kirk, Mr. Burdett-Coutts, M.P., Mr. Robert Palmer Harding, and Mr. George Sutherland Mackenzie, the petitioners. The objects of the petitioners were set forth to be the promotion of trade, commerce, and good government in the territories and regions comprised in certain concessions to and treaties with the British East Africa Association by the Sultan of Zanzibar and sundry chiefs and tribes. The charter binds the Company to remain British in character and domicile, and to have its principal office in Great Britain, its principal representative in East Africa, and all the directors being British subjects, and to discourage the slave trade and slavery. Any difference between the Company and the Sultan of Zanzibar, chiefs, or tribes, is to be submitted to the Secretary of State for decision.

OPIUM-SMOKING.

The Colonial Surgeon of Hong-Kong, in the course of his report for the past year, refers to the subject of opium-smoking, and especially to the consequences to confirmed smokers of being deprived of the pipe while in jail. He says the experience obtained in the Hong-Kong Jail is that the habit of opium-smoking is far less deleterious than spirit-drinking. Old confirmed smokers were found to have preserved a good appetite and healthy digestion, and it was further found that the suffering attendant on the deprivation of opium, which is not allowed to anyone in the prison, was not more than in the case of a tobacco-smoker deprived of his pipe. There was no evidence of suffering from the deprivation, though opium in any form is carefully excluded, and, though they are subject to exactly the same diet as all other prisoners, they remain of the average weight. "Opium-smoking, held forth as the Chinaman's greatest vice, is certainly not to be compared in its evil effects with the European vice of spirit-drinking, a habit to which the Chinese, as a nation, are not given."

OLD MEETING-HOUSE AT LAMBETH: BUNYAN'S PULPIT.

The quaint old building of which we give an Illustration, and which has just been pulled down, stood in Lambeth-road, opposite St. Mary's Church. It was doubtless the remains of what must at one time have been a famous hostelry. In the

JOHN BUNYAN'S PULPIT, FORMERLY IN THE OLD MEETING-HOUSE AT LAMBETH.

courtyard of this old inn "Lambeth Fayre" was held; and the immediate neighbourhood has associations of much historical interest. No doubt the old building stood there in 1641, when the London apprentices attacked Lambeth Palace opposite and tried to capture Archbishop Laud. Close to this old building, too, Mary of Modena, Queen of James II., rested in 1688, when she fled from the palace on the other side of the river, disguised as an Italian washerwoman, with her infant son in her arms. During a long period the upper room of this old building was a Nonconformist meeting-place, and in comparatively recent years it was the scene of much useful and unselfish labour. For many years this old "meeting-room" contained the pulpit of John Bunyan. This pulpit had been removed from the old Nonconformist meeting-house in Zoar-street, Southwark, where Bunyan used to go when he visited London, and where he was allowed to deliver his discourses, by favour of his friend, Dr. Thomas Barlow, Bishop of Lincoln, to whom the old Southwark house belonged. It is not known what has become of this old pulpit.

Mr. Watts, of Messrs. Doulton and Watts, founded here a ragged school, which was frequently taught by Mr. W. R. Selway, now a prominent member of the Metropolitan Board of Works. Here Mrs. Carlile, the founder of the "Band of Hope" movement, taught a class of children, and the room might almost be called the birthplace of the Temperance movement on the Surrey side, as it was the scene of the labours of Meredith, Howlett, and other pioneers of Teetotalism. John Mountford, one of the most zealous followers of the Rev. Rowland Hill, held together a congregation in this old building until his death at an advanced age. Recently the old building was a coffee-shop, and a coffee tavern will be erected on the site.

The Dean and Chapter are about to restore the Chapter House of Lincoln Cathedral, at a cost of at least £7000.

According to the Board of Trade Returns, the value of the exports of British and Irish produce during August exceeded

OLD MEETING-HOUSE AT LAMBETH, LATELY DEMOLISHED.

by £1,399,460 those of the corresponding period of last year, the increase for the first eight months of the year being £11,362,298. The imports for the month show an augmentation of £307,120, and for the eight months of £13,026,743.

"Lays and Lyrics," by Clement Scott, is a recent addition to the monthly volumes of prose and verse forming Messrs. Routledge's Pocket Library. It contains many pieces which charmed at their first appearance in print, delighted still more when appropriately recited, as they frequently were, and which will be the source of further delight at many a recital.

TOURISTS IN RUSSIA.

(By our Paris Correspondent.)

As I was sitting in the reading-room of the Hôtel de l'Europe at St. Petersburg, a few weeks ago, smoking miserable Russian cigarettes, and resting from the fatigue of the dreary journey from Berlin, my attention was attracted by an American voice speaking words from Murray's "Hand-book for Russia." "Moscow," said the voice, "is spread over a circumference of about twenty-five miles, its greatest length, from south-west to north-east, being nine miles, and its maximum breadth, from east to west, about six miles."

"Twenty-five miles! Great Scott! We shall want a week to see Moscow, then!"

"The profusion of churches and chapels—nearly four hundred in number"—resumed the voice of the reader.

"Four hundred churches, George! I'm sick of churches!" struck in a feminine voice. "I only wish I could find a decent candy store in this city!"

"Well, if you did find one you wouldn't know what to ask for, Jane; so you may as well help us to lay out this Moscow trip."

"You can see Moscow in two days easily," piped a sharp-faced American from another corner of the room, taking pity on his countrymen, who were poring over the guide-book. "I have just come back from there. Very little to see. Best hotel is Dussaux, where they speak English and take Cook's coupons."

"Did you get any buckwheat cakes there?"

"There aint no buckwheat cakes in all Moscow," was the reply; "and if you ask me my real opinion, I'll tell you that Moscow and Russia is no country for a white man; and I'm just going to take the express to-night, and I won't get off them cars till I am on the other side of the frontier, out of their blessed bird-cage."

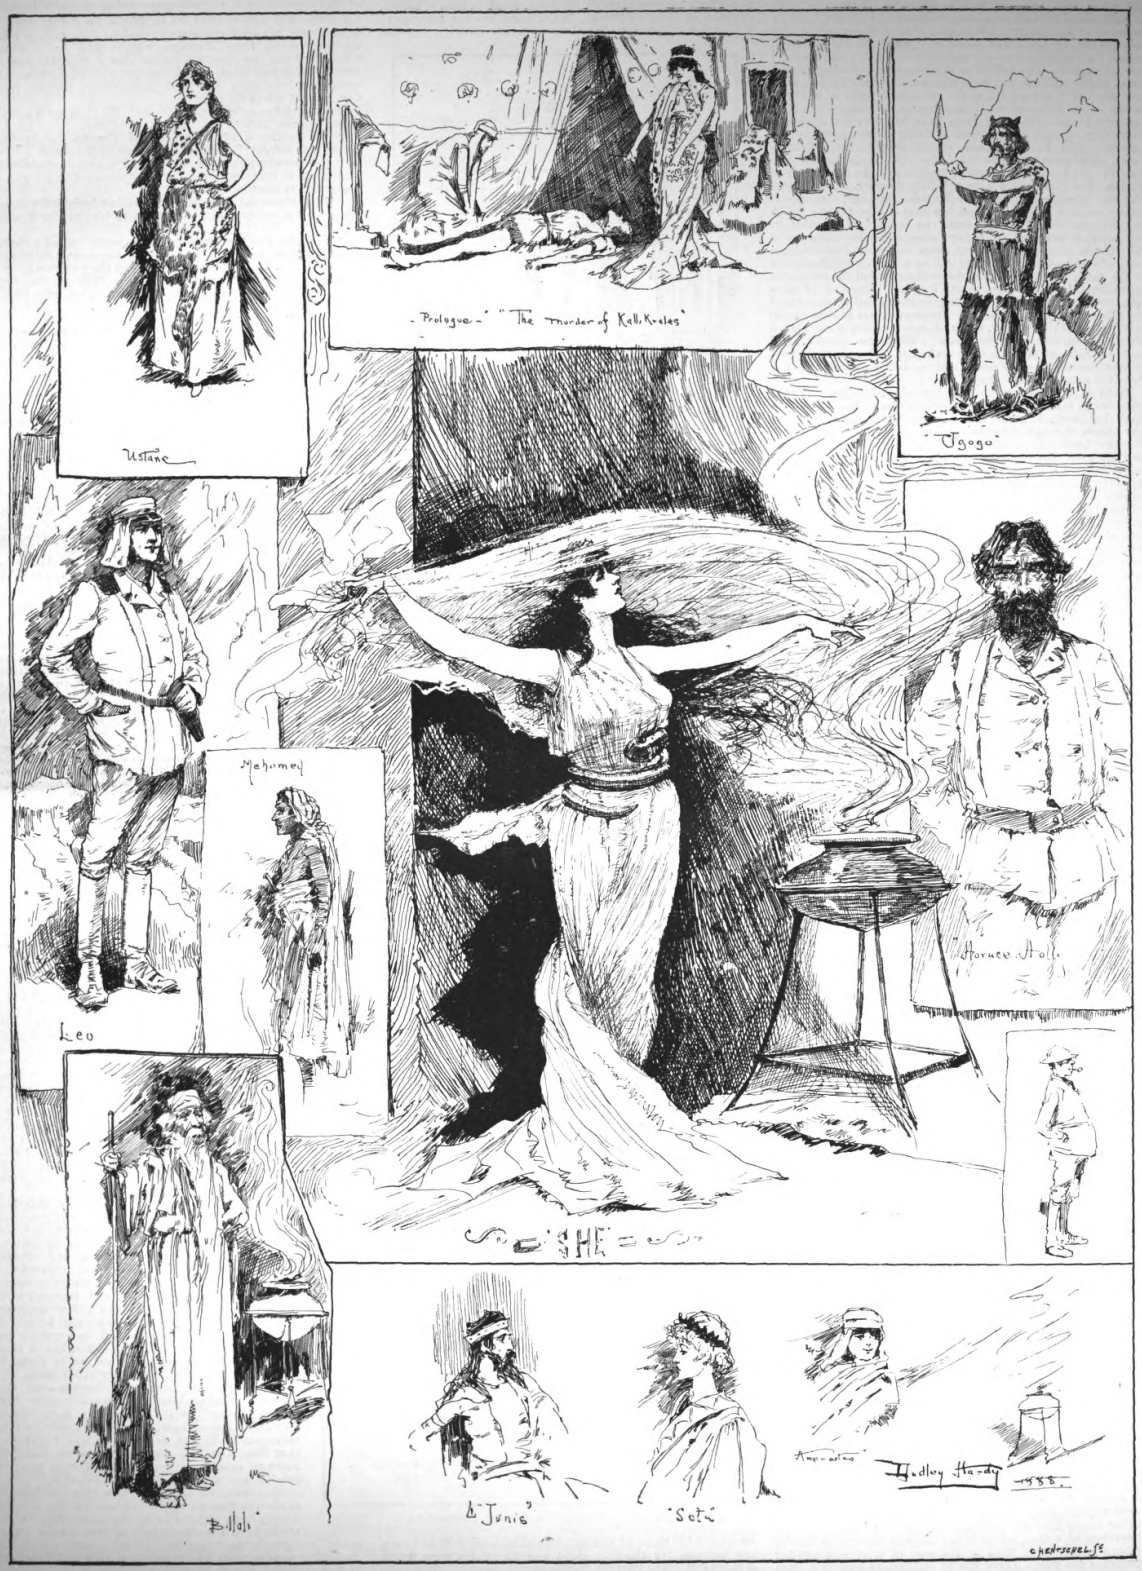
"Have you not had a good time in Russia?"

"Can't have no good times when you can't read even the names of the stations," was the peevish reply. "Have to have chump-headed guides attached to one's person all the time. No; I tell you I'm sick o' Russia, and I have not had a single cocktail since I left Berlin three weeks ago. This is no country for a white man."

"Have you got your passport visad?"

"Yes. Had to wait over a day to get that done. The officials are in no hurry here. What a system! My passport is quite spoilt with their stamps and imprints, and in fees and what not it has cost me over twenty dollars already."

We need not give the conversation further. The above citation suffices to show that the tourist, and especially the American tourist of the cheapest kind, has at last penetrated into Russia. In June, July, and August St. Petersburg and Moscow are now-a-days visited by between two and three thousand Americans, and by a small sprinkling of English, and for the comfort of these travellers certain arrangements have been made. In some hotels at St. Petersburg and in one at Moscow the porter speaks English, and some of the waiters comprehend more or less. French and German are more widely understood and spoken, but it is useless to disguise the fact that the language of Russia is Russian, and without, at least, a little Russian the tourist must, as the American said, have a "chump-headed guide" attached to his person. St. Petersburg and Moscow are both vast towns; the distances from point to point are enormous; the squares are so broad that one can hardly think of walking across them; the streets measure miles in length and furlongs in width. The consequence is that in Russia nobody walks; even the kitchen-maid who goes to market to buy a cabbage or a water-melon rides in a swift droshka. Now, these droshkas are subject to no fixed tariff: in real Oriental fashion you must bargain each time you hire one. That wonderful writer, Baedeker, tells us, it is true, that we may, and ought to, abuse and even maltreat the droshka driver, who will never lose his good temper; but how can you abuse him if you cannot speak his language? In the museums, the churches, the public monuments, and the shops this same difficulty of language stands very much in the way of the tourist's comfort. The veracious guide-books affirm that in the best shops in St. Petersburg and Moscow French is spoken currently, and yet I remember one day visiting thirteen cigar-shops in the Nevsky Prospect, the Regent-street of St. Petersburg, and in not one of them was there a soul who could understand German or French, much less English.



Such being the case in the capitals, what must be the state of affairs in minor towns? How delightful is the situation of the tourist who starts on a seventy-hour railway journey, in the course of which he may have to change trains four or five times, drive across towns from one station to another, explain to porters, ask information from station-masters or train-conductors, who understand nothing but the language of Gogol and Pouchkine! Remember, too, that the tourist who arrives unprepared in the country cannot read even the names of the stations, which are inscribed in Slavonic letters only. In the hotels the bill of fare is unintelligible, and communication with the waiter can only take place through pantomime.

On the other hand it must be stated that in a first-class carriage on a Russian railroad you never fail to find some passenger who speaks French, and the educated Russians seem never to tire of showing kindness and courtesy to foreigners, and piloting them through travelling difficulties. Nevertheless the tourist who ventures outside the great towns, like St. Petersburg, Moscow, and Warsaw, must know the Russian alphabet and a few necessary phrases—the more the better—otherwise he will be so worried that his journey will be anything but pleasurable, or else he will have to hire one of those "chump-headed guides" who are to be found in limited numbers in St. Petersburg and Moscow.

In reality, the stream of tourists—the vast majority of whom are Americans—scarcely flows beyond Moscow, for the present, at least. Russia does nothing to attract tourists or to facilitate their movements. To say, as our American friend does, that Russia is "no place for a white man," is, perhaps, excessive; nevertheless, I have met few tourists who were not glad to get out of it.

One note to conclude. Few foreign journals reach the Russian reader without several columns having been obliterated by the censorship. A few weeks ago, I noticed half of Mr. James Payn's genial paragraphs in "Our Note-Book" cruelly obliterated. As for the present series of observations, they will inevitably appear on the tables in Russian reading-rooms as a dismal black-ink smudge. T. C.

The Lord Mayor of London laid the foundation-stone of the new Technical Schools at Stockport of Sept. 8, with full Masonic honours. Lord Egerton of Tatton, Grand Master of the Cheshire Freemasons, was present. The friendly societies walked in the procession, and the town was gaily decorated.

"SHE," AT THE GAIETY THEATRE.

SEE "THE PLAYHOUSES."

THE LADIES' COLUMN.

Town mouse, visiting her country sister at this season, cannot but think commiseratingly of the dull times which that poor creature must have when all that now makes the country delightful, or, indeed, one might say tolerable, will have faded with the roses and vanished with the verdure. Tennis and tea out-of-doors, swinging in a hammock in the orchard and driving to meet half the county at a garden-party, sketching and amateur photography, woodland rambles and tricycling—everything, in short, that seems to make the country enjoyable, goes with the summer. Of course, a large country-house party in winter may be merry and bright enough, but it is a question now of the resident in her own quiet home. Country mouse declares with proper spirit that her days are full of duties, making the time seem all too short. Her domestic vocations, her correspondence (it is only in the country that people have time to write letters—in town we scribble notes), her cottage and sick visiting, her management of the penny bank and the sewing club, her calls at the village school and her church work, amply occupy her days. But, no doubt, the great resource for the country in winter is needlework, both plain and fancy. It is the "stand-by" which fills up all odd crevices of leisure. To those women who can take an interest in needlework it is the most fascinating and even sedative of employments. It appears, indeed, to be to many of our sex what tobacco is to some men: a never-failing resource against *ennui* and vexation.

Those women who can find such enjoyment in the use of the needle are to be envied. There are many of us to whom the occupation is irritating in the extreme. Generally speaking, I think that the women who take much delight in sewing of any sort are those with quiet temperaments and brains not over-active. At all events, intellectual women generally have not liked the occupation. Even in the days when it was considered inevitable for all women to do much needlework—and when, indeed, it was inevitable, for there were no machines to relieve them from the positive necessity, so it was truly a female duty to sew much—even then women of active intellect could often not refrain from bearing testimony to the painfulness of the labour. Mdme. De Maintenon, the severe mentor of Louis XIV. of France, for instance, said that she wished the girls in her school for demoiselles of family at St. Cyr to do much needlework, as a salutary discipline, because it was such an unpleasant occupation, and one allowing so much scope for painful self-examination and solemn reflection. The more fortunate sisters who can delight in the mechanical action which results in the manufacture of pretty things ought to be sorry for those less happy amongst us who find that "that way madness lies." I do not observe that they are so sympathising.

Great scope is given to artistic feeling by fancy work, and as the mechanical part of it—the mere doing of the various stitches—is comparatively easily acquired, the pleasure of the achievement of making something pretty is open in this direction to many who have not leisure or training for painting, etching, or modelling. Every woman who has to live much alone does wisely to try if she can find satisfaction in the use of the needle. The several stitches once learned—chain stitch, feather stitch, coral, cross, and satin stitches, and French knots, and the rest—it is easy to combine them into broideries and designs either out of one's own head or from the innumerable patterns now procurable. Lace stitches and painting on satin are more elaborate and ambitious undertakings: but there is enough variety for most people in the many different ways in which the ordinary embroidery stitches can be utilised.

A pretty centre for a dinner-table may be made by working with coloured thread on a white linen ground, or with white cotton on an écru ground. For this purpose, a conventional pattern should be traced along each edge of a strip of linen about twelve inches wide, and a corresponding design worked rather thickly at each end—the length depending on the size of the table. This is very effective if worked either in blue or red ingrain cotton, with a second line close by everywhere in the design, of écru thread if the ground be white, or white thread if the ground be string-colour. Another dinner-table centre is more elaborate, the material being that "satin-sheeting" which, while having a surface gloss almost like silk, can yet be cleaned repeatedly. This was covered with an "all over" design of running stems and occasional leaves in blue cotton, with a little bird every here and there in raised stitch of white silk, the shape backed up and marked out from the flat white ground by being outlined with gold. Sideboard cloths are generally worked in designs to match; but in this case a coarse Russian canvas was substituted for the ground—as, of course, a sideboard cloth must be more frequently cleaned than a dinner-table centre.

Portières are made out of the roughest-looking materials, such as great common grey, blue, and brown blankets, or the rough Irish frieze, or the coarsest of serge. The colours must be well chosen to harmonise with the ground; and then these common materials become gloriously beautiful with comparatively small expenditure of time and labour, the designs being bold and the stitches chosen those which rapidly fill a large space. Sunflowers, with their leaves in the natural colours, and the hearts of the flowers brightened up with a little orange silk amongst the brown, form an effective broad bordering for a very dark red serge. A peacock-blue serge curtain looks well with embroidery in a sort of Greek key design, straight down it, in a series of rather broad lines, the colours being dark brown, in various tones, with a little intermixture of gold. "Bed-spreads" have superseded spotless counterpanes in artistic households: the "spread," of course, being only intended for day use, and being taken off, with the frilled and monogrammed "pillow-shams" that during the day cover the pillow-case, when the room is prepared for the night by the housemaid. The bed-spread is generally of silk, and is worked nearly all over with embroidery. A running design of flowers is very popular for this use, such as cornflowers and clematis in strips, on a white silk or Roman satin ground, or white roses on a red ground, &c. Geometrical shapes make very effective embroidery for this purpose. Diamonds or squares worked in white crewels, or, better still, in purse-silk on scarlet silk, may offend a severe taste, but give a not unpleasing bit of colour in a large room hung in pale neutral tints.

Enamelling with Aspinall's paint, which gives at once colour and gloss, is one of the latest workable amusements for ladies. It is having quite a run, some country houses showing rooms entirely re-painted by the mistress or her daughters in this way; while plain white wood articles are to be found in great variety in the fancy shops in London, and are specially designed to be enamelled. Tables, square, octagon, or corner, rush-seated chairs, overmantels, book-shelves, milking-stools, and a multitude of other articles are procurable in white wood. Japanese leather paper is another great resource for home decorators. It fills in the panels of doors, the fronts of coal-boxes, the skirtings beneath windows, &c., with very pleasing effect. Painted panels are popular, too—i.e., a plain ground with a flight of birds, a bunch of bulrushes, or some other easily-executed design, painted somewhat roughly across. Stencil-plates can be had for this work by ladies who cannot manage without their aid. FLORENCE FENWICK-MILLER.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

M N KUKA, M.A. (Bombay).—The defence you suggest does not appear in any book because analysts have never considered it sound enough for serious notice. We would invite you to study the effect of White playing 4. Kt takes P, P to Q 4th; 5. B takes P, Q to Kt 4th; 6. P to Q B 3rd, Q takes R P; 7. Q to Q R 4th (ch), &c.

CAPT GREY (R.N.).—We have no knowledge of anyone ready to play; but if you wish we will publish your desire.

S D G.—No, there is no flaw. Look again.

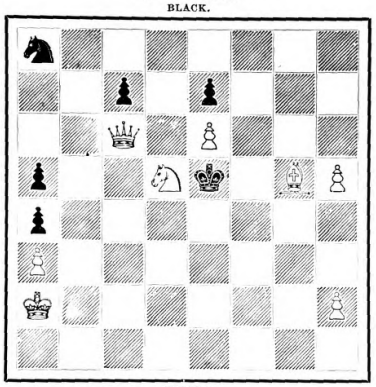
MRS KELLY (Lifton).—Your solution was quite right, and duly acknowledged last week.

J BRYDEN.—Thanks for your kindly appreciation of the collection.

H B ROBERTSON.—Thanks for notice and kind offer. We shall be always glad to report the doings of the club.

GODFREY HEATHCOTE.—Thanks for problem. David Nutt, foreign bookseller, Strand, can probably supply your want.

C EDDERINGTON.—In Problem 2312 if White play 1. Kt to Q 4th, Black answers with 1. R takes P, and no mate follows.



CORRECT SOLUTIONS OF PROBLEM No. 2314 received from Dr F St and E R (Bombay); of No. 2315 from Joseph T Pullen, S B O, and P R; of No. 2316 from Major Prichard, C Etherington, Hereward, J Bryden, and P R.

CORRECT SOLUTIONS OF PROBLEM No. 2317 received from J Bryden, Mrs Kelly, Joseph T Pullen, Dr F St, A H Austen, Howard A, Dr Waltz (Heidelberg), Jupiter Junior, E Phillips, E Von Kornatzki, E Casella (Paris), Peterhouse, J Hepworth Shaw, E Lacy, W Hiller, Shadforth, Rev Winfield Cooper, Hereward, Dawn, E E H, R Louden, A W Hamilton Gell, P Drew, E Crane, W R Raillem, T Roberts, Ruby Rook, Julia Short, J Dixon, Colonel R Matthew, J Hall, J D Tucker (Leeds), D T (Ben Rhydding), James Sage, Colour-Sergeant H S B (Ben Rhydding), Lieutenant-Colonel Loraine, F T Horton, Carslake W Wood, Mrs W J Baird, R H Brooks, D McCoy, J A Schmucke, Thomas Chown, C E P, B Reynolds, R Worters (Canterbury), G J Veale, S B O, A Newman, J D Taylor, F W Ensor, R F N Banks, and Percival.

SOLUTION OF PROBLEM No. 2315.

WHITE.	BLACK.
1. Q to K 8th	Any move
2. Mates accordingly	

PROBLEM No. 2319.
By J. W. ABBOTT.
BLACK.

WHITE.
White to play, and mate in four moves.

BRITISH CHESS CONGRESS.

Game played in the Masters' Tournament between
Herr VON BARDELEBEN and Mr. POLLOCK.
(Irregular Opening.)

WHITE (Herr B.)	BLACK (Mr. P.)
1. P to Q 4th	P to K B 4th
2. Q Kt to B 3rd	P to Q 4th
3. B to B 4th	P to K 3rd
4. P to K 3rd	K Kt to B 3rd
5. Kt to B 3rd	

Premature. He should have prevented the opposing Kt from occupying his K 4th by B to Q 3rd.

5.	B to Kt 5th
6. P to Q R 3rd	B takes Kt (ch)
7. P takes B	Kt to K 5th
8. Kt to Q 2nd	

White's last few moves have steadily cramped his game, but this seriously jeopardises it. Kt to K 5th would have recovered lost ground, and considerably improved his position.

8.	Kt takes Q B P
9. Q to R 5th (ch)	P to Kt 3rd
10. Q to R 6th	Q to K 2nd
11. P to K R 4th	

Wasting time on an attack with no force to support it. Why not bring out the K B and then Castle?

11.	R to Kt sq
12. Kt to B 3rd	Kt to K 5th
13. B to Q 3rd	Kt to Q B 3rd
14. B takes Kt	

All this leaves the Queen's side dangerously weak.

14.	B P takes B
15. Kt to K 5th	Kt takes Kt
16. B takes Kt	B to Q 2nd
17. Q to Kt 5th	Q to B 2nd
18. Q R to Kt sq	

His efforts to draw being frustrated, and his onslaught exhausted, a diversion is sought on the Queen's flank. Black

WHITE (Herr B.)	BLACK (Mr. P.)

continues with admirable judgment and coolness.

18.	K R to B sq
19. Q to Kt 3rd	

White's forces are most curiously out of play, and he ought here to have taken advantage of the opportunity to Castle. He altogether ignores the gathering counter attack.

19.	B to B 3rd
20. B takes P	Q to Q 2nd
21. P to R 5th	

Returning to the offensive, when he can at best hope for a draw. Q to Q 6th was his last chance of staving off defeat.

21.	P to K Kt 4th
22. R to K 5th	B to Kt 4th
23. Q takes P	B to R 3rd
24. B to B 4th	

The object of this is not easy to see. Q to Kt 7th seems the best move at command.

24.	Q R to B sq
25. R to Kt 2nd	Q to B 3rd
26. K to Q sq	B to Q 6th
27. B to Q 6th	

Sheer desperation, but there is nothing else to do. It is an instructive evidence of the strength of Black's position that this does not even lead to an exchange of Bishops.

27.	Q takes B
28. Q to K 5th	Q takes Q
29. P takes Q	K R takes P
30. R takes P	Q R takes P
31. R to Kt 8th (ch)	K to Q 2nd,

And White resigns, Black finishing the game in masterly style.

CHESS IN NORFOLK.

Mr. J. O. HOWARD TAYLOR gives odds of Q R and move to Mr. E. S.

WHITE (Mr. E. S.)	BLACK (Mr. T.)
1. P to K 4th	P to K 4th
2. B to Q 3rd	Kt to K B 3rd
3. Kt to K B 3rd	Kt to Q B 3rd
4. P to Q Kt 3rd	B to Q B 4th
5. B to Kt 2nd	P to Q 3rd
6. Q to K 2nd	Kt to K R 4th
7. Kt to Q B 3rd	

A recent match odds is presumably unacquainted with the openings; but White could have scarcely blocked himself more thoroughly had he devoted his best energies to that object.

7.	Kt to K B 5th
8. Q to K B sq	P to K Kt 4th
9. P to Kt 3rd	Q B to K R 6th
10. Q to Kt sq	Kt takes B (ch)

WHITE (Mr. E. S.)	BLACK (Mr. T.)
11. P takes Kt	Q to K B 3rd
12. K to K 2nd	Q takes Kt (ch)

The game so far has been very tame, but Black now continues it rather prettily; White's moves are forced, and the odds are practically recovered.

13. K takes Q	Kt to Q 5th (ch)
14. K to K 3rd	Q B to K Kt 5th
15. P to K B 3rd	Kt takes K B P (dis ch)
16. P to Q 4th	P takes P (ch)
17. K to Q 3rd	Kt takes Q
18. Q R takes Kt	P takes Kt

And the odds-giver wins, through disparity of skill, in the end game.

The City of London Club is now arranging another of its gigantic tournaments, which will be commenced early in October. In addition to the usual prizes, which will amount to about £40, Mr. Anger has this year presented for competition a special prize of £5, and Mr. Mocatta a special prize of £4.

The annual meeting of secretaries of metropolitan chess clubs to arrange the dates of matches for the ensuing season, will take place at Oliphant's, Ludgate-circus, on Sept. 18, at seven o'clock.

The Zukertort Chess Club, which has been established under the fostering care of Mr. Bird to "afford facilities to the working classes for the cultivation of chess" is giving effect to this object by bringing some of the leading masters to meet its members in friendly fight. On Wednesday, Sept. 5, at the club-room, Mr. Gunsberg played twenty simultaneous games, of which he won eighteen, drew one, and lost one. There was a large and encouraging attendance, and other similar gatherings are being arranged, in one of which Herr Von Bardeleben is to give a blindfold exhibition. Whilst we do not share the enthusiastic expectation of some of its supporters of this new mission to working men, we trust the club may have a long and prosperous career.

The east wing of the Star and Garter, at Richmond, comprising banqueting and other rooms, was destroyed by fire on Saturday, Sept. 8.

OLD FAMILIAR FACES.

Some weeks ago, in a speech in the House of Commons, Sir William Harcourt referred to the conduct of a certain person as resembling that of Dogberry, in writing himself down an ass. Now, every reader of Shakspeare knows that Dogberry did nothing of the kind, since writing was not one of the worthy constable's accomplishments; but that which he really said was: "O, that he" (his companion, Verges) "were here to write me down an ass!" This looseness of quotation is, now-a-days, only too common. One constantly sees the last line of Milton's "Lycidas": "To-morrow to fresh woods and pastures new!" perverted into the vile tautology: "To-morrow to fresh fields and pastures new!" The other day I came across Pope's uncomplimentary allusion to the fair sex, "Woman's at best a contradiction still," improved into "Woman's at least." How often do you find Butler's famous couplet correctly given?—

> Compound for sins they are inclined to,
> By damning those they have no mind to.

This, indeed, is a favourite lay-figure with ready speakers and easy writers, who dress it up in every variety of disguise. Another quotation, almost as frequently distorted, is—

> He that complies against his will
> Is of his own opinion still;

which sometimes makes its appearance in the following form:—

> He that's *convinced* against his will
> Is of his own opinion still—

a very different thing; and we may be sure that Butler would never have written so manifest an absurdity. Even such well-known (and mildly insipid) lines as those of Dr. Watts—

> Let dogs delight to bark and bite,
> For God hath made them so—

undergo the modifying process, and come out as—

> Let dogs delight to bark and bite,
> It is their nature to.

The saying ascribed to Fouché, who borrowed it, perhaps, from Talleyrand—"It is a blunder; it is worse than a crime; it is a political fault," has been cut down to, "It is not a crime but a blunder." It would be easy to multiply examples of the audacious coolness with which—not in common parlance only, but in grave discourse; and not in leading articles only, but in works of matured pretension—even the most familiar quotations are transposed, twisted, and tortured, until their authors would find it as difficult to recognise them as mothers do to recognise their children who have been kidnapped by gipsies and transmogrified accordingly. (An image we adapt from Sheridan, who conveyed it from Churchill.) Yet, surely, when we borrow from an author, the least we can do is to preserve the article borrowed in its original condition. We may be satisfied that it is what he wished and meant it to be, and that he does not thank us for any of our alterations. We may be equally satisfied that our alterations will not be improvements. If he lends us his guineas, what right have we to clip them?

It is interesting to observe what are the essential points in those quotations which have become "household words." Take such examples as—"Pity's akin to love;" "We have scotched the snake, not killed it;" "Virtue is her own reward;" "He who fights and runs away, may live to fight another day;" and we shall perceive that the primary condition is Brevity. The words must be few, and so put together as to be easy of remembrance. Then, if few, they must be fit—that is, aptly chosen; conveying, without surplusage, the exact meaning of the author. Here is an example—

> A heap of dust alone remains of thee;
> 'Tis all thou art, and all the proud shall be!

In this couplet every word *tells*, every word is the right word, and the whole is the apt expression of what is, no doubt, a common truth, but is so put as to have all the force of novelty and all the air of freshness. But this leads us to the third essential—that the truth, or the idea conveyed, shall be, as we have said, "common"—patent to everybody, intelligible to everybody, and therefore accepted by everybody. In fact, a phrase or passage obtains extended currency exactly in proportion to its *obviousness*. Any recondite image or remote inference would have no chance of acceptance. We do not get our familiar quotations from Hobbes's "Leviathan" or Sir William Hamilton's "Discussions on Philosophy." The multitude adopt a quotation, and make it their own, when it expresses for them, in a form which they can understand and remember, their own sentiments on subjects connected with their everyday life. On this principle one may explain the popularity of such quotations as Burns's "Man's inhumanity to man Makes countless thousands mourn" (where, by-the-way, the alliteration helps to fix it in the memory); or Longfellow's "Still achieving, still pursuing, learn to labour and to wait"; or Tennyson's "Kind hearts are more than coronets, And simple faith than Norman blood." The multitude have also an ear for poetical rhythm, and swiftly seize upon a phrase which has a musical turn, or is graced by a pretty image, or brightened by an antithesis; as, for instance, "God made the country, and man made the town" (Cowper); "He who ascends to mountain-tops shall find The loftiest peaks most wrapped in clouds and snow" (Byron); "Coming events cast their shadows before" (Campbell); "Immodest words admit of no defence, For want of decency is want of sense" (Roscommon); "Full many a flower is born to blush unseen" (Gray)—and so on.

A story is told of a critic who, during the recital of a new poem by a young versifier, was observed to lift his hat at almost every other line, and excused himself on the ground that he always bowed to old acquaintances. The courtesy is one which we might incessantly practise if we made a point of acknowledging all the veteran faces, worn and furrowed with age, that greet us in the guise of "Familiar Quotations." Recently a proposal was made, we think, to banish them from our daily speech and writing, on the ground that the world was weary of their constant reappearance. We are not so sure of that! No doubt one is somewhat sick of "Audi alteram partem," and "Just as the twig is bent," and many of the same class; but, on the other hand, not a few of our old friends appeal to our sympathies with their venerable air and kindly habit, no less than with their reputed wit and wisdom. We have no patience with the cold-blooded ingratitude which would thrust strangers into their accustomed places. They have served us well for years, and our fathers, and our fathers' fathers: shall we turn them adrift into the howling wastes of oblivion? "We have heard the chimes at midnight," "I had rather be a dog and bay the moon," "To err is human; to forgive, divine"—let not the cynic think he will easily get rid of these old familiar faces! Like the poor, they are always with us. Besides, it is but an act of ordinary gratitude to cherish the friends who have served our fathers and our grandfathers so faithfully; to respect them in their old age; and not to jeer at the rags and tatters which are due, after all, to the freedom with which we have treated them. Even now, when an author is gravelled for lack of matter, they come readily at his call, while the reader is seldom unwilling to receive them with cordiality. W. H. D.-A.

It is a happy family party in which the father is a hale and active elderly gentleman still able to enjoy a walk of ten or twelve miles, and the daughters have been trained in habits of outdoor exercise, so that their brother, as good a pedestrian as most young Englishmen, will not be sacrificing his own due allowance of healthy exertion by keeping company with them in a ramble of five hours over the moors and through the forest on this fair September day. Few pleasures of life are more genuine, or seem to be a more just and natural reward of wise and temperate living, than to preserve at fifty or sixty years of age the bodily vigour, as well as the cheerful alacrity of mind, which enable a parent, or even an uncle—that often delightful degree of relationship, free from parental cares and expenses—to share the joys of beloved youth; to be still associated with two or three boys and girls, or those who recently were so considered, in some active recreation where his earlier experience may qualify him to be their guide and adviser. He may have local knowledge of the scenes which they are now visiting for the first time. Before they were born, when he was a roving bachelor of adventurous and aesthetic predilections, long before the new palatial hotel was built and its gardens and park were laid out, on this sunny slope overlooking the beautiful Lake, he lodged in a rustic cottage and climbed the steep hill-paths, where to-day, as he trudges along with his juvenile companions, he will fondly look for remembered turns leading to the rocky point of vantage whence the eye penetrates a deep mass of foliage to see the foaming cascade that rushes down the opposite cliff; or to the sudden opening of a fairyland valley spreading its green meadows at the margin of the stream. These fair sights of nature which have frequently haunted his memory, and have sometimes consoled his thoughts amidst the troublesome business of manhood, perhaps in distant lands where he toiled for wealth and distinction, are now re-visited with his grown-up children; and let us hope that their mother, who cannot walk so far with them, is resting or quietly strolling with their aunt in the hotel gardens, expecting on their return to be told of a day of pure and fresh delight. Such holidays in Westmoreland or Cumberland, in Derbyshire, or in Wales, or in the romantic Scottish Highlands, or on the shores of Killarney, or in Norway or Switzerland or Bavaria, if they please, may again and again be enjoyed by the happy and prosperous father, his son and his two daughters, the former preserving, the latter inheriting, that priceless gift, "a sound mind in a sound body," with affectionate fellowship in all the innocent pleasures that earth abundantly provides.

THE TOURIST SEASON: SETTLING THE DAY'S WALKING EXCURSION.

"THE OUT-PATIENT."

A Tale of a Dog.

REPRINTED FROM THE "PALL MALL GAZETTE," MARCH 31, 1888.

CANIS SUM: HUMANI NIL A ME ALIENUM PUTO.

He prayeth best who loveth best
All creatures, great and small.

From the Original, by the Celebrated Dog Painter, YATES CARRINGTON, exhibited at the Royal Academy, London. Purchased by Messrs. **PEARS.**

On Sunday morning, July 31, 1887, a hospital porter heard a dog barking at the door; he, though a kindly man, thought of his patients, and went to drive the dog away. Instead of finding one dog, he found three. Two white-and-tan fox-terriers were standing up on the top of the flight of steps, while a long-haired collie lay beside them, looking very sorrowful, for he was sorely wounded, and lay in a thick pool of blood. The moment the good porter showed his face the two terriers bolted, leaving their lame comrade at the door. At this moment a medical student came in, and he at once treated the collie as an ordinary patient. On examination, it was found that the dog had an artery cut on his right foreleg, with a gaping wound three inches long. The leg was dressed and bandaged, the hæmorrhage was arrested, and the dog lay outside the hospital on the grass for a couple of hours, and then went away. Such is the story of Bob, a drover's collie. The friendly hospital was KING'S COLLEGE HOSPITAL, and the touching incident made a great sensation at the time. While some were sceptical, many were touched by the simple pathos of the little drama. Mr. Yates Carrington, the eminent dog painter, happened to read the incident in the papers, and at once went down to the hospital to make inquiries. He was also struck by the kind and intelligent sympathy for the distress of their comrade shown by the fox-terriers. "If it is true," he said, "why should I not tell the story on canvas?" He made his inquiries; Mr. Mosse Macdonald, the secretary of the hospital, gave him every help; the dogs in the drama were discovered, and the result is the picture which Mr. Carrington exhibits at the Academy this year.

Of this picture we were favoured with a private view. There was the picture on its easel, occupying the place of honour in the cosy studio, flanked by half-a-dozen other pictures of dogs—toy dogs, terrier dogs, mongrel dogs—which Mr. Carrington loves to paint. The famous Teufel had just left the platform on which he had been sitting to his master, and Mr. Carrington told us how he painted the "Out-patient." "I read the story, set off at once to the hospital, and Mr. Macdonald kindly gave me every assistance. A thick patch of blood was still on the hospital steps, and starting from that we traced it all round the back of the hospital to a spot in Clement's Inn, called Yates's-court. In the hoarding between the court and the enclosure of the Law Courts there was a hole just large enough to admit the dog. Below the hole was a piece of glass. This discovery, and the state of the pavement, which was like a slaughter-house, left no doubt in our minds that this was the scene of the 'tragedy.' While we were talking, Mr. Hutt, the bookseller, came out and informed us that his terrier was one of the actors in the drama, and thus No. 1 was secured. The second terrier belonged to his brother. The patient was the property of a drover, who in driving his cattle was frequently in the vicinity of the hospital. You see the three dogs were evidently in the habit of meeting one another, for two lived close by the hospital, and the third often passed it. They were playing together on the Sunday morning. The collie cut his foot, and his little friends induced him to follow them to the out-patients' door of the hospital. The interesting point to me was that the dogs took their shortest cut through the various alleys past the back entrance to the hospital to the *front door*, mind you. The conclusion I came to was that the terrier had constantly seen patients carried in that way. The end of it all was that I got the drover to lend me the collie, and was also able to borrow the terriers. The collie was the most intelligent dog sitter I ever had. 'Jack,' one of the terriers, did not at all approve of studio life, for on the fourth morning after his arrival here my servant informed me at breakfast that he had vanished. Little thinking that 'Jack,' who lived four miles away, and had never been up in St. John's Wood before, had been cute enough to find his way through Marylebone and Holborn, I wired his master, and received the reply that 'Jack' arrived safely at 6.30 a.m., barking for admission in time for breakfast. You see the blood in the picture," said Mr. Carrington, pointing to the red splashes on the door. "To paint that part of the picture I sent to the butchers for some, and dabbled the collie's paw into it, but he would persist in licking it off, and with evident relish."

This pathetic and interesting painting—of which a replica is to hang in the Hall of King's College Hospital as a memento of the event—has been bought by

Messrs. PEARS,

and can be seen, together with the celebrated Picture of "Bubbles," by Sir JOHN E. MILLAIS, Bart., R.A., on presentation of visiting-card, in the Art Gallery, at their Offices, 71-75, NEW OXFORD-STREET, LONDON, W.C.

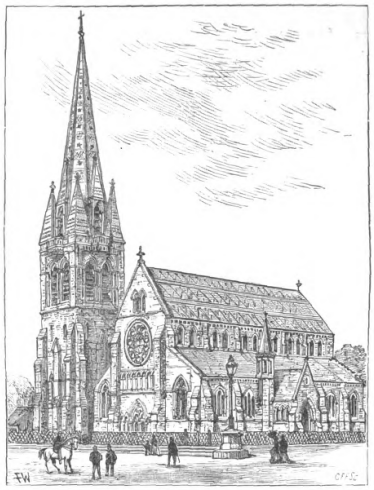
NATIONAL EISTEDDFOD OF WALES.

At the Wrexham Eisteddfod, on Sept. 4, the opening day, the great choral competition was the chief event of the morning. Three choirs sang—the Wrexham Philharmonic Society, the Carnarvon Choral Union, and the Birkenhead Cambrian Choral Society. The adjudicators unanimously resolved that the first prize of £150 should be given to the Carnarvon Choral Union; and the Birkenhead choir took the second prize, value £20. The prize of £20 offered for the best English essay on the influence of Celtic genius on English literature was divided between Mr. J. Jones, of London, and Mr. A. Lewis, of Bala. The prize of £20 offered by the National Eisteddfod Association for the best critical essay on the works of Ceiriog was secured by the Rev. Evan Lewis, Congregational minister, of Hull. In the evening there was a concert, under the presidency of Sir John Puleston, M.P.

Mr. Osborne Morgan, M.P., was one of the presidents on the second day, and he gave an interesting address. Professor Rhys took the chair at a meeting of the Cymmrodorion Society, and Mr. Lewis Morris read a paper on the proposed University for Wales. A resolution urging the Government to establish a University organisation in the Principality was carried unanimously. There was a choral competition for persons under sixteen years of age, and prizes were awarded for this, for an essay on the leading scientific discoveries during the reign of her Majesty, for the best poem on the Sabbath in Wales, for the best Welsh novel, and the best carved bardic chair. In the evening Mendelssohn's "Elijah" was performed: and Miss Helen Gladstone presided at a meeting of the Association for Promoting the Education of Girls in Wales.

Sir Watkin Williams Wynne presided on the third day. The Rev. T. T. Jones was "chaired" as the successful bard who had sent in the best ode. The Clwydian Male Voice Choir from Ruthin was adjudged the male choral prize, the second prize being gained by the Arvonic Choir from Carnarvon. Other prizes for essays, &c., were decided, and meetings of societies connected with the occasion were held. A list of subjects for competition at the Brecon Eisteddfod next year was presented, among them being a prize of £100 for the best landscape in oil or water-colours which takes in the town of Brecon. This handsome prize was supplemented by £50 for the best landscape from any point south of the Usk. It was decided to hold the Eisteddfod of 1890 at Bangor. At night there was a miscellaneous concert in the Pavilion, the Hon. George T. Kenyon, M.P., presiding. The principal artistes were Madame Antoinette Sterling, Mrs. Glanffrwd Thomas, Miss Annie Roberts, Mr. James Sauvage, and Mr. Maldwyn Humphreys.

The Gorsedd which preceded the meeting on the fourth day was rendered additionally interesting from the fact that two ladies were among those invited into the bardic fraternity; these were Madame Antoinette Sterling and Mrs. Mary Davies. This was the concluding day of the Eisteddfod, which is stated to have been the most successful ever held. Sir John Puleston, M.P., who presided, announced that when he was at Homburg lately, the Prince of Wales desired him to express his regret at his inability to attend the Eisteddfod, and to say that his Royal Highness hoped at some future Eisteddfod to have the pleasure now denied him. At the conclusion of his address, he moved that a vote of condolence should be sent to Mrs. Richard on the death of her husband. This was unanimously agreed to. The prize gold bâton and the first prize of £50 were won by the Newton Competitive Choir. Mr. T. E. Jacob took the £50 prize for the best essay on Wales under Queen Victoria, and Mr. L. W. Lewis £20 for the best heroic poem. In the evening Handel's "Messiah" was performed in the Pavilion.



The total sum received in admission fees amounted to nearly £3000, and another £1000 was subscribed. This is stated to be the largest sum ever taken at an Eisteddfod.

Sir John Pender had a private audience of the Sultan on Sept. 8, and received from his Majesty the Grand Cordon of the Medjidieh.

Through the Foreign Office the Board of Trade have received a binocular-glass and two silver medals and diplomas, which have been awarded by the French Government to Captain G. W. Lash, master, and Messrs. A. Scott and J. E. Burnside, officers of the British steam-ship Stephanotis, in recognition of their services to the shipwrecked crew of the French steam-ship Suez, which vessel was sunk, on Jan. 24 last, off Lisbon, after having been in collision with the German steam-ship Dittmarschen.

AN EARTHQUAKE IN NEW ZEALAND.

The earthquake felt in both the North and South Islands of New Zealand, on Sept. 1, was not attended with any great mischief, and the first reports concerning it were much exaggerated. The spire of the Cathedral Church in the city of Christchurch, the capital of the Canterbury Province, in the South Island, was said to have been destroyed; but it was only partially damaged. We are obliged to Mr. F. T. Haggard, of Tunbridge Wells, for sending us a photograph of the Cathedral,

CATHEDRAL OF CHRISTCHURCH, NEW ZEALAND, THE SPIRE OF WHICH WAS DAMAGED BY AN EARTHQUAKE.

which is a handsome building, with nave, two aisles, tower and spire, the transepts and permanent chancel being not yet added to it. It was consecrated in 1881, but the diocese of Christchurch was founded in 1856; its first Bishop, the Right Rev. H. J. Chitty Harper, D.D., was in 1868 elected Primate of New Zealand by the General Church Synod; but there are Bishops of Auckland, Wellington, Waiapu, Dunedin, and Nelson. The earthquake shocks, five times repeated in half-an-hour, also damaged some chimneys in the city, but caused no loss of life, and were scarcely more destructive than the similar visitation in Essex, three or four years ago, and others which have taken place in our own country.

The British Pharmaceutical Conference concluded at Bath on Aug. 5. An invitation to visit Newcastle-on-Tyne next year was accepted; and Mr. Charles Umney, of London, was elected president for the year 1889.

The Trades Union Congress at Bradford concluded its proceedings on Saturday, Sept. 8, when resolutions were adopted condemning the Merchant Seamen's Widows and Orphans Pension Fund Bill, and taking exception to the interpretation put upon the Conspiracy and Protection of Property Act by Mr. Justice Stephens and Mr. Justice Hawkins. The debates and resolutions and amendments on the many subjects about which the congress was engaged throughout the week were of interest all through; the interest of the proceedings lying mainly in the information which they give us about the wants and wishes of the working classes as we find them stated by the representatives of their own choice. Dundee has been chosen as the place of meeting next year.

HYDE PARK ON SUNDAY.

In the height of the fashionable London season, on a fine Sunday afternoon of June or July, the scene in the park, which our Artist has delineated, is one of considerable social interest. This crowded promenade, in which ladies and gentlemen have a good chance of meeting their acquaintance, takes place, weather permitting, with tolerable regularity at that period of the year. There is, at any rate, a breath of fresh air to be got, with a little foliage, pleasant until it becomes dusty and sooty, and the view of a certain extent of grass, to say nothing of the pretty flower-beds. Those who have secured chairs may indulge in talk which easily finds its topics among the passing groups and figures. Any gentleman who feels a craving for his cigar will, of course, retire to a sufficient distance from the ladies' walk. Dignified English womanhood is well represented in this assemblage of correctly-behaved people, and few will object to such a harmless way of passing one or two hours on Sunday.

MUSIC.

THE HEREFORD FESTIVAL.

This celebration (the one hundred and sixty-fifth meeting of the cathedral choirs of Hereford, Gloucester, and Worcester, held in yearly alternation at each city) closed on Sept. 14. Having already given details as to the object of these festivals, and the arrangements made for that which has just taken place, but brief record must now suffice, as most of the performances occurred too late for present notice, and must be referred to hereafter. The inaugural service in the cathedral included the co-operation of the three cathedral choirs and other choristers; and, in the morning, the delivery of a sermon special to the occasion by the Rev. Canon Sir F. A. Gore Ouseley, Bart. At the evening service, on the Sunday, a sacred cantata, entitled "Samuel," was performed, in place of the anthem. It is the composition of Dr. Langdon Colborne, organist of Hereford Cathedral and conductor of the festival. It includes narrative passages for a bass voice, solos for a treble, and choral writing, with the association of a small string band. The most effective portions were those for chorus, which included the introduction of several more or less familiar hymn-tunes. Dr. Colborne has purposely aimed at simplicity rather than elaborateness of style, with the object of rendering the work widely available by parish choirs.

As at most of these Three Choir festivals, the first of the oratorio performances in the cathedral (on Sept. 11) was appropriated to "Elijah," the principal solo vocalists in which were Misses Anna Williams and Ambler, Madame Enriquez, Mr. E. Lloyd, and Mr. Santley. Comment on such familiar details would be superfluous. The evening of the same date was devoted to the first concert in the Shirehall, Sir Arthur Sullivan's dramatic cantata "The Golden Legend" having been selected for the occasion, with Madame Albani, Miss H. Wilson, Mr. E. Lloyd, and Mr. Brereton as chief solo vocalists. No new compositions were commissioned for the festival, the important specialties announced having been Mr. Cowen's "Song of Thanksgiving," composed for, and performed at, the recent opening of the Melbourne Centennial Exhibition; and the Rev. Sir F. A. Gore Ouseley's oratorio, "St. Polycarp"; the first-named work given for the first time in England, the other having been seldom heard since its first production some thirty years ago. These and other features of the festival must be spoken of hereafter.

There is as yet nothing to record of London music beyond the promenade performances at Covent-Garden Theatre, which are fully maintaining the high character gained for them in Mr. Thomas's previous five seasons. Large and enthusiastic audiences are attracted nightly, the classical programmes on Wednesday evenings being special features of each week. All tastes, indeed, are amply provided for in each evening.

The next important revival of serial performances will be that of the Saturday afternoon concerts at the Crystal Palace, which will enter on their thirty-third season on Oct. 13.

The remaining important provincial festival of the year will be that of Bristol, where the sixth triennial celebration will be held (in the Colston Hall) on Oct. 16 and three following days.

An endeavour is being made (under the competent direction of Dr. C. Swinnerton Heap) to establish festivals at Hanley (Staffordshire), the initial experiment being fixed for Oct. 11.

LIFE, FORTUNE, AND HAPPINESS.

Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease,
Ring out the narrowing lust of gold,
Ring out the thousand wars of old,
Ring in the thousand years of peace.
Tennyson.

IMPORTANT TO ALL.—As a natural product of nature, use ENO'S "FRUIT SALT." You cannot overstate its great value in keeping the BLOOD PURE. Without such a simple precaution the JEOPARDY of life is immensely increased. As a means of keeping the system clear, and thus taking away the groundwork of Malarious Diseases, and all Liver Complaints, or as a Health-giving, Refreshing, Cooling, and Invigorating Beverage, or as a Gentle Laxative and Tonic in the various Forms of Indigestion.

HEADACHE, DIARRHŒA, &c.—"Hôtel de Couronne, Morat, Switzerland, Jan. 28, 1882.—Dear Sir,—Whilst staying at the town of Morat, I met a patient of mine, who was on a tour for the sake of his health. He had been suffering from giddiness when rising in the morning, perpetual nausea, and constant attacks of severe diarrhœa. He had consulted several London and Parisian doctors without receiving any lasting remedy; he now consulted me. I examined him and was puzzled at his case. He was in a bad state, and I feared he was not long for this world. Bethinking me of the wonderful remedy my wife had given me whilst I was an invalid (suffering under somewhat similar yet much slighter circumstances), I resolved me to recommend it to him. This remedy was ENO'S 'FRUIT SALT.' I directed my patient to take two doses per day, morning and night, and in a short period he expressed himself cured. Sir, I write to you (as a professional man) to thank you for your great invention, which has not only cured myself, my patient, and many other sufferers, but has procured me a handsome fee from the grateful man. I recommend ENO'S 'FRUIT SALT' as a sure cure for Headache, Diarrhœa, Nausea, Giddiness, &c., and as a pleasant drink to those needing a mild aperient.—I am, yours sincerely," (an M.D.).

THE SECRET OF SUCCESS.—"A new invention is brought before the public, and commands success. A score of *abominable imitations* are immediately introduced by the unscrupulous, who, in copying the original closely enough to deceive the public, and yet not so exactly as to infringe upon legal rights, exercise an ingenuity that, employed in an original channel, could not fail to secure reputation and profit."—ADAMS.

CAUTION.—*Examine each Bottle, and see that the Capsule is marked* ENO'S "FRUIT SALT." *Without it you have been imposed on by worthless imitations. Sold by all Chemists.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

DISORDERED STOMACH AND BILIOUS ATTACKS.

A gentleman writes:—"Dec. 27, 1887.—After twelve months' experience of the value of the **'VEGETABLE MOTO,'** I unhesitatingly recommend their use in preference to any other medicine, more particularly in bilious attacks; their action is so gentle, and yet so effective, that nothing equals them in my opinion. They have never failed to give the wished-for relief. I take them at any hour, and frequently in conjunction with a small glass of Eno's 'Fruit Salt.'—Yours gratefully,
ONE WHO KNOWS."

West Indies. To Mr. J. C. ENO, London.—"Please send me further supply of your **'VEGETABLE MOTO'** to the value of the P.O. inclosed (eight shillings). The first small parcel came fully up to what is written of them.—St. Kitts, West Indies, Oct. 11, 1887."

THE SAME CORRESPONDENT, in ordering a further supply of the **"VEGETABLE MOTO"** in July, 1888, writes as follows:—"I cannot help telling you that the 'Moto' is a valuable addition to your 'Fruit Salt,' and ought to be as generally known as the latter."

ENO'S "VEGETABLE MOTO," of all Chemists, price 1s. 1½d.; post-free, 1s. 3d.

ENO'S "FRUIT SALT" WORKS, POMEROY-STREET, NEW CROSS-ROAD, LONDON, S.E.

VAN HOUTEN'S PURE Soluble BEST AND GOES FARTHEST. COCOA

EASILY DIGESTED.—MADE INSTANTLY.

WILLS AND BEQUESTS.

The will (dated June 16, 1888) of the Right Hon. Henry Richard, Baron Wolverton, late of Iwerne Minster, Dorset, and No. 67, Lombard-street, who died on July 2 last at Coombe Wood, Kingston-on-Thames, has just been proved by the Hon. Pascoe Charles Glyn, the uncle, the executor, the value of the personal estate exceeding £42,000. The testator devises and bequeaths all his estate and hereditaments at Iwerne, Dorset (subject to the life interest of the Right Hon. Georgiana Julia Maria Baroness Wolverton, in such parts thereof as may be in her occupation) to his brother, Frederic, together with the furniture, plate, glass, pictures, carriages, horses, farm stock, &c., in and about the mansion-house, and the medals, swords, and decorations of their father, the late Admiral Henry Carr Glyn; and £300 each to his housekeeper and valet. The residue of his real and personal estate he leaves, upon trust, for his two sisters, Rose Riversdale Lady Norreys, and Alice Coralie Glyn, for life, and at their death, to their respective children as they shall appoint.

The will (dated Dec. 5, 1883), with a codicil (dated Oct. 1, 1886), of Mr. Benjamin Piercy, C.E., J.P., late of Marchwiel Hall, Denbigh, and Drapers-gardens, E.C., who died on March 24 last, was proved on Sept. 5 by Mrs. Sarah Piercy, the widow, Francis George Whitwham, Edmund Bower Bernard, and Evan Morris, the executors, the value of the personal estate amounting to upwards of £324,000. The testator bequeaths one tenth of what he may die possessed of over £110,000 to such charitable institutions and objects as his executors may determine, and at such times and in such manner as they may think fit. The residue of his real and personal estate he leaves, upon trust, to pay one fifth of the income to his wife, for life, or during the time she shall remain his widow; and the remaining four fifths of income between his children, his brother, Robert, and his sister, Jane. At the death or second marriage of his wife, the capital and income are left in equal shares between his children and his said brother and sister; but the shares of his children and his brother are to be held in trust for them, for life, and at their death to their respective children.

The will (dated Feb. 12, 1883) of Mr. Charles Joseph Lambert, formerly of No. 3, Queen's-street-place, Upper Thames-street, afterwards of No. 29, Park-lane, and late of No. 1, Crosby-square, merchant, who died on July 11 last, was proved on Aug. 16 by Mrs. Susan Lambert, the widow, and John Alexander Weir, the executors, the value of the personal estate exceeding £274,000. The testator bequeaths £60,000, and all his pictures, bronzes, plate, furniture, horses and carriages, to his wife, Mrs. Susan Lambert; and £1000 to his executor and partner, John Alexander Weir. The residue of his real and personal estate he leaves, upon trust, during the life of his wife to pay annuities of £300 to each of his children and the surplus of the income thereof to his wife; at her death, he leaves the capital sum between his children, in such shares as his wife shall by deed or will appoint, and, in default of such appointment, in equal shares.

The will (dated Jan. 26, 1877) of Miss Rachel Pinckard, late of No. 23, Tavistock-square, who died on July 26 last, has been proved by John Coles, one of the executors, the value of the personal estate exceeding £53,000. The testatrix bequeaths her leasehold house, with the furniture and effects therein, to her niece Louisa Stebbing; £1000 to Agnes Pinckard; £150 to her executor, and various legacies and specific gifts to friends and relatives. The residue of her real and personal estate she leaves between her six nieces, Louisa Stebbing, Anne Stebbing, Emiline Clough, Amelia Coles, Clara Lathbury, and Jane Slocock, in equal shares.

The will (dated April 3, 1883) and a codicil (dated Jan. 30, 1886) of Mrs. Julia Cave, formerly of Brook House, Sunbury, but late of Boxwell Court, Gloucester, who died on July 7, were proved on Aug. 30, by Thomas Sturmy Cave, the son, and Joseph Lancaster Wetherall, the executors, the value of the personal estate exceeding £30,000. Subject to a legacy of £1000 to the eldest daughter who shall be living at home, for the purpose of carrying on the management of the house, the testatrix leaves all her property, upon trust, as to two tenths thereof, for her son, Thomas Sturmy; two tenths for her son Herbert; and one tenth each for her daughters, Mrs. Emma Henrietta de Carteret, Mrs. Catherine Louisa Hewitt, Mrs. Louisa Johnson, Fanny Blanch Cave, Georgiana Cave, and Julia Cave. She also declares that, during the life of her husband and herself, certain sums of money have been advanced to some of her children, and that such sums are to be taken into account upon the distribution of her estate.

The will (dated Aug. 8, 1888) of Mr. Allen Fletcher, late of No. 6, Lord Mayor's-walk, York, who died on Aug. 19 last, was proved on Aug. 29 by William Pulleyn and William Hood, the executors, the value of the personal estate exceeding £26,000. The testator bequeaths £25 each to the Wilberforce School for the Blind, the York Bluecoat Boys' School, the York County Hospital, and the York Infirmary; his house, No. 6, Lord Mayor's-walk, the furniture and effects therein, and £100 to his wife, Mrs. Annie Fletcher; and other legacies. The residue of his real and personal estate he leaves, upon trust, for his wife, for life or widowhood (in the event of her marrying again she is to have the income of £6000), and subject thereto for his children, in equal shares.

The will (dated May 8, 1888) of Mr. John Beale, late of Belle Vue, Eastern Villas-road, Southsea, Southampton, who died on May 28 last, was proved on Sept. 3 by Henry Beale and William Beale, the brothers, Mrs. Maria Beale, the widow, and William Saunders Messiter McCallum, the executors, the value of the personal estate amounting to upwards of £25,000. The testator bequeaths all his furniture and effects and £200 to his wife, and also the income of £10,000 during her life or widowhood; £500 each to the London Hospital for Incurables and the Cancer Hospital (London); £1000 to his nephew, Roland Lang; £500 each to his godson, Methuen Wilson, Mrs. Hoffmeister, and Edgar Hoffmeister; and other legacies. The residue of his property he leaves between his brothers, Henry, Charles, and William, his sister Anna, Frederick Beale, and Augustus Roper, share and share alike.

The will (dated Jan. 25, 1879) and a codicil (dated Aug. 7, 1888) of Mr. John Diplock, formerly of No. 94, Upper Tulse-hill, and Ivy House, Clapham, but late of St. Germains, Honor Oak-road, who died on Aug. 8 last, were proved on Sept. 4 by Thomas Diplock, the son, and Elizabeth Diplock, the daughter, the executors, the value of the personal estate exceeding £24,000. The testator bequeaths a legacy of £50 and an annuity of £50 to his wife, Mrs. Hannah Diplock; and gives and devises very many freehold and leasehold houses round London to his children. The residue of his real and personal estate he leaves equally between his children. He also directs that he is not to be buried for seven clear and whole days after his decease or supposed decease.

The will (dated May 25, 1886) of Mrs. Emma Mary Ann Maria Knowles, the widow of the late James Sheridan Knowles, the well-known dramatist, formerly of No. 34, Southwick-street, Cambridge-terrace, Hyde Park, but late of No. 29, North Bank, Regent's Park, who died on May 10 last, was proved on Aug. 25 by Richard Brinsley Knowles; Emma Webb, the niece; and Heber Coghlan, the executors, the value of the personal estate exceeding £5000. The testatrix bequeaths £1000 each to the Pastors' College in connection with the Metropolitan Tabernacle, the Midnight Meeting Movement (Red Lion-square), and the Stockwell Orphanage for Boys (Clapham-road); £100 to the minister, deacons, and elders of Ardberg Baptist Chapel (Rothsay, Isle of Bute), for general purposes; £300, and all the manuscripts and writings and the interest arising from the acting of the dramas of James Sheridan Knowles, to Mary Knowles Rice; £500 to her niece Mrs. Emma Webb, and other legacies and specific gifts. The residue of her property she leaves to her said niece Emma Webb, absolutely.

FRUIT-CULTURE FOR PROFIT.

A conference of fruit-growers was held at the Crystal Palace on Friday, Sept. 7. Mr. F. T. Rivers read a paper on "Fruit-Culture for Profit," and advocated the adoption of means for drying fruit in seasons when there is a glut. Other papers were read on the packing, carriage, and marketing of fruit, and on the land-tenure of fruit-growers. As regards the picking and marketing of fruit, it was stated that the Frenchman was far more careful than the English grower, and, consequently, got a better price for his produce. It was said, for instance, that strawberries sent from Cornwall are often packed in ferns, which sweated the fruit and altered its colour and taste. English fruit-growers, it was also remarked, rarely troubled whether their fruit was bruised or not, and many of them only picked their apples because they were not ripe enough to be shaken off. In France the grower always hand-picked his finest fruit, and, as he packed it carefully, his mark became known, and he could always rely upon a good price.

The conference was resumed on the 8th, when Mr. D. Tallerman read a paper on "The Science of Fruit Distribution," in which he urged the importance of getting fruit to market in good condition, and of distributing the supply so as to bring the fruit to the consumers in the various large towns. In discussing the subject, it was urged that land capable of growing good fruit could be had at low rents. It was resolved to establish an association of fruit-growers, for the promotion of profitable fruit culture, and the improvement of the present system of fruit distribution; and the Executive Committee was asked to make its first report on Oct. 11.

Beetham's Glycerine and Cucumber

Prepared only by ELLIMAN SONS & Co Slough Eng

The Hon. Sec. of a Local Centre of the N.C.U. writes:—
"June 19, 1888.
"A few weeks ago I went for a 24 hours' ride on a bicycle, and succeeded in covering 204 miles; during the journey I was advised by a friend to try your Embrocation, which I did, with a very good result."

The Hon. Sec. Hartlepool Athletic Association writes:—
"May 19, 1886.
"With respect to your Universal Embrocation I may say that some of the members of our Rovers' Football Club swear by it, and not only use it for sprains, contusions, &c., but rub it all over the body after a match."

VALUABLE DISCOVERY for the HAIR. If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer," for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. "The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

ADVICE TO MOTHERS.—Are you broken in rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

Circular, with further particulars, from CHARLES WILLIAM JONES, Esq., 39, Drury-buildings, Liverpool; or ARTHUR B. JONES, The Sanatorium, S. Paulo, Brazil.

MONTE CARLO AS A SUMMER RESORT. For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.

Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Fetes, &c.

There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.

As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND. The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gotthard line. Through-coaching Sleeping-Cars from Ostend to Milan. Balcony Carriages. Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

AIX-LES-BAINS.—Grand Hôtel Europe. One of the most renowned and best conducted in Europe. Patronised by Royal Family. 300 lofty chambers. Refined table. Large gardens; lawn-tennis.—BERNASCON, Proprietor.

DIEPPE.—Hôtel Royal, facing the sea. Superior first-class house, worthily recommended. Nearest the sea, the casino, and bathing establishment. Table d'hôte. Open all the year. LARSONNEUX, Propr.

GENEVA.—Hôtel and Pension Belle Vue. Oldest reputation as first-class pension. Middle of large shelter garden. Sanitary arrangements perfect. Terms, 8f. a day. Write for Prospectus to JEAN SATTERLIN, Proprietor.

LUCERNE.—Hôtels Schweizerhof and Lucernerhof. An extra floor and two new lifts added to the Schweizerhof. The electric light is supplied in the 200 rooms; no charge for lighting or service. HAUSER FRERES, Proprietors.

MÜRREN, Switzerland.—Grand Hôtel des Alpes. Altitude, 1650 yards. One of the most beautiful spots in Switzerland. This Hotel is just rebuilt in stone, and has all modern improvements and comfort; electric light in every room. Residence of English Chaplain. Lawn tennis. Museum. Telephonic communication with the Hôtel Steinbach, Lauterbrunnen.

MALVERN IMPERIAL HOTEL.—The Largest Hotel in the district. Excellent situation. Replete with every comfort for families. Private sitting-rooms. Splendid views of the Malvern Range. Special Droitwich Brine Baths. Baths of every description. Moderate charges. Manager, S. HOLROYD.

THE "PARKER" UMBRELLA (REGISTERED). PATRONISED BY ROYALTY. 5,000 SILK UMBRELLAS, 2s. 6d. each, direct from the manufacturer. Ladies' or Gents' Plain or Twill Silk. PARKER'S hollow ribbed frames; beautifully carved and mounted sticks. Parcel Post free. 2s. 9d. (or 36 stamps). 15,000 sold in twelve months. List and Testimonials free. Re-covering, &c., neatly done.—J. B. PARKER, Umbrella Works, Broom Close, Sheffield.

GOLDEN HAIR.—Robare's AUREOLINE produces the beautiful golden color so much admired. Warranted perfectly harmless. Price 5s. 6d. and 10s. 6d., of all principal Perfumers and Chemists throughout the world. Agents, R. HOVENDEN and SONS, 31 and 32, Berners-st., W.

COCKLE'S ANTIBILIOUS PILLS.

COCKLE'S ANTIBILIOUS PILLS. FOR LIVER.

COCKLE'S ANTIBILIOUS PILLS. FOR BILE.

COCKLE'S ANTIBILIOUS PILLS. FOR INDIGESTION.

COCKLE'S ANTIBILIOUS PILLS. FOR HEARTBURN.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world; it thoroughly cleanses partially-decayed teeth from all parasites or living animalcule, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Florilline removes instantly all odours arising from a foul stomach or tobacco smoke; being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

MAPLE & CO.

TABLE LINENS.

TABLE LINENS. During the long-continued depression in trade, many of the best Irish manufacturers have still kept their most skilful weavers employed, with the result that stocks have accumulated, till of necessity they must be realised, even at a serious sacrifice.

TABLE LINENS.—MAPLE and CO. having been consulted by several manufacturers so situated, have bought out for cash, on most exceptional terms, an immense assortment of pure hand-made, soft-finish CLOTHS and NAPKINS, which they are now offering at a very large percentage under value.

TABLE LINENS.—The cases are now being opened out, and comprise a large variety of CLOTHS of a substantial character, fit for everyday family use, and which, being pure flax, will wear well and retain their natural bloom till the last. The Cloths are mostly of medium sizes—2 yards by 2½ yards, from 5s. 11d.; better quality, 8s. 11d.; EXTRA quality, 14s. 9d.

TABLE LINENS.

TABLE LINENS.

TABLE LINENS.—Amongst the stocks are a number of CLOTHS, in both medium and large sizes, of altogether exceptional quality; in fact, some of the finest and most beautiful productions of the Irish looms. These are suitable for best use and special occasions, and should certainly be seen. The prices will be found but little more than usually asked for goods of ordinary character.

TABLE LINENS.—Included in the stocks will also be found a large variety of both CLOTHS and NAPKINS suitable for use in Hotels, Clubs, Boarding-houses, &c., and proprietors contemplating the renewing of these items should certainly make an early inspection, or write for samples or quotations. A great saving may be effected by purchasing at once.

TABLE LINENS.—The Stocks also include piles upon piles of DAMASK NAPKINS, as follows: Fish Napkins, from 5s. 2d. per dozen; Breakfast ditto, from 4s. 6d. per dozen; Dinner Napkins, all fine flax, from 6s. 11d. per dozen; extra large Napkins, 8s. 11d. per dozen. These goods will be found of remarkably good value, and are sure to please in use.

SHEETINGS.

SHEETINGS.

SHEETINGS. MAPLE and CO.'S Stock of pure-finish and hand-made Irish, Scotch, and Barnsley LINEN SHEETINGS, as well as plain, and twilled COTTON SHEETINGS, is now completely assorted, and prices are ruling unusually low. Housekeepers would therefore do well to replenish their stores. Patterns free. A special quality Cotton Sheets, very strong, at 6s. 8d. per pair.

HOUSEHOLD LINENS.

HOUSEHOLD LINENS.

THE BRITISH ASSOCIATION.

The annual meeting of the British Association for the Advancement of Science began on Sept. 5 at Bath with an address from the president of the year, Sir Frederick Bramwell. In this he maintained that whatever contributions civil engineers have made to past science by original research, they have by their applications of scientific discoveries done much to advance science, the discoveries in science and the applications of science acting and reacting upon each other. In these applications success had attended the civil engineer mainly because of his attention to small things. The gradual introduction of prime movers to supplant the muscular power of man or beast was described as the greatest feat in our civilisation since the introduction of printing by movable type. The prodigies performed by the steam-engine were referred to; but Sir Frederick prophesied that its place would be taken by some more economical form of heat-engine driven by combustion of gas or petroleum vapour. The impulses given to engineering by the improvement in the making of steel were also dwelt upon.

The eight sections sat on the 6th, the best attended being that of Mechanical Science, where, after the opening address by Mr. Preece on "The Applications of Electricity to Mankind's Needs," Colonel Gourand described Edison's phonograph, the audience being greatly delighted with its reproduction of the human voice in speech and song; and Mr. Edmunds read a paper on the graphophone. In the Economical Section Lord Bramwell's address, read by his brother, upheld the *laissez faire* doctrine in political economy, and condemned legislative intermeddling with property and contracts; in the Geographical Section Sir C. Warren treated on the means of extirpating the slave-trade in Africa; in the Geological Section Professor Boyd Dawkins spoke of the impossibility of measuring geological time in years; Professor Tilden discoursed to the Chemical Section on the need of concentration and thoroughness in study; Mr. Thiselton Dyer addressed the Biological Section on the rise of botany from an elegant accomplishment to a serious study; and Professor Fitzgerald addressed the Physical Science Section.

On the 7th, Mr. G. W. Hastings, M.P., presided in the Economic Section, where Professor Sidgwick gave an address on the current conceptions of State Socialism. Professor Foxwell read a paper on the tendency of competition to result in monopoly, and said that all the most characteristic tendencies of the age favoured the growth of monopoly. Mr. B. Shaw treated of Social Democracy, and considered the municipalisation of urban rents, the speedy nationalisation of the land, and the abolition of the House of Lords to be fast approaching. There was a long discussion. Sir John Lubbock entertained a large audience in the Zoological Department with accounts of the habits of solitary bees and wasps. In the Physiological Department, Professor Roy read a paper in favour of wearing waist-belts and stays, which gave rise to an animated discussion. Sir Charles Wilson again presided over the Geographical Section, where some interesting papers were read.—At night, Professor Ayrton gave a popular address on the subject of the electrical transmission of power.

On Saturday, Sept. 8, the weather being fine and several excursions having been arranged to places of interest, the sections were somewhat thinly attended. In the Chemistry Section the report of the committee on chemical education was presented and discussed at some length. In the Anthropological Section the Rev. B. Danks and Rev. R. H. Codrington described the marriage customs of people in the Eastern Archipelago and Polynesia. Sir John Lubbock, M.P., discoursed to working men in the Drill Hall on the "Mental Condition and Ideas of the Savage Races."

The services at the Abbey and other principal churches were all fully attended on Sunday. At the Abbey, the Bishop of Sydney (Dr. Barry) preached in the morning, and the Rev. Dr. Tristram in the evening: at St. Mary's, Bathwick, the Rev. Hayes Robinson; at St. Michael's, the Rev. T. J. Bonney, Professor of Geology at the London University; and the Venerable Archdeacon Browne, of Madras; the Bishop of Nelson, at St. Andrew's; and at the Octagon Chapel, where for many years the first Herschell was the organist, Prebendary Davis, of Cullompton, was the preacher.

There was a great deal of activity shown in the sections on Monday, the 10th. In the Geographical Section a paper was read on the condition of Central Africa, Bechuanaland, the Transvaal, the Cameroons, Tunis, and South Morocco. In the course of the discussion, Sir Charles Wilson, Sir Francis de Winton, and the Rev. John Mackenzie agreed from their African experiences in thinking that there is not yet any cause for alarm respecting Stanley. In the Economic Section, the variations in the monetary standards, the use of index numbers, and the amount of gold and silver in use as money and in the arts were discussed. In the Technical Science Section, various new applications of electricity to lighting and to other purposes were described. In the Anthropological Section, prehistoric commerce, the early races of Western Asia, and discoveries in Asia Minor, occupied attention.—During the afternoon a large party of the members of the Association were taken over the new baths by Major Davis. These baths incorporate all the portions of the old Roman work which lies beneath them.—Professor Bonney lectured in the evening at the Drill Hall, which was densely filled. He dealt with the structural characters of the gneissic and schistose rocks of the Laurentian and Huronian systems of Canada, and of the pre-Cambrian period of the British Isles.

The sections were very busy on the 11th, which practically saw the conclusion of the Association's work. One of the best attended sections was the Economic Science Section, where a discussion took place on the leasehold system in our towns, and considerable support was given to the enfranchisement project. The industrial education of women was also discussed. Mr. Isaac Pitman was heard in support of his views on spelling reform. The Physical Science and Mechanical Sections discussed the question of lightning-rods. The Chemical Section had before it the action of light on water colours.—In the evening there was a soirée in the Assembly Room.

The General Committee met at the Guildhall on the 12th to receive the report of the Committee of Recommendations, and the concluding meeting was held in the Assembly Rooms; the Mayor entertaining a large party in the evening.

Professor Flower, director of the Natural History Museum, South Kensington, has been elected president of the Association for the meeting at Newcastle-on-Tyne, beginning on Sept. 1 next year; and an invitation from Leeds to meet there in 1890 has been accepted.

EARL AND COUNTESS FITZWILLIAM'S GOLDEN WEDDING.

There were great rejoicings at Wentworth Woodhouse on Monday, Sept. 11, in celebration of the fiftieth anniversary of the wedding day of Earl and Countess Fitzwilliam. A garden-party was given, to which about two thousand invitations were issued to the tenantry and leading residents in the district. In the afternoon there was a gathering in the marble saloon, when a series of presentations were made to the noble Earl and Countess. The tenantry and friends at Wentworth, to the number of three hundred, presented to the Countess her portrait, by Herkomer, and an illuminated address. The followers of the Fitzwilliam Hunt presented to his Lordship a picture of a hunting group in Wentworth Park; in it are portraits of the noble Earl, Ladies Alice and Albreda Fitzwilliam, and the first and second huntsmen. Presentations were also made by the Magistrates of the West Riding, the past and present officers of the Yeomanry Cavalry, the Corporation of Peterborough, and the inhabitants of Malton.

Our last issue contains Portraits of the Earl and Countess Fitzwilliam, a two-page Engraving of Wentworth Woodhouse, with many smaller illustrations of the historic building, and a representation of the Fitzwilliam Hunt picture.

At Doncaster on Sept. 11 the Duke of Beaufort's Button Park won the Great Yorkshire Handicap Plate, Mr. J. Charlton's Treasurer being second, and Lord Durham's Drizzle third. Mr. C. Perkins's Chitabob won the Champagne Stakes, Mr. C. Archer's Frapotel the Fitzwilliam Stakes, Mr. Leybourne's Goldseeker the Doncaster Welter Plate, Sir R. Jardine's Sweetbriar the Clumber Plate, Mr. Abington's Master Bill the Glasgow Plate, and the Duke of Westminster's Rydal had a walk over for the Filly Stakes. On Wednesday Lord Calthorpe's Seabreeze won the St. Leger Stakes, Chillington being second, and Zanzibar third. Lord Penrhyn's Noble Chieftain won the Bradgate Park Stakes, and Mr. Leybourne's Goldseeker the Cleveland Handicap.

SOLD EVERYWHERE, price 1s. 1½d., 2s. 9d., and 11s.

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM
KNIGHT OF THE LEGION OF HONOUR

LIGHT-BROWN COD LIVER OIL

Incontestably proved by thirty years' medical experience to be

THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS

IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D.,
Physician in Ordinary to the Queen in Ireland.

"I consider DR. DE JONGH'S Light-Brown Cod-Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Sir G. DUNCAN GIBB, Bart., M.D.,
Physician to the Westminster Hospital.

"The value of DR. DE JONGH'S Light-Brown Cod-Liver Oil as a therapeutic agent in a number of diseases, chiefly of an exhaustive character, has been admitted by the world of medicine."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod-Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

Dr. SINCLAIR COGHILL,
Physician to the Hospital for Consumption, Ventnor.

"In Tubercular and the various forms of Strumous Disease, DR. DE JONGH'S Light-Brown Oil possesses greater therapeutic efficacy than any other Cod-Liver Oil with which I am acquainted."

Sold ONLY in Capsuled Imperial Half-Pints, 2s. 6d.: Pints, 4s. 9d.; Quarts, 9s.; by all Chemists and Druggists.

Sole Consignees—ANSAR, HARFORD, & CO., 210, High Holborn, London, W.C.

CAUTION.—Resist mercenary attempts to recommend or substitute inferior kinds.

BENHAM & SONS

CHIMNEY-PIECES, STOVES, TILES, COOKING APPARATUS, KITCHENERS, LAUNDRIES, LIFTS, ENGINEERING, ELECTRIC LIGHTING, ELECTRIC BELLS.

WIGMORE-STREET, LONDON.

CAUTION.

BENGER'S FOOD differs entirely from any other Food obtainable. When mixed with warm milk it forms a delicate nutritious cream, in which the curd is reduced to the same flocculent digestible condition in which it exists in human milk, so that hard indigestible masses cannot form in the stomach.

It may be had of Chemists, &c., everywhere, or will be forwarded free by Parcel Post direct from the Manufacturers.

THE OPENING OF THE PARNELL COMMISSION.

OUR NOTE BOOK.

BY JAMES PAYN.

Some purists (who live in the West-End of London) have expressed their contempt for the panic in Whitechapel, and their indignation at the interest that is excited there by half a dozen murders, committed by some uncultured person. They are confident that an essay by Ruskin, or a poem by Browning, would not be received just now by an East-End public with half the satisfaction it would derive from some information about this malefactor. Of course these highly-educated and elegant-minded individuals are quite right. But it sometimes strikes one that there are people in the world who have not enough of human nature about them. This is especially noticeable in small literary folk, and still more so in amateur artistic circles. They are full of sympathy, but with only printed matter, chiefly in verse, and with doubtful works on canvas, on which they will dilate by the hour. They have apparently had no experience of life as it is whatever, and only a nodding acquaintance even with vice. Their language is like a prolonged stammer, which the sanguine listener expects will culminate in something worth hearing, but which never does. Humour, the disinfectant of Coarseness, they do not possess, so that everything which is not delicate is coarse to them; while their nervous organisation is so "highly strung" that everything which is tragic is morbid. There are moments ("when we 've had our wine, and say d—canters") in which one is tempted to think that the dreadful person who reads the police reports with gusto and says, "Well, for my part, I confess I like a good murder," is preferable to these ornaments of society.

The device adopted of late by a negro minister of introducing dramatic effects into his discourse has, as one would naturally expect, more of the "revival" in it than of novelty; it is, in fact, only another form of the old "miracle play," but it doubtless makes a great impression. The Prodigal Son appearing *in propriâ personâ* out of the forest must have given a point to a discourse upon that parable beyond the reach of eloquence, though his indecent clamour for the fatted calf (before a word had been said about it in his hearing) might, to less simple natures, have suggested collusion. Unhappily, this is a sort of surprise which will not bear repetition: "What would you say, my brethren, if at this very moment there should emerge from yonder forest, spiritless, ragged, and emaciated from his diet of husks, the Prodigal Son himself? Why, goodness, gracious, there he *is!*" may do for once and away, but it would be on his first appearance only that the performer could make a success. In the case under consideration the experiment was rather expensive, for the Prodigal's hunger was far from feigned. We have had nothing so realistic in Church services in England for many a day; the last instance of the kind was one in which a Methodist minister, wishing to convince his congregation of the actual personality of the Father of Evil, suddenly produced a black man from the pulpit, like a Jack-in-the-Box. The effect was tremendous, but unsatisfactory: a few hardened sceptics laughed, while the others, and all the faithful, went into fits.

Is it possible what the *Railway Press* has been telling us of the cost of getting a railway Bill through Parliament can be correct? That the Parliamentary costs of the Brighton line were £4806 a mile, the Manchester and Birmingham £5190, and the Blackwall £14,414! And this, when many lines, under favourable circumstances, themselves cost but £10,000 a mile. To whom do these immense sums go? Is it to the solicitors? The solicitor's bill of one line mentioned by the paper in question (though I do not name it here, because, though doubtless true, it has the appearance of a monstrous libel) "contained 10,000 folios, occupying twelve months in taxation, and amounted to £248,000!" The solicitors, of course, lay the blame upon the barristers. "You have no idea, my dear Sir, of the fees exacted by counsel in these cases"; but it is for the shareholders, and eventually the public, who have to pay for it all. John Bull is known to be the most patient of all beasts of burthen—next to the ass; but when one considers how long he has put up with this wasteful and useless expenditure, it strikes one that he is the ass itself.

There is no one who has fallen so much of late years in public estimation as "the Noble Savage." I can remember the time when, thanks mainly to Fenimore Cooper, he was at the very top of the tree. Our philosophers used to point to him as (with some trifling drawbacks, such as his fancy for wearing false hair with the scalp attached to it) a model for civilised man. Our poets idolised him; at the least cross (such as a decrease in their circulation), they threatened to exchange their furnished lodgings in Mayfair for a wigwam in the wilderness: "I will wed some savage woman; *she* shall rear my dusky race!" Even from the pulpit we were told that we might learn much from the simple virtues of the savage! Then the Red Man, as the Laureate tells us, laughed and danced about his tree; now, he is "the Red Man and still"—played out, exploded; those who know most about him even use the expression "bust up." The bull's-eye of the explorer has been brought to bear upon him; and those who imagined that, whatever record leapt to light, the noble savage never could be shamed, have had reason to alter their opinion. We have long, in fact, known him for a lying cruel thief, much less fitted to point a moral than adorn a tale; but till lately we did believe that he had the merit of being unconventional—a virtue which, since very few of us possess it ourselves, we are inclined to estimate at a fancy price. And now, from the joint testimony of Sir John Lubbock and Mr. Tyler we learn that the N. S. **is a martyr to convention, swathed in it as his squaw swathes his infant, so that he can move neither hand nor foot. "When wild in woods the noble savage ran" is a time, it seems, that, socially speaking, had no existence. He never did run alone, untrammelled by his mother's apron-string or his wife's. For when he was married, he was less his own** master than even an Englishman. Until a son was born to him, his mother-in-law—though he had to live in her house—never spoke to him. No wonder the savage tribes are dying out! Of course he remained childless. If we had this system here, half the letters in the *Daily Telegraph* about the results of matrimony would never have been written. Then again, if he was so imprudent as to have children, he was not allowed to claim relationship to them; his heirs were his nephews and nieces. The attention shown to married uncles under these circumstances must have been much greater than is experienced among ourselves. To myself, who once believed in the N. S., it is painful to pursue these revelations of the professors of anthropology concerning him. I would rather have learnt that my old friend with the philosophic air and the expressive "ugh," had had no existence than that he was fettered with the same bonds as we are, with even less opportunities of escaping from them. A chief might leave his wigwam occasionally on pretence of going to a "palaver," but it could never have been so good as a club; while for the inferior "braves" there does not appear to have been even the refuge of a public-house; they had "fire-water" (which it is no wonder they cottoned to, as a relief from the conventionalities), but they must have drunk it at home or (very uncomfortably) on the war-path; no light from the hospitable windows of "The Stake and Scalping-knife" ever tempted them to spend their evenings "out."

"Odd and even" is not a game to which the energies of even our sporting population have been much directed, but under the name of "Fantan" it has so taken the fancy—and more than "the Fancy," for it pervades all classes—of the Chinese nation that it is prohibited by the Government under pain of death. A double handful of copper coins under a bowl, with a couple of chopsticks to rake them out four at a time, are the simple ingredients of this gambling game. The only peculiarity of it is that the bankers are always "naked to the waist"—which is unusual in financial establishments in this country. At this "amusement," we are told, the losers stake their homes, their wives, their children, and eventually themselves—with a spit or a small-sword.

The method of this madness seems childish in the extreme, but your true gambler in all countries thinks the simplest and quickest way to wealth the best. He prefers poker to whist, and baccarat to poker, and "the putting the pot on" some insignificant event, to be settled instantly, to anything. The backing one drop of rain upon the window at "White's" to reach the bottom of it before another for a thousand pounds, and the same sum laid against the recovery of the man in the fit—with the stipulation that no doctor should be sent for—fall under this head. Some people seem to live only to bet. The Lord Mountford who blew out what he called his brains (doubtless for a bet) in 1755, was said "to have reduced his natural affections to the doctrine of chances." When asked, after his daughter's marriage, whether an heir to the estate was not expected, he replied, "I really don't know; I have no bet upon it." The most humorous story, perhaps, next to that of "the Jumping Frog," and one which has the advantage of being a true one, is that of the caterpillar owned by a nobleman of the Regency, which, placed in the centre of a soup-plate, he backed at odds to make its way off it more quickly than any other caterpillar. It had not more legs than its fellows, but somehow it always ran faster, and was the cheapest racer that ever man kept. It was not until his Lordship had won many thousand pounds that it was discovered that he used to warm the plate.

In the end, however, even that sagacious nobleman did not come out of his gambling transactions with anything to the good; and it is very, very seldom that such people do. When luck is with them on the green baize they flourish, of course, *like* green bays; but when they come to grief, they do so utterly. It is only a Marshal Blücher who—if all stories of the Occupation are true—can lose at *rouge-et-noir* with the serene security of having the Bank of Paris behind him; and it is but a very few who retire upon their laurels, or the fruit of them. Colonel Panton, whose name is still borne by a rather unfashionable London street, was one of these exceptions. He was the proprietor of the gaming-house called Piccadilly Hall at the time of the Restoration, and in one night won as many thousands as purchased him an estate of above £1500 a year. "After this good fortune," says an annalist of the day, "he had such an aversion to all manner of games that he would never handle cards or dice again, but lived very handsomely on his winnings to his dying day, which took place in 1681." The incident is headed, with some stretch of charity, "A Reformed Gamester."

It is always a satisfaction to a journalist to know that a word he has dropped in season (or even "out of the season") has done good. He may be mistaken, of course, in supposing that what he has written has had anything to do with the matter; but if so he errs in good company. I notice that even the *Little Pedlington Chronicle* and the *Entanwell Gazette* always attribute whatever happens on the Continent, and even in Central Asia, to "the advice we ventured to offer to the Powers" (to my mind a charming word, "the Powers") "a week or two ago." I may be excused, therefore, for modestly drawing attention to the fact that the remonstrance I addressed to suicides the other day in connection with their habit of anathematising those they leave behind them has already had a good effect. A young gentleman, crossed in love, who took a dose of oxalic acid last week, but who subsequently, I am glad to say, was recovered, like Mr. Jingle's Spanish adorer, by the stomach-pump, left this last testament (as he thought) behind him, instead of the usual malediction. . . . "Tell her I thought of *her* to the last. . . . She was quite right in giving *me* up, for I was not good enough for her. Tell her from me that I hope she will get some real good young man who is worthy of her." He has been remanded "for the Chaplain's advice"; but he doesn't seem to need it. I hope he will find some real good young woman—with no acid about her—and be worthy of *her*.

OPENING OF THE PARNELL COMMISSION.

The Special Commission of judicial inquiry, created by the Act of Parliament last Session, to investigate and report upon the charges and allegations made against Mr. Parnell and certain other members of Parliament, and other persons, in the trial of an action for libel brought by Mr. Frank O'Donnell against the proprietors of the *Times*, was opened at the Royal Courts of Justice, in the Strand, on Monday, Sept. 17. The Commissioners, the Right Hon. Sir James Hannen, Judge of the Divorce Court, Mr. Justice Day, and Mr. Justice A. L. Smith, three Judges of the High Court of Justice, were present, with the secretary, Mr. Cunynghame, sitting in the Probate Court. The counsel engaged in the case sat in two rows of seats, while the rest of the floor was occupied by newspaper reporters; and persons admitted only by ticket formed the general audience, in the jury-box and in the galleries, so that there was no crowding. Sir Charles Russell, Q.C., M.P., and Mr. Asquith were counsel for Mr. Parnell and many other Irish members of Parliament, whose solicitor was Mr. George Lewis. In the absence of the Attorney-General, Mr. W. Graham appeared as counsel for Mr. J. Walter, M.P., chief proprietor of the *Times*, and for Mr. Wright, printer of the *Times*, instructed by Mr. J. Soames, solicitor. Mr. G. Kebbel, solicitor, watched the case on behalf of Mr. Moser, late Inspector of the Criminal Investigation Department of the Metropolitan Police. Mr. C. S. Parnell, M.P., Mr. T. P. O'Connor, M.P., Mr. Quinn, M.P., Mr. T. Gill, M.P., Dr. Fox, M.P., Mr. Arthur O'Connor, M.P., and Mr. H. Campbell, M.P., formerly Mr. Parnell's private secretary, were present.

The President of the Royal Commissioners, Sir James Hannen, briefly stated the authority and scope of the inquiry, observing that they had all the powers vested in the High Court of Justice for the trial of any action, and would call before them any persons whom they might think able to throw light on the truth or falsehood of the allegations that had been made; but they would hear that day such applications, with regard to procedure, as might be submitted to them by the parties interested in this inquiry. The counsel then stated who were the parties for whom they appeared.

Sir Charles Russell first asked which party would be expected to begin opening the case; and Sir James Hannen said it was the opinion of the Court that the counsel for Mr. Walter and the *Times* should open the case, and should tender evidence in support of the charges that they had made, to which the counsel for Mr. Parnell and others should reply.

Sir Charles Russell then applied for an order to allow his side to inspect the original letters alleged to have been written by Mr. Parnell and by Mr. Patrick Egan, formerly treasurer of the Irish Land League, and to obtain photographs of those letters, which, as he was instructed, were forgeries. This was agreed to by Mr. Graham for the proprietors of the *Times*, having the letters in their possession.

The next application was for a general "order of discovery," compelling them to reveal by affidavit all the documents of which they were, or had been, in possession, bearing on the charges at issue. Mr. Graham contended that the Commissioners had no power, by the Act of Parliament, to make such a general order, as his clients were not litigant parties to an action in this case. Sir Charles Russell and Mr. Asquith, however, maintained the contrary, and quoted decisions of the High Court of Justice to show that the Judges had this power. Much was said also of notices which had been given to Mr. Parnell, Mr. T. Harrington, M.P., Mr. Justin M'Carthy, M.P., Mr. Biggar, Mr. Quinn, and others, that they would be required to make a full affidavit of all documents in their possession, "relating to the matters in this Commission," or belonging to the Irish Land League or National League. The Commissioners retired for three quarters of an hour to consult upon this question. On their return into court it was further discussed until luncheon-time; after which, the Judges having again taken their seats on the bench, Sir James Hannen announced their decision. They held that they had power to order the persons who now appeared at this inquiry to make a full discovery of all documents that might be of use in getting at the truth, and they would direct Mr. Graham's clients, the proprietors of the *Times*, to prepare a schedule of all the documents in their possession, and to present it before the inquiry was to be resumed.

Sir Charles Russell's third request of the Court was to order that the proprietors of the *Times* should set forth what were the charges and allegations, and against what persons, they intended to stand by, and of what they meant to bring evidence. Mr. Graham endeavoured to avoid this demand by pleading that it was the Land League organisation, not any particular persons, as individuals, against which the charges were made; and that it was the object of the Commission to discover the individuals who were personally implicated. After much debate on this point, Sir James Hannen said that Mr. Graham's clients would be expected to particularise the charges; but if they failed to do so it would be the duty of the Commissioners to gather the particulars for themselves. Mr. Graham said that his clients would do their best to carry out his Lordship's view, but it would necessarily be a work of great labour, involving much consideration, to frame specific charges against every individual who might be implicated.

It was arranged that the next sitting of the Court should be on Monday, Oct. 22, and that these particulars of the charges should be furnished a week before that date.

Two other applications were made by Sir Charles Russell; the first was to allow the evidence of Mr. Patrick Egan to be taken in America by commission, instead of obliging him to come to England. He is engaged in business as a corn-merchant at Lincoln, in the State of Nebraska, and is a State delegate for the Presidential election towards the close of this year. The application was considered premature, as the Court thought he might attend here in person at a later time. It was also requested that the Court should order the release of Mr. John Dillon, M.P., from his imprisonment at Dundalk, on his giving bail and promising not to speak at public meetings. The Court signified that an order to this effect, not insisting on bail, should be issued three or four days before Oct. 22, to which date the sitting of the Court is adjourned. Mr. Dillon has already been unconditionally released, on account of ill-health.

No fewer than 350 ladies entered for competition at a Beauty Show at Spa.

A fire broke out on Sept. 17 on a wharf at Cardiff, where a large quantity of petroleum was stored. The fire raged with great violence, and destroyed two landing-stages and three warehouses.

The quinquennial festival of the Royal Albert Asylum for Idiots and Imbeciles of the Northern Counties was held on Sept. 17 at Lancaster. The occasion was utilised for the opening of the Winmarleigh Recreation-hall. A recreation-hall for large assemblies of the patients, combining a suitable and commodious hall for the associated entertainments as well as a spacious play-room for the use of the girls and junior boys in inclement weather, had long been regarded as essential to the smooth and efficient working of the institution.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Sept. 18.

The Republicans are rejoicing over the success of the journey of M. Carnot in Normandy, which is all the more important as the Normans are prudent and conservative people, who do not give themselves away readily. From the many speeches made by the local authorities in presence of M. Carnot it is to be gathered that the Normans demand concentration of the Republican forces against the attacks of Cæsarism and Dictatorship and the maintenance in France of a strong practical Government. The re-opening of Parliament is fixed for the beginning of October, and the idea is that M. Carnot will hope to see the Floquet Cabinet overthrown early in the Session, whereupon he will form an Opportunist Ministry, obtain the dissolution of the Chamber and get the general elections over well before the opening of the Universal Exhibition. M. Floquet, it appears, is rapidly approaching the end of his tether, for, in matters of Ministers as in matters of rulers, the French nation resembles a servant who is always wanting to change masters, and no sooner has it a new master than it begins to criticise, find fault, and finally ridicule. M. Floquet has entered upon the phase of ridicule, and then, as people say, "Il est si peu Parisien." And to be a Minister in France a man must be a "Parisian." What all this means it would be hard to say; but it is so, and probably will always remain so. France is an easy prey—if there were only a man strong enough to seize her.

In spite of the warm summer weather the theatres are all reopening their doors, and the critics are being summoned to judge the new pieces. The Odéon has opened with an adaptation of Dostoievsky's famous novel, "Crime et Châtiment." In this long book Dostoievsky presents with prodigious subtlety the sentiments and sufferings of Russian souls ravaged by Nihilist doctrines, and with minute psychological analysis dissects the slender and manifold threads by which these seeming madmen are still connected with ordinary life and humanity. Unfortunately, it is impossible to retain on the stage the many details of the novel, and the consequence is that the characters appear wild, improbable, and, therefore, uninteresting. The seven tableaux of this sombre melodrama are curious; they provoke the same sensations as a lugubrious waxwork show; but we do not feel any interest in the half-crazy student Rodion, who preaches the doctrine of justifiable assassination, carries out his doctrines on the person of an old money-lender, apes Hamlet, feels remorse, and finally gives himself up for punishment. M. Paul Mounet, however, has made an admirable creation out of the student Rodion; his acting is very fine, and suffices to classify him amongst the remarkable contemporary French actors.

The French follow with great interest the news from Africa concerning Stanley, Emin Pasha, and the various schemes of European occupation, the more so on account of Cardinal Lavigerie's anti-slavery campaign. At the request of the Cardinal and of M. Goblet, the Minister of Marine has ordered all French war-ships in African waters to chase the slave-ships, especially if they carry the French flag. There is talk of organising a big volunteer military force, with a view to a humanitarian expedition in Central Africa, and several ardent Churchmen are trying to induce Cardinal Lavigerie to issue an appeal for men and arms. Meanwhile, a Société Française Anti-Esclavagiste has been formed, with a number of eminent public men as members of the council.

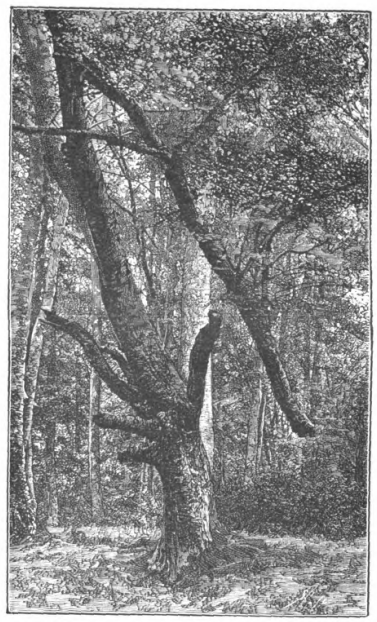
Germany, Denmark, Montenegro, Sweden, and Turkey are at present the only European countries not represented at the Universal Exhibition. According to the definitive calculations now made, foreign countries will occupy at the Exhibition of 1889 more than 100,000 square mètres of space—a larger area than in 1878. The preparations are advancing rapidly, and all kinds of marvels are being prepared to attract all the world to this World's Fair next year. The Eiffel tower has now reached more than half its projected elevation. A curious detail: a manufactory has been established specially in order to make paper-weights, candlesticks, medals, penholders, and various "souvenirs" out of the waste bolts and fragments of iron that are picked up at the base of the tower.

Last week Paris boasted seven centenarians, five women and two men. By the death of Mdlle. Flore le Thuillier, in her hundred and first year, this number is reduced to six. This lady, who has been living for the last thirty years in the Rue Charlot, was a favourite pupil of the botanist Linnæus, had lived in interesting literary and political society under the Consulate, the Empire, and the Restoration, and was altogether a cultivated and distinguished person. In her younger days she placed a sum of 6000f. in a tontine of two thousand subscribers, and being the sole survivor during the past twenty-five years, Mdlle. le Thuillier was in receipt of an income of more than £12 a day. For a long time this old lady had suffered from heart disease.

M. Isidor, the Grand Rabbi of France, died last week at the age of seventy-five. An Alsacian, a strong orator, a man of great authority, and universally respected in France, M. Isidor was officer of the Legion of Honour. He will be succeeded by M. Zadok Kahn, Grand Rabbi of Paris.

On the occasion of the anniversary of the battle of Valmy, M. Paul Déroulède, and about a thousand members of the Patriots' League, placed wreaths around the pedestal of the Belfort lion at Paris. The patriots summed up their demands in two phrases: "Revision of the Treaty of Frankfort" and "Revision of the Constitution of Versailles"; and gave their creed in three cries, "Vive l'Alsace Lorraine!" "Vive la France!" "Vive la République!"

Two congresses were opened simultaneously at Venice on Sept. 15—one of literary men and artists, and the other of meteorologists. Speeches of welcome were delivered by the local authorities, and it was announced that King Humbert had consented to become the patron of the congress.



The Queen-Regent of Spain has signed a decree granting the Golden Fleece to the Duke of Edinburgh. The decree delegates the Prince of Wales to invest the Duke with the collar of the Order.

In the absence of the King, who was not well enough to be present, the Session of the Netherlands States-General was opened by the Prime Minister, Baron Mackay. The speech from the Throne, after announcing that the relations of the Netherlands with foreign countries were of the most friendly character, proceeded to state that the condition of the national finances was fairly satisfactory, and that no increase of taxation would be necessary.

On Sept. 17 began the German field-manœuvres of the corps of the Guards and Third Army Corps, following up the exercises of the past week. The Third Army Corps made an advance towards Berlin with the object of attacking the capital, the defending force being the Regiments of the Guard. After a hot engagement the attack was repulsed, the Emperor in person commanding the retreating troops. Favoured by a continuance of the splendid weather, the sham-fighting was resumed on Sept. 18. The Emperor himself commanded the Third Corps, and entrusted the conduct of the manœuvres in general to Field-Marshal Moltke's successor, Count Waldersee.—The sixty-first annual meeting of German scientists and surgeons—an institution corresponding in some degree to the British Association—met on Sept. 18 at Cologne.

The Emperor of Austria called upon the Prince of Wales on Sept. 12. In the afternoon his Royal Highness, accompanied by the Crown Prince Rudolph and the Archduke Otto, witnessed the public festivities in honour of the Imperial visit. A Court banquet was given in the evening at which the Prince of Wales, the Archdukes Charles Louis and Otto, the principal military officers, and a number of other distinguished personages were present. On the 13th the Emperor, accompanied by the Prince of Wales, the Crown Prince, Archduke Otto, and their suites, rode out to the manœuvres. The troops had been on the ground since six o'clock. The General in command of the 13th Army Corps, Baron Ramberg, is conducting the manœuvres. The Prince of Wales rode beside the Emperor from place to place all the morning. The Prince of Wales arrived at Gödöllö on the 15th with the Emperor, and went out deer-stalking. Sunday was spent quietly. The Prince of Wales, having abandoned his original intention of attending the review near Gödöllö, left Pesth on Sunday, late in the afternoon, for Keszthely, on a visit to Count and Countess Tassilo Festetics. His Royal Highness took part on the 17th in a great hunt that his host had arranged in his honour. The Prince had a splendid reception at Keszthely, the whole town being gaily flagged, and the newly-built castle of Count Festetics brilliantly illuminated for his Royal Highness's arrival, which took place at night.—The Princess of Wales is still at Gmünden. On the 13th the Duke and Duchess of Cumberland gave a *soirée dansante* at the Villa Cumberland. Among the brilliant company present were the Princess of Wales and her three daughters, the Queen of Hanover, the Archdukes and Archduchesses Rainers and Karl Salvator, and the Duke and Duchess of Würtemberg.

The Czar and Czarina, accompanied by the Czarewitch and Grand Dukes George Alexandrovitch, Vladimir Alexandrovitch,

SELF-GRAFTED TREE IN THE NEW FOREST.

and Nicholas Nicolaievitch, left Novaja Praga on Sept. 13 for Spala, in Russian Poland. The official announcement of the betrothal of the Grand Duke Paul, who is the youngest brother of the Czar, to the eldest daughter of the King of Greece, will be made during the stay of his Imperial Highness at Athens. A Russian Imperial ukase, dated in July, has been promulgated on the 12th by which the Minister of Finance is empowered to authorise the Imperial Bank of Russia to issue credit notes as the necessities of the currency may require.

At Copenhagen on Sunday, Sept. 16, the christening took place, according to the Lutheran rite, of the infant son of Prince Waldemar and Princess Marie, daughter of the Duc De Chartres. The child was born on Aug. 13. The scene of the ceremony was the Amalienborg Palace, and among the distinguished people present were the King and Queen of Denmark, the King of the Hellenes, and other members of the Danish Royal family.

A telegram from St. Paul de Loanda states that Major Barttelot was shot dead by his Manyema carriers on July 19. Mr. Jameson is said to be at Stanley Falls arranging with Tippoo Tib for a fresh expedition. Mr. Rose Troup, who, in consequence of ill-health, had left Major Barttelot before the latter was killed, expresses no uneasiness whatever as to the success of Mr. Stanley. He rejects the suggestion of treason on the part of Tippoo Tib.

On the reassembling of the Democratic State Convention of Colorado in Denver, on Sept. 12, Mr. T. M. Patterson was nominated Governor by acclamation. The New York Democratic State Convention met on the same day at Buffalo. Governor David Bennett Hill was renominated by acclamation. The Republican State Convention of Massachusetts, held at Boston, renominated Governor Ames. The national encampment of the Grand Army of the Republic, in session at Columbus, Ohio, have elected the Hon. William Warner, of Missouri, Commander-in-Chief for the ensuing year.

The Ameer has reported to the Indian Government that his troops have captured the Kancard Fort and many prisoners, among whom is the father-in-law of Ishak Khan.

By a proclamation, dated Sept. 4, published in the Brisbane *Gazette*, Queen Victoria's sovereignty has been declared formally over British New Guinea.

TWO AUSTRALIAN GOVERNORS.

The Right Hon. Lord Carrington, C.C.M.G., Governor of the Colony of New South Wales, is Charles Robert Carington, third Baron Carrington, who was born in 1843, was educated at Eton and at Trinity College, Cambridge, held a Captain's commission in the Royal Horse Guards, was M.P. for Wycombe from 1865 to 1868, and succeeded to his father's peerage in the year last mentioned. The first Peer of this family was Mr. Robert Smith, M.P., who was created Baron Carrington, of Upton, Notts, in 1797; his son, the second Baron, in 1839, assumed the name of Carington, by Royal license, instead of Smith, and married a daughter of Lord Willoughby D'Eresby. Lord Carrington is Joint Hereditary Lord Chamberlain, and was aide-de-camp to the Prince of Wales during his visit to India, and has been a Captain in the Corps of Gentlemen-at-Arms. He married, in 1878, Cecilia, daughter of Lord Suffield. In 1885, his Lordship was appointed Governor of New South Wales.

The Right Hon. Sir Henry Brougham Loch, G.C.M.G., K.C.B., Governor of the Colony of Victoria, was born in 1827, son of Mr. James Loch, M.P., of Drylaw, Midlothian, and began life as a midshipman in the Royal Navy, but soon entered the military service of the East India Company, in the Bengal Cavalry, became aide-de-camp to Lord Gough in the Sikh War, and was Adjutant of Skinner's Horse. In 1854, he was sent, with the local rank of Major, on special service to Turkey. He entered the Diplomatic Service, and accompanied Lord Elgin's Mission to China, where he was employed from 1857 to 1860; he was treacherously captured and cruelly ill-treated by the Chinese, but performed important services in negotiating the treaty of Pekin. He was private secretary to Sir George Grey as Secretary of State for the Home Department in 1861. From 1863 to 1882 he was Lieutenant-Governor of the Isle of Man, and in 1884 was appointed Governor of Victoria. Sir Henry Loch married, in 1862, a daughter of the Hon. Edward Ernest Villiers, a relative of the Earl of Clarendon.

THE MAORI COLLEGE, NEW ZEALAND.

The Te Aute Maori College is located thirty miles south of Napier, Hawke's Bay, on the east coast of the North Island of New Zealand. It is an endowed institution, and consists of a handsome and well-appointed block of buildings. During the last few years the school has made great strides, and now ranks, according to the reports of the Government Inspector, amongst the best secondary schools of New Zealand. Its pupils are drawn from all parts of the country, the number now in residence amounting to sixty-one. It educates up to the standard of the matriculation examination of the New Zealand University. A considerable number of "old boys" have taken good positions, and are proving that the Maori is not only capable of receiving a high educational and social culture, but that he can settle down to steady work, even of a decidedly sedentary character. Three, at least, of the team of Maori footballers now in our midst received their education at the College, and their memory is still green on its football ground. Mr. J. Thornton is the head-master of the Te Aute College.

EXTRAORDINARY TREE, NEW FOREST.

A correspondent tells us that in the past summer, while on a visit to Mr. W. Everett, J.P., near Lyndhurst, he was taken for a walk into the depths of the New Forest, between Lyndhurst and Boldre Wood, and was shown there a singular curiosity, in the shape of an accidental tree graft; of which, having a photographic apparatus with him, he got a photograph, and it is represented in our Illustration. It is said that a gale or cyclone must have torn away a very large branch; when, in falling, the broken and smaller end of this branch had evidently struck against the parent tree, had lacerated the bark, and had so grafted itself again to the trunk, once more to be nourished and kept alive by the sap of this tree, which is a fine beech. The self-grafted offspring, reunited, is now in full leaf and flourishing growth. To all appearance the healed bark at the graft has been many years in this remarkable position. Our correspondent is a medical gentleman, Mr. T. W. Blake, of Bournemouth.

TECHNICAL INSTITUTES FOR NORTH LONDON.

A meeting was held at the Hackney Townhall on Sept. 17 for the purpose of promoting a scheme for providing North London with technical and recreative institutes. It is proposed to appeal for £200,000, the Charity Commissioners promising a similar amount, provided that this sum is raised, to erect an institute in each of the divisions of Finsbury, Hackney, Islington, and St. Pancras. Sir Charles Russell said that the object that they had met to promote was an eminently desirable one. While a great deal had been done in this country in recent years in the direction of helping elementary education, practically nothing had been done by the State in aid of technical education. All that had been left almost entirely to private effort; and when he recollected the contrast which that state of things presented when compared with many Continental countries, he was bound to confess that there remained a great deal to be done. The time was when England, engaged in productive commercial pursuits, could afford to neglect the aids which modern times required, and when, from her position, and from her command over certain markets, she might be said to be without a rival in productive enterprise. But these conditions had greatly changed in modern days, and if England was to maintain her productive position in the world she must follow the rest of the world in the matter of technical and scientific training. Such institutions as those referred to were greatly needed in the four North London districts, which had a population of one and a half millions, with a rateable value of five millions, and he hoped that they would unite and work till they had succeeded, as South London had succeeded, in establishing their technical schools. Resolutions were adopted approving of the scheme and appointing local committees to put it into operation.

A geodetic conference was opened at Saltzburg on Sept. 17 for the purpose of discussing the adoption of an international system of longitudinal measurement. Among the twenty-five members present were representatives of Germany, England, France, and other European nations.

Sir Thomas McIlwraith, the Premier and Colonial Treasurer of Queensland, made his annual Budget statement in the Legislative Assembly on Sept. 12. The Minister announced that he expected a deficit of £135,000, but declared that it was not the intention of the Government to introduce a land or income tax, since the proposed changes in the Customs' tariff would, he expected, remove the deficit and leave a surplus of £72,000. Fixed duties would be imposed whenever practicable, and the *ad valorem* duties would be raised to 15 per cent. The Minister, in conclusion, declared that he looked to future years to alleviate other taxation by means of an amended Land Act, and expressed the belief that the finances of the colony would shortly be in a sound condition.

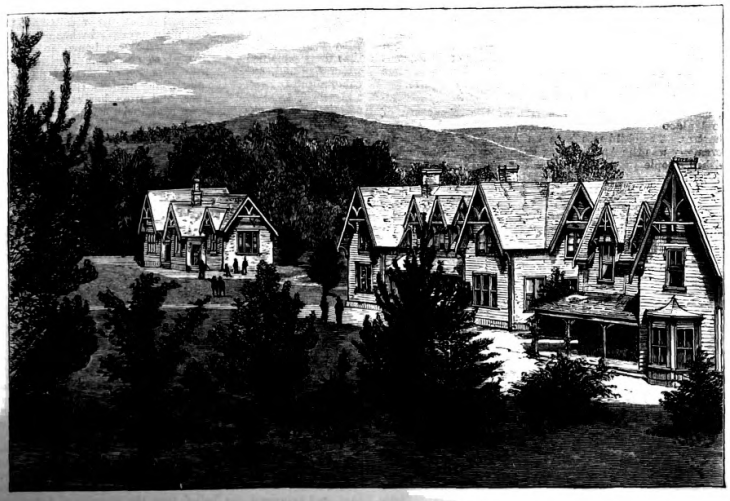
SIR H. B. LOCH, G.C.M.G., K.C.B.
GOVERNOR OF VICTORIA, AUSTRALIA.

LORD CARRINGTON,
GOVERNOR OF NEW SOUTH WALES.

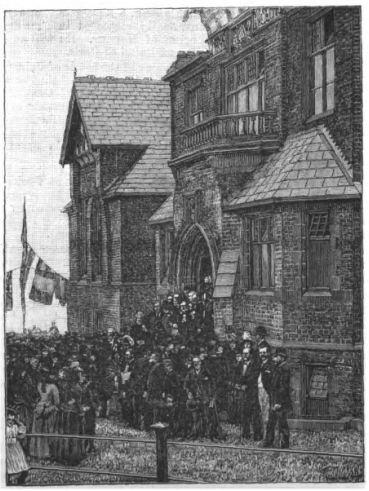
THE NEW ITALIAN AMBASSADOR.

In selecting Count Di Robilant, a former Minister of Foreign Affairs of the Kingdom of Italy, late Ambassador to Vienna, and a member of the Italian Senate, to be the Ambassador of King Humbert at the Court of Queen Victoria, the Italian Government has paid a high compliment to Great Britain; for he is a statesman and a soldier, and one of the most distinguished public men belonging to Italy. Carlo Felico, Count Di Robilant, a Lieutenant-General of the Italian Army, is a Piedmontese, having been born at Turin in August, 1826. At the age of thirteen, he entered the Royal Military College, and obtained his commission as sub-lieutenant six years later. He fought in all the wars of Italian independence against Austria, firstin 1848, and in the following year; when, at the battle of Novara, he had his left hand shot off by a cannon-ball. In 1853 he attained the rank of Captain of Artillery. Having served with great distinction in the campaign of 1859, he was gazetted a Major in the following year. In 1860 he took part in the campaigns of Ancona and Central Italy, and he was also in the Austrian war of 1866. He was President of the Commission for the delimitation of the Austro-Italian frontier in 1867, and was then appointed Commandant of the Superior Military College, a position he held till 1870. In 1871, Count Di Robilant was sent as Special Envoy to the Court of Austria, and was Ambassador there during many years. The Count was nominated a member of the Italian Senate for life in 1883. He became Minister of Foreign Affairs in 1885, an office which he retained two years. Count Di Robilant has received every distinction his country could bestow, such as the silver medals "for valour" of Sommacampagna (1848), Novara (1849), the Cross of Savoy, the Grand Cross of the Crown of Italy, and the Grand Cross of SS. Maurice and Lazarus, besides many decorations conferred by foreign Sovereigns. His wife, Countess Di Robilant, is a daughter of Prince Edmond Clary-Aldringen, by his wife, Princess Elizabeth, née Countess Fiquelmont.

The Portrait is from a photograph by Montabone, of Turin.



COUNT DI ROBILANT,
THE NEW ITALIAN AMBASSADOR.



NOBLE'S HOSPITAL, ISLE OF MAN.

At Douglas, Isle of Man, on Sept. 4, the hospital erected by Mr. H. B. Noble and his late wife, as a gift of public charity, was formally delivered to the Lieutenant-Governor, Mr. Spencer Walpole, as representing the island community. The building, of which an Illustration is presented, has been constructed at a cost of about £5000, from the designs of Messrs. Bleakley and Cubbon, architects, of Birkenhead and Douglas. It is situated in Windsor-road, an elevated position overlooking the sea. Its external face is of red pressed brick with terra-cotta dressings and half-timbered gables. The plan of the building is that of two projecting pavilions, one to the right, the other to the left, of the central block. This central block contains the administrative offices, the medical and surgical officers', matrons and nurses' apartments, the committee-room, and the operating theatre. The wards for male patients are in one of the side pavilions, and the female wards in the other, giving accommodation for nearly thirty patients altogether. The central hall and staircase are handsome. Those who attended the ceremony, headed by the Right Rev. Dr. Bardsley, Bishop of Sodor and Man, with the Vicar-General, Deemster Drinkwater, and members of the committee, walked in procession from Villa Marina, Mr. Noble's residence, to the hospital, where that gentleman received them and the Lieutenant-Governor, who was accompanied by Mrs. Walpole. After the singing of a hymn, reading a Psalm, and offering prayer, the Bishop dedicated the new hospital to the glory of God, for the relief of the sick poor: Mr. Noble handed over the key, and a deed of conveyance of the building, to Governor Walpole, who responded in a short speech, followed by the Deemster (Judge of the Isle of Man) and the Vicar-General. The building was afterwards opened for public inspection.

Mr. James L. Bowes, of the well-known firm of Messrs. J. L. Bowes Brothers, has been appointed honorary Consul for Japan at Liverpool.

TE AUTE MAORI COLLEGE, NEW ZEALAND.

PRESENTATION OF NOBLE'S HOSPITAL, ISLE OF MAN.

ACROSS TWO OCEANS: NEWCASTLE, JAMAICA, FROM THE MORTON D'ORSAY BRIDLE-PATH.

FROM A SKETCH BY OUR SPECIAL ARTIST, MR. MELTON PRIOR.

MUSIC.

THE HEREFORD FESTIVAL.

Our previous notices of the one hundred and sixty-fifth meeting of the cathedral choirs of Hereford, Gloucester, and Worcester, have to be supplemented by remarks on performances which occurred too late for record until now. The specialties of the occasion were: Mr. Cowen's "Song of Thanksgiving," produced at the recent opening of the Melbourne Centennial Exhibition, and Sir F. A. Gore Ouseley's oratorio, "The Martyrdom of St. Polycarp."

Mr. Cowen's work is a setting of words taken from the Psalms, appropriate to the occasion. The music is scored for chorus and orchestra, and consists of three movements, one of which is entirely choral, and affords a good contrast to the other two, in which somewhat excessive use is made of the more demonstrative instruments. The general style is well suited to the festive and jubilant purposes for which the work was produced.

Sir F. A. Gore Ouseley's composition is the work of the occupier of the chair of music at the University of Oxford. His knowledge of the art, theoretical and practical, has been successfully manifested on many occasions by didactic writings, lectures, and musical compositions. That now referred to was produced as the exercise for his degree some thirty odd years ago. It is a scholarly work, both scientific and interesting in style, contrapuntal learning being successfully manifested without pedantry. Several portions proved highly effective, particularly the march, the tenor and baritone duet—finely sung by Mr. Lloyd and Mr. Santley—"Polycarp's Prayer"; a very pleasing trio—excellently rendered by Misses Anna Williams, Ambler, and H. Wilson—the double chorus of Christians and Pagans; and the final "Amen," also a double chorus. In addition to the vocalists already specified, Mr. C. Banks contributed some incidental passages. The two works just referred to were performed on the third day of the festival, Sept. 13; the previous morning having been occupied by a selection from Handel's "Samson," with additional accompaniments by Mr. E. Prout; and the late Sir Sterndale Bennett's sacred cantata, "The Woman of Samaria." The selection from Handel's noble work was not judiciously made, and the performance was far from satisfactory, with the exception of that of the solo vocalists—Madame Albani, Miss Anna Williams, Madame Enriquez, Mr. E. Lloyd, Mr. Santley, and Mr. Brereton. "The Woman of Samaria" (originally produced at the Birmingham Festival of 1867) is replete with grace and charm, if not altogether reaching the height of the sublime style. Its great and undoubted merits should have secured for it more frequent hearing than it has received, and its revival at the Hereford Festival was a welcome feature of the programme. It received a far better rendering on the occasion now referred to than the mutilated selection from "Samson." The solo vocalists in Bennett's work were Misses Anna Williams and H. Wilson, Mr. C. Banks, and Mr. Brereton. The sacred performances in the cathedral, on the evening of Sept. 12, included the first and second parts of Haydn's "Creation" (with Madame Albani, Mr. C. Banks, and Mr. Santley as solo vocalists), followed by Spohr's cantata, "God, Thou art great" (soloists, Misses Anna Williams and H. Wilson, Mr. C. Banks and Mr. Brereton); Schubert's "Song of Miriam" (soloist, Miss Anna Williams) having completed the evening's programme.

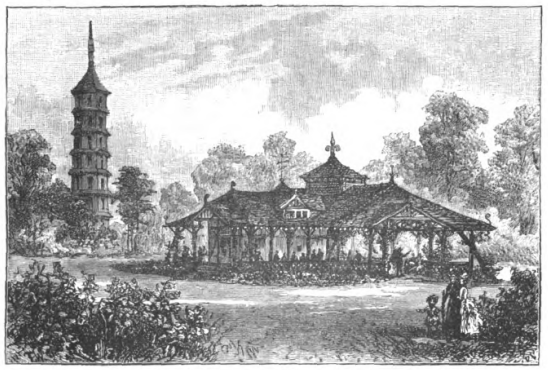
Cherubini's Mass in D minor (one of the grandest of his many grand productions) was given on Thursday morning, Sept. 13, when the compositions of Mr. Cowen and Sir F. A. Gore Ouseley (above referred to) were produced; between these latter having been placed Dr. C. H. H. Parry's effective setting (for chorus and orchestra) of Milton's ode, "Blest pair of Sirens," the composer having conducted. The soloists in the mass were—Madame Albani, Miss Ambler, Madame Enriquez, Mr. E. Lloyd, Mr. C. Banks, and Mr. Santley.

The closing oratorio performance, the "Messiah," in the cathedral, on Sept. 14, calls for only brief record. The soloists named in the programme were Madame Albani, Misses Anna Williams and H. Wilson, Mr. C. Banks, Mr. Santley, and Mr. Brereton.

The miscellaneous concerts in the Shirehall on Sept. 11 and 13 included, on the first occasion, a performance of Sir Arthur Sullivan's dramatic cantata, "The Golden Legend" (as already recorded by us). The composer conducted, and he and his work were enthusiastically received. The second concert comprised a varied selection of orchestral and vocal music, to which some of the principal solo singers contributed, special features having been the fine singing of the Leeds choristers in several instances. A graceful gavotte and minuet, for strings, by Mr. C. Lee Williams, was much appreciated. A chamber concert on Friday evening, Sept. 14, closed the proceedings of the festival week.

The general duties of conductor have been fulfilled by Dr. Langdon Colborne, organist of Hereford Cathedral, Mr. Done, of Worcester, having rendered good service at the organ, as did Mr. C. L. Williams (of Gloucester), as pianoforte accompanist, and organist at the evening performance in the cathedral. The co-operation of the excellent Leeds choristers was a valuable feature on several occasions.

The Covent-Garden Promenade Concerts have now completed five weeks of their seventh season under the lesseeship of Mr. W. Freeman Thomas, whose arrangements this year are of unprecedented interest, and are being attended with a corresponding amount of success. It is stated that the present season of these concerts will terminate on Oct. 1; a series of performances of Italian opera (under Signor Lamperti's management) being arranged to begin on Oct. 13, closing on Nov. 10; after which, the theatre will be required for the preparation of Mr. Freeman Thomas's Christmas pantomime.



In London 2488 births and 1331 deaths were registered in the week ending Sept. 15. Allowing for increase of population, the births were 217, and the deaths 77, below the average numbers in the corresponding weeks of the last ten years. The deaths included 27 from measles, 24 from scarlet fever, 18 from diphtheria, 31 from whooping-cough, 12 from enteric fever, 1 from an undefined form of continued fever, 122 from diarrhœa and dysentery, and 1 from choleraic diarrhœa. No death from smallpox was registered. The deaths referred to diseases of the respiratory organs were 184, exceeding the corrected average by 2. Different forms of violence caused 61 deaths; 45 were the result of negligence or accident, among which were 18 from fractures and contusions, 7 from burns and scalds, 5 from drowning, and 12 of infants under one year of age from suffocation. Fifteen cases of suicide were registered.

NEWCASTLE, JAMAICA.

When Mr. Melton Prior, our Special Artist, was in the West Indies, on his way from London to Melbourne "Across Two Oceans," he visited Jamaica, and went up to look at Newcastle, the head-quarters of the British troops, which is about thirteen miles from Kingston, up a high mountain. He writes the following account of this trip:—"I had to take an hour and a half's drive to Gordon-town, where a mountain pony is provided for the rest of the ascent. The barracks and officers' quarters are built on a lofty spur of the Blue Mountains. The site is undoubtedly healthy; and the wife of Major Garnett, whose guest I was, informed me that she quite liked the place, and much preferred it to living in Kingston. It is well that the British soldier was sent up to this salubrious height, but they say that some great personage made a very large fortune by the purchase in one instance, and the sale of it in the second, to the British Government. After passing Gordon-town, the way up is by a bridle-path, so narrow in parts that a pony making a false step would quietly topple you over into a mountain torrent many hundred feet below. There is luxuriant foliage on all sides, and occasionally, through gaps in the trees, you obtain a view of Newcastle, perched up on high, even in the clouds, or so it appears. There is a magnificent view of the surrounding country from Major Garnett's house and the officers' mess. All species of flowers grow here—violets and forget-me-nots, as well as the geranium and rose, in all their beauty. New potatoes and vegetables of all kinds are brought to perfection. The Blue Mountain trout abounds in the streams, and is one of the great delicacies of Jamaica. I should like to thank the officers of the garrison of Newcastle for the hospitality with which they treated me; and I was glad to see one of the finest sights of this island."

REFRESHMENT PAVILION, KEW GARDENS.

The propriety of allowing refreshments to be supplied to the public in Kew Gardens has been debated for some years past, and has been discussed in all the papers as a matter of public interest and convenience. Recently official permission was obtained by Mr. G. Ewens, of the Royal Albert Hall, for the erection of a refreshment pavilion, and probably other pavilions will shortly be erected in other parts of the gardens. The structure, of which we give an Illustration, was designed

NEW REFRESHMENT PAVILION, KEW GARDENS.

by Messrs. Gordon and Lowther, architects, of Finsbury-circus, who have also instructions for a proposed building under the trees, near the Diana pond in Bushey Park.

CONFERENCE OF GEOLOGISTS.

The fourth triennial Congress of geologists began its sittings on Sept. 17 at the London University. In the evening, the president, Professor Prestwich, of Oxford, gave an address in French. He expressed sincere regret that Professor Huxley, the honorary president, was, through ill-health, unable to welcome the foreign visitors, representing more than twenty different countries. He proceeded to a critical review of the work done at former congresses, and to suggest the paths which should immediately be followed. At the first congress, at Paris, in 1878, the fundamental questions of nomenclature and classification of rocks were taken up, and the suggestion of applying the solar spectrum as the basis of colouring geological maps was accepted. But the scale of red, blue, and yellow was found to be too limited, and the scale had to be very largely increased. One result of the Bologna congress had been the giving of practical illustrations of the seventy-six signs and engravings of different colours by a map of the Swiss mountains; and on it was also inserted the conventional sign for indicating the inclinations of the strata, the faults, the fossiliferous regions, the water-springs—cold, thermal, and mineral—the quarries and mines, &c.; the result being a veritable hieroglyphic chapter of universal significance. It had been decided to publish a geological map of Europe, in like manner, upon a scale of 1-1,500,000th; and the execution was far advanced, under the direction of the committee elected at the Berlin congress. The unification of geological terms was in the hands of nine national committees, eleven individual geologists of eminence also rendering assistance. The object of their deliberations was to reduce the various terms to be used to the expression of definite objects. This group would be applied to the great rock divisions—primary, secondary, tertiary. The sub-divisions would be called systems, as, the Silurian system. The minor divisions would be series, as the Oolitic series, the terms *étage* and *assise* being introduced for the smaller sub-divisions. In like manner, in regard to time, the terms recognised would be era, period, epoch, and age. In regard to the nomenclature of fossil organic remains, the name which would be retained for each species would be that under which it was first known, on condition that it was then properly described; but no date before the twelfth edition of Linnæus, 1766, would be recognised as to priority. The President and Mrs. Prestwich afterwards held a reception in the library of the University.

The meetings follow each other daily, and afterwards a series of excursions will be made to North Wales, West Yorkshire, the Isle of Wight, Bridlington, and other places. There will also be receptions at Eton, Kew, the Natural History Museum, the Geological, and other learned and scientific societies.

THE COURT.

The Queen went out on the morning of Sept. 13, attended by the Hon. Harriet Phipps; and in the afternoon her Majesty, accompanied by Princess Frederica and attended by Miss Phipps, drove through Braemar and down by the Lion's Face. Princess Beatrice and Princess Alice of Hesse drove to Loch Callater. The Earl of Fife arrived at the castle, and, as well as Viscount Cranbrook, had the honour of dining with the Queen. On the morning of Sept. 14 the Queen went out, accompanied by Princess Beatrice and Princess Alice of Hesse; and in the afternoon her Majesty drove with Princess Beatrice and Princess Alice. Prince Albert Victor of Wales went out deer-stalking. The Queen went out on Saturday morning, Sept. 15, accompanied by Princess Beatrice; and in the afternoon her Majesty drove out with Princess Alice of Hesse. Princess Beatrice, attended by Miss Cochrane, also drove. Sir Maurice and Lady FitzGerald had luncheon at Balmoral Castle, and were afterwards received by her Majesty. The Rev. Dr. Macgregor arrived at the castle and had the honour of dining with the Queen and Royal family. Divine service was performed at Balmoral Castle on Sunday morning, Sept. 16, in the presence of the Queen, the Royal family, and the Royal household. The Rev. Dr. Macgregor, Minister of St. Cuthbert's, Edinburgh, officiated. The Duchess of Albany and Prince Albert of Schleswig-Holstein drove over from Birkhall and attended Divine service at the castle and remained to luncheon. The Rev. Dr. Macgregor had the honour of dining with the Queen and Royal family. On the morning of Sept. 17 the Queen went out, accompanied by Princess Beatrice, Princess Alice of Hesse, and Prince Albert Victor of Wales; and in the afternoon her Majesty drove with Princess Frederica, attended by the Dowager Lady Churchill, through Ballater. Princess Beatrice, Princess Alice of Hesse, and Prince Albert Victor, attended by Miss Minnie Cochrane, drove to the Falls of Corriemulzie. The Duchess Dowager of Marlborough and Lady Sarah Spencer Churchill lunched at the castle, and afterwards had the honour of being received by her Majesty. Earl Cadogan arrived as Minister in attendance, and had the honour of dining with the Queen and the Royal family.

THE RUSSIAN GOVERNMENT AND POLISH INDUSTRY.

In the course of a recent report on the trade of Warsaw, Mr. Grant, the British Consul-General there, refers to certain measures of the Russian Government which will tell seriously against Polish industry. Ever since 1815 the immigration of foreigners to Poland for commercial and industrial purposes has been greatly favoured by the Government. Various ukases granted subsidies to immigrants, gave them grants of public land selected by themselves, supplied timber for building gratis, exempted them perpetually from military service and from the payment of taxes, and sometimes even ordered grants of money to be made them. The rising industries were also fostered by the establishment of chambers of industry and a bank. The industrial development of Poland was, in consequence, very remarkable, especially in the districts nearest to Germany. Suddenly, in 1887, the policy of seventy-three years was reversed; foreigners were prohibited from acquiring land in any way, in Poland and the Baltic provinces, and immigration was thus stopped. Building, except by peasants, within a mile and a quarter of the frontier is also prohibited, and the owners are not allowed to repair the existing buildings. In two governments alone, this order affects 193 factories. Polish industries will also suffer by the application of an old law which has never before been enforced in Poland—viz., that forbidding foreign Jews to engage in trade without the consent of three Ministers, and as this permission is being systematically refused, foreign Jews are virtually excluded from taking part in the trade and industry of Poland. A still greater danger threatens in the proposed measures for protecting Russian industries against those of Poland. If these are carried the protective system will be applied, probably for the first time, to the internal industry of the same State, for the purpose of protecting one province against another. Polish cotton-mills are already handicapped in their competition with Moscow by imposing a higher duty on raw cotton imported by sea to that imported by land. The effect has been to increase the cost of raw material for the Polish spinners and to decrease it for the Moscow ones, for the former must either pay the higher freight or the higher duty. If they import by Germany they must pay the higher freight, if by sea to Riga or Libau they must pay the higher duty, the Moscow spinners being clear gainers by the arrangement. These and other measures in contemplation are attributed to the jealousy of the Moscow manufacturers, who, at the last fair of Nijni Novgorod, addressed a memorial to the Government asking for protection against the Polish industries. The Polish cotton-spinners petitioned against the differential duties, showing the disadvantages under which it places them, but in vain.

FRENCH CENTENARIANS.

A paper was recently read before the French Academy of Sciences by M. Emile Lavasseur on the "Centenarians now living in France." The first report collected gave the number of persons who had attained one hundred years and upwards as 184, but on these being thoroughly sifted no less than 101 were struck out, leaving eighty-three; but even of these there were no fewer than sixty-seven who could not furnish adequate proof of their reputed age. In sixteen cases, however, authentic records of birth or baptism were found, including that of a man born in Spain, and baptised Aug. 20, 1770. His life was spent almost wholly in France. All the other centenarians were reputed to be between 100 and 105 years of age, with the exception of a widow claiming to be 112 years old. Of the eighty-three persons said to be centenarians women formed a large majority, the proportion being fifty-two women to 31 men. There were but few married couples, six male and sixteen female celibates, twenty-three widowers, and forty-one widows. One of the latter was Madame Rostkowski, 103 years of age. She enjoys a pension of 60f. per month, allowed her by the French Government in consideration of her late husband's military services. More centenarians exist in the south-western Departments than in the rest of the Republic, while the basin of the Garonne—from the Pyrenees to the Puy-de-Dôme—contains as many as all the rest of France put together. M. Lavasseur finds that the chances of a person in the nineteenth century reaching 100 years of age are one in 18,800.

Another very important addition has been made to the Navy by the launching at Portsmouth of the powerful twin-screw cruiser Melpomene, six guns, 2350 tons, 9000-horse power, which was commenced in October last.

FAINT-HEARTED READERS.

There was a time when men sat down to a book with the patience and courage needed to bombard a well-fortified town. They girded up their loins for the encounter, and read every

page of a black-letter folio without a moment's thought of the degenerate practice of skipping. To treat an author thus frivolously would be to show themselves unworthy scholars; and it never occurred to these patient plodders to ask whether in all instances the good gained was worth the hours consumed.

Charles Lamb, who dearly loved old books and old ways of study, wrote in one of his letters:—"I mean some day to attack Caryl on 'Job,' six folios. Whatever any man can write surely I may read!" This was the feeling of students in earlier days, when to gain learning at all it was necessary to dig deep, since there were no royal roads to knowledge, such as "coaches," classes, free libraries, and the school-books which, if we may credit the compilers, leave no difficulties unexplained. If the food then provided was a little tough, there was a compensatory power of digestion. Probably there is no man living courageous enough to attack the amazing works left behind him by "voluminous Prynne." But in his lifetime he had readers—that Peter Heylin was one of them Prynne found to his cost—and we know, too, that the public licenser, whose position must have been as painful as that of a cemetery chaplain, was forced to read his works. But now even the 1100 quarto pages of his "Histriomastix," the cream of his life's labours, will, as Carlyle says, "nevermore be read by mortal." A like comment may be passed on many a work over which long nights of toil have been spent. In the Puritan days, Englishmen appear to have been endowed with a patience wellnigh superhuman. How men endured seven hours, with a single break of one quarter, spent in preaching and praying—and this by John Howe's confession he sometimes inflicted upon his congregation—is inconceivable to us; but the same power of prolonged attention was demanded by the pious writers of the period, some of whose works are wellnigh interminable. There was Baxter, who wrote the narrative of his life in folio, and who published more than one hundred books; there was Thomas Fuller, the wittiest and most original of divines, and also one of the most voluminous authors in the language, whose works may be said to form a small library; there was our English Chrysostom, Jeremy Taylor, whose hospitable board, as Coleridge said, "groans under the weight and multitude of viands"; and there was Milton, whose prose works in English and Latin, weighty in bulk and power, contain passages unsurpassed for eloquence, and passages not a few in which language is abused and Christian charity forgotten. That there must have been in that age a good amount of iron in the constitution of authors, readers, and publishers, goes without saying.

Even the lighter literature then in vogue would be deemed by modern young ladies intolerably heavy. Is there one of them that would dare to read Sidney's "Arcadia," or the ten volumes of the "Grand Cyrus"; or Lord Broghill's "Parthenissa"; or even Spenser's incomparable "Faerie Queene"? Why, there are educated English women living—and, it may be feared, men too—who have never read "Paradise Lost," one of the world's greatest poems; and who, to descend considerably in the poetical scale, are ignorant of Thomson's "Seasons," than which few poems, if any, won so much admiration from youths and maidens in the last century; and how greatly they admired "Pamela" and "Clarissa Harlowe," and that exquisite prig "Sir Charles Grandison," is a fact of literary history. Never was novelist so surrounded by female flatterers and devotees as Richardson; but now young ladies

have not the patience to read him, and prefer the dainty, if somewhat slight, refection provided for them by Mr. Henry James.

Exactly in the middle of the last century, Miss Talbot, writing to Mrs. Carter, of blue-stocking renown, said that she had set her whole heart on the success of "The Rambler." An essay is, or ought to be, easy reading, if it is not easily written; but Dr. Johnson, the liveliest and wittiest of talkers, lost the greater part, both of his wit and liveliness, when he took the pen in hand. There is meat in "The Rambler" both plentiful and wholesome, but it is not for babes, and it is to be feared that even a Newnham or Girton scholar would reject it also. Neither an essay nor a short sermon can always escape the charge of dullness. Rogers relates that when Legge was made Bishop of Oxford he had the folly to ask two wits, Canning and Frere, to be present at his first sermon. "Well," said he to Canning, "how did you like it?" "Why, I thought it rather short." "Oh, yes; I am aware that it was short: but I was afraid of being tedious." "You *were* tedious."

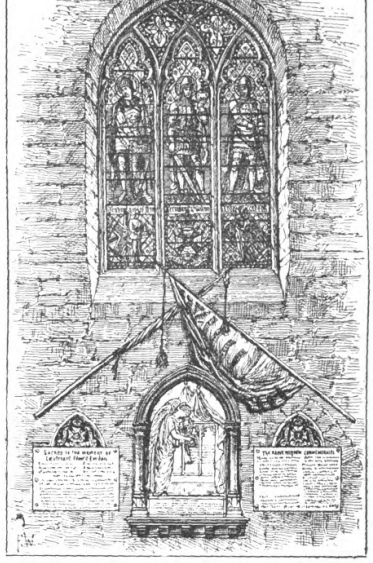
Is it the hurry and excitement of life, the variety of magazines and novels, and a growing love of amusement that make the modern reader so much less patient than his forefathers? or is it that he is generally content with being simply a reader and not a student? Literature, like tinned meats and soups, is now sold in the most portable form possible. A man will not read the greatest poets of his country or even the most popular of living poets unless in selections. In earlier days, when Young's "Night Thoughts" was read as a pastime, it would have needed little heroism to read the entire works of such fine poets as Lord Tennyson, Mr. Coventry Patmore, and Mr. Matthew Arnold; but now we profess to be satisfied with their "Beauties"; as if it were possible to understand a poet's full scope and charm by reading him in fragments! Such volumes may be serviceable to the traveller who has little space in his portmanteau, but the reader shows a strange lack of courage who dallies with selections when he has access to a library. Into all departments of literature the process of abridgment is carried. The late George Henry Lewes encouraged a young gentleman to attempt the astounding feat of reducing Boswell; and Lockhart's Scott has undergone the same treatment. Even the Waverley novels, works unsurpassed since Shakspeare for imaginative power, for elevation of tone, and for the sweetness and light that no English writer has possessed in a larger measure than Scott, have been considered too solid food for the fitful appetite of the modern novel-reader. He can swallow without much difficulty a "shilling dreadful"; he can read after dinner, and when supported in an easy-chair, the society papers; but a noble work of art, the interest of which is not due to thrilling incidents and impossible adventures in every page, is a weariness to the flesh.

The passion for strong sensations is a remarkable feature of the time, and of late a new danger has invaded England, against which Sir Theodore Martin has recently warned his countrymen. The grossest literature of France, which represents, as its chief exponent admits, the rottenness of Parisian society, is now translated and scattered broadcast over England. What toleration, Sir Theodore asks, should be shown to Englishmen who make a trade of translating and propagating this poisonous trash! and truly does he add that to keep works of fiction of this class out of the hands of their sons and daughters "must now cause many an anxious hour to English parents." Such fiction is easily read, but it is not easily forgotten; and the amusement of an hour may be the ruin of a life. A taste for what is noble and of good report in literature is, no doubt, the best antidote against this poison; but the faint-hearted reader has not enough energy of purpose to gain this taste. He reads simply to pass away the time, and, without any wish to go astray, is in danger of doing so from sheer love of excitement. Simple and wholesome food no longer suits him, and he longs for a new mental sensation, just as Keats, eager for a new bodily one, covered his tongue with cayenne pepper, in order, as he said, to appreciate "the delicious coolness of claret in all its glory."

J. D.

"CAPTAIN SWIFT" AT THE HAYMARKET.

The romantic play of "Captain Swift," by that clever young Australian writer, Mr. C. Haddon Chambers, has so quickly secured public favour at the Haymarket Theatre that the principal personages of this effective drama well merit portrayal. The central figure in our Illustration is the supremely artistic actor-manager, Mr. H. Beerbohm Tree, as Mr. Wilding (the alias the quondam Australian bushranger, Captain Swift, bears in England), inflicting chastisement on the venomous servant, Marshall (Mr. Brookfield), for his insulting references to the past life of Wilding. Captain Swift, it will be remembered, is in a most trying position. Guest of his new friend, Mr. Seabrook, at Fernshawe Park, he has a double reason to banish his bushranging recollections. He is in love with the gentle niece of Mr. Seabrook, Stella Darbisher, who returns his affection; and he learns, to his amazement, that he is the natural son of his hostess, Mrs. Seabrook. The masterful way in which Wilding plucks this love from his heart, and, at the prayer of his agitated mother, quits the house, and all that makes life worth living, commands the warmest sympathy of the audience; and, when the troubled outcast at last shoots himself to save his mother's secret from being divulged, it is felt that the motto of the piece is realised, however painfully, and that "There is some soul of goodness in things evil." As that deeply-moved gentlewoman, Mrs. Seabrook, Lady Monckton acts with emotional power in every phase; her anguish for the sin of her young days being as eloquently expressed as her strong attachment for her fond husband (Mr. Kemble) is feelingly conveyed. Lady Monckton could not possibly have a better foil than Miss Rose Leclercq in the adroitly enacted part of the cold-blooded woman of the world, Lady Staunton, Mrs. Seabrook's sister. Mrs. Tree has rarely, if ever, been seen to such advantage. She is delightfully natural as Stella Darbisher, beloved at one and the same time by the two half-brothers, Captain Swift and Harry Seabrook, his jealous rival (Mr. Fuller Mellish). The influence of Mr. Tree's example has had an excellent affect on Mr. Macklin, who has never acted better than he does as the frank and good-hearted young Queenslander, Mr. Gardiner, who recognises Wilding as a bushranger assailant of his, Captain Swift, but is induced for a sentimental reason to refrain from unmasking him, as he indubitably would do in real life in common justice to his host and hostess, particularly as he is betrothed to pretty Mabel Seabrook (Miss Angela Cudmore). It remains to add that Mr. Charles Allan infuses individuality into the part of the Australian detective, Michael Ryan, who comes to England to arrest Captain Swift, and finds a ready confederate in the vindictive Marshall, of which rascally person Mr. Brookfield has made quite a character-study.



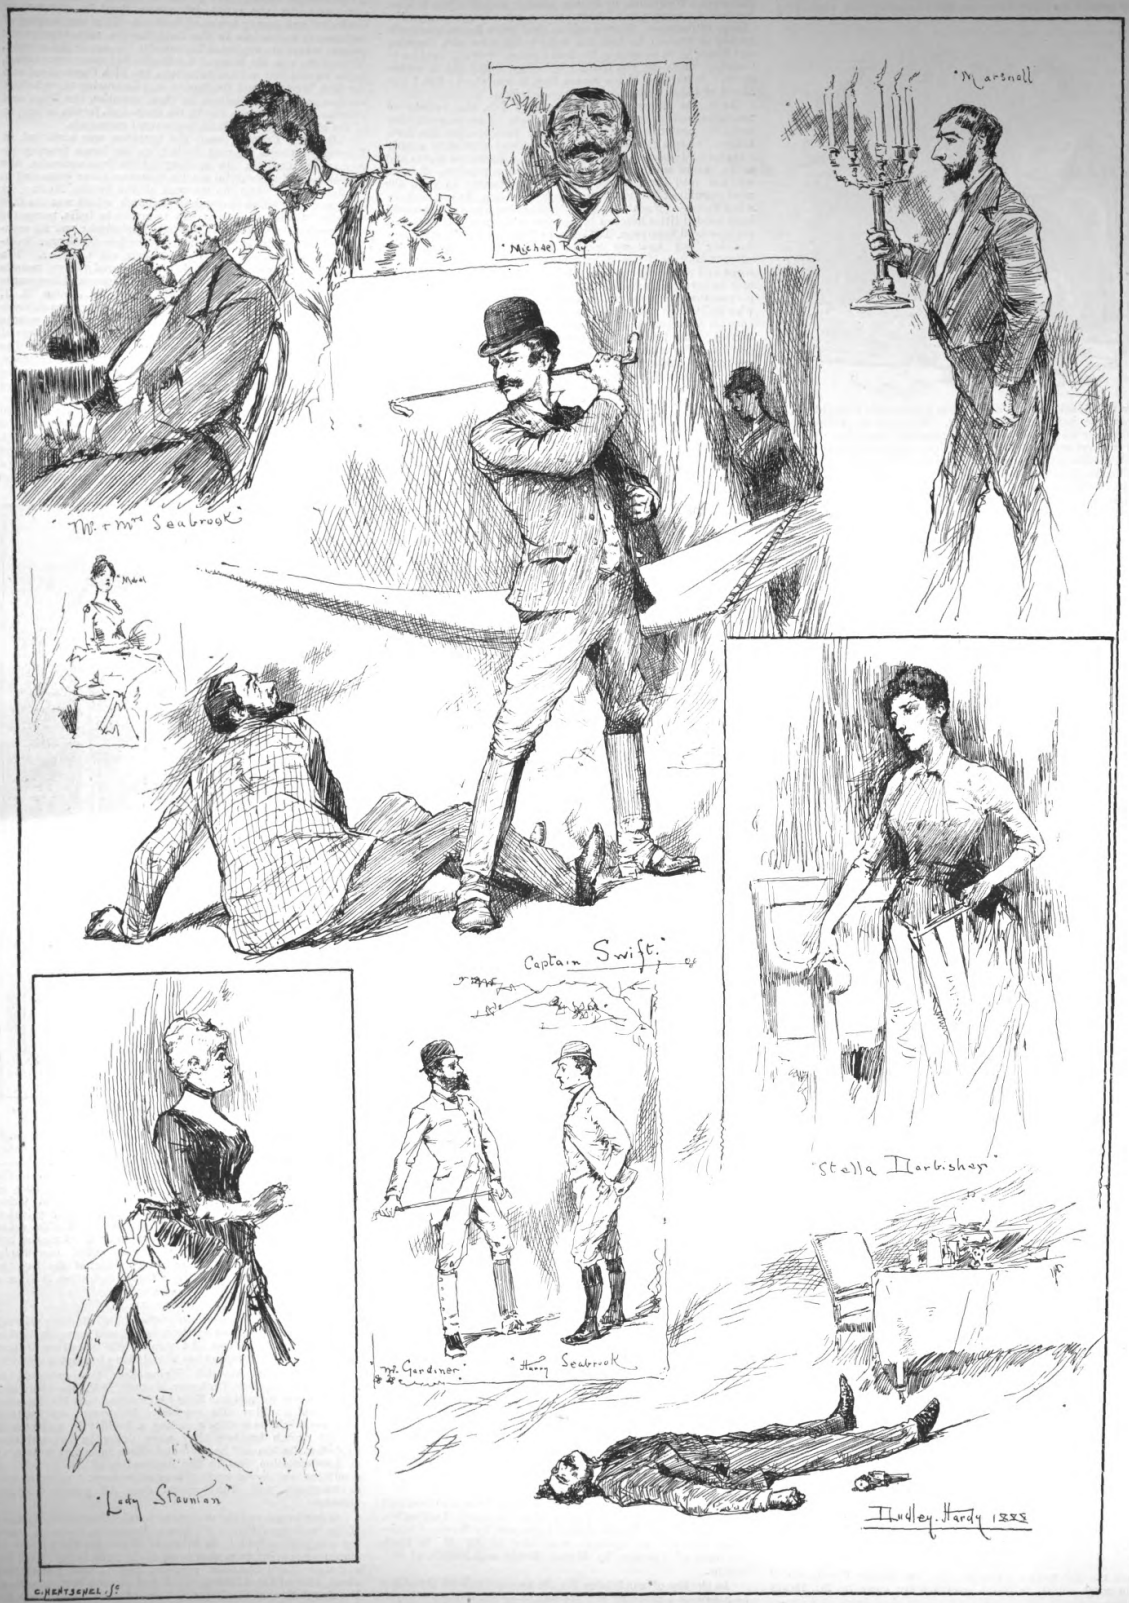
The Portrait of the Emperor of Brazil is from a photograph by M. Numa Blanc, of Paris; that of Lord Carrington, Governor of New South Wales, from one by Messrs. Charlemont and Co., of Sydney; and that of Sir H. B. Loch, Governor of Victoria, by Messrs. Foster and Martin, of Melbourne.

In the list of candidates for the vacant chair of chemistry at Aberdeen University are the names of Dr. Snape, Aberystwith; Professor Masson, Melbourne University; Professor Japp, South Kensington; Dr. Hartley, Dublin; Dr. Scott, Durham; and Dr. Senior, London. The salary attached to the office is £1000 per annum, and the candidates are very numerous.

MEMORIALS OF 34TH CUMBERLAND REGIMENT, CARLISLE.

An incidental consequence of the localising of regiments of our army, by the territorial system, may be observed in Cathedral and county towns of England. It is the placing of regimental memorials in the Cathedrals, a very appropriate custom where the regiment historically belongs to the county. At Carlisle, now the home of the Border Regiment, comprising, in its 1st and 2nd or Line battalions, the 34th Cumberland and the 55th Westmorland Regiments, and embracing the whole of the fine auxiliary battalions of these counties, the Dean and Chapter have allotted a bay in the Cathedral, for the collection of the old 34th, Cumberland, regimental memorials.

After the Crimean war, the battalion was stationed in Edinburgh Castle, having halted, on its home journey up country, at Carlisle. In memory of its late comrades, the preparation of a beautiful marble monument was entrusted to Sir John Steell. But the outbreak of the Indian Mutiny, in 1857, and the sudden dispatch of the 34th, which was the first of those battalions specially sent to arrive in India, prevented their seeing its erection in Carlisle Cathedral; and its completion was kindly superintended by the late Sir George Scott-Douglas, of Springwood, one of their old Captains. The inscription beneath this graceful sculptured design records the names of Captains Shiffner and Robinson, Lieutenants F. R. Hurt, Hector Lawrence, H. D. Alt, W. Jerdan, R. J. Brown Clayton, and Norman Ramsay, and enumerates thirteen sergeants, eleven corporals, four drummers, and 289 private soldiers, who were killed in action, or died from the effects of labour in the trenches, during the Crimean campaigns. The tablet was erected by General Sir Thomas Macdougall Brisbane, Bart, G.C.B., G.C.H., Colonel of the regiment, and the surviving comrades, in 1857. Two pairs of the regimental colours were subsequently received, with befitting ceremony, by Dean Close, to be deposited in the Cathedral. The death of General Lord Airey, who had served in the 34th Regiment, and had been its Colonel, was followed by that of their commanding officer, Colonel Trevor Chapman, from cholera, at Dum-dum; and Captain Archibald Balderson, Station Staff Officer, was killed about the same time, while endeavouring to rescue those buried



MEMORIALS IN CARLISLE CATHEDRAL TO THE 34TH REGIMENT.

in the landslip at Nynee Tal. The officers, past and present, erected a noble window in Carlisle Cathedral to the memory of those lost during that tour of foreign service. They have also caused to be engraved, on a brass tablet, a duplicate of the inscription in the Cawnpore Memorial Church, in memory of Lieutenant Edward Jordan, Ensigns Applegate and Grier, several non-commissioned officers, and twenty-four privates, killed in action at Cawnpore in November, 1857. The set of colours borne by the regiment throughout the Crimean and Indian campaigns are crossed above the mural monuments, and, with the second pair, masking the front of the bay, the arrangement is highly effective. Our Illustration is from a photograph by Messrs. Wnaite, of Carlisle.

The miners and ironworkers in the Ebbw Vale have rejected the compromise proposed by the masters, and have decided to remove their tools from the mines. It is estimated that upwards of £6000 in wages has already been lost to the district.

At a crowded Scottish Home-Rule demonstration in Glasgow on Sept. 18, Professor Hunter, M.P., the chairman, said whatever form Home Rule for Scotland took the Imperial Parliament would remain supreme. At present the Scottish members might as well be spending a holiday in Switzerland for all Scotch business they were doing in Westminster. Professor Blackie said he did not believe in centralisation or in Londonisation, but in the nationality of the Scotch. A resolution was passed urging the establishment of a Legislature in Scotland, with full control over all purely Scottish questions.

In furtherance of the movement to celebrate the bicentenary of the landing of Prince William of Orange in Torbay, a meeting was held on Sept. 18 at Brixham, Devon, for the purpose of obtaining support from that town to the fund being raised for a statue. Lord Churston presided, and it was stated that about £400 of the £1000 required had already been promised. Representatives of the Huguenot societies of London and the Protestants of Hull supported the object of the meeting, and a resolution was passed endorsing the action of the committee. The event will be celebrated on Nov. 5, and it is proposed to erect the statue on Brixham Beach, at the spot where the Prince landed.

SKETCHES OF "CAPTAIN SWIFT" AT THE HAYMARKET THEATRE.

WOOLWICH ARSENAL: THE SHELL FACTORY.

The Shell Factory at Woolwich Arsenal produces shells of thirty-seven different measures, from the smallest, one inch in diameter, used instead of a bullet in the Nordenfeldt machine-gun, up to the largest, of sixteen and a quarter inches diameter, used for the great gun that weighs a hundred and ten tons. All these shells are of the cylindrical, conical-headed form; no spherical shells are now made at Woolwich, but the Arsenal will repair those of that pattern which may have been handed over to the Artillery Volunteers for their practice. A shell of the largest size contains 85 lb. of gunpowder, which is calculated to burst its steel wall or case, two inches and a half thick; if the shell were made of iron, instead of steel, this charge would burst it four inches thick. The scattering of the fragments of the exploded shell is, of course, the mode of its destructive effect, not here considering the shrapnel shell, which contains a large number of bullets, to kill or wound many men at a time. The shell is discharged like a solid shot from a gun; the gun-charge to throw the largest shell that is made at the Arsenal would be 800 lb. of gunpowder, in the 110-ton great gun, which can throw such a projectile five miles. The apparatus for igniting the charge of gunpowder contained within the shell itself, and so causing it to burst when it has reached the enemy, is placed in the conical head of the shell. It may either be a detonating percussion cap, which acts by striking against the first obstacle in the flight of the shell, whether it be the side of a ship, the wall of a fort, or the hard ground; or it may be a "time fuse," which is ignited by the flame of the gun at its discharge, and which consists of a metal tube filled with a slowly-burning composition, the fire of which reaches the gunpowder charge of the shell in a certain time, not less than five seconds or more than fifteen seconds, according to the range of distance and other considerations. The fuses are readily put on the shells when required for service; in the head of every shell is a brass fuse-hole, with an internal conical screw, made so that the fuse can be quickly screwed into it; all the fuse-holes, of all kinds and sizes of shells, are exactly alike, so that any fuse can be applied to any shell, which is a great practical convenience, preventing the chance of any shells being rendered useless by a mistake in not having their proper fuses at hand. As the shell, discharged from a rifled gun, is to have a rotatory movement, like that of a rifle-bullet, the base or hinder end of the shell is surrounded with a ring of copper, a softer metal, which takes the groove from the rifled calibre of the gun. There are shells of the hardest steel, for penetrating iron or steel plate armour; but we believe these are not made in the Shell Factory at Woolwich. It may be observed that the inside surface of every shell is coated with a red lacquer, which is a composition of resin and other substances, and the utility of which is more important than one would suppose. When the projectile rushes forward through the gun, the powder within the shell has such violent friction with the inner surface of the shell that it might be prematurely ignited by the heating of the steel surface, and so the shell might burst even before leaving the gun, bursting the gun and all. Such accidents are known to have formerly happened with very disastrous effects. The inside coating of resinous lacquer tends to prevent this heating from the friction of the powder on the steel of the shell.

The shrapnel shell is of more complex construction. It has a powder-cup at the base, the hinder end of the cylinder, with a separating diaphragm between the charge of gunpowder there and the middle length; a connecting-tube from the head of the shell to the powder-charge, descends through the centre of the cylinder, and the space all round this tube is filled with bullets; the upper end of the tube fits into a socket in the conical head of the shell, where it communicates with a time-fuse; the head is made of Atlas metal, and is not designed to pierce the armour-plate of ships, but to pour out the multitude of bullets. The fire from the fuse, of course, is transmitted by the connecting tube to the gunpowder in the cup at the base of the shell, and the bullets are shot forward. A shrapnel shell of six and a half inches calibre will contain nearly 240 leaden bullets, each weighing above an ounce. The largest shrapnel shell, discharged by the Elswick 110-ton gun, having a diameter of sixteen and a quarter inches, contains 2330 iron bullets, each weighing four ounces, the effect of which must be terrible when poured amongst a body of men, or in the interior of an enemy's ship. A shrapnel shell made of cast iron will burst, like an ordinary shell, and scatter its fragments; but a shrapnel shell of steel will only project its contents through the head. The bullets are effective at a distance of from fifty to a hundred yards from the shell, spreading from 10 ft. to 15 ft.

PAINTING SHELLS.

The Woolwich Shell Factory, as well as the foundry of the Arsenal, is now working night and day, and issuing shells of all sizes at the rate of ten thousand a week; but at present, we understand, about four thousand of them weekly made are those of one-inch measure for the machine-guns. It will be understood that every shell has to be carefully tested; and, when it comes from the foundry, an apparatus is applied to its interior, as shown in one of our Illustrations, to find whether its sides are of perfectly uniform thickness; if it were faulty in this respect, it would twist irregularly, and might even break in the gun. Any shell not answering this requirement is at once condemned and returned to the foundry.

With reference to our description and Illustrations of the Torpedo Factory, which appeared last week, it should be observed that the man who was shown "ganging the tail of a torpedo" applies his measurement not to the propeller flanges, which are not yet fixed on, but to what may be called the tail fins, as we likened the torpedo to a mechanical swimming fish. In front of the double-screw propeller, which is the tail, are four well-proportioned tail fins, on one pair of which are to be fitted the vertical rudders, permanently adjusted to keep the torpedo in a straight course directed to its object; on the other pair are the horizontal rudders, acted on automatically by a secret contrivance, and serving, when adjusted, to keep the torpedo at the required depth below the surface of the water.

The cost of manufacturing a Whitehead torpedo is roughly estimated at about £300. It can travel through the water, by its own locomotive power, a distance of probably one mile; but its velocity would diminish after a run of six hundred yards. The maximum speed is twenty-seven knots or nautical miles an hour; and six hundred yards may be taken as the practical range, being the distance to which the torpedo would maintain sufficient velocity to explode its gun-cotton charge by the impact of its detonator against the side of a ship.

We shall give further Illustrations of the manufactures in the Royal Arsenal.

LIFE-BOAT SERVICES.

A meeting of the Royal National Life-Boat Institution was held on Sept. 13 at its house, John-street, Adelphi; Sir Edward Birkbeck, Bart., M.P., in the chair. Rewards amounting to £208 were granted to the crews of life-boats belonging to the institution for services rendered during the past month; also to the crews of shore-boats and others for saving life from wrecks on our coasts. Payments amounting to £3842 were ordered to be made on the 293 life-boat establishments of the institution. Among the contributions recently received were £2000 from the trustees of the late Mr. Edward Boustead, of Clapham Park; £1700 from the residuary legatees of the late Sir Joseph Whitworth, being a further contribution towards providing and permanently maintaining a life-boat to be named the Joseph Whitworth; and £700 from Mrs. Martin, of Pershore, to defray the Rhyl new life-boat, to be named the Jane Martin. New life-boats were sent during the past month to Ramsey, Wells, Dover, Jersey, Guernsey, Berwick-on-Tweed, and New Brighton.

At the recent conference at Harrogate of the industrial department of the Girls' Friendly Society, under Mrs. Fawkes, of Farnley Hall, Otley; Lady Louisa Lascelles; and Mrs. Jerome Mercier, of Kemerton, it was decided to offer prizes at diocesan and branch festivals, to members, for the best butter, cheese, and bread (plain and fancy), with the object of reviving that practical part of a country-girl's education which of late has been too much neglected, to the detriment of the farming interest.

Before summer can be said to have properly visited us, giving merely a side-smile in passing, behold we are favoured with Christmas and New-Year greetings, in the form of floral cards, from the Religious Tract Society.

FILLING SMALL SHRAPNEL SHELLS WITH BULLETS.

NOVELS.

The Lindsays: A Romance of Scottish Life. By John K. Leys. Three vols. (Chatto and Windus).—It would seem that the manners of rural life in Scotland, especially under the peculiar religious influences of the Kirk, or the Free Kirk, or the "U. P." Connexion, artistically contrasted with less sharply defined customs of the English middle classes, afford a field of social varieties in culture and growth suitable to the novelist's purpose. The family of Mr. Lindsay, of the Castle Farm, Muirburn, somewhere in Clydesdale, being visited by a gentleman from London, Mr. Hubert Blake, an amateur artist of roving disposition, exhibits three strong individual characters—the father, a strict Presbyterian of severe integrity, but cold and austere to his children; one of the sons, named Alec, who is ambitious of a liberal education and profession, but refuses to become a Minister of the Kirk; and the beautiful daughter, Margaret, whose romantic piety, nourished by tales of the Covenanters and Martyrs, rejects the offered love of a generous worldling too sceptical of the creed she has been taught. There are two other young ladies, who are English, and who have a fair share of mental accomplishments and fashionable experiences. One is Miss Laura Mowbray, a charming and rather daring flirt, who desires to marry somebody likely to be rich; the other is Hubert Blake's cousin, Sophy Meredith, who lives quietly with her old uncle at Highgate. When Alec Lindsay goes to Glasgow as a University student, which must have been some twenty years ago, the College being then in the old High-street buildings, he calls on a wealthy relative, a Mr. James Lindsay of Dramleck, the owner of valuable oil-works; is invited to dinner there, and meets Laura Mowbray, with whom he falls in love. In a summer holiday sojourn at Arrochar, on Loch Long, rowing her in a boat at evening, and assisting her in a perilous climbing adventure on the Cobbler mountain, the heart of the unsophisticated young man is irrecoverably lost. She, for her part, though liking Alec Lindsay, has a shrewd eye to his unworthy cousin, James Semple, who is a confidential clerk in the great oil-works business, expecting to succeed to its managing partnership with a large fortune. Alec therefore obtains no substantial encouragement, and, resolving to go to the Bar at the end of his University studies, is admitted into the office of a London firm of solicitors, Messrs. Hatchett, Small, and Hatchett, in the neighbourhood of Gray's Inn. The managing clerk of this firm is a Scotchman, a Mr. Beattie, of course some years older than Alec, plausible, crafty, and dishonest, who receives Alec with a show of friendly candour. The law affairs of old Mr. Lindsay of Dramleck, a demi-millionaire, are entrusted to these solicitors; that old gentleman, being in ill-health, coming to consult a London physician, is warned of approaching death. He has to make his will, and, not caring to bestow a great inheritance on any of his kindred, determines that the oil-works and all his business property shall be sold, and that the Free Kirk of Scotland shall be endowed with £500,000. There are legacies of £10,000 to his sister, Miss Joan Lindsay, and to Alec's father; small legacies to Margaret and to Laura Mowbray, who is living in his house with his sister; and only the residue, estimated at £10,000, is left to James Semple and Alec Lindsay, as residuary legatees and executors of this will. Alec is employed by Mr. Hatchett, at the testator's special request, to prepare the draft of the will, and performs his task with scrupulous fidelity; but the senior clerk, Beattie, had previously taken the testator's instructions, and this man, being an artful rogue, communicating with James Semple, who is equally dishonest, contrives an audacious though easy trick. He gets a drunken engrossing-clerk to make a false copy of the document for signature, omitting the word "hundred," so as to reduce the Free Kirk bequest to five thousand pounds. There is no violent improbability in the manner in which the fraudulent substitution of this copy for the true copy is effected by Semple, after the reading over of the correct will aloud by Alec to the bedridden and feeble testator, who is then induced to sign the false will in the presence of two witnesses, Alec's attention being called away by a pretended message from the office. Semple had also taken care to steal the draft prepared by Alec, which was in the old gentleman's bed-room; but in this he was obliged to ask the aid of Laura, who was ignorant of his nefarious purpose. The effect of the false will, obviously, would be to divide between James Semple and Alec Lindsay, as residuary legatees, nearly half a million of money, deducting the specified legacies and bequests. Its genuineness, however, is furiously denied, after the death of the testator, by the Rev. Mr. Mackenzie, a Free Kirk minister, with whom the testator had conferred, and who had both seen the original draft and heard the true will read over before its signature. Alec Lindsay is therefore arrested on the charge of fraudulent conspiracy to falsify the will, and is presently brought to trial at the Central Criminal Court, where he is about to be found guilty, when Laura comes forward, of her own accord, to give evidence against Semple concerning the draft; and the sudden reappearance of MacGowan, the engrossing clerk, whom Beattie had shipped off, as he thought, to Australia, completes the proof of Alec's innocence. All this is very well told, with a natural and probable concatenation of circumstances; but, when the will is found to be invalid, and the property has to be distributed among the next of kin, it seems rather silly that Alec should decline his just and lawful share. Nevertheless, he marries Laura; while Hubert Blake, his generous friend, makes Sophy Meredith happy; Margaret chooses a single life, and James Semple comes to a miserable end.

The Black Arrow, a Tale of the Two Roses. By R. L. Stevenson. One vol. (Cassell and Co.).—Few of our popular writers of fiction have greater mastery of the mechanism of plot and incident, or a more concise and effective style of narrative, than the author of "Kidnapped" and "Treasure Island." In this historical romance, illustrating the troubled domestic condition of England during the civil wars between the rival factions of York and Lancaster, the main interest belongs to a band of desperate outlaws, men driven wild by the oppression of local tyrants, notably of a cruel and covetous Knight, Sir Daniel Brackley, infesting the Tunstall Woods in the East Riding of Yorkshire. The symbolic token of their conspiracy for vengeance is the "Black Arrow," with which they constantly threaten the lives of Sir Daniel and his accomplices in many wicked acts—Bennet Hatch, his right-hand man; Sir Oliver Oates, the parson, who is also a cunning lawyer; and old Appleyard, a soldier of Agincourt, over eighty years of age. Menacing papers signed "John Amendall" are found in the neighbourhood, but the actual ring-leader is Ellis Duckworth, who has been robbed of his home and property by Sir Daniel's unjust machinations. The former landlord, Sir Harry Shelton, died a violent death under mysterious circumstances, and Sir Daniel and the parson are suspected of having contrived his murder; but his only son, young Richard Shelton, now emerging from boyhood, has been made a ward of Sir Daniel, and has been kept ignorant of the dire injury that was done to him and to his parent. In those times, as we know, the wardship of an orphan heir or heiress, with the opportunity, sometimes, of appropriating the revenue of an estate, was often purchased of the Crown by unscrupulous Court favourites; and Sir Daniel has likewise got hold of a young lady, Joanna Sedley, whom he has stolen, in the disguise of a boy, from the custody of Lord Foxham, her other guardian. There is no doubt that powerful men in the country, able to bring scores or hundreds of armed retainers to join either of the contending armies, could practise these and worse crimes with impunity during the Wars of the Roses; and the contemporary existence of freebooting foresters, at least in the North of England, not unlike the famous Robin Hood and his followers three centuries before, is also matter of history. The period to which this tale must be ascribed is in the winter preceding the battle of Towton, early in 1461; and Sir Daniel Brackley, being a shameless turn-coat, musters his force of men-at-arms, billmen, spearmen, and archers, in the village of Kettley, with the base intention of joining whichever may prove to be the stronger party. While professedly an adherent of King Henry VI., he sends secret messages to the Yorkists, among whom the deformed but terrible figure of young Richard Plantagenet, shortly afterwards Duke of Gloucester, and ultimately King Richard III., with his characteristic valour in fight, his cunning, and his merciless cruelty, is forcibly portrayed. Young Richard Shelton, commonly called "Dick," presently discovering the villainy of Sir Daniel, assists Joanna, whom he mistakes at first for a boy like himself, to escape through the marshes and forests, seeking a refuge at Holywood Abbey; but she is recaptured and shut up in Sir Daniel's house. The outlaws welcome Dick Shelton as the son of their former popular landlord, and beleaguer the mansion for some days, in hopes of revenge and plunder. After much confused fighting and many incidental perilous adventures, dropping from walls into ditches, running away, losing the way, scrambling to and fro, putting on the dress of a friar to enter the house, finding Joanna there, failing to deliver the captive maid, stabbing a spy behind the arras, seizing a small vessel and conducting an attack from the sea, in all which an old sailor, soldier, and sometime friar named Lawless does useful service, Dick seems to be little nearer his object. Joanna, indeed, is about to be married, under compulsion, to Lord Shoreby, a hateful old profligate, when a black arrow strikes the bride's groom dead as the wedding procession enters the church. But a detachment of the Yorkist army, led by the fierce Richard of Gloucester, to whom Dick is sent by Lord Foxham with valuable military information, marches on the Lancastrian garrison of Shoreby-on-Till, where Sir Daniel, under the Earl of Risingham, is still obliged to be on service. Dick Shelton is put in command of an important post, fights with great skill and bravery, and earns the honour of knighthood. Joanna Sedley is set free, and her wedding with Sir Richard Shelton, by the consent of Lord Foxham, is joyfully solemnised in Holywood Abbey. Sir Daniel Brackley falls by the "black arrow" from the bow of Ellis Duckworth; and one would suppose that there was another black arrow reserved for the parson; but Dick intercedes for him, and the league of vengeance is dissolved. Homicide, of one kind and another, is frightfully abundant in this story; and Dick's poniard is busily employed, on many occasions, without the slightest remorse, in perforating the breasts of vulgar clowns and serving-men who stand in his way. The amount of bloodshed here, quite apart from the battles of "The Two Roses," exceeds that which is found in any of Mr. Rider Haggard's African romances. But there are readers, probably, who like plenty of that ingredient; stabbing, shooting, and splitting skulls are undeniable resources of literary sensation, and it is always entertaining to describe the various manners in which people are killed.

Helen, the Novelist. By J. W. Sherer, C.S.I. Two vols. (Chapman and Hall).—It will not be expected of any critic that the merits of Miss Helen Clare, as a "novelist," should be estimated in a review of these volumes. From them we indeed know nothing of the stories that she wrote and published. The present story, in which Helen figures less as an active or passive heroine than as a friendly spectator of the doings and sufferings of other persons, would lose nothing essential to its plot if she had never attempted to write a novel. It would be as complete, if she had contented herself with her first occupation of daily governess, until her rich uncle from Australia provided the means of comfort for his widowed sister and his niece. Helen's two pupils, however, Julia and Margaret Rathbone, the daughters of a prosperous and ambitious barrister, undergo much more serious adventures than she does herself in the way of lovemaking and marriage. These are attended with disastrous results in the case of Julia, but in Margaret's case with a rather ludicrous escapade, while Helen's agency in these affairs is of no real importance. The most amusing episode is that of the Indian experiences of Arthur Geneste, the young artist, who was engaged as Court painter to the Maharajah of Madhopore. As the mutual affection between Arthur and Helen, when they lived with their two neighbourly mothers, respectively, at No. 9 and No. 13 in the same street at Kensington, and often met at supper-time, never expressly declared itself on either side, its apparent quality is scarcely vivid and intense enough to become a source of romantic interest. The only considerable endeavour to exhibit the sustained passion of love, as powerfully influencing the characters and conduct of any leading personages in this tale, is in the quickly interrupted relations between Harry Beaumont, or Lister, the rightful name which he resumes, and Julia Rathbone. That unfortunate young lady, being denied her father's consent to receive Harry as a suitor, because his stepfather had been hanged for poisoning his wife and child, forthwith allows herself to be disposed of to a drunken and reckless man of aristocratic family, Lord Gilbert Vandeleur, and then, having become his wife, listens to the seducing voice of a more vicious profligate, Sir Eric Campbell, with whom she agrees to elope from her husband. Harry Beaumont or Lister, a young gentleman of high principles, the soul of honour, generosity, and refined sensibility, ought, perhaps, to be congratulated on his failure to win the hand of Julia. The repulsive figure of Broughton Williams, a boorish blockhead and drunkard some degrees more odious than Lord Gilbert, but with large pecuniary expectations, occupies a small space; and there is a grotesque audacity in the notion that he and Margaret Rathbone, pretending to accept their marriage at the behest of their elders, contrive, each separately and independently, to run away on the wedding morning, and each to marry somebody else. Helen Clare, certainly, in her original function as governess of Julia and Margaret, could not be proud of her pupils; nor could she be very proud of either of her lovers; while the value of her novels is problematical, unless they were worth more than this one.

TAKING THE THICKNESS OF A LARGE SHELL, AT WOOLWICH ARSENAL.

OBITUARY.

SIR EDMUND LACON, BART.

Sir Edmund Henry Knowles Lacon, M.A., third Baronet, of Great Yarmouth, Norfolk, J.P. and D.L., died on Sept. 6, at Ormesby House. He was born Aug. 14, 1807, the eldest son of Sir Edmund Knowles Lacon, second Baronet, by Eliza Dixon, his wife, eldest daughter and co-heir of Mr. Thomas Beecroft, of Saxthorpe Hall, Norfolk, and grandson of Sir Edmund Lacon (created a Baronet in 1818), by Eliza, his wife, daughter and co-heir of the Rev. Thomas Knowles, D.D., Prebendary of Ely. He was educated at Eton and Emmanuel College, Cambridge; and served for a short time in the Diplomatic Service. He succeeded to the title in 1839, and in the following year married Eliza Georgina, eldest daughter of Mr. James Esdaile Hammet, of Lawn Cottage, Battersea, and had four sons and two daughters. Sir Edmund sat in Parliament as M.P. for Great Yarmouth, 1852, 1859, and 1865; and for North Norfolk, 1868 to 1886. He was High Steward of Great Yarmouth, Hon. Colonel 4th Battalion Norfolk Regiment, and Norfolk Artillery Volunteers. His eldest son, now Lieutenant-Colonel Sir Edmund Broughton Knowles Lacon, fourth Baronet, married, in 1878, Florence Amelia, daughter of Morgan H. Foster, C.B., of Brickhill, Beds.

SIR C. R. ROWLEY, BART.

Sir Charles Robert Rowley, fourth Baronet of Tendring Hall, in the county of Suffolk, died on Sept. 8. He was born May 5, 1800, the third son of Sir William Rowley, second Baronet, by Susannah Edith, his wife, youngest daughter of Admiral Sir Robert Harland, and succeeded his brother as fourth Baronet on March 18, 1857. He was formerly a Captain in the Grenadier Guards, and was a Deputy-Lieutenant and Justice of the Peace for Suffolk. He married, Sept. 14, 1830, the Hon. Maria Louisa Vanneck, only daughter of Joshua, second Lord Huntingfield, and by her (who died March 16, 1878) leaves, with other issue, a son, now Sir Joshua Thellusson Rowley, fifth Baronet, who married, in 1887, the Hon. Louisa Helena Brownlow, late Maid of Honour to the Queen, third daughter of Charles, second Lord Lurgan, K.P.

GENERAL WILLIAM INGLIS.

General William Inglis, C.B., late Royal Engineers, of Hildersham Hall and Rickling Hall, in the county of Cambridge, died at 1, Talbot-place, Blackheath, on Sept. 2, in his sixty-fourth year. He was the eldest son of General Sir William Inglis, K.C.B., by Margaret Mary, his wife, daughter of General Raymond, of The Lee, Essex; and entering the Army in 1840, became General in 1881. He served in the Crimean campaign in 1854-55, including the battles of Balaclava and Inkermann, the siege and fall of Sebastopol, the assault of the Redan, and the expedition to Kinbourn. For his services he received the Crimean and Turkish medals, and was made a Knight of the Legion of Honour and the Fifth Class of the Medjidieh. The decoration of C.B. was given to him in 1867. General Inglis married, in 1860, Mary, daughter of Mr. Hector William Bower Monro, of Edmondsham, Dorset, and Ewell Castle, Surrey, and leaves issue, a son and a daughter.

GENERAL MORDEN CARTHEW.

General Morden Carthew, C.B., late Madras Army, died at his residence, Denton Lodge, Harleston, Norfolk, on Sept. 4. He was born Oct. 25, 1804, the eldest son of the Rev. Morden Carthew, Vicar of Mattishall, Norfolk, by Emily, his wife, daughter of Mr. George Tweed Pyke, of Baythorn Park, Essex, and inherited the Woodbridge Abbey estates from his grandfather, the Rev. Thomas Carthew, M.A., F.S.A., of Woodbridge Abbey, which he subsequently sold to Mr. Peter Carthew, whose son now possesses that property. General Carthew entered the Indian Army in 1821, became Captain in 1836, Major in 1842, Lieutenant-Colonel in 1848, Colonel in 1854, Major-General in 1859, Lieutenant-General in 1870, and General in 1877. He served in the Goomsoor campaign in 1837 and in the Indian Mutiny campaign in 1857-58 (medal). He was made a C.B. in 1867. The deceased General married, firstly, in 1827, Jemima Borland, daughter of Mr. John Ewart of Romana; and secondly, in 1866, Mary, youngest daughter of Mr. Roger Hunter, of Liverpool, and widow of the Rev. J. Clarke, Rural Dean and Rector of Stretford. His eldest son is Mr. Morden Carthew-Yorstoun, of East Tinwald, Dumfriesshire.

MAJOR-GENERAL STANSFIELD-CROMPTON.

Major-General William Henry Stansfield-Crompton, of Esholt Hall, and Azerley Hall, Yorkshire, J.P. and D.L., died at his shooting-box at Buckden Moors, near Skipton, on Sept. 6, in his fifty-fourth year. He was the eldest son of the late Mr. Joshua Samuel Crompton, of Azerley Hall, formerly M.P. for Ripon, by Mary, his wife, youngest daughter of Mr. Claude Alexander, of Ballochmyle, and assumed the additional name and arms of Stansfield on succeeding to the estates of his uncle, Mr. William Rookes Crompton-Stansfield, of Esholt. He was educated at Harrow, and entered the Army in 1854; he became Captain in 1856, Major in 1870, Lieutenant-Colonel in 1871, Colonel in 1876, and Major-General in 1882. He served with the 42nd Highlanders in the Crimea, including the siege and fall of Sebastopol, for which he received a medal, with clasp, and the Turkish medal. He married, in 1858, Frances Elizabeth, fifth daughter of Mr. John Dalton, of Fillingham Castle, Lincoln, and Gleningford Park, York; and leaves three daughters.

We have also to record the deaths of—

The Earl of Mar and Kellie, on Sept. 16. His Memoir will be given in our next Number.

Colonel Herbert Mends, late of the 2nd West India Regiment, at 29, Shepherd's Bush-green, aged eighty-seven.

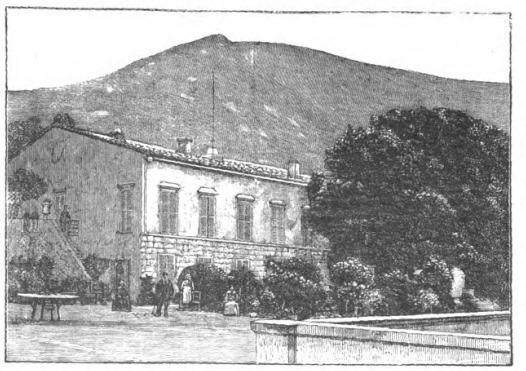
Mr. Alfred Backhouse, of Pilmore Hall, county of Durham, J.P., High Sheriff, 1883, suddenly, at Dryderdale, near Wolsingham, on Sept. 2, aged sixty-six.

Mr. Walton Howland Roberts, only son of Sir Randal Howland Roberts, Bart., at Bournemouth, on Aug. 30, aged twenty-nine.

Lady Emilie Caroline Gray, at 3, Templeton-place, S.W., on Sept. 4. She was the third daughter of Henry Lord Glentworth, second son of Edmond, first Earl of Limerick, and sister of William, second Earl. She was born March 20, 1815, and married, May 14, 1835, the Rev. Henry Gray, Vicar of Almondsbury, Gloucestershire, and was left a widow on June 5, 1864. The deceased lady was raised to the rank of an Earl's daughter in 1846.

Rev. George Craig, M.A., late Rector of Aghanloo, in the county of Derry, on Sept. 4, at Portrush, Antrim, aged eighty-eight.

Mr. Richard Proctor, the well-known astronomer, at a private hospital in New York, on Sept. 12, of yellow fever contracted recently in Florida.

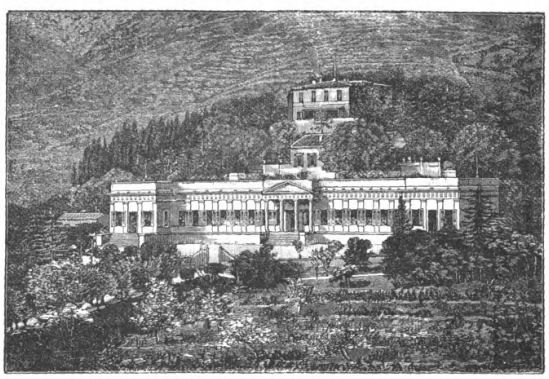


Helen, Lady Dunbar, widow of Captain Sir James Dunbar, R.N., first Baronet, of Boath, and daughter of Mr. James Coull, M.D., of Ashgrove, Elgin, at 3, Richmond-terrace, Tunbridge Wells, on Sept. 1, aged ninety-two.

Mr. Arthur Buchheim, M.A., late scholar of New College, Oxford, recently, in his twenty-ninth year. He was a young mathematician of very great promise, and after having gone through a brilliant University career, he contributed a number of articles to various mathematical journals and read several papers before the London Mathematical Society, of which he was elected member only last year. Mr. A. Buchheim was the son of Professor Buchheim, of King's College, London.

Mr. Thomas Holt, lately a member of the Legislative Council of New South Wales, suddenly, at Halcot, Bexley, on Sept. 6, aged seventy-seven.

Mr. John Herbert Orpen, LL.D., barrister-at-law, of St. Stephen's-green, Dublin (the representative of the Orpen family), at Philpotstown, county of Meath, on Sept. 3, aged eighty-two.



General Peter Thomas Cherry, Madras Army, at Hayward's-heath, on Sept. 3, aged seventy-nine. He entered the Army in 1826, and became full General in 1877. He served with the 1st Madras Cavalry during the Coorg campaign, in 1834, and was present at the siege and surrender of Bolourjee, in 1841.

NAPOLEON'S VILLA AT ELBA, WITH TREE PLANTED BY HIM IN 1814.

NAPOLEON'S HOUSE AT ELBA.

The island of Elba, in the Mediterranean, off the coast of Tuscany, was the appointed residence of the first Emperor Napoleon, after his abdication at Fontainebleau, from May, 1814, to Feb. 26, 1815, when he escaped and returned to France. We present two Views of his house, and of the building which has been erected below it, and which is occupied as a museum of historical relics. The island is opposite to Piombino, a strait five miles wide dividing it from the mainland of Italy, and is about eighteen miles long and from six to ten miles broad—a small extent of dominion for him who had been the conqueror of more than half Europe. It is mountainous, the highest summit, the Monte della Capanna, having an elevation of 3600 ft. The hills are planted with the vine and olive; mulberries and other fruit are grown abundantly, and there are fields of wheat and Indian corn. The tunny fishery is profitable; there are valuable iron mines, worked ever since the early times of the Roman history, and probably by the Carthaginians; but the scarcity of fuel makes it necessary to send the iron ore to be smelted in the mainland. The population of the island exceeds twenty thousand. Porto Ferrajo, the chief town, on the north coast, has a good harbour, and is strongly fortified, with two citadels on the hills above the town. It is connected, by a road which Napoleon made, with Porto Longone, on the east coast; the other towns are Rio, Marciana, Campo, and Capo Liveri. Elba formerly belonged to the Grand Duchy of Tuscany, and now belongs to the Kingdom of Italy. Our Illustrations are from photographs recently taken.

NAPOLEON'S VILLA, WITH MUSEUM BENEATH IT.

ABOUT NOISES.

Readers of Miss Austen will remember her remark in "Persuasion" that all persons have their taste in noises as well as in other matters, and that "sounds are quite innoxious or most distressing by their sort rather than their quantity." This delightful novelist illustrates her assertion by adding that when Lady Russell called on Mrs. Musgrove she found the noise of that lady's children insupportable; but that when Lady Russell drove through the streets of Bath, amidst the heavy rumble of carts and drays and the bawling of milkmen and newsmen, she made no complaint, since these were noises which belonged to the pleasures of the place, and her spirits rose under their influence.

Miss Austen was right. There are noises which the most sensitive person can bear with equanimity. A mother rejoices in the shouts of her boys; and the sound of a mountain stream is not so sweet to the mill-owner as the whirl of his machinery. The demagogue can endure the loudest acclamations of the crowd he addresses, the soldier on a battle-field is not stunned by the thunder of artillery, and we never heard of an engine-driver who disliked the shriek of his whistle. In all barbarous tribes and among the lower orders in a civilised country noise seems to be loved for its own sake. They cannot have too much of it, and on festive occasions he is the happiest man who makes the most clatter. Custom, too, makes noise dear to some men. Mr. Ruskin tells the story of a City merchant who was not able to endure more than three days in Venice owing to the silence of the streets; and an essayist of the last century relates that a wealthy old lady took lodgings on Ludgate-hill in order to be enlivened by the noise of that busy thoroughfare. It may be admitted that on certain occasions noise is of service. The stump orator, when argument fails, understands the advantage of a loud voice; and, in days far later than those alluded to by Butler, fists have done good service in the pulpit. A triumphal procession unaccompanied by music and huzzahs would lose half its attraction, and how flat and stupidly dignified a University Commemoration would be if the undergraduates were tongue-tied! On every occasion that brings together a large number of people, noise is inevitable, and the man must be oversensitive whose nerves are irritated by it. To the lover, silence may be "the perfectest herald of joy"; but it is not so to the mob, who prefer to show their happiness by shouting.

If we must admit that noise has its uses in the world, there are few London residents who do not regard it as one of the serious troubles of life. Civilisation, while it has given us more excitable nerves than our forefathers, has done little towards soothing them. The sound of the scythe, which so distressed poor Leech, is music when compared with the mowing machine; and the shrill whistle of the engine is an ill exchange for the coachman's horn. The constant slamming of doors on suburban railway journeys is an intolerable nuisance to the man of business who would fain read his newspaper in peace; and the voices of the small boys upon the platforms do not discourse sweet music. Music, by-the-way, or what is popularly known by the name, is a fruitful source of misery. The church bells ringing from a village steeple awaken happy memories, but the dull tolling of a bell at all hours of the day in a London suburb is not an aid to reflection or to cheerfulness. We know what pain the street-organ inflicted upon Babbage when he was making his intricate calculations, and there are few men who have not suffered in a less degree from that instrument of torture. The piano, too, owing to the thin walls of modern houses, is a daily trial to the man of letters cursed with a musical neighbour. If it is his ill-luck to live in what is known as a quiet street, he may cry in vain for peace. The organ-grinder loves a quiet street, so does the costermonger, so does the psalm-singing beggar who carries a squalling baby in his arms. There the muffin-man's bell is heard, there the conjuror exhibits his tricks, and there, to the joy of little people, "Punch" sets up his show. There are squares in Brighton, and in other fashionable watering places, in which idleness is compulsory. One discordant noise is followed in swift succession by another, and the man who had vainly hoped to do some solid reading at the seaside is reduced to a sensational novel.

The roar of vehicles in a busy thoroughfare is less distressing to a sensitive ear than the noise which comes with intermissions and may be expected at any moment. Carlyle, who denounced in his vehement language "mankind's brutish, bedlamitish creation of useless noises," found his rest disturbed by a cock. He used to say that it was not so much the actual crowing of the cock in the early morning that prevented sleep as the expectation that the bird would crow. The monotonous sound of a waterfall or of a mountain river does not distract the mind by day or prevent sleep at night; but all tranquillity of mind and body is destroyed by the coarse voices of hawkers and by the midnight music of cats. It is said that in the old Dutch taverns travellers were charged for the noise they made. If the Government were able to tax our street noises, what a splendid sum would be added to the revenue of the country!

It is a happy thing for us that Nature, with a few grand exceptions, performs her works in silence. If there is the roar of the waves, the crash of the tempest, and the mighty thunder of the avalanche, there is far oftener the still, small voice. The morning dawns on us in peaceful beauty, and the shadows of the evening fall in peace, the moon and stars shed their light silently, the flowers open and close without a sound. Even man, the great noise-maker, is quiet in the supreme moments of life; he thinks in silence and in silence he dies. J. D.

The Rev. T. A. Nash, Rector of Lowestoft, has been appointed an hon. Canon of Norwich Cathedral.

The cathedral church of St. Patrick, Armagh, which has been closed for some months, was reopened on Sept. 15 by the Archbishop of Armagh.

The new Roman Catholic College at Tooting has been opened for the reception of students. With the exception of Stonyhurst College, it is said to be one of the largest educational establishments in this country connected with the Roman Catholic Church. The building has been erected on the Hill House estate, immediately adjoining Tooting Beccommon. The mansion and estate, which cover an area of nearly twenty acres, were purchased for the purposes of the college for about £15,000. The highest point on the estate has been selected for the college buildings.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXII.

THE DAY AFTER THE FIGHT.

It WAS five o'clock when I awoke next morning. Though the hour was so early, I heard a great trampling and running about the streets, and, looking out of window, I saw a concourse of the townspeople gathered together, listening to one who spoke to them. But in the middle of his speech they broke away from him and ran to another speaker, and so distractedly, and with such gestures, that they were clearly much moved by some news, the nature of which I could not guess. For in some faces there was visible the outward show of triumph and joy, and on others there lay plainly visible the look of amazement or stupefaction; and in the street I saw some women weeping and crying. What had happened? Oh! what had happened? Then, while I was still dressing, there burst into the room Susan Blake, herself but half dressed, her hair flying all abroad, the comb in her hand.

"Rejoice!" she cried. "Oh! rejoice, and give thanks unto the Lord! What did we hear last night? That the Duke had but to shut the stable-doors and seize the troopers in their beds. Look out of window. See the people running and listening eagerly. Oh! 'tis the crowning mercy that we have looked for: the Lord hath blown and His enemies are scattered. Remember the strange words we heard last night. What said the unknown man?—nay, he said it twice: 'The Duke had but to lock the stable-doors.' Nay, and yesterday I saw, and last night I heard, the screech-owl thrice—which was meant for the ruin of our enemies. Oh! Alice, Alice, this is a joyful day!"

"But look," I said, "they have a downcast look; they run about as if distracted, and some are wringing their hands"——

"'Tis with excess of joy," she replied, looking out of the window with me, though her hair was flying in the wind. "They are so surprised and so rejoiced that they cannot speak or move."

"But there are women weeping and wailing: why do they weep?"

"It is for those who are killed. Needs must in every great victory that some are killed—poor brave fellows!—and some are wounded. Nay, my dear, thou hast three at least at the camp, who are dear to thee; and God knows I have many. Let us pray that we do not have to weep like those poor women."

She was so earnest in her looks and words, and I myself so willing to believe, that I doubted no longer.

"Listen! oh! listen!" she cried, "never, never before have bells rung a music so joyful to my heart."

For now the bells of the great tower of St. Mary's began to ring. Clash, clash, clash, all together, as if they were cracking their throats with joy; and at the sound of the bells those men in the street who seemed to me stupefied as by a heavy blow, put up their hands to their ears and fled as if they could not bear the noise, and the women who wept, wrung their hands, and shrieked aloud in anguish, as if the joy of the chimes mocked the sorrow of their hearts.

"Poor creatures!" said Susan. "From my heart I pity them. But the victory is ours, and now it only remains to offer up our humble prayers and praises to the Throne of all mercy."

So we knelt and thanked God.

"O Lord! we thank and bless Thee! *O* Lord! we thank and bless Thee!" cried Susan, the tears of joy and gratitude running down her cheeks.

Outside, the noise of hurrying feet and voices increased, and more women shrieked, and still the joy-bells clashed and clanged.

"O Lord! we thank Thee! O Lord! we bless Thee! Susan repeated on her knees, her voice broken with her joy and triumph. 'Twas all that she could say.

I declare that at that moment I had no more doubt of the victory than I had of the sunshine. There could be no doubt. The joy-bells were ringing: how should we know that the Rev. Mr. Harte, the Vicar, caused them to be rung and not our friends? There could be no manner of doubt. The people running to and fro in the street had heard the news, and were rushing to tell each other and to hear more—the women who wept were mothers or wives of the slain. Again, we had encouraged each other with assurances of our success, so that we were already fully prepared to believe that it had come. Had we not seen a splendid army, seven thousand strong, march out of Taunton town, led by the bravest man and most accomplished soldier in the English nation? Was not the army on the Lord's side? Were we not in a Protestant country? Were not the very regiments of the King Protestants? Why go on? And yet—oh! sad to think!—even while we knelt and prayed, the army was scattered like a cloud of summer gnats by a shower and a breeze, and hundreds lay dead upon the field, and a thousand men were prisoners; and many were already hanging in gemmaces upon the gibbets, where they remained till King William's coming suffered them to be taken down; and the rest were flying in every direction hoping to escape.

"O Lord! we thank Thee! O Lord! we bless Thee."

While thus we prayed we heard the door below burst open, and a tramping of a man's boots; and Susan, hastily rolling up her hair, ran down-stairs, followed by mother and myself.

There stood Barnaby. Thank God! one of our lads was safe out of the fight. His face and hands were black with powder; his red coat, which had been so fine, was now smirched with mud and stained with I know not what—marks of weather, of mud, and of gunpowder; the right-hand side was torn away; he had no hat upon his head, and a bloody clout was tied about his forehead.

"Barnaby!" I cried.

"Captain Barnaby!" cried Susan, clasping her hands.

"My son!" cried mother. "Oh! thou art wounded! Quick, Alice, child—a basin of water, quick!"

"Nay—'tis but a scratch," he said; "and there is no time for nursing."

"When—where—how?" we all cried together, "was the victory won? Is the enemy cut to pieces? Is the war finished?"

"Victory?" he repeated, in his slow way—"what victory? Give me a drink of cider, and if there is a morsel of victual in the house"——

I hurried to bring him both cold meat and bread and a cup full of cider. He began to eat and drink.

"Why," he said, talking between his mouthfuls, "if the worst comes 'tis better to face it with a—— Your health, Madam": he finished the cider. "Another cup, Sister, if you love me: I have neither eaten nor drunk since yesterday at seven o'clock, or thereabouts." He said no more until he had cleared the dish of the gammon and left nothing but the bone. This he dropped into his pocket. "When the provisions are out," he said wisely, "there is good gnawing in the shank-bone of a ham." Then he drank up the rest of the cider and looked around. "Victory? Did someone speak of victory?"

"Yes—where was it? Tell us quick!"

"Well, there was in some sort a victory. But the King had it."

"What mean you, Barnaby? The King had it?—what King?"

"Not King Monmouth. That King is riding away to find some port and get some ship, I take it, which will carry him back to Holland."

"Barnaby, what is it? Oh! what is it? Tell us all."

"All there is to tell, Sister, is that our army is clean cut to pieces, and that those who are not killed or prisoners are making off with what speed they may. As for me, I should have thrown away my coat and picked up some old duds and got off to Bristol and so aboard ship and away, but for Dad."

"Barnaby," cried my mother, 'what hath happened to him? Where is he?"

"I said, mother," he replied very slowly, and looking in her face strangely, "that I would look after him, didn't I? Well, when we marched out of Bridgwater at nightfall nothing would serve but he must go too. I think he compared himself with Moses who stood afar off and held up his arms. Never was there any man more eager to get at the enemy than Dad. If he had not been a minister, what a soldier he would have made!"

"Go on—quick, Barnaby."

"I can go, Sister, no quicker than I can. That is quite sure."

"Where is he, my son?" asked my mother.

Barnaby jerked his thumb over his left shoulder.

"He is over there, and he is safe enough for the present. Well, after the battle was over, and it was no use going on any longer, Monmouth and Lord Grey having already run away"——

"Run away? Run away?"

"Run away, Sister. Aboard ship the Captain stands by the crew to the last, and if they strike, he is prisoner with them. Ashore, the General runs away and leaves his men to find out when they will give over fighting. We fought until there was no more ammunition, and then we ran with the rest. Now, I had not gone far before I saw lying on the moor at my very feet the poor old Dad."

"Oh!"

"He was quite pale, and I thought he was dead. So I was about to leave him, when he opened his eyes. 'What cheer, Dad?' I asked. He said nothing; so I felt his pulse and found him breathing. 'But what cheer, Dad?' I asked him again. 'Get up if thou canst, and come with me.' He looked as if he understood me not, and he shut his eyes again. Now, when you run away, the best thing is to run as fast and to run as far as you can. Yet I could not run with Dad lying in the road half dead. So while I tried to think what to do, because the murdering Dragoons were cutting us down in all directions, there came galloping past a pony harnessed to a kind of go-cart, where, I suppose, there had been a barrel or two of cider for the soldiers. The creature was mad with the noise of the guns, and I had much ado to catch him and hold the reins while I lifted Dad into the cart. When I had done that, I ran by the side of the horse and drove him off the road across the moor, which was rough going, but for dear life one must endure much, to North Marton, where I struck the road to Taunton, and brought him safe, so far."

"Take me to him, Barnaby," said my mother. "Take me to him."

"Why, mother," he said kindly, "I know not if 'tis wise. For, look you—if they catch us, me they will hang or shoot, though Dad they may let go, for he is sped already—and for a tender heart like thine 'twould be a piteous sight to see thy son hanging from a branch with a tight rope round his neck and thy husband dead on a hand-cart."

"Barnaby, take me to him!—take me to him!"

"Oh! Is it true? Is it true? Oh! Captain Barnaby, is it really true? Then, why are the bells a-ringing?"

Clash! Clash! Clash! The bells rang out louder and louder. One would have thought the whole town was rejoicing. Yet there were a thousand lads in the army belonging to Taunton town alone, and I knew not how many ever came home again.

"They are ringing," said Barnaby, "because King Monmouth's army is scattered and the rebellion is all over. Well: we have had our chance and we are undone. Now must we sing small again. Madam," he said earnestly, addressing Susan, "if I remember right, they were your hands that carried the naked sword and the Bible?"

"Sir, they were my hands. I am proud of that day."

"And they were your scholars who worked the flags and gave them to the Duke that day when you walked in a procession?"

"They were my scholars," she said proudly.

"Then, Madam, seeing that we have, if all reports be true, a damned unforgiving kind of King, my advice to you is to follow my example and run. Hoist all sail, Madam, and fly to some port—any port. Fly false colours. When hanging, flogging, branding, and the like amusements set in, I think they will remember the Maids of Taunton. That is my advice, Madam."

"Sir," said Susan, bravely, though her cheek grew pale when he spoke of floggings and brandings, "I thank you. Whither should I fly? Needs must I stay here and bear whatever affliction the Lord may lay upon me. And, since our Protestant hero is defeated, methinks it matters little what becomes of any of us."

"Why," Barnaby shook his head, "King Monmouth is defeated, that is most true; but we who survive have got ourselves to look after. Sister, get a basket and put into it provisions."

"What will you have, Barnaby?"

"Everything that you can find. Cold bacon for choice, and bread, and a bottle of drink if you have any, and—all you can lay hands upon. With your good leave, Madam."

"Oh! Sir, take all—take all. I would to God that everything I have in the world could be used for the succour of these my friends!" And with that she began to weep and to cry.

I filled a great basket with all that there was in the house, and he took it upon his arm. And then we went away with many tears and fond farewells from this kind soul who had done so much for the Cause, and was now about to pay so heavy a penalty for her zeal.

Outside in the street the people recognised Barnaby for one of Monmouth's Captains, and pressed round him and asked him a thousand questions, but he answered shortly.

"We were drubbed, I tell you. King Monmouth hath run away. We have all run away. How should I know how many are killed? Every man who doth not wish to be hanged had best run away and hide. The game is up—friend, we are sped. What more can I say? How do I know, in the Devil's name, whose fault it was? How can I tell, Madam, if your son is safe? If he is safe, make him creep into a hiding-place"—and so on to a hundred who crowded after him and questioned him as to the nature and meaning of the defeat. Seeing that no more news could be got from him, the people left off following us, and we got out of the town on the east side, where the road leads to Ilminster; but it is a bad road and little frequented.

Here Barnaby looked about him carefully to make sure that no one was observing us, and then, finding that no one was within sight, he turned to the right down a grassy lane between hedges.

"'Tis this way that I brought him," he said. "Poor old Dad! he can now move neither hand nor foot; and his legs will no more be any use to him. Yet he seemed in no pain, though the jolting of the cart must have shaken him more than a bit."

The lane led into a field, and that field into another and a smaller one, with a plantation of larches on two sides and a brook shaded with alders on a third side. In one corner was a linney, with a thatched roof supported on wooden pillars in front and closed in at back and sides. It was such a meadow as is used for the pasture of cattle and the keeping of a bull.

At the entrance of this meadow Barnaby stopped and looked about him with approbation.

"Here," he said slowly, "is a hiding-place fit for King Monmouth himself. A road unfrequented; the rustics all gone off to the wars—though now, I doubt not, having had their bellyfull of fighting. I suppose there were once cattle in the meadow, but they are either driven away by the Club-men for safety, or they have been stolen by the gipsies. No troopers will this day come prying along this road, or if they do search the wood, which is unlikely, they will not look in the linney; here can we be snug until we make up our minds what course is best."

"Barnaby," I said, "take us to my father without more speech."

"I have laid him," he went on, "upon the bare ground in the linney; but it is soft and dry lying, and the air is warm, though last night it rained and was cold. He looks happy, mother, and I doubt if he hath any feeling left in his limbs. Once I saw a man shot in the backbone and never move afterwards, but he lived for a bit. Here he is."

Alas! lying motionless on his back, his head bare, his white hair lying over his face, his eyes closed, his cheek white, and no sign of life in him except that his breast gently heaved, was my father. Then certain words which he had uttered came back to my memory. "What matters the end," were the words he said, "if I have freedom of speech for a single day?"

He had enjoyed that freedom for three weeks.

My mother threw herself on her knees beside him and raised his head.

"Ah! my heart," she cried, "my dear heart, my husband, have they killed thee? Speak, my dear—speak if thou canst! Art thou in pain? Can we do aught to relieve thee? Oh! is this the end of all?"

But my father made no reply. He opened his eyes, but they did not move: he looked straight before him, but he saw nothing.

And this, until the end, was the burden of all. He spoke no word to show that he knew anyone, or that he was in pain, or that he desired anything. He neither ate nor drank, yet for many weeks longer he continued to live.

CHAPTER XXIII.

IN HIDING.

Thus we began our miserable flight. Thus, in silence, we sat in the shade of the linney all the morning. Outside, the blackbird warbled in the wood and the lark sang in the sky. But we sat in silence, not daring so much as to ask each other if those things were real or if we were dreaming a dreadful dream. Still and motionless lay my father's body, as if the body of a dead man. He felt no pain—of that I am assured; it makes me sick even to think that he might have suffered pain from his wound; he had no sense at all of what was going on. Yet once or twice during the long trance or paralysis in which he had fallen, he opened his lips as if to speak. And he breathed gently—so that he was not dead. Barnaby, for his part, threw himself upon his face, and laying his head upon his arm, fell asleep instantly. The place was very quiet: at the end of the meadow was a brook, and there was a wood upon the other side; we could hear the prattling of the water over the pebbles; outside the linney, a great elm-tree stretched out its branches; presently I saw a squirrel sitting upon one and peering curiously at us, not at all afraid, so still and motionless we were. I remember that I envied the squirrel. He took no thought even for his daily bread. He went not forth to fight. And the hedge-sparrows, no more afraid than if the linney was empty, hopped into the place and began picking about among the straw. And so the hours slowly passed away, and by degrees I began to understand a little better what had happened to us, for at the first shock one could not perceive the extent of the disaster, and we were as in a dream when we followed Barnaby out of the town. The great and splendid army was destroyed; that gallant hero, the Duke, was in flight; those of the soldiers who were not killed or taken prisoners were running hither and thither trying to escape; my father was wounded, stricken to death, as it seemed, and deprived of power to move, to feel, or to think. While I considered this, I remembered again how he had turned his eyes from gazing into the sky, and asked me what it mattered even if the end would be death to him and ruin unto all of us? And I do firmly believe that at that moment he had an actual vision of the end, and really saw before his eyes the very things that were to come to pass, and that he knew all along what the end would be. Yet he had delivered his soul—why, then, he had obtained his prayer—and by daily exhortation had doubtless done much to keep up the spirit of those in the army who were sober and godly men. Did he also, like Sir Christopher, have another vision which should console and encourage him? Did he see the time to follow when a greater than the Duke should come and bring with him the deliverance of the country? There are certain gracious words with which that vision closes (the last which he did expound to us), the vision, I mean, of the Basket of Summer Fruit. Did those words ring in his mind and comfort him even in the prospect of his own end? Then my thoughts, which were swift and yet beyond my control,

* *All Rights Reserved.*

DRAWN BY A. FORESTIER.

I went to the pony's head, and Barnaby, going behind the cart, lifted it over the rough places.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

left him and considered the case of Barnaby. He had been a Captain in the Green Regiment; he would be hanged, for certain, if he were caught. My sweetheart, my Robin, had also been a Captain in the Duke's army. All the Duke's officers would be hanged if they were caught. But perhaps Robin was already dead—dead on the battlefield—his face white, his hands stiff, blood upon him somewhere, and a cruel wound upon his dear body! Oh, Robin! Yet I shed no tears. Humphrey, who had been one of the Duke's chyrurgeons, he would also be surely hanged if he were caught. Why—since all would be hanged—why not hang mother and me as well, and so an end!

About noon Barnaby began to stir; then he grunted and went to sleep again; presently he moved once more; then he rolled over on his broad back and went to sleep again. It was not until the sun was quite low that he awoke, sitting up suddenly and looking about him with quick suspicion, as one who hath been sleeping in the country of an enemy, or where wild beasts are found.

Then he sprang to his feet and shook himself like a dog.

"Sister," he said, "thou should'st have awakened me earlier. I have slept all the day. Well; we are safe, so far." Here he looked cautiously out of the linney towards the wood and the road. "So far, I say, we are safe. I take it we had best not wait until to-morrow, but budge to-night. For not only will the troopers scour the country, but they will offer rewards; and the gipsies—ay, and even the countryfolk—will hasten to give information out of their greedy hearts. We must budge this very night."

"Whither shall we go, Barnaby?"

He went on as if he had not heard my question.

"We shall certainly be *safe* here for to-night; but for to-morrow I doubt. Best not run the chance. For to-day their hands are full: they will be hanging the prisoners. Some they will hang first and try afterwards; some they will try first and hang afterwards. What odds, if they are to be hanged in the end? The cider orchards never had such fruit as they will show this autumn, if the King prove revengeful—as, judge by his sour face, he will be."

Here he cursed the King, his sour face, his works and ways, his past, his present, and his future, in round language which I hope his wounded father did not hear.

"We must lie snug for a month or two somewhere, until the unlucky Monmouth men will be suffered to return home in peace. Ay! 'twill be a month and more, I take it, before the country will be left quiet. A month and more—and Dad not able to crawl!"

"Where shall we be snug, Barnaby?"

"That, Sister, is what I am trying to find out. How to lie snug with a couple of women and a wounded man who cannot move? 'Twas madness of the poor old Dad to bring thee to the camp, Child. For now we cannot—any of us—part company, and if we stay together, 'twill maybe bring our necks to the halter."

"Leave us, Barnaby," I said. "Oh! leave us to do what we can for the poor sufferer, and save thyself."

"Ta, ta, ta, Sister knowest not what thou sayest. Let me consider. There may be some way of safety. As for provisions now: we have the basket full—enough for two days, say—what the plague did Dad, the poor old man, want with women when fighting was on hand? When the fighting is done, I grant you, women, with the tol acco and punch, are much in place. Those are pretty songs, now, that I used to sing about women and drink."

"Barnaby, is this a time to be talking of such things as drink and singing?"

"All times are good. Nevertheless, all company is not fitting: wherefore, Sis, I say no more."

"Barnaby, knowest thou aught of Robin? Or of Humphrey?"

"I know nothing. They may be dead; they may be wounded and prisoners; much I fear, knowing the spirit of the lads, that both are killed. Nay, I saw Humphrey before the fight, and he spoke to me"—

"What did Humphrey say?"

"I asked why he hung his head and looked so glum, seeing that we were at last going forth to meet the King's army. This I said because I knew Humphrey to be a lad of mettle, though his arm is thin and his body is crooked. 'I go heavy, Barnaby,' he said, speaking low lest others should hear, 'because I see plainly that, unless some signal success come to us, this our business will end badly.' Then he began to talk about the thousands who were to have been raised all over the country; how he himself had brought to the Duke promises of support gathered all the way from London to Bradford Orcas, and how his friends in Holland even promised both men and arms; but none of these promises had been kept: how Dad had brought promises of support from all the Nonconformists of the West, but hardly any, save at Taunton, had come forward; and how the army was melting away and no more recruits coming in. And then he said that he had been the means of bringing so many to the Duke that if they died their deaths would lie upon his conscience. And he spoke lovingly of Robin and of thee, Sister. And so we parted, and I saw him no more. As for what he said, I minded it not a straw. Many a croaker turns out in the long run to be brave in the fight. Doubtless he is dead: and Robin, too. Both are dead. I take it, Sis, thou hast lost thy sweetheart. Cry a little, my dear," he added kindly; "'twill ease the pain at thy heart. 'Tis natural for a woman to cry."

"I cannot cry, Barnaby: I wish I could. The tears rise to my eyes, but my throat is dry."

"Try a prayer or two, Sister. 'Twas wont to comfort the heart of my mother when she was in trouble."

"A prayer? Brother, I have done nothing but pray since this unfortunate rebellion began. A prayer? Oh, I cannot pray! If I were to pray now it would be as if my words were echoed back from a wall of solid rock. We were praying all yesterday: we made the Sabbath into a day of prayer without ceasing: and this morning, when you opened the door, we were praising and thanking God for the mercy of the great victory bestowed upon us. And at that time the poor brave men"——

"They were brave enough to the end," said Barnaby.

"The poor brave men lying cold and dead upon the field among them, maybe, Robin's, and the prisoners huddled together somewhere, and men hanging already upon the gibbets. We were praising God—and my father lying on the ground stricken to death, and thou a fugitive, and all of us ruined! Prayer? How could I pray from such a pit of woe?"

"Child," my mother lifted her pale face, "in the darkest hour pray without ceasing. Even if there happen a darker hour than this, in everything by prayer and supplication with thanksgiving let your requests be made known—with thanksgiving, my daughter."

Alas! I could not obey the apostolic order. 'Twas too much for me. So we fell into silence. When the sun had quite gone down Barnaby went forth cautiously. Presently he came back.

"There is no one on the road," he said. "We may now go on our way. The air of Taunton is dangerous to us. It breeds swift and fatal diseases. I have now resolved what to do. I will lift my father upon the cart again and put in the pony. Four or five miles sou'-west or thereabouts is Black Down, which is a No-Man's-Land. Thither will we go and hide in the combs, where no one ever comes, except the gipsies."

"How shall we live, Barnaby?"

"That," he said, "we shall find out when we come to look about us. There is provision for two days. The nights are warm. We shall find cover or make it with branches. There is water in the brooks and dry wood to burn. There we may, perhaps, be safe. When the country is quiet we will make our way across the hills to Bradford Orcas, where no one will molest you, and I can go off to Bristol or Lyme, or wherever there are ships to be found. When sailors are shipwrecked, they do not begin by asking what they shall do on dry land: they ask only to feel the stones beneath their feet. We must think of nothing now but of a place of safety."

"Barnaby, are the open hills a proper place for a wounded man?"

"Why, Child, for a choice between the hills and what else may happen if we stay here, give me the hills, even for a wounded man. But, indeed"—he whispered, so that my mother should not hear him—"he will die. Death is written on his face. I know not how long he will live. But he must die. Never did any man recover from such evil plight."

He harnessed the pony to the cart, which was little more than a couple of planks laid side by side, and laid father upon them, just as he had brought him from Taunton. My mother made a kind of pillow for him, with grass tied up in her kerchief, and so we hoped that he would not feel the jogging of the cart.

"The stream," said Barnaby, "comes down from the hills. Let us follow its course upwards."

It was a broad stream with a shallow bed, for the most part flat and pebbly; and on either side of the stream lay a strip of soft turf, broad enough for the cart to run upon. So that, as long as that lasted, we had very easy going; my mother and I walking one on each side, so as to steady the pillow and keep the poor head upon it from pain. But whether we went easy, or whether we went rough, that head made no sign of feeling aught, and lay, just as in the linney, as if dead.

I cannot tell how long we went on beside that stream. 'T was in a wild, uncultivated country; the ground ascended; the stream became narrower and swifter; presently the friendly strip of turf failed altogether, and then we had trouble to keep the cart from upsetting. I went to the pony's head, and Barnaby, going behind the cart, lifted it over the rough places, and sometimes carried his end of it. The night was chilly; my feet were wet with splashing in the brook, and I was growing faint with hunger, when Barnaby called a halt.

"We are now," he said, "at the head of the stream. In half an hour, or thereabouts, it will be break of day. Let us rest. Mother, you must eat something. Come, Sister, 't is late for supper, and full early for breakfast. Take some meat and bread and half a cup of cider."

It is all I remember of that night.

(To be continued.)

CHRISTOPHER COLUMBUS.

The King of Italy, acting on the recommendations of the Minister of Public Instruction, has issued a decree regulating the manner in which Italy proposes to celebrate the fourth centennial of the discovery of America by Columbus. This will consist mainly in the publication of the collected works of the great navigator, and of all the documents and charts which will throw any light upon his life and voyages. This will be accompanied by a biography of the works published in Italy upon Columbus and the discovery of America from the earliest period down to the present time. The head of the Royal Commission charged with the preparation of this edition is Cesare Correnti, President of the Italian Historical Institute; and among its members are Signors Amari, Cantu, and Desimoni, and the Marquis Doria. An appropriation of 12,000 lire has been made to cover the expenses of this work, which is now fairly undertaken for the first time. Various editors have published portions of the writings of Columbus, as Navarrete the account of his voyages, and Major his letters; but no one has yet collected all his writings into a single edition, though an index to them was published in 1864.

SURGICAL APPLIANCES FOR THE POOR.

In reply to a paragraph under the above heading in our issue of Sept. 8 a correspondent—who is a member of the council of the Saturday Hospital Fund and of the Surgical Appliance Committee—states that all cases that come before the committee are inquired into, and if the applicant is not in a position to pay for what he or she requires the appliance is given free of cost. He cites an instance that occurred recently: A young woman applied for an artificial arm. She stated she was a general servant, had a sick mother and two young sisters to support, and that she had no means of paying for the appliance. The committee decided to give her an order on the surgical appliance maker to get what was suitable for her, such appliance costing the committee £7 14s. Another case was that of a poor girl, who was both blind and deaf. An ear-trumpet, which cost 12s., was given her free. The correspondent states, in conclusion, that any applicant applying to the Surgical Appliance Committee with a subscriber's or collector's letter to the Saturday Hospital Fund is not sent away because they have no money to pay for what they require.

A rifle-match held at the Park Ranges, Tottenham, resulted in Corporal Rothon, London Rifle Brigade, being declared champion shot of Middlesex for the year.

The Board of Trade have received through the Colonial Office a binocular glass, which has been awarded by the Canadian Government to Captain Zabala, master of the Spanish steam-ship España, in recognition of his services to the ship-wrecked crew of the barque Billy Simpson, of Nova Scotia, which vessel foundered in the China Sea on Sept. 12, 1887.

Lately there has been a great increase in the articles, such as lace, embroidery, underclothing, painting, knitting, wood-carving, &c., sent over to the Old Irish Market Place, in the Irish Exhibition, by poor peasants in Ireland. In most cases this work is the senders' sole means of support, and it is most desirable that it should not be returned to them unsold. Visitors to the Irish Exhibition would be giving material help and encouragement to these poor peasants by making some purchases, however small.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

SEPTEMBER 22, 1888.

Subscribers will please to notice that *copies of this week's number* forwarded abroad must be prepaid according to the following rates: To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (*viâ* United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (*viâ* Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

THE LADIES' COLUMN.

It was a misfortune for the British Association when the Social Science Association "went under" and left all the grocheteers and social sensation-makers adrift. The discovery by two pathologists that, after all, the stays which have been banned by so many doctors are beneficent institutions, would just have suited the Social Science Association. There was a flavour of science about it, while its conclusions were "social"—fit for newspaper discussion and gossip. The argument of these learned defenders of stays was that compression of the trunk causes the blood to pass more rapidly out of the veins of the part, and hence the vital fluid is, "as long as the compression continues, available for the use of the other regions of the body, for the brain, muscles, &c." Women who are without proper tone in those muscles which the stays are designed to support, "are rather the rule than the exception amongst the sex. We are, therefore, brought to conclude that among women some form of waistbelt is very advantageous—be it from muscular weakness or from a desire to obtain easily a condition of good mental and bodily activity." This is rather obscure; it sounds as though the waistbelt were the ambitious character who wants to easily obtain activity. However, it has unhappily been understood to mean that two learned professors have found out that squeezing yourself in is good for you.

This is sad hearing. To anybody who has the least conception of the broken health, diminished general power, and incapacity for the performance of the dearest womanly duties that result from the use of stays, it is really painful to hear such theories put forth as scientific facts. The grounds on which they are based are surely inadequate. Temporary pressure on the stomach of a dog no doubt did, as they say so, increase for the time the volume of blood going to other parts of the body; but to leap thence to a conclusion that this would be a permanent result is not justified; persistent compression would surely have exactly the opposite result! Would the hounds run better well laced up in corsets, as our new mentors seem to infer! The heart beats faster, doubtless, for the moment, when pressure is put on the stomach of the dog, in a great effort to overcome the obstacle to the circulation; but the ultimate tendency of such an obstacle being continuously applied must needs be to congest instead of to assist the movement of the blood—just what so many women suffer from because of their stays. Then again the result of not fully using the muscles of any part is to render them weak and fatty and incapable; so that to give constant artificial support to the muscles about the waist tends directly to deprive those muscles of their natural force, and to bring about the "flaccid condition" which makes continued pressure necessary. Nature knows her own business best, and where she has given elastic and muscular structures, we may rely upon it that cages of whalebone and steel are superfluous, and constriction and pressures injurious. Diseased conditions need their appropriate treatment, but conclusions cannot be drawn from the needs of the sickly about what should be done by the healthy.

Stays are, nevertheless, necessary for many women, because they have been rendered dependent on such artificial aid by the habits of a whole life. Stays are necessary, too, so long as heavy skirts are worn depending from the waist; the stiff busk throwing the chief weight round to the strong bones of the hips cannot be dispensed with in that case. Anybody who wants to give up stays must take care to simultaneously adopt "combinations," and to hang the dress-skirt from the shoulders, either by buttoning it on to a jean or other firm petticoat-bodice, or by the ladies' braces, now sold by most outfitters. The tide of dress reform sets, I think, too strongly for the paper referred to, with its insufficient consideration of antecedents and its too hasty generalisations, to check progress. Ill-considered enthusiasm for reform is still its greatest danger.

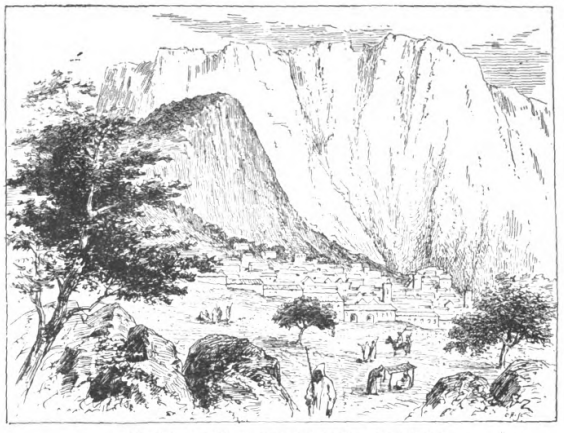
Any very interesting social event in early autumn, such as the first night at the Haymarket was, serves to bring home to one how different a meaning has the saying "town is empty" now from that which it bore fifty years ago. In these railroad days, an occurrence of interest will always bring back many whom it specially concerns, and on any given day there will always be numbers of people just "passing through"—resting at their own homes for a day and a night. There was little of that sort of thing before railroads joined the ends of the land, and gave us all the winged feet of the messenger of the gods. In the early part of the century, my people, when they removed from town to their country place in the North, were three days on the journey, driving in the private carriage. Half the furniture of the house, it seems, used to go too; curtains, cushions, silver, china, knick-knacks of every description, and even the old Colonel's pet bedstead and bedding—all travelled between the houses when the family moved. But then, London, once forsaken, was not to be seen again for at least six months. How different life must have been in those days!—so different that we cannot realise it, I expect. One gets a glimpse of it occasionally, more by chance than by deliberation. The old inventory of what was moved, and where the travellers spent three successive nights on a journey which now takes eight hours, was one such flash of revelation to me. Another was when the late eminent educationist, William Ellis, who was "the age of the century," said to me casually in conversation: "The population of the kingdom has quadrupled since I was a boy." An old lady whom I met a few days ago told me that she, as a girl, went with some young friends to view as a curiosity, on its stand in Piccadilly, the first hackney coach that ever plied in the streets of London. It is such trifles as these, contrasted with the way in which we now rush from one crowded place to another, and in which "town" is never really "empty," that bring home to one the changed conditions of modern existence. I was not in London for the first night of "Captain Swift" at the Haymarket, but one who was there tells me that, notwithstanding the season, there was exactly the brilliant gathering customary to Mr. Tree's "first nights"; and on the fourth night, when I enjoyed the performance, the house was as completely filled as though we were in June.

Metropolitan Police Magistrates are under no obligation to give gratis legal advice to applicants; but when they do so their observations are so widely reported that it is of great consequence that the impression conveyed should be correct. A Magistrate has twice over informed a poor woman that she has no remedy against a husband who has deserted her and then returned to her home and seized the furniture—which she had bought out of her own earnings—selling her bed for five shillings, and threatening to sell everything else. Now, the fact is, that in such a case the poor woman has by law just the same remedy as she would have against any absolutely strange man who entered her house and stole her goods. She has a legal right to call a policeman and give the thief into custody, or the Magistrate should issue a warrant for his arrest; and any person buying the goods from the husband, knowing them to be the wife's property (that is, to have been bought by her own earnings since 1870), would be a receiver of stolen goods. The law can do no more to protect the earnings and goods of poor wives from drunken and deserting husbands.

FLORENCE FENWICK MILLER.

FEMALE CLERKS AT THE POST OFFICE.

It is a very prevalent idea that the notion of employing female clerks is a comparatively recent institution at the Post Office, and that the late Mr. Fawcett was the first to attempt it. As a matter of fact, however, the experiment was first made seventeen years ago, shortly after the Government had acquired the telegraphic system of the country. The first germ of the idea was probably derived from the fact that the old telegraph companies employed a large number of young women to manipulate the instruments—a system that has been continued with great success by the Post Office. At the present time 719 young women are employed in the great galleries of the Central Telegraph Station at St. Martin's-le-Grand; while if we take into account the number of those who are engaged at the district offices and throughout the country generally, the total is considerably over 1000 persons. The Postmaster General, in his last published report, gives the total number of female telegraphists, together with the counter-women employed for postal purposes, as 3121. It was not, however, until the latter end of 1870 that Mr. Scudamore, who was then the moving spirit of the Telegraph Department, conceived the idea of *employing ladies upon actual clerk-work*. It occurred to this enterprising official that a periodical examination of the telegraph messages forwarded and delivered by the Post Office, for the purpose of ascertaining whether they had been correctly and promptly transmitted and delivered, and whether the rules of the Department had been generally observed with regard to them, was rendered necessary for maintaining the efficiency of the service. It was obvious that in an undertaking like that of the telegraphs inefficiency of management would be certain sooner or later to result in loss of business and revenue. People who receive messages that are promptly transmitted and delivered, are accurately rendered, and are clearly and distinctly written out, are almost insensibly tempted to send telegraphic messages. On the other hand, if the telegrams are delayed, or are inaccurately rendered, or are unintelligible either from bad writing or bad transmitting, the public are by no means disposed to trouble their friends with similar annoyances. Mr. Scudamore fully appreciated these matters, and he was, moreover, well aware that the people who are annoyed are not always the ones to complain, and he very rightly considered that something ought to be done for those long-suffering people who sit down calmly under their grievances and never let the Department know what they have endured. These are briefly the circumstances which suggested the establishment in 1871 of what is now known as the Clearing House Branch, and in electing to have a staff of female clerks for the performance of the work to be allotted to this new branch, Mr. Scudamore seems to have been guided by the idea that, as it would for the most part consist in fault-finding, it would be well within the capacity of such clerks. Nor was he disappointed in his anticipation, for the work was performed in a highly satisfactory manner, and the operation of the check thus instituted proved so salutary that it led the telegraph clerks throughout the country to pay attention to the rules of the Department, to use their utmost exertions to get the messages off promptly, to write out the received messages carefully, and to expedite the delivery of those messages to the best of their ability.



This practical demonstration of the success of female employment on purely clerical work soon led to the extension of the scheme, for it was found that they could be entrusted with work of a more important character, such as the preparation of the accounts against all the newspaper proprietors in the United Kingdom who send telegrams without prepayment. The work is of a somewhat intricate and difficult nature, and was formerly performed by male clerks; the fact, therefore, that it has now for many years past been successfully accomplished by females is a weighty argument in favour of their employment to a limited extent as clerks. In dealing with the newspaper telegraph accounts, and also those of the various Press associations, these lady clerks have the handling of work that yields to the Post Office a revenue of nearly £114,000 a year. The Clearing House Branch clerks have now also the preparation of the accounts rendered against the Royal family, Government Departments, &c., for telegrams, and the examination and checking of certain accounts between the railway companies and the Post Office in connection with telegraphic work, and so satisfactorily has this latter work been performed that the auditors into whose hands the accounts subsequently pass have been able to find but little or no fault.

The quantity and variety of work now performed at the Clearing House necessitate, of course, the maintenance of a considerable force of clerks, and the staff of that branch now numbers 174 ladies in all. The branch, which is under the control of the Receiver and Accountant General of the Post Office, is directly governed by a superintendent, who receives a yearly salary on a scale from £210, rising by annual increments of £15 to £400. There is also an assistant superintendent, with a fixed salary of £200 a year. The general staff comprises five principal clerks, whose salaries are from £120 to £170, rising by £10 a year; twenty first-class clerks, with salaries from £85, rising by £5 a year to £110; and 147 second-class clerks, whose salaries are from £65, rising by £3 a year to £80.

It was, no doubt, the success that had been experienced in the employment of female clerks at the Clearing House Branch which induced the Post Office, on the establishment of the Postal Order System in 1881, to appoint a staff wholly composed of female clerks to perform the manifold duties arising out of that service. The late Mr. Fawcett, when Postmaster General, alluded with pardonable pride in some of his public speeches to the efficient manner in which this work had been performed. That it is of considerable magnitude may be gathered from the fact that the number of postal orders issued in a year at the present time is at the rate of not less than 37,000,000 a year, amounting to something like £15,000,000. It may be imagined that these orders have all to be examined as they come in as paid, and to be credited to the respective postmasters by whom they are paid; that they have to be sorted and put away in numerical order for reference as occasion may require; and that there is a large amount of work also in connection with the orders presented by bankers, in supplying postmasters with sufficient stocks of orders, and in attending to applications from the public respecting lost orders, &c., together with general correspondence arising out of the postal order business. It is scarcely to be wondered at, therefore, that the staff now employed upon that work is very large, and numbers in all no less than 294 persons. The higher establishment of this branch comprises one superintendent, one assistant superintendent, six principal clerks, thirty-one first-class clerks, and 148 second-class clerks; while the lower establishment consists of a force of 107 female sorting clerks, who are, of course, of an inferior rank, and are employed in sorting and finally disposing of the orders. The major establishment of clerks is paid on a scale precisely similar to that enumerated in the case of the Clearing House Branch; the sorting clerks receive weekly wages of 12s., rising by 1s. a week to 20s. a week, except twelve, who rank on what is called the first-class of female sorters, and receive 21s., rising by 1s. 6d. a week to 30s. a week. This branch, like the Clearing House Branch, is under the control of the Receiver and Accountant General of the Post Office.

Female labour has also been introduced with marked success into the Savings Bank Department of the Post Office, dating from 1875. The work performed in that department by these clerks is of a varied, and in some cases difficult, character, and its performance by lady clerks has been, as already stated, very successful. In a very interesting pamphlet on the "Employment of Women in the Public Service," published by Lady John Manners (now Duchess of Rutland), that lady remarks that "the public has been well served by ladies, to whom the work has furnished an honourable independence." The staff now employed upon the work, which needs no detailed description, as it can be readily imagined from the nature of the business that gives rise to it, is very large, and comprises both higher and lower establishment clerks. Of the former, there are a superintendent and assistant superintendent, eight principal clerks, thirty-six first-class clerks, and 229 second-class clerks. The latter comprises eight first-class sorters and fifty-nine second-class sorters. In each case the scale of pay is the same as that of the Clearing House and Postal Order Branches.

It is not, perhaps, generally known that the greater part of the Returned Letter Office is now manned, if such term may be here used, by female clerks. The work of this office is altogether of a more simple character than that already alluded to, and consists chiefly in returning to the senders the letters which the Post Office is unable to deliver. The number of letters and post-packets of all kinds dealt with in the Returned Letter Office last year was 13,436,600. The work, of course, is simple enough; but some of the clerks are employed on higher class duties, such as endorsing inquiry papers referred to the Returned Letter Office, and ledgering letters of small value, concerning the disposal of which there can be no mistake. The results of the experience of female labour at the Returned Letter Office, which dates from 1873, have been very satisfactory.

SHESHOUAN, A TOWN OF FANATICAL BERBERS IN MOROCCO.

The female clerks here have been found to be both quick and accurate in the performance of their work, and have completely surpassed the expectations that were formed of them, while they have proved themselves perfectly amenable to discipline. The number of female clerks employed in the Returned Letter Office is fifty. The superintendent receives wages at the rate of 40s. a week, rising by 2s. every year to 50s. a week; the first-class clerks receive 28s., rising by 1s. 6d. to 34s. a week; and the wages of the second-class commence at 14s., rising by 1s. to 17s., and thence by 1s. 6d. to 27s. a week.

In addition to the female clerks already mentioned as being employed at the Post Office, there is a certain number attached to the account branches of the post offices at Edinburgh and Dublin. At the former place there are at present nineteen employed, of whom one is superintendent, receiving a salary of £120, rising by £10 annually to £170 a year. The remainder of the staff is divided into a first class and a second class, the former receiving £75, rising by £5 to £100 a year, and the latter £55, rising by £3 to £70 a year. In Dublin there are seventeen female clerks, who are apportioned in like manner, and enjoy similar scales of pay as in Edinburgh.

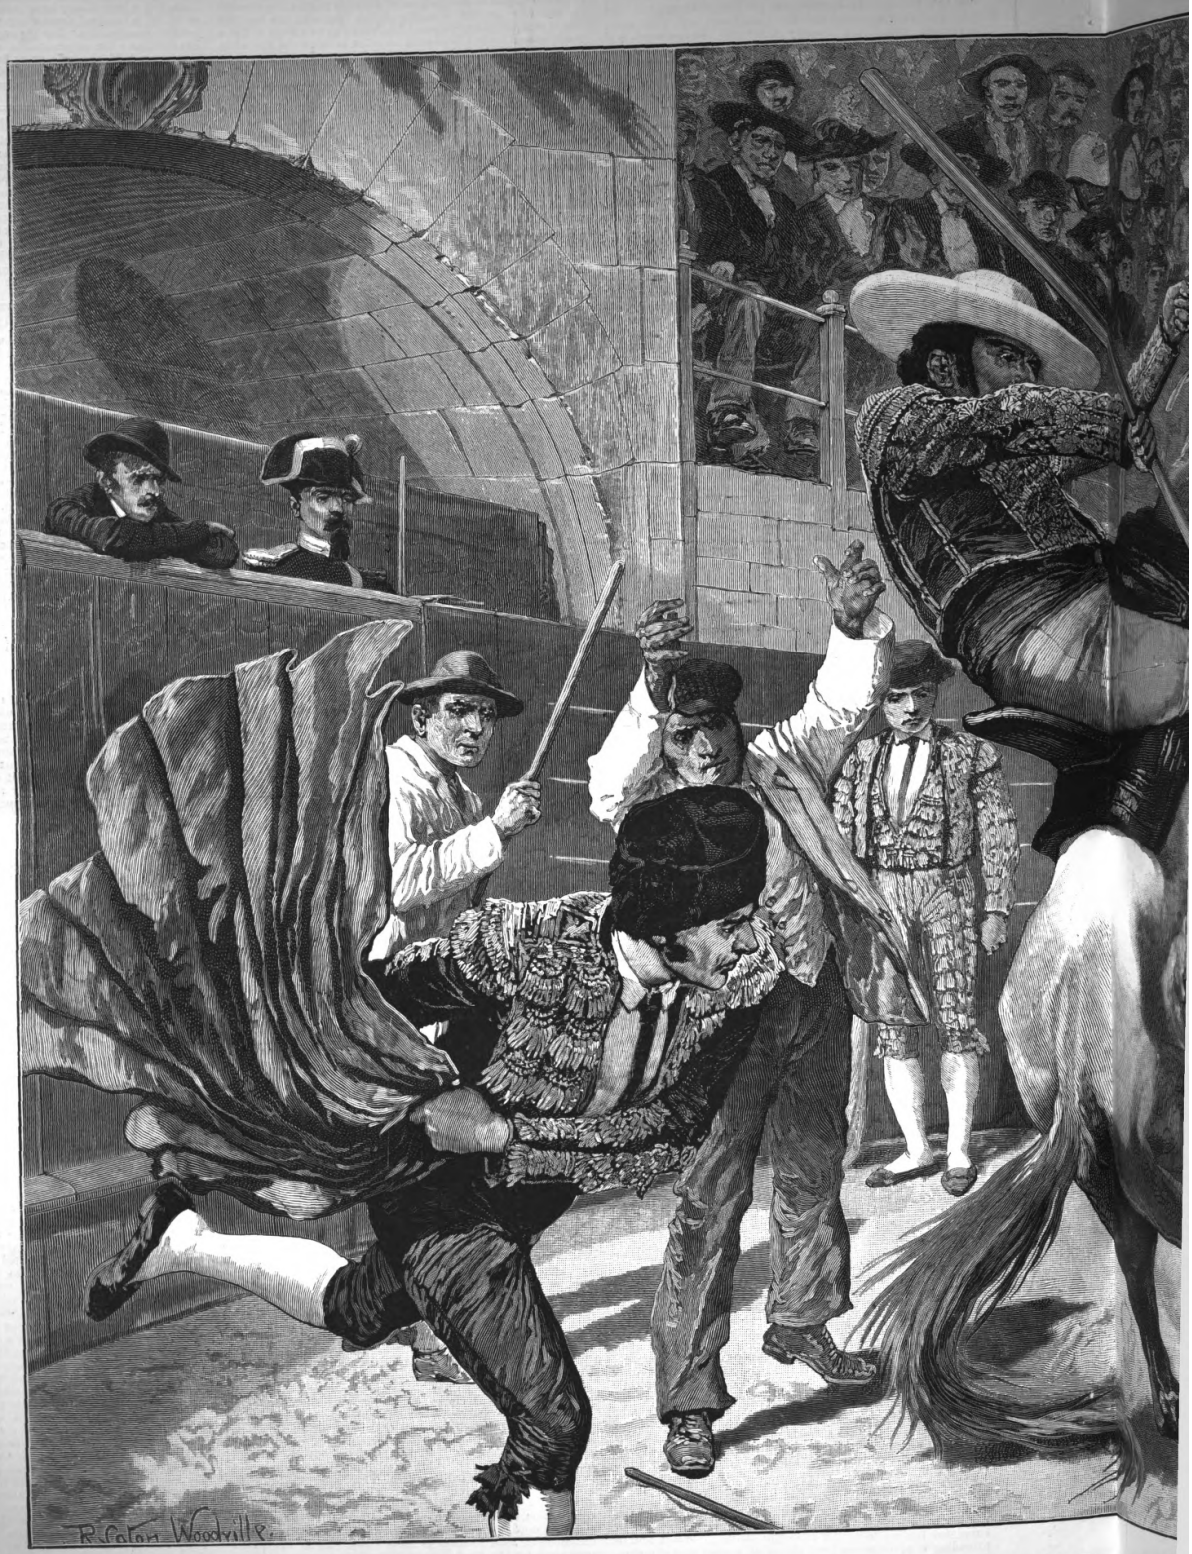
The hours of attendance for female clerks in the Post-Office are six daily, being from ten till four, with a half-holiday on Saturdays, and they are allowed an annual holiday of one month. The female sorters do not fare quite so well. They are required to attend eight hours daily—from nine till five—and till two on Saturdays, whilst they are only allowed an annual holiday of a fortnight, except those on the first class, who receive three weeks.

It only remains to say a few words as to the mode of admission for female clerks, &c., to the post-office, which, as regards both classes—namely, female clerks and female sorters—is by open competitive examination. In the latter class the examination is comparatively easy, consisting of reading and copying manuscript, handwriting, spelling, arithmetic (first four rules, simple and compound), and geography of the United Kingdom. Preliminary examinations are held in the first four subjects, and candidates failing in any one of them are disqualified from taking part in the competition, which comprises, of course, all the five subjects above named. Application for admission to attend an examination must be made at such times and in the manner prescribed by the Civil Service Commissioners, and a fee of one shilling is required from every candidate attending the examination. The limits of age are from fifteen to eighteen years of age, and candidates must satisfy the Commissioners that they are unmarried or widows, and that they are duly qualified both in respect of health and character. Similar conditions apply to candidates for female clerkships; but the limits of age are from eighteen to twenty years, and the examination is, of course, of a severer character; the subjects being arithmetic, English composition, geography, and English history. The fee required of every candidate attending a preliminary examination is 1s.; and a further fee of 1s. 6d. is required from every candidate attending a competitive examination. For the rest, it need only be added that examinations for appointments as female clerks or female sorters are held, as a rule, every half-year; and that full particulars as to the mode of admission, &c., can be obtained on application to the Civil Service Commission, Cannon-row, Westminster.

A. G. B.

SHESHOUAN.

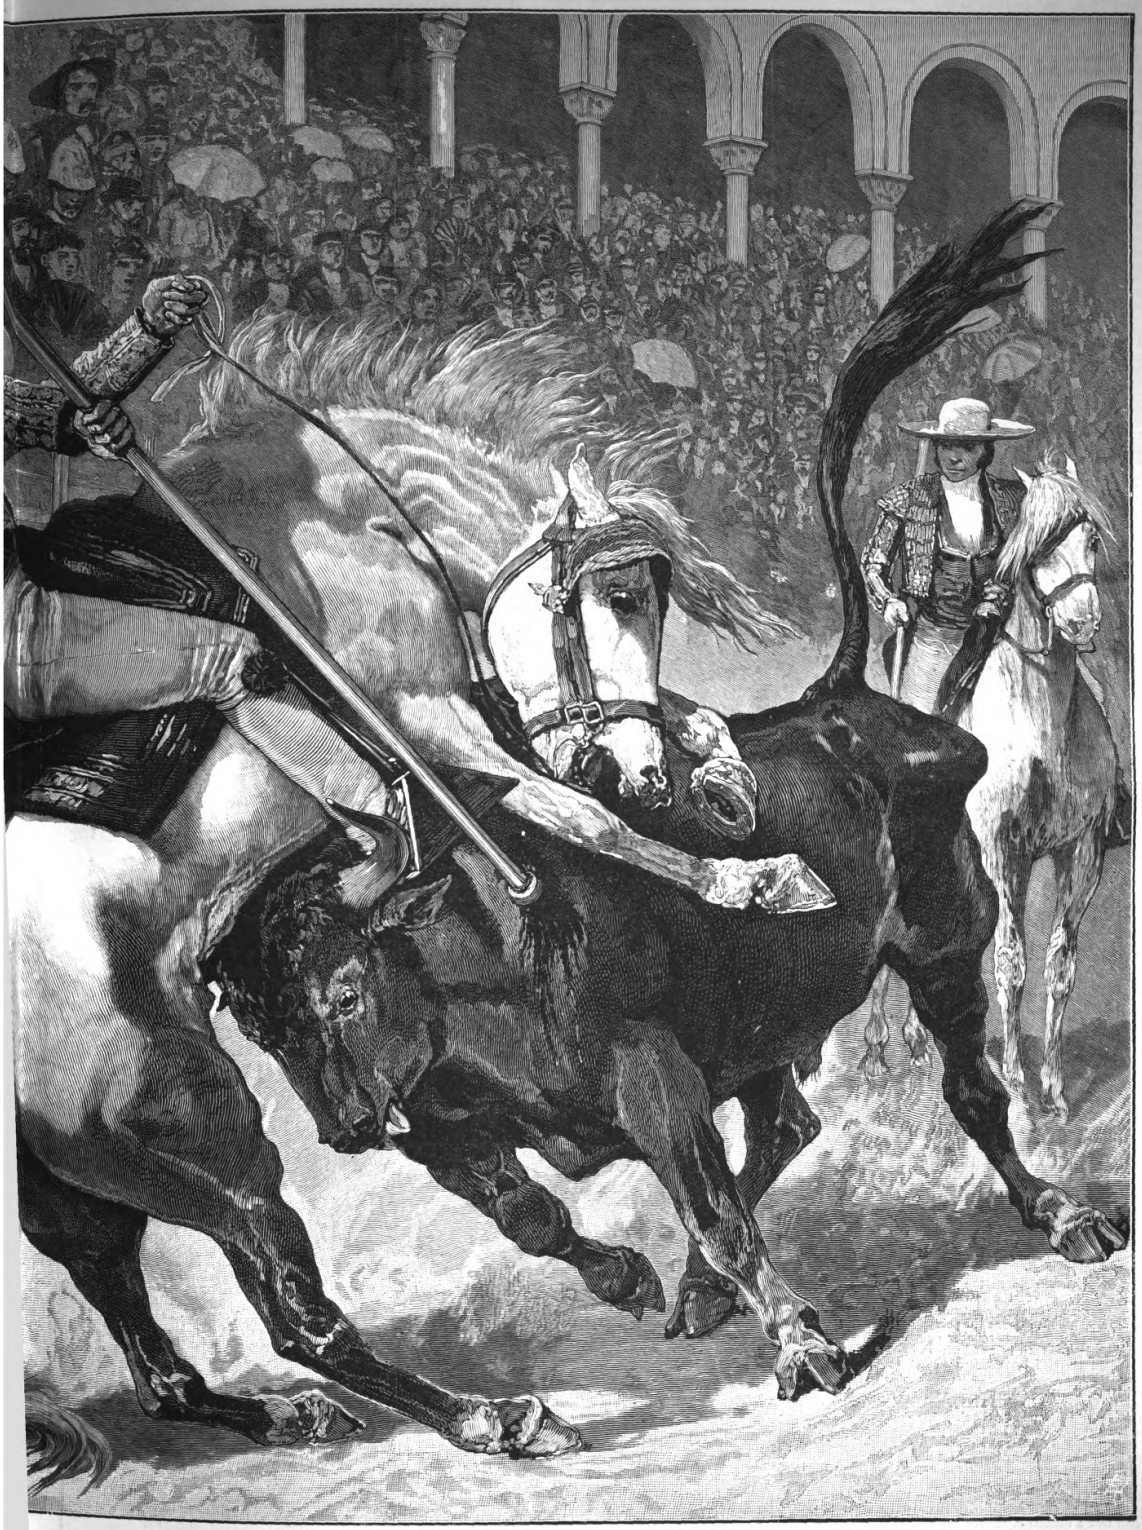
Sheshouan is a town of the fanatical Berbers, situated on the borders of the Riff country, in the northern part of Morocco. So far as is known, it has only twice been visited by Christians. The last time was in July of this year, when Mr. W. B. Harris, a young Englishman, contrived to reach the town, and remained twenty-four hours within its walls. But the suspicions of the natives were aroused, and Mr. Harris had to fly from the town in the middle of the night; and, remaining hidden during the day-time and travelling at nights, arrived safely at Tetuan two days later. Mr. Harris visited Sheshouan in the disguise of an Arab, accompanied by an Arab boy who acted as guide. Our View of the place is from a sketch taken by Mr. Harris on the spot.



ART NOTES.

The Hellenic Society has been well inspired in publishing, separately, Miss J. E. Harrison's interesting summary of the progress of archæology in Greece during the past season. For those not immediately connected with the studies for which the various schools and museums have been established, the chief interest lies in the number and variety of the art-treasures which are being brought to light. For these, abundant space has been or will be found in the two museums in the Acropolis, in the Central Museum in Athens, and in the projected "Antiquarium" for minor antiquities. At the same time, a museum has been built at Syra for the reception of treasures found in the islands—Delos excepted—and another at Tripolitza, which will contain those from Mantineia, Tegea, and the neighbourhood. The excavations in the Acropolis, which will probably be brought to a close during the ensuing season, have brought to light the walls of the old house of Erechtheus, and the foundations of the Temple of Roma and Augustus, both lying to the eastward of the Parthenon. The Erechtheion, it seems, is now considered to have originally extended over a large portion of the Acropolis, some portions of it having been removed to make room for the buildings in the time of Pericles; just as the site of some prehistoric building had previously been built over by the Erechtheion. Amongst the sculptural fragments discovered, Miss Harrison refers especially to the archaic figure of a priestess in a style of dress hitherto unknown, and to the head of a "Triton," in which the colours—blue hair and beard and green eyes—are vividly preserved. In bronze work nothing has been unearthed equalling in beauty and completeness the Athene found last year to the north of the Erechtheion; but a small Athene Promachos about to hurl her spear, and an archaic bronze of the Apollo type, with both arms extended, deserve notice. The general works carried on by the Greek Government have in view the levelling up of the surface of the Acropolis to its presumable height in the fifth century B.C., whilst the base will be freed from the accumulated débris of centuries; and by next May it is hoped that some idea of the form and actual extent of the Acropolis rock may be brought home distinctly to the ordinary spectator.

Outside Athens the most important discovery of the year is that of the Kabeiroi Temple at Thespiæ, about five miles from Thebes, by Dr. Wolters and the German Institute. The American school has been still more fortunate in its excavations of the buried city of Sicyon, and the still richer results of their work at Dionuso, to the north-east of Pentelicus, and the supposed site of the earliest temples raised to Apollo and Dionysos when they first came to Attica. At Mantineia, the French school has discovered the site of a temple of Hera, together with a large number of bronzes and terra-cottas; and at Amorgos, one of the Cyclades, the same body has been almost equally successful. Mycenæ, Tanagra, Eleusis, Epidaurus, and Ægina, have all yielded, though in a less degree, fresh testimony to their importance in bygone times—and finally Dr. Schliemann has identified the site of the present Christian church at Cerigo with the world-famous temple of the Cytherean Aphrodite, and that learned German is convinced that the church has been almost entirely constructed out of fragments of the temple.



Of the many thousands of tourists, English and French, who make Dieppe the starting point or the limit of their travels, only a score or two seem to think it worth while to make a visit to Envermeu, a little village or township about ten miles off, pleasantly situated on the right bank of the Eaulne. It has, nevertheless, at various times attracted the attention of archæologists, and now has suddenly come into notoriety by the discovery of a picture which M. Gervex, the well-known Belgian artist, unhesitatingly ascribes to Roger Van der Weyden. Envermeu at some remote period was a more important place than now appears. It can boast traces of a "campo santo" dating from the Merovingian period, the memories of a castle whence started some of the companions of the Conqueror, and the ruins of a priory dedicated to St. Lawrence. Its church or abbey, built about 1415, seems never to have been finished; but the interior contains some wood-carving of extraordinary delicacy and merit. The pictures on the walls, however, have never attracted any notice, and it was generally supposed that they belonged to a much later date than the abbey itself. M. Gervex, however, was struck by "A Martyrdom of St. Sebastian," which hung in perhaps the most obscure corner of one of the side aisles. By degrees he became convinced of the great artistic merit of the work; and he at length discovered that Roger Van der Weyden had at one period of his life taken refuge at the Priory of Envermeu, and that he had introduced into this picture the portrait of the Prior Turold (whence the English Thorolds) in recognition of the hospitality he had received. Van der Weyden died in 1464, so that this picture must have been transferred from the priory at the time of its suppression in 1510, shortly before the present church was commenced.

The legatees of Sir Joseph Whitworth, who have given £10,000 to the Stockport Technical School, intend granting £1000 to the new Girls' Industrial School just built at Stockport.

A SPANISH BULL-FI

DRAWN BY R. CATON WOODVILLE.

BULL-FIGHT.

.TON WOODVILLE.

A SPANISH BULL-FIGHT.

We had left Morocco, crossed the Straits, and arrived at the Royal Hotel, Gibraltar, where we heard that we should be just in time to see a bull-fight in the Spanish town of La Linea that same afternoon. We procured a vehicle, and drove over the frontier to that place. On alighting in the Square, I saw the loveliest girl that I ever beheld, waiting there with her duenna. In disputing with my driver, who demanded four times his proper fare, I had time to study my Spanish beauty's features. We had a walk of two miles to the bull-ring through dirty streets decorated with flags overhead and with holes underfoot. Banners were flying from the roofs, and draperies floating from the balconies; on each side of the way were tents and booths to supply the thirsty with wine and spirits, or the handsome and picturesque women with large fans on which scenes from the bull-fight were painted. The streets were crowded with carriages and foot-passengers, the ladies being dressed in black satin or silk, with black lace veils or mantillas floating from the tortoise-shell combs at the back of their heads, and every one of them flirting an enormous fan. There was a large crowd outside the bull ring when we arrived. From without, the building looks like a huge amphitheatre, with ticket-offices and turnstiles guarded by gendarmes and soldiers with fixed bayonets all round it. We paid two dollars apiece for our stalls—or, rather, the seats in the best portion of the circle—and when we got inside found that we were left entirely to our own devices to obtain sitting room, for there were no attendants; and finally, as the place was quite full, we had to be content with standing room.

The ring, as near as I could judge, was about sixty yards across, and was surrounded by tiers of seats rising one above another, like a Roman amphitheatre, and holding about six thousand persons. The spectators are well protected from the bull, as there is a double barricade all round the ring, with a space between the two fences, in which the bull-fighters who are not engaged in the ring stand and watch the performance until it is their turn to enter the arena. Behind these men sit Spanish ladies, row above row, some dressed in the latest Parisian fashions, with exaggerated hats piled up with feathers and bows—though most are dressed in the more becoming Spanish costume; old women and young women; gentlemen in top hats and frock coats, and peasants in shirt-sleeves and wideawake hats—the Spanish national costume being conspicuous only by its absence; English soldiers from Gibraltar, looking very smart in their red, blue, and green uniforms and white helmets, and forming a very appreciative part of the audience; and strong pickets of Spanish soldiers distributed here and there among the people with loaded rifles and fixed bayonets, to prevent any sudden disturbance or tumult. A military band, which played extremely well, gave us the latest airs from Europe. "Africa begins at the Pyrenees," and we by no means felt that we had arrived at the nineteenth century civilisation even though we had crossed over from Morocco. The great gates of the arena were thrown open, and the procession of bull-fighters, both horse and foot, defiled into the ring in a double line with due formality. Then an alguazil, mounted on a good horse, and dressed in a black mediæval costume of the Philip IV. period, rode up to the Alcalde, and asked him for the keys of the inclosure where the bull is kept. This request having been granted, the alguazil backed his horse all across the arena and retired. Then the first bull was let out. The animal trotted about with an astonished air, and looking for a way of escape: he was by no means frightened, and seemed very fierce with his bushy tail stuck up on end, and evidently thought himself fit to fight the whole world. When the bull had shown himself, the gates on the right of the bull's entrance opened, and four or five picadors entered mounted on miserable broken-down screws. These wretched horses had a bandage slanting over their faces across the right eye, so that they might not see the bull charging upon them, but might stand, blindly and without a movement, to be gored by the horns till they could no longer stand. The picadors were seated on heavy and clumsy black Moorish saddles with high back and peak, and their legs were cased in buff leather overalls lined with bars of steel and lead, so that they might not be injured by the bull's horns touching them instead of their horses. In fact, they were so heavily accoutred that they could scarcely walk, and could not get up when thrown, so that they would stand but a small chance of getting away from an infuriated bull were it not for the assistance of their comrades in the ring. Behind the picadors followed a number of dirty-looking rascals in shabby everyday European dress, whose duty it is to prod the tottering horses into a walk with long pointed sticks, to help dismounted horsemen to rise, to obliterate bloodstains with sand, and to do the dirty work of the arena. They may be useful, but they are certainly not ornamental. The horses on which the picadors are mounted are only put up as ninepins for the bull to knock down, and to gratify the Spanish passion for blood. They are miserable screws, generally broken down cab-horses from Gibraltar and the country round. The poor starved things could hardly move under the weight of their riders, and were quite unable to avoid the bull when he charged. The men behind thrashed them and drove them on to meet the bull's repeated charges; and it is no exaggeration to say that the wretched brutes were goaded into tottering towards the charging bull, stumbling over their own entrails, as long as they could stand on their feet. The sight was a sickening and disgusting one, and yet well-dressed women gloated over and applauded it, and if at least four or five horses were not supplied for each bull to gore to death, joined with shrill screams in the cry of "Caballo! Caballo!" for more victims to be driven up to the bull. There is no sport in it; the head of the picador's spear is only about an inch long, and is merely intended to enrage the bull, a circular stop being placed near the point to prevent it entering too far. When a sufficient number of horses have been killed, the picadors make their bow and withdraw. The chulos further enrage the bull by waving a red flag in front of him, and eluding him when he charges. Time after time the bull rushes at the red flag, to find nothing but an impalpable foe; but, some time ago, an English bull from Gibraltar was brought into the ring and teased by the chulos. The first time he charged at the red flag; but when the chulo tried to deceive him again, he disregarded the flag and charged the man. This was not playing fair according to Spanish notions, and so the chulo declined to have anything to do with a bull which was so intelligent as to butt at a man and not to go blindly for the red flag. Before the matador entered, the banderilleros played all sorts of tricks with the bull to irritate him. One man took a banderilla in each hand and faced the bull as he charged. Just as it seemed as if he must be knocked over, the banderillero deftly stuck his weapons one into each of the bull's shoulders, and the animal, on feeling the prick, instantly stopped dead, leaving the daring man unmoved and unhurt. Another trick sometimes done is for a man to sit in a chair in the centre of the arena and await the bull's charge, turning a somersault just in the nick of time, and leaving the enraged animal to tumble over the empty chair. Occasionally a chulo will take a leaping-pole in his hand and face the bull, springing into the air when the animal charges, and dropping down behind the bull after the pole has been knocked out of his hands. This is a very pretty feat; but a bull—probably the intelligent English one—has been known to see through it, and, at the man's second jump, to stop short, leaving him to descend ignominiously to the ground, and seriously goring him before assistance could arrive.

Then, at last, when the bull had been sufficiently tormented, the matador entered the ring, sword in hand. The matador is the most important personage in the bull-ring, and is the admired of all beholders. A celebrated matador is paid as much as £300 a day for his performance, and always has to be in strict training, though he looks rather fleshy to an English eye. He enters the ring alone, armed only with his Toledo blade, and with a red flag, about a yard square, over his arm. The matador begins as a chulo, and, after proving himself an expert toreador, is promoted to the post of bull-slayer. Though bull-fighting is looked upon as a very low-caste trade, yet a successful matador becomes a huge favourite with all classes, and is generally known by some endearing nickname, from the place of his birth or from a personal peculiarity. The most celebrated matadors of Spain were Joseph Delgado and Francisco Montes. Joseph Delgado, who was known by the nickname of "Pepe Illo," was the favourite at the end of the last century. He was a first-rate swordsman, and wrote a book on bull-fighting, which is a text-book on the subject. He was killed at Madrid, on May 11, 1801. On the morning of the bull-fight he felt ill, and had a presentiment that he was going to lose his life; but he would not disappoint the public, and so entered the ring, where he was gored to death by the bull. Francisco Montes, who also wrote a book on his profession, was known as "The First Sword of Spain." After a most successful career, he was severely wounded on July 21, 1850; but was rescued by his nephew, "El Chiclanero," who afterwards became as celebrated as Montes himself. Amongst remarkable toreadors must be placed the woman who became a matador and killed her bull, like a man, for love of the ring. A story is told of a lawyer in Seville, named Mazantini, who was in love with a beautiful girl in the city. But she was so fond of the bull-ring that she declared to her lover that she would never marry him, or anyone else who had not killed a bull. The lawyer was so in love that he threw up his profession and

PEDRO II., EMPEROR OF BRAZIL.

turned bull-fighter, and not only did he kill his bull but he became one of the most celebrated matadors of the day. He became so rich and famous, and was so run after by women of all ranks, that his head was quite turned; and when it was intimated to him that now he was worthy to marry his lady-love, he laughed at the idea; for the girl, who was a great match for a lawyer, was far too insignificant a person to be looked at by a successful toreador. It is also said that an English officer, who had sold out at Gibraltar for reasons of his own, went into Spain and turned matador; but he soon grew so successful at his trade that he had to give it up, for the Spaniards were jealous enough of his fame always to leave him alone with the bull, and never to distract the animal's attention, so that he knew that sooner or later he must be killed.

The matador was armed with a very sharp sword about three feet long, and carried a red cloak, with which he engaged the bull. When the animal charged into his cloak, he plunged some ten inches of his blade into its shoulder. As the bull, maddened by the pain, dashed furiously round the ring, we could see the long keen sword gradually sinking by its own weight into the flesh, but before it touched the heart one of the chulos twisted his cloak round the hilt and jerked the sword out. Then it was thrust in again, until the bull was too weak to charge any more and lay down on the sand very sick. The poor brute refused to get up, and so his death-blow was given in the nape of the neck with a short heavy knife like a hunting-knife. This rather ignominious death was inflicted as the bull would not face the matador a third time; the succeeding animals were more courageous, and charged the red flag up to the last, receiving the death-thrust from the long keen sword just in front of the shoulder-blade, amid the enthusiastic cheers and plaudits of the spectators. The people screamed themselves hoarse with delight, and threw hats, caps, and cigars into the ring for the toreador. The victor bowed his thanks all round, and, picking up one of the cigars thrown him by his admirers, lighted it out of compliment to the donor. It was easy to understand why every Spanish boy wishes to be a toreador, and every Spanish girl to have the king of the bull-ring for a lover. He is the hero of the hour, and even a King of Spain would cut a very poor figure beside him.

When the bull has been killed, a team of mules, gaily harnessed with bells, is driven in, the bull is dragged out, and the arena sprinkled with sawdust. The same is done with the dead horses, and then the ceremony begins all over again. All bulls do not take their badgering quietly; some of them jump over the barrier into the passage between the two fences. I saw one bull do this no less than eight times, trying to escape from the banderilleros, and lie down between the inner and outer barriers. Then one of the great gates was thrown back, so that it closed the circular passage and opened a way to the ring. The bull was driven round until he came to the gate, when, the path being blocked, he perforce re-entered the arena.

A bull-fight in Spain is a very ceremonious affair. It lasts from two p.m. to six p.m. for two or three days, and on each day some thirty horses are horribly gored to death, and about six bulls slaughtered. The crowded audience sit watching the butchery with breathless interest, every now and then bursting into loud applause or laughter as some point rather tickles their fancy, and all the time the venders of water and sweetmeats wander about among the audience with their monotonous cries. During the early part of the performance the object is not to kill the bull, but to kill the horses; and if any picador or other were officious enough to put an end to the tormented animal he would get anything but praise from the rough peasants, or from the dainty ladies shading their delicate faces from the sun under their white parasols. The women of the lower classes bring their babies and enjoy every point of the performance, shouting and cheering their favourite toreadors, or howling abuse and insults at the bull; but the ladies, though they are just as keen after their amusement, and appreciate just as much every display of skill and dexterity made by the fighters in the ring, yet generally contrive to hide with their fans the more painful and disgusting incidents of the combat. No doubt, in the great cities, such as Seville, Madrid, Ronda, Granada, and the like, where bull-fighting has its home, and where the performance is carried out in the fullest and most ceremonious manner, there may be more sport in the show. I have heard of picadors being tossed by the bull and having their ribs and legs broken, of chulos and banderilleros being caught and gored in spite of their agility, and even of matadors finding the bull more than a match for them. I am only concerned with what I saw in the arena at La Linea, where none of the men were injured, and where there was apparently very little danger. But wherever and however the performance is conducted, whether there is danger to the toreadors or not, there is still the same ghastly horror of trembling screws goaded on blindfolded to meet the charges of the bull in order to gratify a lust for blood that calls for the bull-ring to be turned into a shambles or knacker's yard. In the early days of bull-fighting the combat was a real one from the beginning; if horses were used they were good ones, and the horseman was as anxious to preserve his mount from the horns as to guard himself. Though bulls were killed in the ancient arenas among the Romans, yet the present methods and procedure of the bull-fight are modern, and are not derived from classical times, but were in all probability devised by the Moors of Spain. Originally the bull-fight was conducted solely by gentlemen, who entered the arena armed only with a short heavy spear about four feet long. This was a terribly dangerous sport; but in spite of the thunders of the Church it flourished, until the chivalrous habits of the Spaniards began to die out, and after the accession of Philip V. bull-fighting became unfashionable and professional, though it was still patronised by all classes, as much as the prize-ring used to be in England. Real bull-fights were presented only on the occasion of some great Court ceremonial or rejoicing, and the last that were held were at the marriage of the late King Alfonso, eight or ten years ago.

When the last bull had been killed, the huge audience broke up, and we drove home through the streets of La Linea with a very motley crowd. There were carriage-loads of Spaniards in horrible imitations of the most ridiculous Paris fashions, and toreadors in full costume going back to their hotels amid the "Vivas!" of their admirers; and jostling along with the best of them came Tommy Atkins, lounging in an open carriage, smoking a huge cigar, and altogether looking an awful swell. We were well satisfied at having managed to see a Spanish bull-fight during our short stay at Gibraltar, though I cannot say that any of us felt very desirous of seeing another such spectacle. R. CATON WOODVILLE.

THE EMPEROR OF BRAZIL.

The precarious health of the Emperor Pedro II. of Brazil, while sojourning in Italy and other parts of the South of Europe, has during some months of this year caused much anxiety to his many personal friends. His Majesty is as well known in almost every European country, which he has often visited, and in the United States of America, as in his own dominions. He is a man of frank and amiable character, and of varied intellectual accomplishments, taking great interest in science and in literature; and, though an excellent constitutional Sovereign of the Brazilian nation, is quite a citizen of the world. Don Pedro is sixty-two years of age, having been born on Dec. 2, 1825, the son of the first Emperor of Brazil, Pedro I., and of the Empress Leopoldina, an Archduchess of Austria. He is a direct descendant, in the male line, of the ancient Royal House of Braganza, which was elevated to the throne of Portugal in 1640, when the Portuguese threw off the yoke of Spain, and which, through the marriage of Queen Donna Maria, restored to her rightful inheritance in 1834, with a Prince Ferdinand of Saxe-Coburg, is represented by her son, the reigning King Louis of Portugal. In 1807, when the French had overrun Spain and Portugal, the Portuguese Royal family took refuge in the great South American colony, which was constituted a separate Kingdom by the Congress of Vienna in 1815. The King of Portugal, John VI., returned to Europe and reigned in his old kingdom, but his eldest son, Don Pedro of Alcantara, chose rather to reign in Brazil, and became Emperor there in 1822. He abdicated in 1831, and his son, the present Emperor, being declared of age in 1840, was crowned in the following year. The Emperor married in 1843 Princess Teresa, a daughter of King Francis I. of Naples. His daughter is married to the Count D'Eu, one of the Princes of the French Royal House of Orleans; and he has three sons, the eldest of whom, Pedro, heir to the Brazilian Crown, is nearly thirteen years of age. The Constitution of Brazil is Parliamentary, with an elective Senate and Congress and responsible Ministry, and with a Council of State nominated by the Emperor, who has also the prerogative of selecting a senator from one of three elected candidates, and that of temporarily withholding his sanction from any legislative act which he disapproves. The empire is of vast extent, and rich in natural resources; its population, of Portuguese, natives, and mixed races, exceeds ten millions; it has a yearly revenue of more than twelve millions sterling, a national debt exceeding sixty millions, and a respectable army and navy. Rio de Janeiro, Bahia, and Pernambuco, are the principal cities and commercial ports of Brazil. The recent abolition of slavery is an act which reflects great credit on the Emperor's Government.

The Lord Mayor has remitted to the Organising Committee of the Imperial Institute £21,917 5s. 7d., being the amount subscribed for the institute through the Mansion House Fund since September, 1886. The question of establishing a commercial museum in the City remains in abeyance.

WILLS AND BEQUESTS.

The will (dated Oct. 5, 1873) of Mr. William Johnstone Newall, late of No. 33, South-street, Park-lane, and No. 122, Cannon-street, E.C., a partner in the firm of Messrs. M'Calmont Brothers and Co., who died on July 26, was proved on Sept. 6 by Robert Stirling Newall, of Gateshead-upon-Tyne, the brother and residuary legatee, the value of the personal estate amounting to upwards of £257,000. The testator leaves all his property to his said brother, absolutely.

The will (dated Sept. 1, 1884), with a codicil (dated Sept. 2, 1885), of Mr. Arthur Potts, J.P., late of Hoole Hall, Hoole, Chester, who died on April 10 last, was proved at the Chester District Registry, by Mrs. Elizabeth Potts, the widow, Frederick Potts, the brother, and William Rogers, the executors, the value of the personal estate exceeding £37,000. The testator bequeaths £400 and his furniture and household effects to his wife; his plate, books, china, and pictures to his wife, during life or widowhood, and, subject thereto, to his daughter, Edith; £100 to his sister, Annie Dixon; £50 each to the Plemondestal Parochial Day Schools and the Chester Female Home; and other legacies. The residue of his real and personal estate he leaves, upon trust, for his wife, for life or widowhood, and at her death or remarriage, upon further trust, for his daughter, Edith, and then to her children as she shall appoint, and, in default of such appointment, in such proportions that each son shall receive twice as much as each daughter.

The will (dated April 4, 1887), with a codicil (dated April 7, 1887), of Mr. Griffiths Lewis, late of Alltycham, Pontardawe, Llanguicke, Glamorgan, colliery proprietor, who died on Sept. 13, 1887, was proved on Sept. 7 last by Mrs. Mary Ann Hedley, the daughter, the Rev. John Charles Thomas, and the Rev. Joseph Pollord Lewis, the executors, the value of the personal estate exceeding £29,000. Subject to the legacies of £200 to his first daughter, £360 to his second, and £1000 to his third daughters, the testator leaves his colliery called the Primrose Colliery, at Pontardawe, and all the remainder and residue of his real and personal estate, upon trust, to pay the income thereof to his three daughters—Mrs. Mary Ann Hedley, Mrs. Anna Jeannette Thornley, and Mrs. Margaret Laura Gwenllian Thomas for life, and at their death to their respective children.

The will (dated Nov. 19, 1887), with a codicil (dated June 12, 1888), of John Harry Eyres Parker, J.P., Commander, R.N., late of Ware Park, Herts, who died on Aug. 14 last, was proved on Sept. 5, by Francis Parker, Major Herbert Scott Gould Miles, Lieut.-Colonel Sydney William Bell and William Christopher Higgins Burne, the executors—the value of the personal estate exceeding £27,000. The testator leaves his mansion house and premises, called Ware Park, and all his freehold, copyhold, and leasehold property, upon trust, for his son Francis William, until he shall attain the age of twenty-five; on his attaining that age he gives and devises all the said lands and premises to him, with remainder to his first and other sons according to seniority in tail. After confirming his marriage settlement he bequeaths £500 to his wife, Mrs. Alice Parker; £3000 to his sister, Mrs. Sarah Bell; £200 to his bailiff, George Piggott; and £15,000, upon trust, for his daughter, for life, and then for her children. The residue of his property he leaves, upon trust, for his said son, Francis William.

The will (dated July 17, 1888) of Colonel Reginald John Manningham Buller, late of the Grenadier Guards and Dilhorn Hall, Stafford, who died on Aug. 9 last, was proved on Sept. 3 by William Morton Philips, the nephew, one of the executors, the value of the personal estate exceeding £24,000. The testator leaves all his property, upon trust, to pay the income thereof to his wife, Mrs. Marianne Henrietta Buller, for life, and after her death he gives £5000 each to his nieces, Evelyn Mary Manningham Buller, Adelaide Marion Manningham Buller, and Lilian Manningham Buller, and the ultimate residue of his property to his nephew, Robert Edward Philips, and his two nieces, Mrs. Evelyn Adelaide Lane, and Nina Margaret Philips, in equal shares.

The will (dated Dec. 18, 1880), with a codicil (dated May 10, 1886), of Mrs. Hannah Morland, late of Heath Lodge, Croydon, widow, who died on July 16, was proved on Sept. 10 by Miss Lucy Morland, the daughter, and John Morland and Charles Coleby Morland, the sons, the executors, the value of the personal estate exceeding £22,000. The testatrix gives all her jewels and wearing apparel to her daughter, Lucy; her plate and articles of vertu between her four children and stepson; £1100 to her stepson, Thomas Morland; £2000 each to her sons, John and Charles Coleby; and a few other legacies. The residue of her real and personal estate she leaves, as to one fourth thereof, to each of her four children, John, Lucy, Charles Coleby, and Mrs. Jane Kemp.

The will (dated Sept. 6, 1883), with three codicils (dated Nov. 11, 1886; and July 14 and 26, 1888), of Mrs. Janet Barr, late of Oak Villa, Riddlesdown Park-road, Kenley, Surrey, widow, who died on Aug. 5, was proved on Sept. 8 by Edward Dadswell, George Verney Hall, and Henry John Mead, the executors, the value of the personal estate exceeding £18,000. The testatrix bequeaths £1000 to the National Life-Boat Institution, to found a life-boat in memory of her late husband, John William Barr, and to be called the "John and Janet"; £100 to the Caterham Cottage Hospital (Caterham Valley); £500 to Edward Dadswell; her house, Oak Villa, to her nephew, James Hall; and other legacies. The residue of her real and personal estate she leaves between her nephews and nieces (except James Hall), the children of her brothers, James and William Hall.

The Council of University College, Dundee, have appointed Mr. Patrick Geddes, of Edinburgh, to be Professor of Botany, and Mr. Andrew Paterson, Lecturer at Owen's College, Manchester, to be Professor of Anatomy. These chairs were recently founded by the merchants of Dundee.

The Town Council of Dundee, at the suggestion of the Provost, have resolved to present the freedom of the burgh to Mr. Ritchie, President of the Local Government Board, in recognition of the ability and tact with which he had carried the Local Government Bill through the House of Commons. Mr. Ritchie is a native of Dundee.

The first turf in the works of the Belfast main-drainage scheme was cut on Sept. 12 by Mr. William M'Calmont, chairman of the Town Improvement Committee of Belfast. The Mayor and Corporation, and the leading merchants of the town, attended the ceremony. The work will be the most costly undertaking ever entered upon in Ireland, the outlay being nearly £300,000.

The first grand flower-show of the season at the Royal Aquarium, Westminster, was held on Sept. 12 and 13, under the auspices of the National Chrysanthemum Society. The exhibition was held at a period too early for any large display of the particular flower from which the society takes its name. This deficiency, however, was more than atoned for by the splendid show of dahlias and gladioli which formed the prominent feature of the exhibition, and by the miscellaneous collections of floral beauty which were contributed.

Mr. R. A. Proctor, whose death has made such a gap in the ranks of literature and science, was a chess-player of no mean skill, and always took an interest in matters relating to the game. Whist, perhaps, had more fascination for him, on account of the mathematical reasoning involved in the chances of cards and the opportunity thus afforded to his facile pen of popularising an abstract study; but, as a mental recreation he probably put each on the same level. His periodical, *Knowledge*, contained a "Chess Column" from the beginning, and by his writings and otherwise he has laid chess under some obligation to his memory.

Herr Bardeleben gave his promised blindfold seance, at the Zukertort Chess Club, on the evening of Sept. 12, when a large attendance of members and friends gathered to witness the performance. The German master had for his opponents six fairly strong players, to half of whom he gave the move—a considerable advantage in such cases—whilst from the others he took it. The result was that he won two and drew one of each set—a very creditable score. In one game, mate was forced in twenty moves; and the others were played in almost equally good style, although the fight was more protracted. Mr. Guest, the amateur champion, will probably be the next distinguished visitor to the club, when he will play a large number of simultaneous games.

The Queen has approved of the appointment of Captain J. S. Hay, C.M.G., to be Governor of Sierra Leone, and of Mr. Gilbert T. Carter to be Administrator of the Gambia.

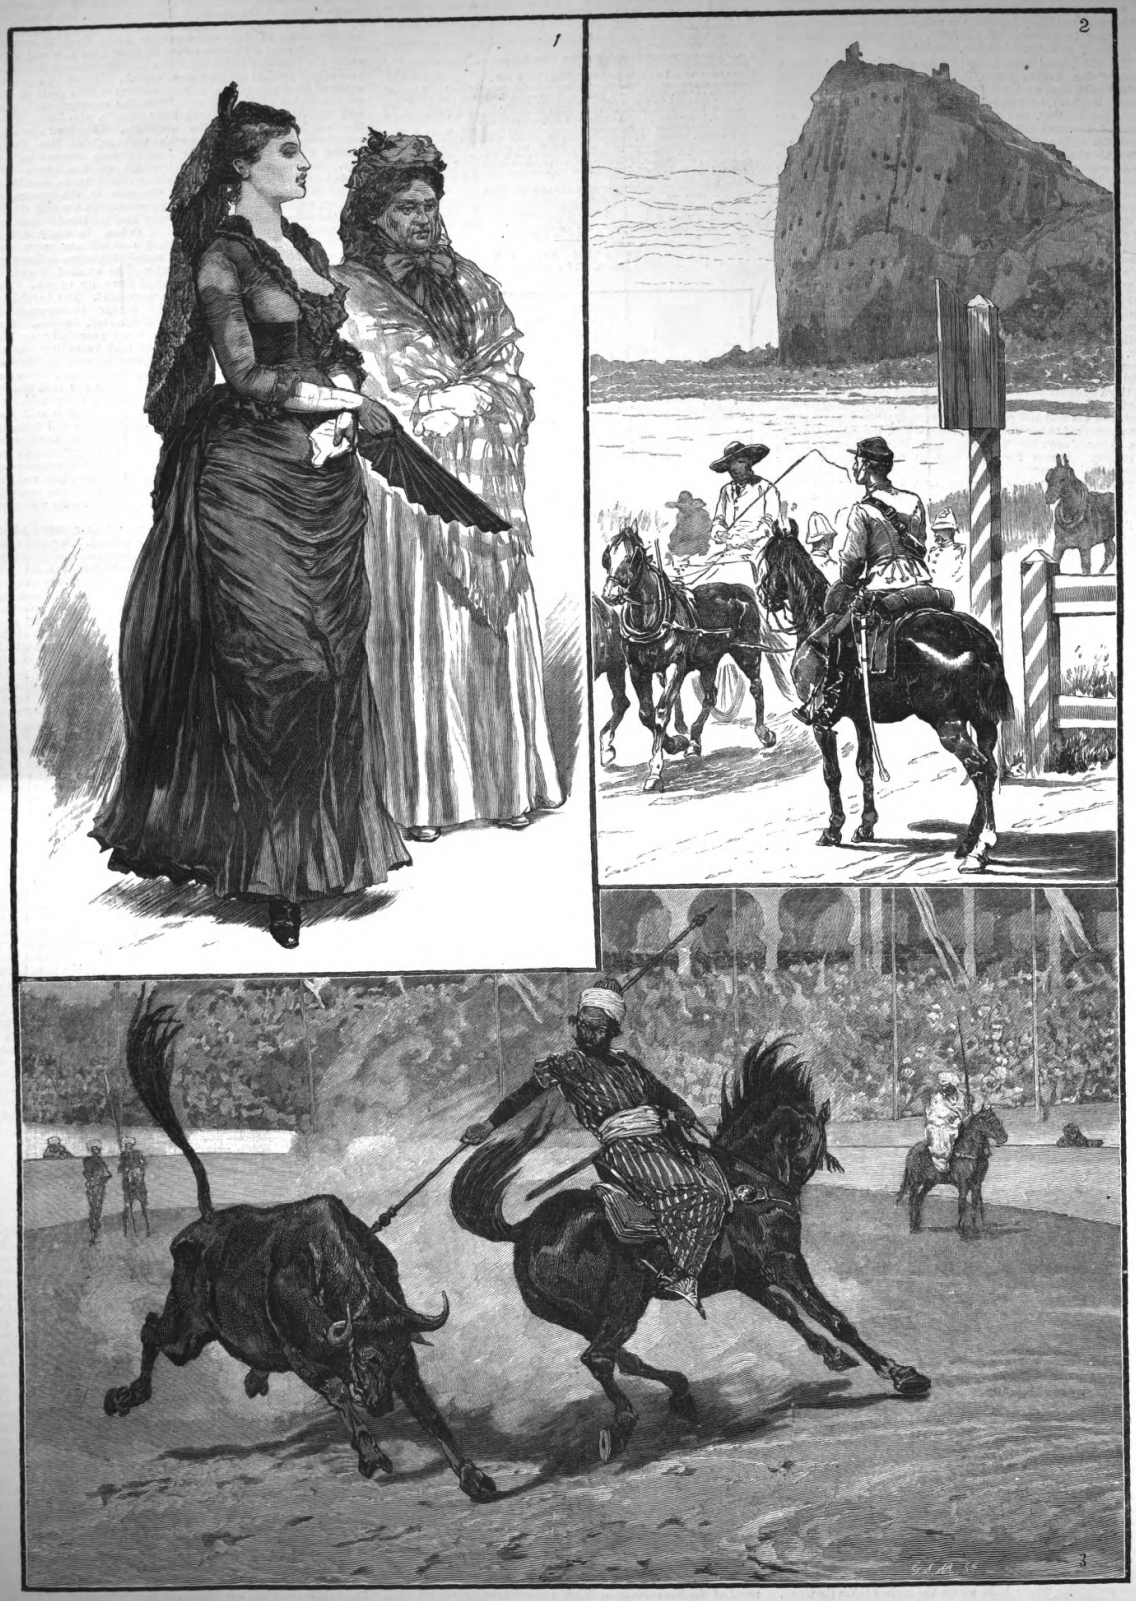
Detailed reports respecting the cyclone which burst over Cuba on Sept. 4 state that the damage done to the shipping was the greatest ever known. Throughout the island all communication except by boat is suspended.

Mrs. Charles Turner, of Liverpool, has placed at the disposal of the Archbishop of York £20,000 towards the creation of a fund for assisting with pensions the clergy of the diocese who may have become unfit for the discharge of their duties through infirmity. Mrs. Turner made an equal gift to Liverpool some time ago for the same benevolent purpose.

SCIENCE JOTTINGS.

THE NIGHT-LIGHTS OF THE SEA.

It is a calm, clear night, this, on which the good ship Adelaide lies at Parkeston Quay, Harwich, blowing off her superfluous energy in the shape of clouds of steam, while waiting for the Rotterdam contingent of passengers, who are being hurried down at sixty-miles-an-hour speed from Liverpool-street. Presently, there is a flash of light seen now and then along the fen-sides which mark the near approach to Harwich, and with a muffled roar the great engine, followed by a goodly array of carriages, comes to rest under the full glare of the electric lights of the station. Then the carriage-doors open, and the vehicles belch forth their crowds, who hurry down the wooden slope to the quay-side. Forward go the passengers for the "Ankwork's package," as Mrs. Gamp named the prototype of the fine Antwerp steamer of to-day. The Rotterdam boat lies aft on the quay. As I step on board and survey that crescent moon overhead, which a short time before at Claygate, in the garden of Surrey, was a full orb, and, as I contemplate the still clouds and the calm sea, I prophesy an even keel for the Adelaide on her coming voyage to the land of dykes. In truth, it is a lovely night; and when we have cast off our ropes and hawsers, and go half-speed ahead round that curve in Harwich Bay towards the open sea, one may well be excused if even a rhapsody on the moonlit sea flowed from lip or pen. The whole seascape is a nocturne in moonlight. The twinkling lights of Harwich show up the darker background of hill and church spire in true Rembrandt fashion. Out in the bay the yachts and ships sleep peacefully on the bosom of the deep, and the rays of each twinkling lantern rise and fall with the swell. Away beyond, in the sea whither every dip of our paddles carries us fast, there are seen the light-ships, each with its twinkling eye that gleams luminous for a moment and then vanishes away with the regularity of unvarying mechanism. The deck is still and quiet, although there is noisy clatter of knives and forks in the saloon below. On the steamer's bridge you can discern three or four dark figures—those of our guides through the deep. Soon things settle down to a still more monotonous state than before. Save for the throbs of the engines, and the occasional rattle of the steam-steering gear, all is at rest, and the good ship ploughs her way easily over the calm waters of the sea.



One may sit on the paddle-box on this autumn night revelling in the beauty of the seascape around. Far away the light-ships continue their mechanical illumination of the deep; but as you glance over the ship's side into the sea you become aware that the lights of man's contriving are not the only illuminations which meet the eye to-night. Watch the waves which spring into existence as the bow of the steamer ploughs the main. A long crest of foam passes away at a wide angle from the bow, and loses itself in the wash of the paddles behind. What is that strange gleam of light which ever and anon you see tipping the foam-crest with a weird effulgence and an uncanny gleam? As the moon passes behind a cloud, and the night grows darker for the obscuring of the Queen of Night, this strange light on the waves literally glows with its fiery sheen. You are fortunate to-night in that you can see this "phosphorescence of the sea," as it is named, in all its splendour. Look how every fleck of spray seems tinged with a radiance as of jewelled kind. Flashes of lambent fire play among the foam, and now and then a long ripple of flame plays along the whole course of the wave that rushes aft from the bow. Suppose you could lift a bucket of water from the sea to-night, and that in your deck-cabin you had your miscroscope in full array, let us endeavour to see what such a scrutiny of the waves would tell us about the cause of the phosphorescence of the deep. The water would be seen to be alive with animalcules, each the mere fraction of an inch in length. Closely studied, each animalcule—the *Noctiluca* by name—is in shape not unlike a bean. It is curved or convex on its outer margin, while on the inner side it is concave and deeply indented. On the hollowed side it bears a single tentacle or "feeler," which is in active movement. Of structure or organisation this Noctiluca possesses little or none. It is an animalcule belonging to one of the lowest grades of animal life. Its substance consists of that life-matter of which, under the name of protoplasm, you have heard so much in days gone by. It is a little living speck, and nothing more. Here and there it seems to exhibit spaces and gaps in its substance, and you may discover traces or beginnings of definite tissues in the soft mass whereof it consists. This, then, is the Noctiluca, which emphatically constitutes the "night-light" of the sea. Swarming in myriads in the waters of the ocean, these animalcules, under favourable conditions of heat and other phases relating to their vital activity, give forth the strange weird gleam you see shooting along the crest of the waves. You can recall Coleridge's lines with apt force, when on this quiet night you sit and watch the play of phosphorescence on the sea:—

> Beyond the shadow of the ship, I watched the water-snakes;
> They moved in tracks of shining white,
> And when they reared the elfish light
> Fell off in hoary flakes.
>
> Beyond the shadow of the ship, I watched their rich attire;
> Blue, glossy green, and velvet black,
> They coiled and swam, and every track
> Was a flash of golden fire.

How and why these and other animals exhibit a phosphorescent light is a problem towards the solution of which science has, at least, advanced within reasonable distance. The Noctiluca is undoubtedly the cause of the diffused phosphorescence of the sea. The myriads of animalcules give to the ocean the appearance of a universal effulgence. But other animals are solitarily phosphorescent. Jelly-fishes, and their neighbours, the "Venus's girdles," show such a light. Some fishes also possess phosphorescent qualities; and, as regards insects, our familiar glow-worm has only to be named to call to mind an analogous example of light-producing powers. The why and wherefore of the phosphorescence lies in a nutshell. You have only to hark back to a great and leading principle in science to find the clue to the mystery. That one force of Nature can be transformed into an equivalent of another force, is plain language of science. Fire a bullet at a target. When the bullet hits the mark its motion has become transformed into an equivalent of heat. Similarly out of motion you may get electricity, and out of electrical motion of another kind you may get light. So is it with life and living structures. So much of vitality, or life-force, goes to produce motion, and so much in particular cases (that of our Noctiluca included) to produce light. Just as by the discharge of its nerve-force into its electrical organ, a species of skate produces electricity, and gives you a powerful shock; so your animalcule, transforming a modicum of its life-force in a special fashion, gives you "the night-light of the sea."

But it is time to draw rein to these thoughts. Here is the light-ship close on our starboard bow. "To rest we repair," as the old song has it; yet the animalcules will not cease their phosphorescence, even when the faint rays of the morning have brightened more and more into the perfect day.

SKETCHES OF GLASTONBURY.

The ruins of Glastonbury Abbey, one of the places visited by the excursions of members of the British Association during their assembly at Bath, were partly described in our last. We may give little credit to the old monkish legends of the founding of the first Christian Church in Britain on this spot by St. Joseph of Arimathæa, with the attendant miracles of the Holy Thorn, Joseph's blossoming staff; the Holy Grail, or chalice from which Christ had drunk at the Last Supper; the Holy Well, some drops of which, perhaps, turned red by the impregnation of the water with iron, were said to be the blood of our Saviour; and other romantic marvels of the "ages of faith." They concern true archæology no more than the fabled removal of the dying hero, King Arthur, by the black-veiled women in the funeral barge on the lake, to the sacred Isle of Avalon, or "Avillion" as Tennyson makes it, which some would identify with Yniswytryn, the "glasten" or grey-green island, amidst the floods and swamps of this region in the sixth century of the Christian era. But the antiquity of the local monastery, dating probably from the mission of St. Augustine to the Saxons, and from the increase of the kingdom of Wessex, is scarcely surpassed. It was largely endowed by King Ina, in 708 and 725; was the chosen burial-place of the Kings Edmund the Elder, Edgar, and Edmund Ironside; the residence for a time of St. Patrick, St. David of Wales, St. Dunstan, and other Archbishops of the early Church in this country; and grew up, in the Norman and the Plantagenet reigns, to be one of the most important English Abbeys. Henry II. was one of its great patrons, and most of the existing architectural remains belong to his time, or not much later; a fine specimen is seen in St. Joseph's Chapel, with its semi-circular arched windows, adorned with zigzag mouldings, the roses, crescents, and stars in the spandrils of the springing arches, and the interlaced round arches below rising from slender shafts. The transept arches show a tendency to the pointed form of Early English or Gothic. The Abbot's house, with his kitchen, described last week, and the refectory, great hall, and dormitory, which are demolished, were on a magnificent scale. It appears that the Abbot, besides exercising a sumptuous hospitality to guests visiting the Abbey, kept a sort of college for the education of nearly three hundred sons of noblemen and gentlemen. The social and political services rendered by this great ecclesiastical community were of considerable importance. Its possession of extensive lands was also beneficial to the country, in the vast work of draining and cultivating the Somersetshire marshes, and settling an industrious rural population, which would hardly have been accomplished under Barons and Knights and lay territorial proprietors. At Meare, two miles and a half from Glastonbury, the

OLD FIREPLACE AT MEARE.

TRANSEPT, GLASTONBURY ABBEY.

Abbot had a manor-house, built at the beginning of the thirteenth century, which still remains, though in a dilapidated state; near it is the old Fish-house, where the fish abundantly caught in the "mere," or pool, were dried and stored. We give a Sketch of the building, another of the entrance to the Alms-houses and one of the old fireplace in the manor-house at Meare. Returning to Glastonbury Abbey, we note the Holy Well, a famous chalybeate spring, of medicinal virtues, which fails not, in summer or winter, to yield the uniform quantity of 23,000 gallons of water daily, conveyed formerly to the Abbey by wooden pipes made of the bored trunks of trees. This water is of proved efficacy in the cure of scrofula, cancerous humours, eye-diseases and deafness of certain kinds, and in the relief of asthmatic complaints. So lately as 1742, it was used by ten thousand patients resorting thither in the course of the year. It was guarded of yore by some of the monks, living as anchorets in a neighbouring hermitage, which was thence called the "Anchorage," giving a name to the Anchor Inn, in the town of Glastonbury. This we learn from a lecture recently delivered by Mr. G. W. Wright to the local Antiquarian Society, under the presidency of Mr. Alderman Bulleid, at the opening of the permanent Museum of Antiquities, which has been established with the aid of many gentlemen in that part of Somersetshire. Among its patrons are the Bishop of Bath and Wells and the Dean and Chapter of Wells, also the Right Rev. Bishop Hobhouse and Mr. H. Hobhouse, M.P., the Mayor of Glastonbury, the Mayor of Wells, Lord Arundel of Wardour, Admiral Sir A. Hood, and Mr. R. Neville, of Bulleigh Court. A loan exhibition, at the Glastonbury Townhall, contained many interesting relics, which included the pastoral staff and episcopal ring of Savaricus, one of the two Bishops of the See of Bath and Glastonbury; the Chalice of the Abbey Church; the Grace Cup, a large and richly-carved oaken tankard of Saxon workmanship; the Abbot's Chair, and the other chair, from Wells, in which the last Abbot of Glastonbury, Richard Whytyng, sat on his trial before the King's Commissioners, at the end of 1539, when he was condemned for high treason. His only crime was that of refusing to surrender the monastery to the King, for which he was cruelly hanged, with two other monks, on the Tor Hill at Glastonbury; his head was stuck up on the Abbey gate, and the four quarters of his body were affixed to gates or buildings at Wells, Bath, Ilchester, and Bridgewater. The watch belonging to this unfortunate Abbot Whytyng was one of the relics shown in the Antiquarian Exhibition. The Abbey buildings, with the church, were for the most part destroyed by Royal order; the estates and manors, in the time of Edward VI., were granted to the Duke of Somerset, by whose attainder they soon reverted to the Crown, and have since been distributed by sale among different owners. Glastonbury has, therefore, a remarkable authentic history, independently of King Arthur and Joseph of Arimathæa, and is a place worth visiting for the sake of its associations with the former condition of England during nearly a thousand years from the Saxon Kingdom of Wessex.

A SPITALFIELDS LODGING-HOUSE.

The licensed common lodging-houses of London are under official inspection; their managers are responsible for order and decency, and for cleanliness and the observance of sanitary rules. The police may visit them at any hour of the night, and sometimes will come there in search of persons suspected of crime, for which reason it is more likely that the fugitive criminal will seek a private lodging. Most of the inmates are comparatively innocent vagrants, either tramps who have wandered into London from the country, perhaps seeking honest employment, or regular haunters of the streets, beggars, idle loungers, and waiters for odd jobs, runaways from irksome employment, deserters of wives and children, and women deserted by their husbands, with those who have no ties of home or kindred. Social waifs and strays, the culpable and the unfortunate, some with a few pence or shillings to keep them from day to day, others not knowing where or how to get food on the morrow, others hoping to find the abode of a friend whom they believe to be living in this huge city, they are received indiscriminately, paying from twopence to fourpence for a bed, and they behave quietly, saying little to each other, taking their sleep as soundly as if they were in the grandest hotel. The dreams that visit poor weary people, often hungry people, in such a dormitory, where the beds cover all the allotted space on the floor of each room, may be as bright and sweet as were those of happy youth in a rural home of peace and comfort, where the morning sunlight, when it entered the cottage window, was accompanied with the twittering of birds and the rustling of a fresh soft breeze in the summer leaves of trees. As death, which finally releases the unhappy from life's troubles and griefs, is said equally to knock in due time at the palace doors and at the humblest of human dwellings, so does the kindly boon of slumber, the temporary oblivion of present woes, "sleep, that knits up the ravelled sleeve of care, the death of each day's life, sore labour's bath, balm of hurt minds," condescend to solace the forlorn twopenny bedfellows of a Spitalfields lodging-house. It is not, however, in the sleeping attitude, which no doubt would make an interesting picture, that our Artist has sketched the figures of a few of these poor folk, but awake in the daylight, fully conscious of their actual position, some of them painfully oppressed with anxiety, others tolerably indifferent, being old customers of Fortune, relying on her continued favours more than on their own deserts. One of the latter class is the aged professional beggar, whose venerable visage, with his ample white beard, might have qualified him to earn a fair income in the painter's studio, as a model for saints and sages, if the temptation of rum or gin, at inconvenient morning hours, did not render him incapable of keeping an appointment. Another is the perfectly contented philosopher who lives on an allowance of ten shillings a week from his respectable son-in-law, and who has realised the truth that "man wants but little here below," only a suit of clothing, warm though shabby, a bit of something to eat, with a cup of

A YOUNG LONDONER.

coffee, and a "turn-in" at night. Very different is the situation of the anxious mother, widowed or forsaken, with her babe in arms and the hungry little boy at her side; or the misguided and betrayed girl-mother, pondering the last desperate chance of pursuing him who has brought her to shame and sorrow. For these, indeed, there is still a refuge in the workhouse, and they will do well to claim it without hesitation. The puzzled and somewhat frightened boy, who has evidently left his friends and repudiated his

A GIRL MOTHER.

bounden duty with a view to precocious independence, should be narrowly watched by the police, and be consigned to a Reformatory on his first positive transgression of the law.

Seven steamers arrived at Liverpool on the week ending Sept. 15 with live stock and fresh meat from American and Canadian ports, the total arrivals being 1495 cattle, 2081 sheep, and 4361 quarters of beef.

THE LONDON POOR: SKETCHES IN A COMMON LODGING-HOUSE IN SPITALFIELDS.

The public mind has during several weeks past been painfully excited by the unsuccessful attempts of the police to discover the perpetrator of repeated atrocious murders in the neighbourhood of Whitechapel and Spitalfields. Those who are well acquainted with the East-End of London will not assent to the unfavourable notion of its general character and condition which is often ignorantly expressed in conversation among persons in society remote from that part of the metropolis. Whitechapel, Mile-end-road, Stepney, Bow, and Bromley, form a manufacturing town district which will bear comparison with similar abodes of the honest and industrious working classes in such towns as Manchester and Leeds and other places of the north of England. The wide and airy thoroughfares, frequented by decent, orderly, and cheerful people, most of whom are in pretty constant and regular employment at various factories; the neatness and comfort of their habitations, and their orderly domestic and social life, may be an agreeable surprise to visitors. To the north of Whitechapel, however, in Bethnal-green and Spitalfields, where the decay of older industries has long caused much of that quarter to be left for occupation by a miserable class, renting single rooms in ill-built and dilapidated tenement houses, there is a sad amount of wretchedness, and probably of vice, concentrated within a small space — not worse, certainly, than might have been found, a few years ago, in the neighbourhood of Drury-lane or St. Giles's, but less easily watched and kept back from breaking out to the disturbance of respectable society. The police force at the East-End of London is apparently deficient in strength of numbers, considering the large extent of its beats; and it has been suggested, also, that the new system of frequently transferring the constables from one quarter to another forbids them to acquire a precise knowledge of places and people. This question may be referred to official consideration; and there is something to be said for the institution of a small permanent detective staff, independent of the street patrol, at every police-station in London.

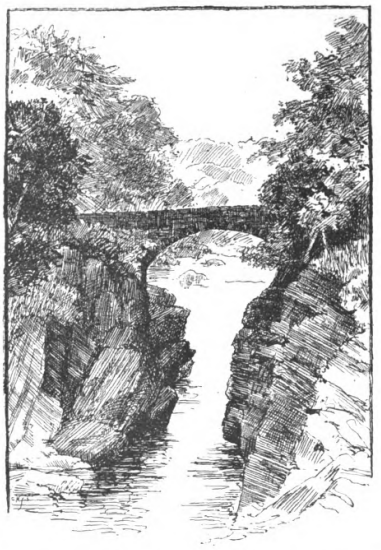
IMPORTANT TO ALL LEAVING HOME FOR A CHANGE.

"Among the most useful medicines that have been introduced within the last century is **ENO'S 'FRUIT SALT.'** There is no doubt that where it has been taken in the earliest stage of a disease, it has, in many instances, prevented what would otherwise have been a severe illness. The effect of **ENO'S 'FRUIT SALT'** upon a disordered and feverish condition of the system is marvellous. As a nursery medicine the **'FRUIT SALT'** is invaluable; instead of children disliking it, they look upon it rather in the light of a luxury. As a gentle aperient and a corrective in cases of any sort of over-indulgence in eating or drinking, **ENO'S 'FRUIT SALT'** is all that is needful to restore freshness and vigour. In cases of Nervous Headache and Debility it is especially useful, and should be taken in all cases where persons suffer from a sluggish condition of the Liver."—*Young Lady's Journal.*



PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

A SCOTTISH RIVER.

The charm of running water is infinite. There is the constant play of light and shade upon its changing surfaces; the rainbow glint in the foam-bubbles that float, like fairy skiffs, along each gliding wave: the incessant variation of form, as the current shifts, slants, or eddies in its course; the various voices which mingle in one full harmony as it swirls beneath a grassy bank, or chafes against a mossy boulder, slips round a ferny promontory, or glides into a sheltered bay. There is this—and more. There is the obvious analogy which it suggests between the passing stream and the passing life; each coming—we know not whence, each flowing—we know not whither; each chequered by swift alternations of darkness and sunshine; each with its shallows, its sandbanks, and dangerous places; each with its promise of future power and performance; and each overarched by the radiant blue of heaven. I have seen the most indifferent persons stand on the bank of a great river and become steadied and sobered, as it were, by the fullness of the message it conveyed to them—a message received almost unconsciously, and yet not without its effect even upon the idle mind. As for persons with an imaginative temperament, I suppose nothing else in nature appeals to them so strongly—touches so strenuously the keynote of passion and feeling—harmonises in so subtle a manner with their finer instincts and higher impulses. That Shelley should compose the word-music of his "Alastor" floating along the Thames at Bisham, and Spenser weave the rich fancies of his "Faerie Queene" by "Mulla's stream," and Burns sing his wood-notes wild on the banks of "bonnie Doon," seems to me natural enough: the sweet singers found the accompaniment they needed for their melodies in the flowing, flowing waters.

But here, in the heart of the Highlands, where the mountain-torrent leaps from the rocky height in a cloud of foam and spray, so densely dazzling that one can hardly see through its shining folds the brown flood in its swift descent, how the sound of the waters comes home to the soul! I know not with what vague, indefinable suggestions—with what hints of might and majestic force—with what thoughts of awe and reverence—for I make no attempt to realise or distinguish them: I prefer to lose myself in a kind of dream of wonder, in which vague forms and scenes blend with vague recollections and vague imaginations—a dream which borrows something from the roaring voices and something from the Iris-curves of colour which wax and wane athwart the falling stream. I am borne away to the tiny tarn amidst the purple heather, where, surrounded by the mighty bulks of the thunder-smitten mountains, their splintered crags and blackened precipices, with no other companionship than that of the lonely eagle, it wells out into light and life. I see it forcing its way down many a rugged declivity, and through thick close growths of moss and heather; then fretting and seething in the narrow gorges which in times long past it cut deep into the solid granite. I follow it as it storms through the wild, dark glens, gathering up the rains which ceaselessly moisten the brushwood knolls, and the burns that tumble from the purple sides of the moorland, until, with increased volume and velocity, it emerges upon the open strath, where the small farmer grows his scanty crops or pastures his little herd. Past a deserted sheiling or two, built of reddish-tinted stone, and roofed with "fog"—which may have sheltered some stern-eyed Covenanter in the days of religious trouble—under a rude one-arched bridge which carries across it the unfrequented road, it strikes into the cool shade of a wood of birch and mountain-ash, until, seized with a wild desire for the peace and plenty of the rich lowland plains, it suddenly falls, a sheet of silver, over an abrupt ledge of rock, and into a basin of rock, where it seems to pause and, one might almost say, take breath—for it is difficult to think of the rushing, plunging, clamorous river as other than a creature endowed with life as well as motion—to take breath (as well it may) before, in three mighty strides or bounds, it carries its accumulated waters, with a welter, as it were, of confused lights and shadows, and all manner of sounds—strident, vibratory, clanging, thunderous—over an incline of some two hundred feet in all, and reaches the lower ground in a tumult of leaping columns of spray and tossing wreaths of foam. What a freshness in the air! What a greenness in the surrounding coppice, which the spray mist bathes so unceasingly that, even in the hottest summer noon, not an aspen-leaf shrinks or shrivels! In the sunshine yonder triple cascade bursts into a glory of broken, wavering, rainbow lights—delicate, luminous, magical—which no words can describe; while in the moonlight it shimmers like a veil diaphanous, of pearly gauze, which Nature has dropped over the radiant scene; or it flutters like a white, wan phantom or wraith, which may, perhaps, have given rise to the story associated with it: how a fair young girl, betrayed by her lover, sought forgetfulness in the still pool beneath the overhanging thorns, and now appears, at each full moon, with white raiments and wringing hands, to wail on the haunted bank for him who never comes.

The traveller who follows the course of a Scottish river comes continually upon enchanting surprises. For example, it will take him first into the bosom of a deep glen, bounded on each side by a range of serrated heights, the rough projections of which, however, are half hidden by thick woods of fir, while their lofty tops flush "celestial rosy-red" in the glow of a September noon. Much, by-the-way, has been said and written depreciatory of the Scotch fir; but for my part I hold it to be a handsome and striking tree, even as an individual; while in ample groups and clusters it produces an impression little short, I think, of grandeur. So straitly here do the rocks confine the brawling waters, that the narrow roadway scarce finds room to follow up the windings of the glen: these rocks are fantastically streaked and patched with moss and lichen, and among them lightly spring the frail stalks of the delicate blue harebell. Of each bold mountain mass towering above you the peasant can tell you the Gaelic name, such as Struanna-Barin, Craig-an-Caillach, and Craig-na-Gaur—the Queen's Promontory, the Old Woman's Rock, and the Rock of the Goats—names the origin and associations of which have long since been forgotten, but recalling a remote antiquity and a social state which has disappeared before the march of civilisation. When the river gets clear of the glen—the profound stillness of which is broken only by the murmur of its waters—it passes into a valley of softer and more pastoral formation; where the slopes, green with birch and larch, descend in gentle

undulations, and flocks of sheep are nibbling the crisp, close, fragrant herbage. Having ceased for a while its contention with immovable crags, and tormenting itself no longer in agonies of rapid and whirlpool, our stream pours onward with a measured, even flow, like the rhythm of solemn music. The mountains are with it still, but have lost much of their sternness, owing to the dark seas of fir which roll up into the intervening hollows, and fill them with emerald waves of foliage.

But now comes another change. Our river clangs and clatters over its rocky bed like an onset of horses; then dashes through a long irregular avenue of green boughs, broadening here into shining shallows, and deepening and darkening there into silent pools, where the fishermen stand knee-deep, anxious to fill the baskets that, as yet, lie empty on the neighbouring bank. At one point the river-channel has opened out too wide for its modest current—except when, swollen with the winter rains, our river runs "in spate"—and there you may see the bonny village girls, with bare white ankles, stepping deftly and gracefully along the wave-worn stones which, stretching from bank to bank, form quite a natural causeway. Thrifty housewives, down by the waterside, lay out to dry and bleach in the open air the piles of snowy linen which, with industrious hands and toiling feet, they have vigorously cleansed. A couple of urchins, with flax-white hair, are watching the gyrations of a paper boat in the eddies of the stream; while, near by, their sisters sit on the grassy brae, picking the gowans to make wreaths and posies. A group of cattle have drawn together under an old hawthorn, where they can ruminate, or drink their fill, undisturbed; while, just beyond, a water-wagtail, on restless wing, is hunting for its insect prey.

Our river, on leaving this bit of Arcady, swirls round the front of a tall grim promontory, on the breezy open summit of which stands a feudal fortalice, grey with the antiquity of five hundred years—a square keep, lofty and massive, with corner turret and machicolated walls. Truly, there were builders in those days! How solidly the tower seems rooted to its rocky base, as if for centuries to come it could afford to defy the assaults of Time! The ivy in luxuriant masses hangs about its battlements; straggling gilliflowers bend to the breeze in many a chink and cranny; at night the owl, from its nest on the turret stair, repeats its doleful cry; and the flitter-mice skim and skurry in the grass-green courts and round about the shattered portals. But with a slight effort of the imagination it is easy to restore the castle to its whilom splendour, to fill the windows with the light of cressets, to rebuild the ramparts and replace at his post the watchful warder—while, through the open gateway, the bright procession issues of Queen and courtiers, knights and nobles, with the pomp of banners and the sheen of spears.

Yet another picture. Standing on a bridge of mediæval masonry, you may see our river expand into a beautiful, shining, glowing, gleaming loch, with waters clear as crystal, transparent as that magic glass of old in which the poet-earl saw his fair Geraldine—cool with the snows of far-off mountains, and bright with the reflections of a firmament which is just now all alive with sunshine. Away to the westward rolls a grand array of dark pinnacles and spires and precipices of granite, their sides purple with patches of heather, or flecked with silver threads—the tiny rills which ooze out of unknown recesses, and, after much tribulation, sigh and sob themselves asleep in the bosom of the loch-like river. Eastward rises an isolated pyramidal mass, which the earliest inhabitants of our land, in times long past, regarded as a vast altar, sending up from it their orisons to the Sun-god—the god of day, and light, and life—the god which gave them all they valued most—the god that, night and morning, touched the mountain-tops with his finger of fire, and filled the earth with the splendour of his presence. Finer inspiration for his pencil can no artist desire than the majesty of this tremendous height, with the waters of the broad river trembling in its shadow; and, in the distance, peak towering above peak, and mountain soaring above mountain—like so many gigantic steps in a ladder which, like Jacob's, seems to lead up to the visions and the mysteries of heaven.

If you ask for a scene of less grandeur, our Scottish river shall wander with you among the green holms and the waving fields of flax and barley, where the sough of its placid current is almost inaudible in the multitudinous murmur of the humble-bees that bask in the "honeyed flowerage" around. Then it will frolic for a while in the rocky linns, and wind past the old mill and mill-lade into a sweet grassy dell, where the sheep-bell tinkles on bank and brae, and among the broom and brackens the lintwhite builds her nest, and the sandpiper flits from stone to stone. Whitewashed houses, straw-thatched, look down upon it from sheltering trees; and the kirk-spire rises above the "auld brigg"; and on a knoll just beyond it stands the manse, with creepers about its porch; and, forgetful of its noble place of birth among the mountains, and its wild career down crag and precipice, and its brawling and strife in savage glens, our river, hushed and subdued, steals away in many a coil and link to swell the basin of another river—a river of larger course and fuller volume—which, in its turn, will pour the tribute of its waters into a spacious estuary, and that estuary will widen into the grey old sea. Thus the lives of individuals are swallowed up in the larger life of the nations, and the life of the nations melts away into the boundless eternity of the Past.

W. H. D.-A.

A young man named Charles Percy on Sept. 16 attempted to shoot the Niagara Rapids in a small boat. The boat capsized directly after starting, and Percy was thought to be lost. He, however, rose again, and, skillfully avoiding the obstructions in the way, finally landed safely in the Devil's Pool, having performed a feat never before accomplished.

Anglers are enjoying an extraordinarily successful season in North Wales. On the Conway, Major Bennett, Mr. Blackwell, and other gentlemen have been killing five and six salmon daily. A small party caught sixty-eight on the Lledr, while a large number have been taken on the Conway. It is the best season for many years.

At the lecture-hall at the Young Men's Christian Association in Aldersgate, on Sept. 17, a meeting was held in view of the departure to Canada of nearly a hundred girls from Dr. Barnardo's Village Homes. Mr. Robert Paton occupied the chair. Following an address by Captain Mandeville, Dr. Barnardo explained that this was the fourth party sent out to Canada this year, and the only party of girls. Twenty-three of the girls are between six and twelve, the youngest is a girl of six and the eldest twenty-two. Forty had been in the Homes from one to three years, twenty-two under one year, and thirty for three years. Thirty-nine were rescued from positions of special danger. These all came from the Village Home for Girls at Ilford, accommodating 1000 girls in fifty separate cottages. The occupants were now being sent out to Canada, after being trained for domestic service. This batch makes 3216 boys and girls who have been sent to Canada by Dr. Barnardo. The bulk of Dr. Barnardo's address was devoted to a defence of his plan of sending these girls out to Canada while there is yet so large a demand for domestic servants at home. He showed that it cost less to send them to Canada than to keep them in this country.

A NEW DEPARTURE.

The publishers of one of the leading society papers of London have taken to analysing some of the leading patent medicines, also to investigating their published testimonials, with the result of creating quite a commotion among certain proprietors. Injurious effects likely to follow the use of patent medicines, published testimonials given from addresses which only exist in the mind of a clever writer in the company's employ, are fully exposed. Suits for heavy damages have been threatened by the proprietors of the remedies thus exposed. Injured innocence puts on a bold front, but the publishers of the paper in question do not frighten easily; they have taken up a question of vital interest to the public, and they propose to turn on the full light of intelligent investigation. One most excellent feature of this exposure is that the public are enabled to discriminate between worthless nostrums and those really good remedies. The publishers evidently take this view of the question, for their last investigation is a most flattering one for the proprietors of that noted remedy St. Jacobs Oil. The following is the report, headed—"The Verdict of the People of London on St. Jacobs Oil":—Mr. William Howes, civil engineer, 66, Red Lion-street, High Holborn, W.C., was afflicted with rheumatism for twenty years. Sometimes his hands swelled to twice their natural size; his joints were so stiff that he could not walk, and his feet so sore that he could not bear any weight on them. Nothing relieved him till he applied St. Jacobs Oil. The result was marvellous. Before using the contents of two bottles all pain left him, and he is now in perfect health. Mr. C. H. Palmer, Secretary of the Conservative Defence Association and Overseer of the District of Islington, said:—"For a long time I have been a great sufferer from neuralgia in my face and head, and rheumatism in my limbs. After trying various remedies without obtaining relief, I procured a bottle of St. Jacobs Oil, the use of which completely removed every trace of pain." Mr. Edward Peterson, electric light engineer, of 36, Wheatstone-park, W.C., said:—"There can be no two opinions respecting the value of St. Jacobs Oil. I was completely used up with rheumatism in my arms and shoulders; a few good rubbings with that famous Oil drove all pain away." Mr. Henry John Barlow, of 4, Staple's Inn-buildings, Holborn Bars, W.C., said:—"I had rheumatism in my feet and legs, which became so bad that I was hardly able to walk. St. Jacobs Oil removed all pain and completely cured me." Mrs. Wolfsberger, matron of Moore-street Home for Poor, Crippled, and Orphan Boys, 17, Queen-street, Edgware-road, said that "St. Jacobs Oil has been used in the Home, and that it is powerful in relieving neuralgia and general rheumatism." Mr. Charles Cartwright, of No. 7, Alfred-place, Bedford-square, W.C., said:—"Having for years been a great sufferer from rheumatism in my limbs, I used St. Jacobs Oil, which cured me directly, after other remedies had signally failed." Henry and Ann Bright, hon. Superintendents of the North London Home for Aged Christian Blind Women, say that "St. Jacobs Oil has proved unfailing; that rheumatism and neuralgia have in every case been removed by using the Oil; and many old ladies, some of them ninety years old, instead of tossing about in agony, now enjoy good nights' rest through its influence." Mr. N. Price, of 14, Tabernacle-square, Finsbury, E.C., said:—"My wrist, that I had strained two years before, and which had given me pain without intermission, yielded like magic to the application of St. Jacobs Oil." Mr. J. Clark, of 21, South Island-place, Brixton-road, London, said:—"Although I was not able to rise from a sitting position without the aid of a chair, I was able to stand and walk after the application of St. Jacobs Oil." Mr. J. Wilkinson, 88, Bentham-road, South Hackney, suffered from rheumatism in his feet and legs for twenty years. The contents of one bottle of St. Jacobs Oil drove away all pain, and brought about an effectual cure. Robert George Watts, M.A., M.D., M.R.C.S., of Albion House, Quadrant-road, Canonbury, N., said:—"I cannot refrain from testifying to the very great efficacy of St. Jacobs Oil in all cases of chronic rheumatism, sciatica, and neuralgia." The Rev. Edward Singleton, M.A., 30, Bournevue-road, Streatham, said:—"St. Jacobs Oil removed all pain directly." The Rev. W. J. Caulfield Browne, M.A., Rector, Kittsford Rectory, said:—"My parishioners, under my recommendation, use St. Jacobs Oil." Mr. E. J. Feusey, Brixton-rise, London, was treated for sciatica by eminent medical gentlemen in private practice and in the Convalescents' Home, Bexhill-on-the-Sea, near London. He obtained no relief, but the contents of one bottle of St. Jacobs Oil practically cured him. This journal concludes its article as follows:—"It is a source of the greatest satisfaction to us, in conducting these investigations, to be able to report a medicine which is so highly indorsed as the above-mentioned. Since making the above investigation, we have learnt that St. Jacobs Oil has such a world-wide reputation that her Majesty's troop-ships, as well as the Cunard Line and other steamers, are never considered ready for sea until a supply of the Oil is on board." Perhaps there is no preparation in the world which enjoys the same degree of success and popularity as St. Jacobs Oil. Its sale far exceeds that of any other Proprietary Medicine, and exceeds by ten times that of all other liniments and embrocations combined. This wonderful success rests on the solid foundation of merit which St. Jacobs Oil possesses, combined with original, dignified, and systematic advertising, which has always characterised the announcements of the Proprietors. The name of St. Jacobs Oil has become a household word in every civilised country in the world. The great success and popularity of the Oil have become the subject of comment by almost the entire Press of the country. In many instances the leading articles of large and influential papers have been devoted to the details of what seemed to be almost magical cures effected by the use of St. Jacobs Oil in local cases, coming under the immediate attention of the publishers. St. Jacobs Oil is indorsed by statesmen, judges, the clergy, the medical profession, and people in every walk of life.

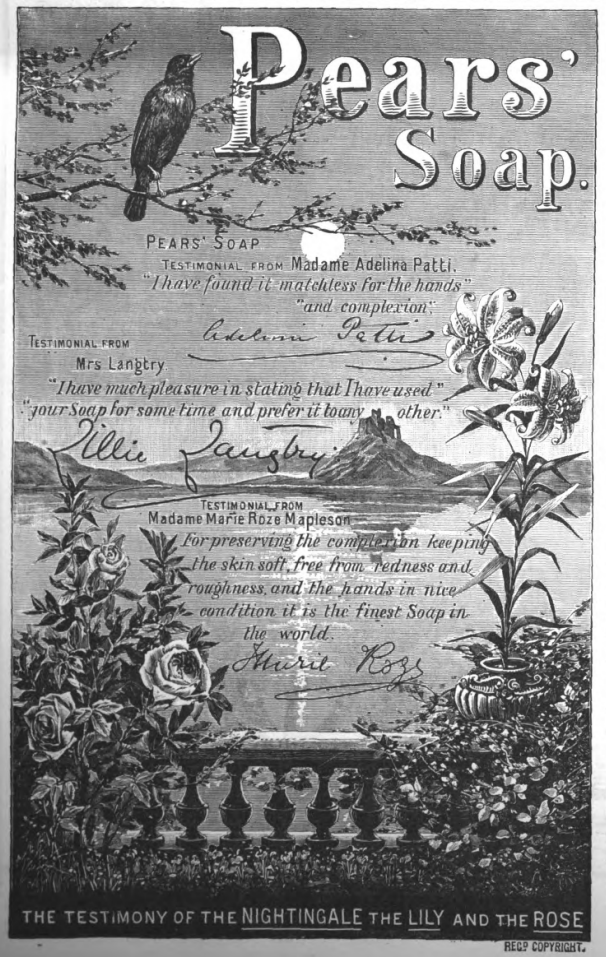
"I'm weak and weary!"—
so the maiden sighed—
My spirits droop, of late—my
roses pine!
Oh, for the days when I might
row or ride,
And glowing health made light
this heart of mine!
Are there no medicines that can recall
My fresh young strength, and
rid me of my ills?
I sometimes think that
I have tried them all—
But stay—I have not
yet had
Beecham's
Pills!"
And thus,
by hope and
doubt alternate
swayed,
She, tired
with musing,
sought her
couch once
more;
When dreams
of gladness
came to cheer
the maid
And tell how
Beecham's
Pills
could
yet
restore!

Oh, kindly vision!
And oh, maiden wise,
Who flew to this never failing friend
in need!
Her merry laugh, bright cheeks,
and sparkling eyes,
Now prove that Beecham's Pills
brought strength, indeed!
And gaily can she ride or row, to day,
For health from every hour new
joy distils;
Her happy face remains—so people
say—
The best advertisement of
Beecham's Pills

PIRATES.

When, as Lord Tennyson prettily sings, the breeze of a joyful dawn blew free In the silken sail of infancy—(the poet's "infancy" must be construed as synonymous with boyhood, for an infant muling and puking in its nurse's arms knows nothing, and, if possible, cares less, about "joyful dawns" and the like)—the present writer was greatly given, he confesses, to a sympathetic perusal of the stirring history of the pirates. Most boys, I think, are—or, at all events, in my time were—enthusiastic admirers of the old sea-rovers. There is something about a free life on the ocean wave which appeals strongly to their most cherished inclinations. They love the odour of the brine and the strong salt winds; the roll of shining waters; the scream of passing sea-birds; the clang of breakers on the iron rocks; or the snow-white line of foam on the coral reef. The vision of a corsair bark, swift-winged as an eagle, speeding "o'er the glad waters of the dark blue sea," and suddenly swooping upon some rich argosy, or desperately attacking some strong town on the shores of El Dorado, fascinates their imaginations. They are not great moralists—the boys. Many a fair apple-orchard has witnessed to their lax interpretation of the laws of *meum* and *tuum*. They have been known to rifle mulberries even from the trees on the Rector's garden-lawn. They will pick filberts under the nose of the lord of the manor himself, and poach fearlessly in streams as rigorously tabooed as any South Sea island sanctuary. Therefore, the ethics of piracy trouble them not. They have a kind of feeling, I think, that a maritime life is outside the legislation made by drowsy home-dwellers. Why should Red Beard or Black Beard, Olonois or Captain Kid, submit to the canons of morality formulated by land-lubbers who have never ventured a mile from shore? The question seems (to them) to involve an unanswerable argument. As for the maiming and slaying in which even the mildest-mannered of the pirates (like Byron's *Don Lambro*) indulged pretty freely, I suppose that that "love of blood," recently imputed by journalistic authority as a fault to our English race, induces the boys to regard it leniently. When Black Beard *runs* a plank out of a lee-scupper—I hope the term is nautically correct—and compels his prisoners to step it nimbly with the disagreeable certainty of tumbling into the waves when they reach the end—what can a boy admirer say but that it is the fortune of war? If Spaniards were foolish enough to go down to the sea in ships, with the certainty of being caught by a Red Rover or a Yellow Buccaneer, they must put up with the dismal consequences. Hurrah for the black flag, and down with skulking traders and all such small deer!

I remember the eager interest with which we boys devoured the pages of Cooper's "Waterwitch" and "Red Rover," Scott's "Pirate," and Byron's "Corsair"; and how we chafed and fretted because the glorious tales were all too brief! How we covered our slates and exercise-books with "Skimmers of the Sea" and other piratical galleys of wonderful swiftness—all very low in the water, all with very sharp prows and very big sails, all with gilded figure-heads, and portentous flags emblazoned each with a skull and cross-bones! Those were the days *ante Agamemnona*—before "freehand" drawing had begun to torment the young idea; the days of Skeat's "1d. plain and 2d. coloured" sheets of "characters" designed for use in the boys' portable theatre; and oh! how we delighted in the possession of a sheet of his glowing and graphic illustrations of pirates!—who, I recollect, were always attired in wide open jackets, striped vests, loose neckties, short petticoats or kilts, high boots, a couple of cutlasses, and twice as many pistols—truculent personages, whom to make still more formidable of aspect, we invariably provided with moustachios of tremendous length and eyebrows very thick and black! Then there was a most delightful book—a small octavo volume, I fancy—entitled "Lives of the Pirates and Buccaneers," with superb portraits of Kid, Tench, Morgan, and other worthies, which, as our tutors and guardians had placed it (very unnecessarily) on their *Index Expurgatorius*, we were compelled to read in secret, and to conceal carefully in our lockers beneath a pile of the "Eton Latin Grammar," Valpy's "Delectus," the "Gradus ad Parnassum," Lindley Murray's "English Grammar," Enfield's "Speaker," and similar works of approved repute. Few boys, I suspect, escaped, in those days, a touch of the *pirate-fever*. It ran through a school like the measles. Happy they who lived near a pond or stream, on which they could launch their trim "Waterwitches" and "Ocean Serpents," each mounted with a couple of tiny brass guns, loaded to the mouth with slate-pencil-dust! How often would we lose ourselves in a noon-day dream of far-away palm-islands, where we reigned as pirate-chiefs, with no end of "sea-rovers" always at our beck and call! Our tents were planted on green lawny slopes in front of the sapphire sea, commanding a fine view of "the offing"—it was indispensable, that "offing"!—and of our pirate-schooners, lying at anchor in sheltered bays, the blue waves "kissing their taffrails," their tall masts standing erect like Norway pines, every rope "taut" and every "sheet" hauled home, and their grim mariners all on the alert to obey their dreaded commander if he should suddenly call them to action. On the hill above was erected an imaginary fort, armed with cannon captured from a Spanish galleon; and beneath was sunk a deep cave, wherein were stored the spoils of our victorious expeditions, the entrance to this cave being known only to ourselves and our trustiest followers, who were bound by a solemn oath to secrecy. Well, those dreams were foolish enough, no doubt; but they did no harm. Perhaps, indeed, the stimulus they gave to the imagination was, on the whole, advantageous; and I believe that the boys who went most deeply into the sea-rover line of business were by no means the worst scholars.



As we grew older, however, we boys found that the world was too carefully partitioned out to permit of our seizing upon an island anywhere for our personal behoof. We learned, too, that the romance of piracy (such as it was) had passed away; and that the seas were too well patrolled for any repetition to be possible of the exploits of the old filibusters. We came to the conclusion that the race of pirates was extinct—a conclusion which, however, a larger and wider knowledge of the social state compelled us very considerably to modify. For, as Shylock tells us, "There be land-rats and water-rats, land-thieves and water-thieves," and the truth of the old Jew's assertion is forced upon most of us by experience. In literature and art you may see the critical pirate lying in wait to pounce suddenly upon some unsuspecting craft, to board it, scuttle it, and sink it to the bottom—unfortunate craft which, if it had but enjoyed a fair voyage and reached a safe haven, might have yielded hereafter a fair return for its owner's venture! In Society, too, pirates are always on the prowl. They hoist, perhaps, the black flag of scandal—as full of evil augury as any ever hoisted by an Olonois or a Montbars—and bringing their calumnies to bear upon the weak and defenceless, rest not until they have done them mortal injury. Then there be the pirates of trade and commerce, who molest the honest trader and prey upon his invention and resource, who entrap the unwary, who get up bogus companies and swindle the widow and the orphan out of their little all. Pirates? You cannot take up your daily paper without coming upon the sad record of the sufferings they have caused, the plunder they have carried off, the tall ships which they have shattered into water-logged wrecks. When I see the terrible mischief wrought by these social pirates—these "land-rats"—who wage clandestine war against woman's honour and man's reputation, who prey upon the defenceless, and attack the weak and innocent, I wish that our laws dealt with them more severely, and that some of the worst offenders might be gibbeted in chains, like the corsairs of old, as a warning to the whole pirate brood. For there is no "romance" about *them* or their doings—it is the ugliest, meanest, coarsest prose. And I solemnly affirm that to compare with the fraudulent speculator, the dishonest trader, the slanderer, the corrupter of youth, and the social pest, such straightforward, such open-and-above-board adversaries as a Lebasque, a Mansvelt, or a Morgan, is to fling an unmerited reproach on the older and manlier race of—Pirates!

Mr. William Redmond, M.P., has been convicted of inciting the people to resist the Sheriff on the occasion of an eviction at Coolroe, and a sentence of three months' imprisonment, without hard labour, was pronounced. He said he did not intend to appeal.

Her Majesty has approved the appointment of Sir Guy T. Campbell, Bart., for the adjutancy of the 2nd City of London Rifles, of which General Sir Frederick Roberts is honorary Colonel, and Lieutenant-Colonel Cantlon the commanding officer. Sir Guy Campbell served in the Afghan campaign.

At a meeting held in Birmingham on Sept. 14, the Mayor presiding, a resolution pointing out the advantages of Cannock Chase for the purposes of the national rifle competitions was carried unanimously, and on the motion of Mr. Powell Williams, M.P., an invitation in the name of Birmingham was given to the National Rifle Association to hold their meeting at that place.

The Winter Session of the Charterhouse Science and Art Schools and Literary Institute will begin on Monday, Oct. 1, 1888, under the presidency of the Rev. Henry Swann, M.A. During the late session upwards of 1000 students, mostly elementary teachers, availed themselves of the privileges afforded by this institution, and of this number nearly seven hundred presented themselves for examination, and were successful in obtaining a large number of class certificates and also a fair number of honours certificates, awarded by the Science and Art Department of South Kensington.

What d'ye lack, my Masteres,
What d'ye lack?

ye Earlie Englyshe Soape,

ESTABLYSHED 100 YEARS,

Pears' Soap,

A Special Preparation for ye Complexion:

As used and recommended bye *Mistreſs Adelina Patti, Mistreſs Lillie Langtry, and* othere beauteous Ladyes. Ye Soape is marvellous for improving ye Complexyon, and for keepynge ye handes inne nice ordere. Ye Proprietors of PEARS' SOAP are ye makers bye Royal Warraunt to ye **Prince of Wales,**

All ye Druggiſts sell it.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all parasites or living animalcule, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke, being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The freshening of spots on the vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Venetian Palaces, &c.
There is, perhaps, no town in the world that can compare in fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages, Safety Brakes, and Gaze's Offices.

AIX-LES-BAINS.—Grand Hôtel Europe. One of the most renowned and best conducted in Europe. Patronised by Royal Family. 300 sunny chambers. Refined table. Large gardens; lawn-tennis.—BERNASCONI, Proprietor.

DIEPPE.—Hôtel Royal, facing the sea. Superior first-class house, worthily recommended. Nearest the sea, the casino, and bathing establishment. Table d'hôte. Open all the year.
LABONNETY, Prop.

LUCERNE.—Hôtels Schweizerhof and Lucernerhof. An extra floor and two new lifts added to the Schweizerhof. The electric light is supplied in the 300 rooms; no charge for lighting or service.
HAUSER FRERES, Proprietors.

WINTER RESIDENCE in the ENGADINE. The Maloja Kursaal (600 ft. above sea-level), open for the whole Winter. New ice rink and sun gallery. Miniature band, snow-shoeing, skating, tobogganing, and sleighing. Vide "Alpine Winter in its Medical Aspects" (Churchill).

THE HIGHLANDS of BRAZIL
SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing, 2300 ft. above sea-level, just within the Southern Temperate Zone; good summer and winter alike; no chance of residence forced on the invalid by the advance of the seasons. English society, English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. to 12s. per diem. Circular, with further particulars, from CHARLES WILLIAM JONES, Esq., 39, Bury-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

SHIRTS.—FORD'S EUREKA.
The most perfect fitting made."—Observer.
Gentlemen desirous of purchasing shirts of the best quality, should try FORD'S EUREKA, 30s., 40s., 45s. half-dozen.

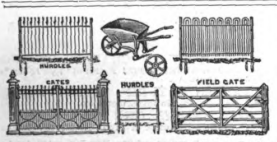
THE PLAYHOUSES.

The pretty and pathetic story of Lesbia and her sparrow, told originally by the Latin poet Catullus, is not wholly new to the stage. It is certain that Rachel, the great French actress, played in a dramatised version of the tale called "Le Moineau de Lesbie," and it has been thought that Mr. R. Davey has done little more than translate the French play, in order to provide the brief preliminary entertainment for the American artists who are now to be seen at the Lyceum Theatre. But this is not the case. Mr. Davey, in graceful language, has told the story in his own fashion, and when in doubt has gone to the fountain head—namely, the Poet Catullus himself. Lesbia, a wealthy, gifted, and witty courtesan of Rome, has left her exalted station, her position, influence, and innumerable admirers, in order to gratify the ambition and minister to the whims of a fanciful and conceited poet. Poor woman, she has done all that faithful companion can do to make her lover happy. But his ambition must be gratified. He frets under the silken chains of Lesbia's unselfish devotion, so he needs must abandon his mistress, in order to marry a wealthy old widow, whose social influence may improve the fretful poet's position. The news of the desertion of Catullus bids fair to break poor Lesbia's heart; but she determines to win the truant back by woman's artifice. She first pretends, with tears in her eyes, that she does not care a straw for her poet, and then she takes to weeping over the supposed loss of the sparrow that Catullus has presented to her in their love-days. The poet's vanity is tickled, and Catullus promises to abandon the widow, who has been cruelly deserted and left in the lurch at the altar, and return to Lesbia if she will only forgive him. In these days of irreverence, the mention of so humble a bird as a sparrow seemed to tickle the Cockney part of the audience. They had no mind for Catullus or romance, and could not associate a poet's love-gift with the chirpy and cheeky little denizen of our house-tops. But the majority of those assembled to see the little play were grateful for Mr. Davey's clever work, and gave the American artists all credit for excellent intentions. Miss Beatrice Cameron would be an actress of the first consequence if she could adequately convey the various passions and emotions that even so small a drama encompasses. She did her best, however; and gave a pretty, if not a very powerful or convincing, rendering of the loving Lesbia. But, somehow or other, the modern actor and actress seem to be ill at ease when they are engaged in portraying character other than that of the age in which they live. A Catullian conceit of this kind does not appear to harmonise with the American diction. But Mr. Mansfield has done his best to give an entertainment in some way worthy of the stage on which it was produced.

When the playgoing world returns to London again, or when the patrons of the theatre pass through town on their way to country houses and shooting-boxes, they will, no doubt, find time to study, if not admire, that curious modern product known as "Dr. Jekyll and Mr. Hyde." It was unfortunate for Mr. Mansfield that he was compelled by the action of Bandmann to open at the Lyceum a full month before he originally intended. August is not the best month in the year to produce a play quite out of the ordinary category and that appeals to the more observant and intellectual of sight-seers. However much the mere subject of such a drama may startle or shock the sensitive, it is, unquestionably, a remarkable *tour de force* on the part of a young actor—this dual impersonation. Such a play can never amuse or edify anybody, but the student of acting will find in Mr. Mansfield's realism much to astonish and to provoke admiration. England, so far, has not taken to Mr. Louis Stevenson's morbid psychology so keenly as did our American cousins. They have no taste for the unadulterated horrible in art. But whilst expressing distaste for the play they have not hesitated to award full praise to the actor. Unless there is a sudden rush to see Dr. Jekyll and the ghastly Hyde during the next few weeks Mr. Mansfield will produce his English version of Octave Feuillet's "Roman Parisien," in which he plays with rare art a horrible old man. After that we may have the promised "Nero," or a revival of "Prince Karl," in which Mr. Mansfield shows his powers as a linguist and a vocalist, as well as an actor.

For the first time for many years past several theatres have got the start of Old Drury in the honour of starting the autumn dramatic season. But on Sept. 22, if all be well, Mr. Augustus Harris and Mr. Hamilton will give us their long-promised spectacular drama, founded on incidents connected with "The Armada." According to the programme, there will be several brilliant scenes, in addition to a realisation of the defeat of the Spanish Armada under the celebrated old Admirals of history. Seymour Lucas's Academy picture of the historic game of bowls on Plymouth Hoe will be realised; and we are to see "good Queen Bess" going in procession to St. Paul's, to give thanks after the victory. Mr. Leonard Boyne will make his first appearance at Old Drury, and the cast is otherwise a strong one. This is the first time that Mr. Harris has departed from modern life in connection with his autumn dramas, and it may be hoped that the experiment will prove successful. This would open up a new field for historical drama, that might prove of incalculable service. Mr. Chatterton, it may be remembered, did very well at Drury with the dramas by Andrew Halliday founded on the historical novels of Sir Walter Scott.—Sept. 24 has been fixed for the opening of the New Court Theatre that was to have belonged to the late John Clayton, but will now be identified with the names of Mrs. John Wood and Mr. Arthur Chudleigh. The opening play is to be Mr. Sidney Grundy's version of "Les Surprises du Divorce," called "Mamma." Considering the subject, an even more effective title might have been found in the now popular query "Is Marriage a Failure?" Mr. Hare will play the leading comic character that was so inimitably rendered at the Royalty—in French—by Coquelin, as that popular actor will not be wanted at his own new theatre, The Garrick, until Christmas time.—On Sept. 24 also the Vaudeville will be re-opened by Mr. Thomas Thorne with a revival of Robert Buchanan's popular play "Joseph's Sweetheart." So that in a very few days' time the season will be in full swing again.

Mr. Willie Edouin has made still another attempt to restore the shifting fortunes of the little Strand Theatre. He seems to be a little unwise in his selection of plays, although he commands a clever company, of which his wife, Miss Alice Atherton, is first lieutenant. Mr. Mark Melford's play, called "Kleptomania," has in it a certain cleverness of construction and neatness in form; but if there really be such a form of madness, concerning which many doctors differ, it is a disease that should inspire our pity rather than provoke our laughter. It is always a mistake to ridicule any affliction on the stage, for no one ever knows what pain may be innocently caused to the casual spectator. Madness in any form is not a thing to be laughed at. And surely the well of inspiration from which burlesque writers used to draw so freely is not so dry as to necessitate a revival of H. J. Byron's "Aladdin," that was produced at the old Strand in April, 1861, and performed seven-and-twenty years ago by that merry company consisting of Charlotte Saunders, H. J. Turner, Fanny Josephs, Marie Wilton, John Clarke, Kate Carson, Danvers, Nellie Bufton, and James Rogers. Mr. Edouin is amusing enough as the Widow Twankay, and he receives excellent support from Miss Atherton and Miss Susie Vaughan, a versatile and excellent actress. But the manager of the Strand should call on such veterans as Burnand or Robert Reece, or summon to his aid the twin brethren Richard Henry, or Robert Martin, in order to give us some fun of a newer pattern than "Aladdin." Playgoers will not be put off with old lamps for new, even when they were made originally by such a humourist as H. J. Byron.



The Queen has presented an engraving of herself bearing a gracious inscription, signed by her Majesty, to Miss Emily Faithfull, who has just completed the thirtieth year of her work in promoting the educational and industrial interests of women.

The marine painter Herr Salzmann, who accompanied the German Emperor on his recent voyage to Russia, has received, in recognition of the merits of his picture at this year's Exhibition, the highest distinction for artists—namely, the great gold medal.

MARRIAGE.

On Sept. 12, at Christ Church, Wellington, Salop, by the Rev. T. Owen, Vicar, assisted by the Rev. T. L. Butler, M.A., Vicar of Adbaston, the Rev. Dr. Bullinger, Vicar of Walthamstow, the Rev. G. E. Yate, Vicar of Madeley, and the Rev. James Dixon, cousin of the bride, William Parkin, great-nephew and heir of the late George Moore, the philanthropist, to Lucy Josephine Cranage, the only daughter of Dr. Cranage, of Wellington, Salop.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

256 to 262, REGENT-STREET.

PETER ROBINSON { MOURNING WAREHOUSE, REGENT-STREET, LONDON.

The "WHIPPET" CYCLES.

In designing our Cycles for this season, we have devoted our attention to perfecting those styles which have been so successful in the past. We have also added several new designs which we have thoroughly tested ourselves before placing them on the Market, and we are able, therefore, to submit them to the approval of our patrons without hesitation.

We removed the one great inconvenience which interfered with the pleasures of cycling—viz., the vibration communicated by every inequality of the road through handle, saddle, and pedals to the rider. This great inconvenience has long been patiently submitted to, because it was supposed to be inevitable.

The success of the "WHIPPET" Spring Frame has caused nearly the whole of the Cycle Trade to imitate our specialty—**NON-VIBRATING CYCLES.** Intending purchasers should remember that **"THE WHIPPET"** stands out clearly as **THE ONLY MACHINE** upon which **THE RIDER IS COMPLETELY INSULATED FROM ALL VIBRATION.**

SOLE MANUFACTURERS AND PATENTEES,

LINLEY & BIGGS,
29, Clerkenwell-road, London, E.C.

THE BALL-POINTED PENS never scratch nor spurt; they hold more ink and last longer.

Six sorts—fine, medium, broad—6d. and 1s. per box.

The "FEDERATION" Holders not only prevent the pen from blotting, but give a firm grip. Price 2d., 4d., and 6d.

Assorted Box of 30 Pens for 1s. 1d., or with ebony Holder for 1s. 6d.—of all Stationers, or post-free from

IN THE HIGH COURT OF JUSTICE.—Gosnell v. Durrant—On Jan. 28, 1887, Mr. Justice Chitty granted a Perpetual Injunction with costs, restraining Mr. George Reynolds Durrant from Infringing Messrs. John Gosnell and Co.'s Registered Trade Mark, CHERRY BLOSSOM.

61 and 62, CHANCERY-LANE, LONDON, W.C.

SALT REGAL is a grateful cup all times. Refreshing—Agreeable—Recuperative—Health-giving—Health-preserving—Quite distinct from all other Salts and Saline Preparations—An entirely New Saline.

Salt Regal,

Protected by H.M. Royal Letters Patent.

Over Fifty Patents, Registrations, and Trade-Marks.

Instantly destroys impurities in the system, and fortifies the body against the attacks of disease.

IT must be distinctly understood that SALT REGAL *is not a copy of or an imitation of any previously existing Saline preparation or Salt, but an entirely new invention, in which principles hitherto unknown to science have been applied in the formation of a perfect Saline.*

"SALT REGAL *will cleanse the Mouth, Throat, and Stomach, at one operation, dispersing Sick-Headache like a charm, and speedily eradicating Flatulence, Feverishness, Acidity, and all kindred troubles, imparting to the system a vigorous tone of exhilaration. No depressing influences attend the use of* SALT REGAL. *There is nothing deleterious, or anything whatever in the nature of incipient Diarrhœa, so common with the old-fashioned Salines.*

"*The ordinary old-fashioned Salts and Salines may be imitated with impunity, as they present no marked feature in effervescence, being all colourless;* SALT REGAL, *on the contrary, changes to a* ROSE *colour during effervescence, and develops an antiseptic, thus possessing a distinct individuality.* SALT REGAL *cannot be successfully imitated. Should anyone at any time be able to buy a colour-changing powder which does not bear the name 'SALT REGAL,' they are invited to communicate with* Messrs. FRITZ & Co., *who will pay handsomely for satisfactory evidence of infringement of either their Patents or Trade-Marks.*

"SALT REGAL *is not only a delightful drink for the hot weather, but for all seasons, all climes, all the year round.*

"SALT REGAL *is now taking the place of old-fashioned ordinary Salines.*"

Sold in Bottles (hermetically sealed), **2s. 6d.**, and can be obtained through any Chemist, as all the London and Provincial Wholesale Houses regularly stock it. Remember SALT REGAL is a Royal Patent, and any attempt at imitation is a felony. You cannot be deceived if you observe that the white powder turns rose-coloured in water, no other Saline having this property. If any difficulty in obtaining it, the Proprietors will forward direct on receipt of Postal Order.

Patentees and Sole Proprietors, **FRITZ & CO., SALT REGAL WORKS, LIVERPOOL.**

SALT REGAL has made hosts of friends in the Colonies and Foreign Countries, and its increasing Sale and growing popularity are bywords among those who sell it. NO TRAVELLER OR VOYAGER SHOULD BE WITHOUT SALT REGAL.

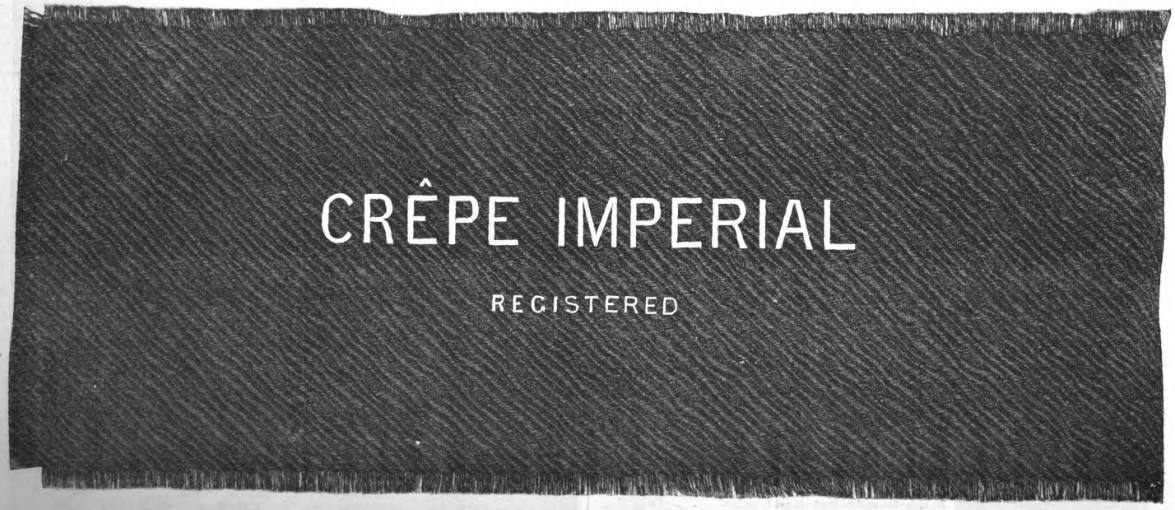
NESTLE'S FOOD

AN ENTIRE DIET FOR INFANTS.



Supplies all the elements necessary for the complete nourishment and growth of the human frame.

Nestle's Food, being partly composed of milk, is complete and entire in itself, and requires simply the addition of water to make it instantly ready for use. It is not merely an auxiliary, like other Infants' Foods, which require milk to be added in preparing for use.

Recommended by the highest medical authorities as the nearest equivalent to Mother's Milk.

Pamphlet, with Medical Testimonials, sent, post-free, on application to H. NESTLE, 9, Snow-hill, London, E.C.

"It is All Wool, and yet looks exactly like crepe, as it has the crinkled or crimped surface which is inseparable from that fabric. It is solid and most durable, being free from the elasticity of the more perishable silk crepe, which it so closely resembles. It is made up effectively into costumes for deep mourning, when it is not compulsory to trim with crepe, and will wear as long as the mourner elects to use it."—Extract from "The Queen, the Lady's Newspaper."

ENTRANCE TO THE MELBOURNE EXHIBITION, SHOWING THE GERMAN TROPHY.

OUR NOTE BOOK.

BY JAMES PAYN.

The reading of the last published Judicial Statistics is calculated to astonish a good many people who have a general notion that save "in exceptional cases, don't you know, like this Whitechapel business," murders are pretty sure to be found out. It appears by the Government report that every year, exclusive of infanticides (which are not so alarming to the adult reader), there are no less than fifty undiscovered murders! Impunity in some cases multiplies the offence ("You see how one black sin brings on another, like little nigger pickaninny riding pickaback upon *him* mother"), and it is possible that two or three of these murders may be committed by one criminal; but even that deduction leaves a handsome average of forty murderers per annum at large. This disproves, for one thing, the comfortable theory that the consciousness of "the guilt of blood" is something that no man can rid of, and which renders life insupportable; and, indeed, the man who gives himself up for a long undiscovered murder is almost never the man who has committed it. It is probable, therefore (since it is the well-to-do who oftenest escape justice), that all of us who mix much in society number at least one murderer among our acquaintance; and it will be an interesting exercise of the fancy to guess who it is most likely to be.

The German Emperor has enacted that henceforth at the Imperial dinners a German menu shall take the place of the hitherto unavoidable French bill-of-fare. It is a patriotic act in any ruler, but especially so in one who reigns over a country in which there is little (to speak of, and much less to write of) to eat. I sincerely hope that this custom of calling national dishes, at least, by their national names will be developed. In England, where we have the best eatables that are to be found anywhere, it is especially absurd to call our dishes by foreign titles. If there must be a French *menu*, let it, at all events, be provided by a French cook. Anything more ludicrous than the aping of foreign names for the dishes that are set before us at an English hotel is not to be conceived. As a rule, the more pretentious are their *cartes*, the more abominable is their food. Why cannot plain English be used to describe English fare? What in the sacred name of gastronomy is meant by "Aloyan de bœuf"? A friend pointed out to me, the other day, on the *carte* of a great hotel at a health resort, "Demoiselles d'honneur"—a dainty which, though familiar enough to us English, would be absolutely meaningless to a Frenchman. I have never seen it done, but I believe hotel-keepers—and, for that matter, hosts who ought to know much better—are quite capable of setting before their guests a French rendering of Devonshire cream and raspberry and currant tart—delicacies. I am proud to say, indigenous to my native land, and about which there is only one drawback: they are a little "too *good* for human nature's daily food." As an honest man grows old, the thing he gets to hate most is affectation; and a French menu prepared by an English cook, out of English ingredients, seems to me the very height of it.

A man was given into custody, the other day, for attempting to commit suicide from London Bridge. His defence was that his hat blew over, and that he jumped into the river after it; and certainly, when he was picked up, half-drowned and dripping, his first inquiry was after his hat. The Magistrate thought it a very strange thing that he should risk his life for an article of such little value; yet very likely, in walking to the court himself that morning, his worship had stepped on to the wet wooden pavement in front of a railway-van, rather than lose one second of his time (which was of no sort of consequence) by waiting till it had passed by. Even the wise man whose motto is "No risk, as the goose said when she stooped under the barn-door," is constantly making a fool of himself in this way; for the most calculating of men are, in such matters, often the creatures of impulse. Comparison—the relative value of one object to another—is a thing which, on the instant, seldom presents itself to men, and not even when they have time to think about it, to women. When the wit utters his sarcasm that makes an enemy for life; when the Cit of "full habit" runs up the incline to save ten minutes by catching the early train, they are both jumping after their hats—and poor hats, too—off the river bridge.

At a watering-place in Somersetshire, where threepence is charged in the local paper for the insertion of the word "Esquire" after the name of a visitor, I read that "in the present weekly issue not a single individual has availed himself of the privilege." This is really very encouraging. One would have expected that "Threepence more and up goes the donkey!" was a cry that on this occasion would certainly have evoked that animal. One can hardly hope, however, that such conduct indicates any decay of snobbism: I am afraid it arises from the experience of the Jury List, in which it is notorious that those who call themselves Esquires are (very properly, as having, presumably, not to work for their bread) more often selected than those who do not aspire to that ambitious title. Lists of visitors at "health-resorts," as watering-places are now called, form a literature of their own: Mr. Brown adds "of London" to his name, as though it were a territorial title. At a southern seaside place (it was, it must be confessed, at rather a slack time) I once read among the fashionable arrivals, "Captain Jones and lady and baby."

If Miss Kilmansegge had been a pauper, she would have had a wooden leg instead of a gold one, and the world would have lost a fine poem; but it is certain (except for the look of the leg) that in that case she would have been more comfortable. The disadvantages of having even a wooden leg are, indeed, serious; but, as one would have imagined, obvious. It is clear that it is liable (like good Mr. Gamp's) to get fast in the water-plugs, and to be carried off (with you on it) by some Newfoundland, who mistook it for another bit of wood for which he is "seeking"; half your "care for a cold" (as Hood drew it) is gone when you have only one leg to put in hot water; you can never stand on tip-toe, nor, however necessary may be caution and secrecy, enter a room without "tapping"; the necessity, when sitting, of keeping it at right angles, like a bayonet brought to the charge, must also be very inconvenient. But all these drawbacks are on the surface, though you can scarcely call them skin deep. No one would have imagined, had it not been disclosed in a debate among the Guardians of the City of London Union, the other day, that a wooden leg was liable to be "tampered with." In the flesh jokes have often been played on legs, but surely not in timber! Where would be the fun of "splashing" a wooden leg, or running a pin into the calf of it? and if "tampering" doesn't mean practical joking, what *does* it mean? The rest of the story is simple enough, though by no means of every-day occurrence. A pauper applied to the Guardians to have his wooden leg repaired, an article which they had themselves procured for him at the cost of fifty shillings. As the estimate for "repairs" reached this sum the "economic section" of the Board, not unnaturally, objected to this item. They proposed that a pound should be paid for absolutely necessary expenses, and so far they have my sympathy as a practical man; but they added this extraordinary "rider"—that, in their opinion, "no alterations would have been required had not the leg been 'tampered with.'" I must have this explained if the "economic section" wishes for my continued support. I shrink from an alliance with persons who make these dark allusions to a crime the very nature of which my intelligence is unable to grapple with. How *can* you "tamper with" a wooden leg!

The "Merry, merry Swiss Boy" has much to comfort him; it is no wonder that he "jodels," and makes other noises indicative of happiness, and which he confidently believes to be harmonious. His purse at the end of the season is heavy with English and American money; the mountains, if not "a glorious heritage" to him, afford him a considerable income. If he is good, we know that he is happy; if he is not good, and wants to commit a murder, there are cantons close at hand in which the punishment of death has been abolished. Moreover, in one of them at least, there are no taxes. "Our cash in hand," says the Government of Unterwalden, "is sufficient to provide for the public expenditure, and no taxes will therefore be levied during the current year." Imagine the British Government making such an observation! In an admirable article on "Taxation," it was once observed of the dying Englishman that, after being taxed all his life, "he pours his medicine, which has paid 7 per cent, into a spoon that has paid 15 per cent, flings himself back upon his chintz bed which has paid 22 per cent, makes his will on an £8 stamp, and expires in the arms of an apothecary who has paid a license of £100 for the privilege of killing him." Its unparalleled freedom from imposts has caused of late a great deal of nonsense to be written about Switzerland. "Look how admirably *she* manages! How extremely limited are her naval expenses! If we had the same form of government, we should be governed with equal cheapness." But the fact is, it is a great advantage to live in a country that nobody wants to enter—far less to conquer—except in the summer months. Switzerland is in the happy position of the crow, as described by the author of "Festus"—

> Oh! 'tis jolly to live like the great black crow,
> For no one doth eat him wherever he go.

It is known that Switzerland is not rich, and also that she is exceedingly tough, so nobody wants to eat her.

The question of "Is Life worth living?" has given place to the more sensible one of "Is Life worth living long?" The former, except to that small minority who were meditating suicide, was a purely theoretic investigation: nothing could come of it, even if it was answered to the general satisfaction, of which there was no sign: but whether it is worth while, by keeping one's temper, bathing in ice-cold water, abstinence from tobacco, or any other disagreeable device, to prolong our three score years and ten to five score years is an inquiry that has some practical interest. It seems pretty clear that if we take trouble enough, and consent to do without many things that seem essential to our comfort, it is as easy to live a little longer as it is to make money. The same sort of sacrifice is demanded in each case, but the advantage is much more clear in the latter. If twenty-five years of health and strength could be added to human life, then, indeed, the discovery would be a boon to man; but the modern advocates of longevity do not seem to hold forth any such expectation. A little less rheumatism, a little less weakness, perhaps, purchased by the lack of many enjoyments, is all that they promise to the septuagenarian, who (like the ancient, not modern, knight almost as witty as Falstaff) would be "buried in a Centry box."

The apostle of this new faith, in urging its claims upon humanity, inquires, "Who knows how often, since the dawn of modern science, the chill of death has palsied a hand that had all but lifted the veil of the Isis in the Temple! Or in how many thousand lives time alone would have solved all discords into harmony!" An eloquent appeal enough, but how contrary in its arguments to human experience! The septuagenarian rarely, indeed, employs himself in the occupation indicated, and if he does—or in other words endeavours to pursue the same path that led him to glory and to fame in his maturity, what a mess he generally makes of it! How often do we hear it said, "What a pity it is that this or that great man (politician, poet, painter, or what you will) did not die ten years ago!" Then as for longevity making harmonies of discords, can anyone acquainted with human nature believe that misunderstandings with our fellow creatures are likely to be dissipated by a few more years added to the sum of our lives? Among the moral attractions of old age can certainly not be reckoned freedom from prejudice, or a readiness to make allowance for the shortcomings of others: no man is so old and feeble but that he can be stubborn in his own opinion; he may be weak as regards his cook-housekeeper, but he is generally resolute enough (though often wrong) in the judgment he has formed of his relatives and belongings. The best and wisest of the greybeards I have known have accepted their old age in patience, but with none of that pretence of welcome that is to be found in sermons and essays *de Senectute*; it is, at best, a bathos, and I have noticed that the desire of abnormally prolonging it, which some old persons entertain, is seldom shared by those who have most to do with them.

THE COURT.

Her Majesty has walked and taken drives daily in the neighbourhood of Balmoral. On Sept. 19 the Duchess of Albany dined with the Queen and Royal family. Earl Cadogan and Sir Robert Collins were included in the Royal dinner-party, and Lady Collins and the other ladies and gentlemen joined the Royal circle in the evening. Prince Albert Victor of Wales left the castle for York on the 20th. Earl Cadogan had the honour of dining with the Queen and the Royal family. On the 21st, Princess Frederica and Baron Von Pawel Rammingen dined with the Queen and the Royal family; Miss Trotter and the other ladies and gentlemen joining the Royal circle in the evening. Earl Cadogan had the honour of dining with the Queen. Monsieur Johannes Wolff, violinist to the King of the Netherlands, accompanied by Mr. Raphael Roche, had the honour of playing before the Queen and the Royal family. The Queen went out on the morning of the 22nd, accompanied by Princess Beatrice and Princess Alice of Hesse; and in the afternoon her Majesty drove with Princess Alice, attended by the Dowager Lady Churchill, to Birkhall, to visit the Duchess of Albany. Princess Beatrice also drove out. Earl Cadogan had the honour of dining with the Queen and the Royal family. Divine service was performed at the castle on Sunday morning, the 23rd, in the presence of the Queen, the Royal family, and the household. The Rev. A. Campbell officiated. Earl Cadogan had again the honour of dining with the Queen and the Royal family. The Queen drove out on the morning of the 24th, attended by the Hon. Harriet Phipps, and afterwards went out, attended by the Dowager Lady Churchill. In the afternoon her Majesty, accompanied by Princess Alice of Hesse, and attended by the Dowager Lady Churchill, drove out and honoured Sir Algernon and Lady Borthwick with a visit at Invercauld. Prince Henry of Battenberg, attended by Colonel Clerk, drove to Glen Muick, and joined Mr. Mackenzie in a grouse drive. Earl Cadogan and Lord Rowton, C.B., had the honour of dining with the Queen and the Royal family.

The Queen's reply to the address which was forwarded by the Archbishops and Bishops recently assembled at Lambeth Palace on the subject of the rapid and continuous extension of the Anglican Church throughout the British Empire and the continent of America, during her Majesty's reign, was published in a supplement to the *Gazette* on Saturday. Her Majesty assures the prelates that it will ever be her anxious duty to promote all measures which may tend to maintain and extend the spirit of true religion.

The Prince of Wales returned to Vienna on Saturday morning, Sept. 22, from Hungary, having concluded his visit to Count Festetics. He again alighted at the Grand Hotel. In the evening his Royal Highness and the Crown Prince Rudolph were present at the Theater an der Wien, and witnessed the comic opera of "The Zigeunerbaron." The composer, Herr Johann Strauss, who conducted, was summoned to the Royal box and congratulated upon his work. On Sunday, Sept. 23, the Prince, after attending Divine service at the British Embassy, entertained at lunch at the Grand Hotel the Crown Prince Rudolph, the Archduke Otto, and several other distinguished guests, among whom was Baron Hirsch. The Prince, on Monday, Sept. 24, called upon his brother-in-law, the King of Greece, at the Hotel Impérial, Vienna, and then visited Professor Angeli's studio, where he saw the half-finished portrait of the German Emperor, and also that just painted of Field-Marshal Moltke. The Prince during the day received General Lawton, the Minister of the United States. He subsequently lunched at the British Embassy, and in the evening, with the Crown Prince and several guests, dined at "Sacher's Garten," in the Prater. Later in the evening the two Princes visited the Theater an der Wien. On the 25th, the Prince entertained the King of Greece at luncheon. In the afternoon, the Archduke Wilhelm gave a dinner in honour of the King of Greece and the Prince of Wales at his Palace on the Ring Strasse. The Prince and the Crown Prince Rudolph left in the evening for the chamois-hunting expedition near Radmer, in Upper Styria.

The Princess of Wales, with her three daughters, ended her visit to the Duchess of Cumberland at Gmünden, on Saturday, the 22nd, arriving in London on the 25th; and next day the Princess and her daughters left Marlborough House for Abergeldie, where they will be joined by the Prince of Wales on his return from Austria.

The Australian cricketers won the match on Sept. 19, with the South of England, at Hastings, by nine wickets. Their tour came to an end on the 22nd, when they beat Surrey, the champion county, by thirty-four runs. Of the forty games they played, they won nineteen, fourteen were lost, and seven were left drawn.

Lord Hampden gave his annual address on agriculture at Glynde (Sussex) harvest-home recently. His Lordship said that although the crops this year were uneven, there was a better average than had been expected, considering the bad weather. In some respects agriculturists were better off this year than last, notwithstanding the fine weather of 1887. Then his shepherds complained that there was nothing in the fields for the sheep to eat, while now they had so much they scarcely knew what to do with it.

The archery season is fast drawing to a close as far as the home counties are concerned. Mrs. Ainsworth, who recently obtained again the National Bronze Medal for Lancashire, has won the Lady Champion badge for the season of the North Lonsdale Archers. Mrs. H. Clarke taking the second badge. Miss Mary Winwood has obtained the silver challenge medal of the Bath Archers. The contest for the silver challenge badges for the highest aggregate score at four of the bow meetings of the Vale of White Horse Archers has resulted in the success of Mrs. Compton and Mr. T. T. S. Metcalfe. Mrs. Tindal-Carill-Worsley has entitled herself to the champion distinction of the Kersal Archers for the best score of the season, and also the champion belt of the Cheadle Archers; Mr. Jepson taking the challenge cup and Miss Hampson the unmarried ladies' badge. The championship medals of the Wyeside Bowmen have been won by Mrs. Crichton and Mr. Battiscombe; the club challenge medals of the West Somerset Society by Miss E. Palmer and Mr. T. Crump; of the Culm Vale, by Miss Sweet and Mr. Snow; while the club badge for highest score with the Fakenham and Dereham has been gained by Miss Norgate.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Sept. 25.

On the occasion of the unveiling of the statue of Baudin, the celebrated Republican martyr and victim of the *coup d'état*, the Minister of Public Works the otner day delivered an important speech on the actual danger of the Republic and the miserable comedy of Boulangism. The Minister of Public Works would wish all Republicans, at the forthcoming elections, to go to the poll with this word of order: "The enemy is Cæsarism—Le Césarisme, voilà l'ennemi. What matter who holds the flag? What matter the imperfections of the edifice or the projects that may be formed for rebuilding it? These disagreements are forgotten in face of the enemy." Certainly it would be a great blessing for the Republic if the political platform could be rid of the question of revision of the Constitution which divides the Republicans against themselves, and must keep them divided. This is why foreign observers declare France to be ungovernable, whereas in reality there is no country more governable—for a time, at least. The fact is that the vast majority of Frenchmen have no opinions at all; but they delight to read newspapers that proclaim advanced views, because they find them piquant and amusing. This has been the case from time immemorial. All the people who go about reading Rochefort's articles and listening to revolutionary speeches are ready to accept any régime that will give them order and security; but the moment that régime is established they will continue as usual to read opposition newspapers, and be quite happy, whether the régime be Napoleon I., Louis Philippe, the Republic, Napoleon III., or General Boulanger. General Boulanger's name has appealed to a million electors "of various opinions," we are told. It would be more correct to say "of no opinions at all." The "brav Général," it appears, will cease to be "lost" next week, when he will return to the capital from his hiding-place, wherever that may be, and resume his campaign against the existing order of things. At the moment of the forthcoming General Elections, in the beginning of 1889, the General will be a candidate in every Department in France—a move which will cost some ten millions of francs; but the Boulangists do not seem to be wanting in funds. One of the active spirits of the party—a militant journalist—declared calmly, the other day, that with liberty of the press, three thousand *camelots*, or newspaper-criers, and a few millions he was ready to accept contracts for changing the Government of France in less than a year. And the worst of it is that this is not altogether a vain bonst.

The theatres during the past week have kept the critics and the "first-nighters" busy, and though it cannot be said that we have assisted at the birth of any great dramatic work, we have seen two pieces which promise to be highly successful. The Gymnase has begnn its season with a comedy-vaudeville, by MM. Blum and Toché, called "Les Femmes Nervenses," a most amusing fantaisie. The Renaissance has opened its doors with an opéra-comique in three acts, "Miette," with music by Audran. The score of this piece is really elegant and charmingly melodious; out of the fifteen morceaux of the piece there are eight or nine that will not be soon forgotten. The chief rôle is held by a new diva, Mdlle. Aussourd, who is pretty and witty and a clever singer, likely soon to become famous. The Comédie-Française, in order to ratify the classification of George Sand among the great dramatic writers of France, has annexed to its repertory and revived with much solemnity that author's play "François le Champi." Certainly we listened with some pleasure to the harmonious periods which George Sand puts into the mouths of her Berry peasants; but these latter, it must be confessed, appear too idealised and too goody-goody for our modern analytic and realistic tastes. George Sand's plays have passed into the domain of *vieux jeu*.

The Paris papers notice generally in moderate and dignified terms the death of ex-Marshal Bazaine at Madrid. In the eyes of every patriotic Frenchman, Bazaine ceased to exist the day when he was condemned to death as a traitor to his country. The Bazaine who survived this condemnation, thanks to the clemency of Marshal MacMahon, and thanks to his escape from the Ile Sainte Marguerite, does not belong to history.

Statuemania continues to rage in France. On Sunday at Arcis-sur-Aube, a statue of Danton was unveiled, and M. Lockroy, on behalf of the Government, took part in the commemorative ceremony in honour of this contestable hero. If Danton has his statue, why should not Marat and Robespierre be similarly honoured?

French Academic art has just experienced a severe loss in the person of the painter Gustave Boulanger, who died suddenly on Sept. 21, at the age of sixty-four. A pupil of Paul Delaroche, Prix de Rome, Professor at the Ecole des Beaux Arts and member of the Institute, Boulanger was an ardent enemy of modernism and especially of impressionism in art. He himself painted scarcely anything but subjects relating to the events and daily life of Imperial Rome. Outside the Greeks and Romans he found few things worthy of his correct brush except occasionally an Arab or a portrait of a friend. Boulanger was a fine draughtsman.

It is proposed to arrange the Fine Arts Section of the Exhibition of 1889 in six sections, which will comprise a retrospective exhibition of French art from 1789 to 1878, and a decennial exhibition of French and foreign art from 1878 to 1889, together with sections of historical monuments, casts, enamel, goldsmith's work, drawing, theatrical construction, scene-painting, machinery, and costume. The national porcelain, tapestry, and mosaic manufactories will be represented by specimens of their products from 1789 to 1889. T. C.

There was a remarkable demonstration in Rome on Sept. 20, the occasion being the celebration of the anniversary of the entry of Italian troops into that city. The Syndic read a telegram from the King, who said that during eighteen years Rome had proved that she was able to accomplish her high mission towards Italy and the civilised world.—His Majesty was present the same day at the unveiling a monument to Quintino Sella at Biella. The ceremony was marked with much popular enthusiasm.—The International Literary and Artistic Congress at Venice have decided that an author's copyright should include the rights of translation, and expressed the wish that the United States would accept the Convention of Berne.

The Spanish Minister of Public Works inaugurated on Sept. 21 one of the most important public works in Spain. The scheme is to construct for Bilbao an outside harbour, or secondary port, at the entrance of the river Nervion, to be known as the port of Abra. The effect will be to supersede the existing dangerous entrance to the river, produced by the open bar, which, especially during the prevalence of north-west winds, renders Bilbao one of the most dangerous and difficult ports on the Atlantic coast.

The Netherlands Minister of Finance has prepared his Budget for 1888-89. It shows a deficit of 13,000,000 fl., which, it is expected, will be reduced to 5,000,000 fl. by an increased yield from taxation and various economies. The total deficit at the end of 1889 is estimated at 25,000,000 fl., but the Minister states that new loans can be avoided for a long time in consequence of the abundance of money in the Treasury.

The Emperor of Germany arrived at Potsdam on Sept. 22. On the 23rd the Emperor and Empress visited the new Casino for the officers of his Majesty's Body Guard Hussars, and afterwards received a visit from the Empress Frederick. The Emperor was present on the 24th at the inauguration of the new club of the Hussars of the Guard. After giving audience to Prince Bismarck, who came from Friedrichsruh on purpose, on the 25th, his Majesty proceeded to Detmold on a visit to the Prince of Lippe-Detmold; and the Empress, accompanied by her children, left for Primkenau.—Public interest

THE LATE EARL OF MAR AND KELLIE.
SEE "OBITUARY."

continues to be greatly excited by the publication of the late Emperor's diary, from which it appears that he was the real moving spirit in the foundation of the new empire. Some doubts have, however, been expressed of the genuineness of the diary.

THE LATE MR. R. A. PROCTOR.

The death of this eminent scientific astronomer, and popular writer and lecturer on the facts of astronomy, took place on Sept. 12, at New York, where he had arrived two days before from his chosen home among the orange-groves of Florida, on his way to England. Mr. Richard Anthony Proctor was a Londoner, born in Chelsea on March 23, 1834, and was educated at private schools, at King's College, London, and at King's College, Cambridge, where he was a wrangler in mathematics, and took his degree of B.A. He was for a short time a clerk in the London Joint Stock Bank, but inherited a small independence, which he lost in 1867 by the Overend and Gurney failure. Having been married several years, and having already written astronomical papers for the *Cornhill Magazine*, and published an important treatise on the planet Saturn, which appeared in 1865, Mr. Proctor resolved to earn an income by literature descriptive of the interesting results of modern

THE LATE MR. R. A. PROCTOR, ASTRONOMER.

astronomical research. In this department, both as an author and as a lecturer, his abilities were such as have rarely been equalled; his lectures, delivered from memory without the aid of any written notes, were admirable compositions, perfectly methodical in arrangement, clear, concise and graceful in style, and replete with exact particulars for which he never hesitated a moment. They were eagerly listened to by his audiences all over the United Kingdom, America, and Australia, while he continued to write magazine articles and popular books, which proved a literary success. "Other Worlds than Ours," "Orbs around Us," "The Borderland of Science," "Half-hours with the Stars," and "Light Science for Leisure Hours;" also "Planetary Orbits," "Sun Views of the Earth," and "Constellation Seasons," are well known. He also performed much really scientific work of research, producing a revised edition of the great catalogue of stars, discussing the method of observing the transit of Venus, examining the mathematics of astronomy, and making observations in solar spectroscopy. He was elected a Fellow of the Royal Astronomical Society in 1866, and was afterwards appointed honorary secretary and editor of its "Proceedings," but soon resigned that office. He was an honorary Fellow of King's College, London.

THE MELBOURNE EXHIBITION.

The grand International Exhibition at Melbourne, held in commemoration of the centenary of the settlement of Sydney, New South Wales, in 1788, which was the commencement of the Australian Colonies, has been partly described. Illustrations, from sketches by our special Artist, Mr. Melton Prior, of its opening by Sir H. B. Loch, the Governor of Victoria, accompanied by the other Governors of Australia, Tasmania, and New Zealand, have appeared in this Journal. The Exhibition buildings, a great enlargement of those erected for the Melbourne Exhibition of 1880, in Carlton-gardens, with the architectural front to the south, but with the main entrance from Nicholson-street, on the east side, are intersected from north to south by the "Grand Avenue of Nations." In this Grand Avenue, a quarter of a mile long, passing down it from the north end, are the entrances to the Courts, respectively, on the right hand side, of the United States of America, Germany, Austro-Hungary, Belgium, France, and Great Britain; on the left hand side, those of Canada, New Zealand, Queensland, South Australia, the large Court of Victoria, Tasmania, and New South Wales. A dome of the building covers the intersection of the Eastern and Western Avenues with the Grand Avenue of Nations; at the south end of which, passing to the right a large compartment allotted to Lancashire manufactures, are the great hall, the fernery, the nave and transept; the grand dome, 200 ft. high, the State reception-rooms, and the offices of the Exhibition Commissioners, with galleries, courts, and various departments specially ornamental or attractive. Here, in the east gallery of the nave, above the concert-hall, is the German Trophy, which represents Germania congratulating Australia on the attainment of her centenary: and in the south gallery is the statue of Victory, which was left by the Germans as a legacy to Victoria after the Exhibition of 1880. The British, French, German, Belgian, and Victorian Art Galleries are in the balconies on the north and south sides of the nave, in this part of the buildings. Proceeding thence up the Grand Avenue of Nations, and passing the Courts of Great Britain and France, on one hand, New South Wales and Victoria on the other, and several foreign and colonial courts, the visitor, approaching the north end, reaches that of Germany, and the United States Court next it, the entrances to which are shown in our Illustrations. The entrance to the German Court is through an immense arch, hung with rich draperies, which leads directly into a saloon filled with pianos, and some of these are continually being played. The United States Court is distinguished by the stars painted on columns, and by the name in large gold letters under the side lights; its front is occupied by Singer's sewing machines, and Edison's phonographs attract much curiosity. In the machinery annexe, at the north end, Great Britain, America, and Germany divide the space between them; the collection of British machinery is said to be the most important ever brought together. There is not very much ground outside the buildings, or anything worthy of note except two portable railways and the inevitable "switch-back," now a popular amusement at all Exhibitions. As a well-furnished and well-ordered show of leading arts and industries, European, American, and Australian, and of Colonial products, the Melbourne Exhibition is tolerably complete.

The Natal Council has passed a resolution declaring that it is undesirable, in existing circumstances, to consider the question of the annexation of Zululand to Natal.

The anniversary of the union between Bulgaria and Eastern Roumelia has been celebrated with great rejoicing at Sofia and the principal Roumelian towns.

From Zanzibar we hear that there has been fighting at Bagamoyo between the German colonists and the natives, upwards of one hundred of the latter having been killed.

The Grand Duke and Grand Duchess Sergius and the Grand Duke Paul of Russia were received by the Sultan on Sept. 25, at Constantinople, his Majesty subsequently paying them a visit at the Yildiz Châlet.

Souakim seems to be regularly invested by the rebel Dervishes. Trenches have been dug, guns mounted, and shells thrown into the town. A hot fire is kept up by both sides, and the boldness of the insurgents seems to be increasing.

A singular affair is reported to have happened on the Southern Pacific Railway, in Texas, where a gang of robbers stopped an express. An armed force on the train put the robbers to flight, and shot two of them; but by mistake they also killed the engine-driver.

The Queen has conferred the Albert Medal of the Second Class upon Lieutenant Pulteney Malcolm, 4th Ghoorka Regiment, in recognition of the conspicuous gallantry displayed by him on June 10, 1887, in attempting to save the life of a comrade who had fallen over a precipice, near Dalhousie, East India.

Colonel Graham has attacked the Thibetans in the Jelapla Pass, and completely defeated them, capturing their camp. The Thibetans lost four hundred killed and wounded. On the British side Colonel Bromhead lost his right arm, and nine Sepoys were wounded. Colonel Graham is now advancing upon Rinchigong, in the Chumbi Valley, which is in Thibetan territory.

A scheme for the promotion of evening educational classes is being set on foot by the London Young Women's Christian Association. There are over 140 branches of the Association in London, and of these nearly forty are institutes and homes. Several of these institutes have held evening classes for their members, but an endeavour is now being made to increase the number and the efficiency of the classes, and so bring them within reach of the large numbers of young women not at present enrolled among the 15,000 members of the London Y.W.C.A. The subjects to be taught will include book-keeping, shorthand, French, music, dress-cutting and draping, ambulance, housewifery, and cookery. The classes will be open to all young women, the teaching will be thoroughly efficient, and the fees extremely moderate. A list of institutes in all parts of London where these classes are to be held will be forwarded on application to the Secretary, 16A, Old Cavendish-street, W.

The Portrait of the late Earl of Mar and Kellie, whose death is noticed in our Obituary, is from a photograph by Messrs. Fradelle and Young, of Regent-street; and that of the late Major Edmund Musgrave Barttelot, murdered in Central Africa by the mutineers of the Emin Pasha Relief Expedition, is from a photograph by Mr. Marshall Wane, of Edinburgh. The photograph of the late Mr. R. A. Proctor, copied in our Portrait of him, is by Messrs. Elliott and Fry, of Baker-street. Among our Illustrations of the Chelmsford festivities at the creation of the new Municipal Corporation for that town, we give the Portraits of Mr. Frank Whitmore, architect, who is nominated by the Charter to be the first Mayor and Alderman; and of Mr. Arthur J. Furbank, solicitor, who is appointed Town Clerk; both these are from photographs by Mr. F. Spalding, of Chelmsford. A series of views of the ceremonies, taken by Mr. F. E. Everard, photographer, of that town, has been received with much approval.

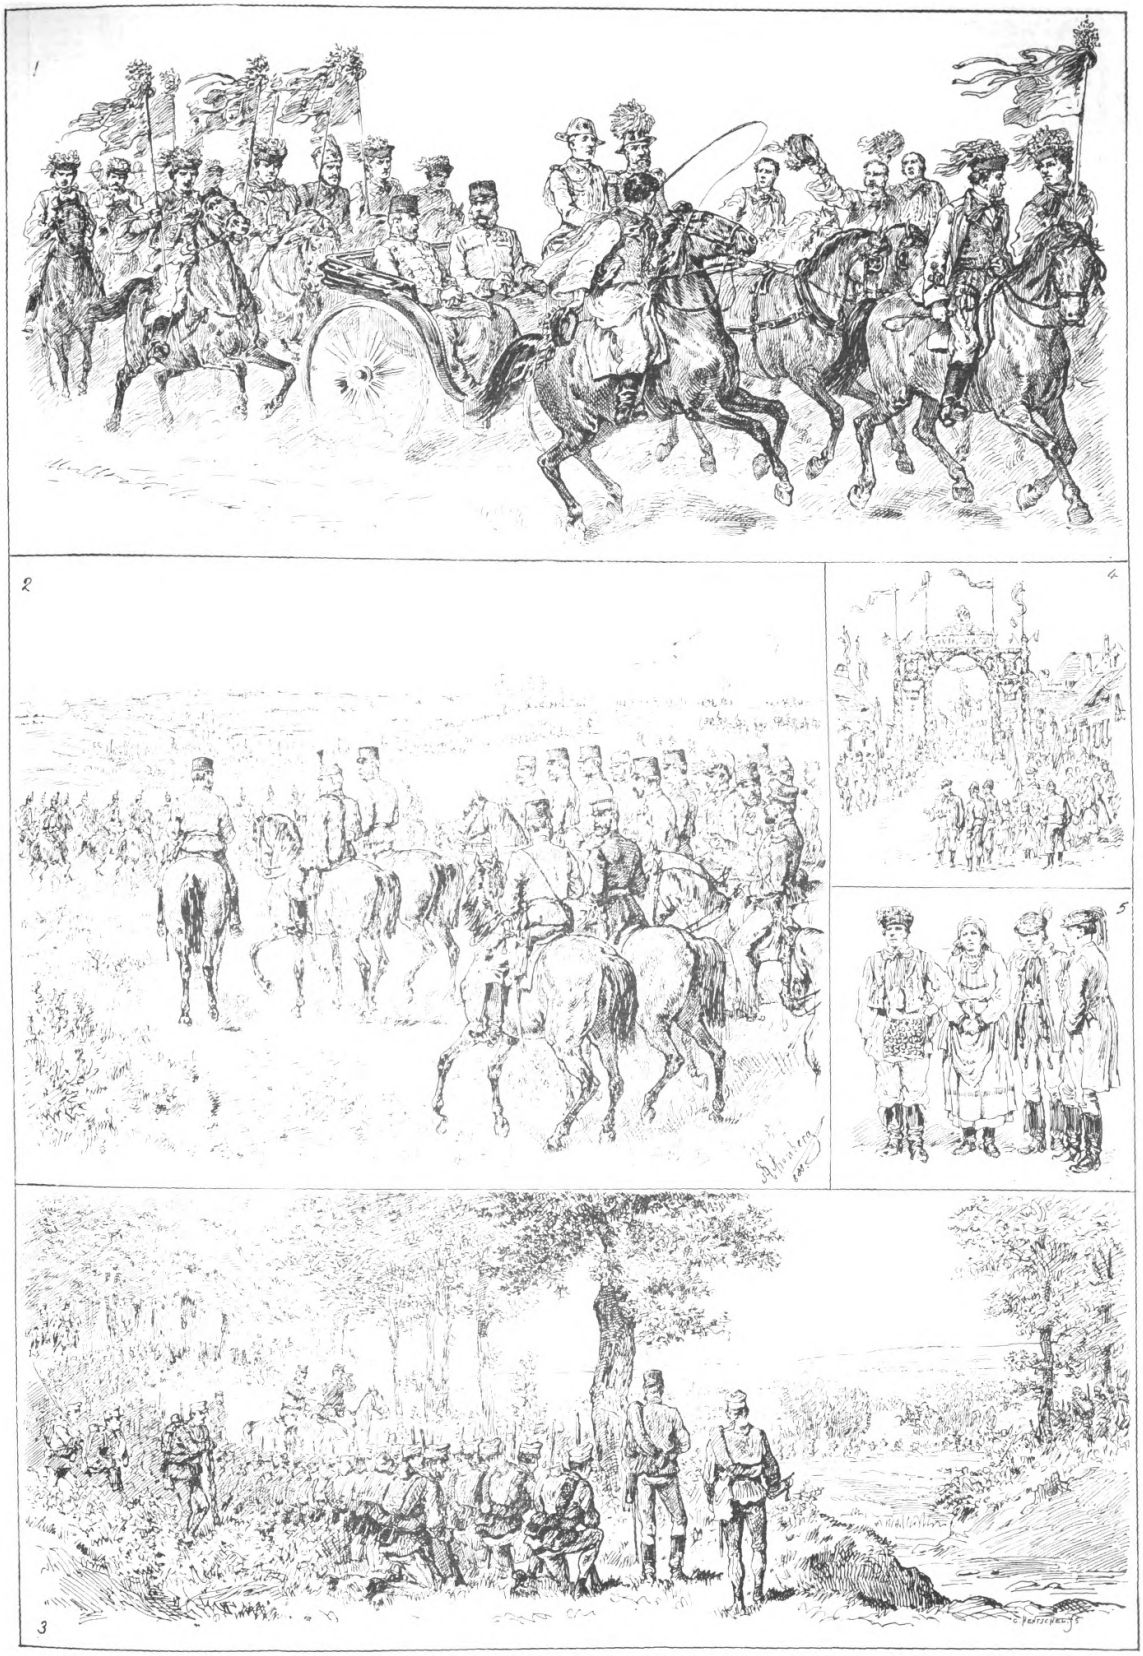
THE MELBOURNE EXHIBITION: ENTRANCE TO THE UNITED STATES COURT.



THE FLOODS IN NORTH ITALY.

The romantic valleys on the Italian side of the Alps, especially those about the Lake of Como and in the Italian Tyrol at the head of the Lake of Garda, have been visited by extensive floods, causing much inconvenience to September tourists, but no real danger, and we believe no great amount of damage. On the Lake of Como, so much frequented by English families, the water rose about ten feet, owing to incessant rains during four days, but not to the height it reached on Sept. 2, 1829, nor that of Oct. 6, 1868, though it exceeded by a few inches the height it attained on May 29, 1810. By Sept. 14 it was slowly receding, and should the weather continue fine, would return to its usual level in the course of a few days. Bellagio and Cadenabbia, towns nearly opposite to each other at the entrance to the south-western branch of the lake, which leads to Como and to Milan, experienced the effects of the flood. At the former place the lower floors of the smaller hotels were invaded by the lake, but the large hotels and more recently built ones are untouched. At Cadenabbia, the salons and dining-hall at the Belle Vue hotel were partially submerged, while the Hôtel Britannia and the Hôtel Belle Île remained completely free from all signs of the inundation. Lieutenant-Colonel T. B. Jervis, who was staying at the Hôtel Belle Vue, has favoured us with some photographs of the scenes he witnessed there. He says that, after the heavy thunderstorm and rains on the night of Sept. 11, the sight of the rapidly rising lake frightened the visitors, so that next morning about eighty persons left the hotel, and were taken off in boats, to which they walked from the door over a platform of planks, embarking on the steamers for Lecco or Como. One of our Illustrations is that of the Arcades at Bellagio, where the floods did a good deal of damage to the contents of the shops for the sale of silks, rugs, and objects of art or curiosity. We take this opportunity of noticing the latest descriptive account of the various interesting places on the shores of the Lake of Como, their beautiful scenery, antiquities, and historical associations. "Como and Italian Lake-land," a volume published by Messrs. W. H. Allen and Co., is the work of the Rev. T. W. M. Lund, Chaplain to the School for the Blind at Liverpool. It includes, moreover, the fullest and most exact account of Milan with which we are acquainted.

1. Front of the Bellevue Hotel at Cadenabbia, on the Lake of Como.
2. Boats taking people from the Hotel on board the Lake steamer.
3. Visitors leaving the Hotel door by a platform across the water to the boats.
4. Arcades at Bellagio flooded.

THE EMIN PASHA RELIEF EXPEDITION UP THE CONGO AND ARUWIMI.

Readers of the articles which have from time to time appeared under the above heading in *The Illustrated London News* will have been more or less prepared for startling incidents in the history of the Emin Bey Expedition. The serious difficulties that threatened the advance have been dwelt upon, but with caution—my correspondent being under articles of agreement with Mr. Stanley which neither he nor I would willingly disregard. Mr. Ward has forwarded to me sketches and notes, portions of which I am privileged to publish in these columns, the object being rather to illustrate some of the country through which the expedition has passed, than to offer any special references to its policy or management. The fatal disaster which has befallen Major Barttelot is by many regarded as indicative of the previous death of Stanley; but the fact of the news of poor Barttelot's assassination travelling home so quickly is rather encouraging than otherwise as touching the fate of the famous journalistic explorer. "Ill news travels apace" even in Africa; and as long as there is no definite intelligence of the death of Stanley, so long may we continue to have not only good hope of his welfare but of the ultimate success of his expedition. Stanley's career is the best answer to the various rumours and reports of his intentions in Central Africa. The latest announcement is that he went out to found a new Empire, and intended to proclaim himself Emperor. A New York correspondent says Stanley offered him a position as one of his Ministers. Mr. Stanley had probably been amusing himself in this romantic suggestion. Those who saw him last on this side of the Atlantic, and who are associated with him in his arduous work, know well enough that his mission was the relief of Emin Bey; and if he has gone out of the prescribed route it is under the pressure of circumstances over which he has had no control.

The accompanying Illustrations are from drawings by my Congo correspondent, Mr. Ward, made principally at Stanley Falls and in the neighbourhood of the Aruwimi camp, so often mentioned of late in connection with the expedition, and which Major Barttelot broke up to follow his chief. Bolobo, which forms one of our first Illustrations, has been mentioned in former notes. Its history is more or less tragic. In connection with the present expedition it has, however, a pacific and uneventful record. It is the great centre of the ivory and cam-wood powder trade. The native merchants do their business through agents at Stanley Pool. Bolobo, during Mr. Stanley's experience of it, had been twice at war and twice burned to the ground. Eventually, peace was established all round, and the station has become more or less safe; but to secure outposts of this importance, they ought to be efficiently garrisoned. In a district where, as Stanley confesses, the most trivial incidents will bring on a battle, an efficient garrison is needed at all times. The Bolobo country commences with the picturesque little village of Itimba, the tropical prettiness of which is artistically suggested in Mr. Ward's Sketch. It is situated on a low hill, thickly wooded. "Then, as you sail up the river," says Mr. Stanley, "village after village appears, in a nearly continuous line, for about an hour, when the station (Bolobo) comes into view on the open higher ground behind the narrow belt of tall timber lining the riverside." The station is healthy; and some day, when Europeans have learnt the diplomatic art of managing the natives, the district may develop into a fine agricultural settlement. "Imagine a strip of the left bank of the river, about twelve miles long, a thin line of large umbrageous trees close to the water's edge, and a gently sloping background of cleared country rising to about thirty feet above the tallest tree. Just above the centre of this strip, on the open ground, is the station of Bolobo, consisting of a long mat-walled shed, a mud and wattle kitchen, a mud-walled magazine with grass roofs, and about seventy huts arranged in a square, on the outside of the inner group of buildings. Above and below it, close to the water side, amid banana and palm groves, are sheltered about fifteen villages. Seven of these—Itimba, Mimgolo, Biangulu, Ururu, Mongo, Manga, Yambula, and Lingenji—are below the station. Eight are above, among which is Mbanga and a few villages of the Banunu tribe. These form what is called Bolobo."

It is hardly necessary to describe Stanley Falls and the river scenery. But the accompanying fresh Illustrations of the locality are interesting. The drawings were made in the autumn of 1887. They are quite in keeping with the eloquent accounts we have had of the two main channels of the river that are almost bridged at the falls. The stakes and nets in the Illustrations below the falls are familiar objects of the river, and mark the various cataracts. Most of the local tribes are fishermen: the tremendous operations of the Wenya people have been graphically chronicled by Mr. Stanley, not the least interesting of whose latter chapters of "The Congo Free State" is the history of Tippoo Tib's cunning dealings with the hardy Wenya men, whereby he was enabled to navigate the river and establish himself at Stanley Falls. The house of Tippoo Tib is from a drawing made from the site of the Stanley Falls station, Aug. 30, 1887. In the Illustration of Mr. Ward's house at the falls we have a suggestion of "home" in the construction of the high doorway and ample windows; and on the walls, I glean from his letters, were photographs of friends and reminiscences of *The Illustrated London News*. Tippoo Tib's personality, his wives and retinue have been previously noted in these papers. Mr. Ward in one of his letters mentions, as a great surprise and a stroke of genius, Stanley's treaty with Tippoo Tib, whose aid he regarded as absolutely necessary to a successful issue of the expedition at Wadelai. The difficulties of Stanley and his officers are possibly in some cases nevertheless increased by their alliance with the Arabs, who have left behind them on all hands rancorous memories among the natives of nearly every class. As an example of the hostility which has to be met, the following note, taken at random from Mr. Ward's diary (prior to the date on which he joined the expedition) may be quoted:—

Jan. 25, 1887.—Left Manyanga for down country with Lieutenant Taunt, the latter on the 21st having come down upon me, burnt the large store, killed one of my men and killed another outright. We succeeded in holding our own to some extent, and saved our loads out of the fire, including some loose kegs of gunpowder.

It was in the following March that Ward met the expedition, about the fate of which everybody is now painfully anxious. The reader has long ago been able to form a good idea of the character and appearance of the army of soldiers and carriers on the march in former extracts from the letters of my Congo correspondent; but the manuscript diary which I have recently received contains memoranda of a picturesque incident already mentioned which are worth more complete quotation:—

March 6.—Ingham had arrived from Europe, and I heard all about Stanley's Emin Bey Relief Expedition, and determined to try and join; so I accompanied Ingham up to Lukunam to procure carriers. We rattled up very quickly, and dodged about the markets. Ingham then went down on the 17th with about 150 men, and I started from Luk with between 300 and 400 men on the 22nd. On my way I heard, at M'Banja Mantika, of Stanley's arrival, and, pushing on, I met him two days after, near Maga Mankenje, on the N'seke-Stanley side. I first of all saw four Soumalis carrying their kit; then Stanley, mounted on a fine mule, its trappings shining in the bright morning light; behind him was a great, tall Soudanese soldier, carrying Gordon Bennett's yacht flag (American, with round yellow circle and anchor). "And you are Mr. Ward, are you? Why, you have grown somewhat since I saw you in London in '81," said Stanley, dismounting. He offered me a seat upon a couple of the Soumalis' rolled blankets. We sat. He handed me a cigar from a small silver case, which I afterwards ascertained was the one given him by H.R.H. the Prince of Wales upon the occasion of his visit to Sandringham just previous to his departure with this expedition. . . . When we parted (I with my new duties and mission) I proceeded on past the caravan, which was composed of upwards of 700 men, and a more imposing sight I think I never saw. All the men were fresh, having only started two or three days, and they were all dressed in their characteristic costumes: Zanzibaris in their white Arab shirts reaching to the knee, with just a little of their gaudy-coloured loin-cloth visible below it, boxes on their heads, water-bottles slung over their shoulders, their guns at their backs; Soudanese soldiers in their dark-blue great-coats and hoods, their bayonets, cross-ridge-belts, and guns and kit; Soumalis with their fancy waistcoats and variegated loin-cloths; sections of the whale-boat carried each by four men; donkeys with pack-saddles and loads; large-horned goats with similar saddles and loads, and hoes, shovels, and axes; the caravan stretched away for three miles—a fine subject for a painter; a most unusual and strange sight on the Congo.

Sad events have happened since that gay cavalcade marched through the African wilderness; and Mr. Ward's diary of 1888, to which I shall have occasion to refer in future articles, contains notes of pestilence, privations, and war. In presence of the doubts as to Stanley's fate, the murder of Barttelot, the death of Jameson (which will probably leave Ward in command), one may be allowed to make such extracts therefrom as throw light upon the earlier movements of the expedition and the experiences of those whom Stanley has left as his rearguard. Meanwhile, touching the remainder of this week's Illustrations, the examples of basket-work and pottery from the Aruwimi river will, no doubt, surprise many readers who are apt to couple an art instinct and an eye for form and colour only with a high type of civilisation. Everything connected with the Aruwimi is just now of more than common interest. It was here that Stanley formed his last camp prior to his disappearance; here Barttelot collected his men and supplies to follow his chief. Aruwimi has had bad and good omens for Stanley. He had to storm the Aruwimi village in 1877; but in 1883 he was well received, and entered into ceremonious blood brotherhood with the local chiefs, Yambinga, Yambilia, Yambua are all on the Aruwimi, and not far from the camp where Ward served under Barttelot. The native woman and child and the picturesque huts belong to this locality. Mr. Stanley, on his visit to the Aruwimi in 1883, mentions the new kind of hut noted by Ward. "At Bondeh," says Stanley, "we saw for the first time a change in the architecture of the buildings. Many tall, conical huts, of the candle-extinguisher type, were seen rising high above the well-known low ridge-roof style adopted along the Congo, since we left the Atlantic."

In Ward's private notes to me I find, in the very early days of 1888, anxious memoranda about Stanley. As early as Jan. 9 he writes at "Yambinga Intrenched Camp, Aruwimi River.—It seems very strange we have heard nothing of Stanley, who was to have returned last November, and we can only account for this prolonged absence by supposing that he has had to go a longer journey from Lake Albert Nyanza than he previously anticipated. If anything has happened to him it will be a bad look out for the expedition; and I do not know how the relief goods—merchandise and ammunition, 700 loads—will ever reach him. There appears to me to be some motive in Tippoo Tib's delaying the 700 men he promised. It is hardly feasible his excuse that his men refused to carry our loads on account of their weight. His authority certainly ought to overcome any scruples of that sort, and, besides, £2500 is very good pay for his Manyema slaves. . . . There is something at the bottom of it all which we shall perhaps know all about before long."

Major Barttelot, it is said, fell by the hand of one of the fierce Manyema tribe, many of whom he had engaged as carriers, and in whose country Livingstone had a narrow escape of assassination. Ward mentions giving a knife and spear (which had been given to him by an Arab) to Jameson (whose death is reported this week), about whom he writes:—"Jameson is an awfully good fellow—energetic, amusing, very clever in many ways, and has exceedingly good taste. He is one of the best fellows I ever met, or am likely to meet. His kind attention to me during my attack of dysentery, probably saving my life, I shall never forget." JOSEPH HATTON.

The "Wanderings of a War Artist," now publishing in the *Naval and Military Magazine*, are by Mr. Irving Montagne, formerly one of the special artists of this Journal. Mr. Montague proposes to publish his recollections in book form when completed.

The concluding meeting of the International Geological Congress was held on Sept. 22, at the London University, Professor Prestwich, who presided, felicitated the members on the results attained, and it was decided to hold the next meeting (in 1891) at Philadelphia. A hearty vote of thanks was accorded for the hospitality which had been shown to the foreign members in London.

Many inquiries have been received by members of the "Society of the Japanese Residents in England" as to the means of remitting contributions to those suffering from the recent eruption of the Mount Bandai Wakamatsu, Japan. Arrangements have been made with the Yokohama Specie Bank, 84, Bishopsgate-street Within, E.C., that they will transmit to the sufferers such contributions that may be sent to them before Oct. 10.

The central committee of the Glasgow City Bank Relief Fund have disposed of the surplus of about £8000, after providing annuities, at a cost of £90,000, for those who had hitherto received pensions. This closes the largest fund that has ever been raised in Scotland for a charitable purpose. The sum subscribed amounted to upwards of £380,000, which, with added interest of £47,000, brought the total amount distributed amongst the shareholders to £427,000.

SUBSCRIPTION TO THE ILLUSTRATED LONDON NEWS.

AT HOME.

Twelve months (including Christmas Number), £1 9s. 3d.
Six months, 14s. Christmas Half-Year, 15s. 3d.
Three months, 7s. Christmas Quarter, 8s. 3d.

Copies will be supplied direct from the Office to any part of the United Kingdom and the Channel Islands, for any period, at the rate of 6½d. for each Number, paid in advance.

ABROAD.

The yearly subscription abroad, including the Christmas Number, is £1 16s. 4d. (on thin paper, £1 12s.), with the following exceptions:—

To Abyssinia, Aden, Bechuanaland, Borneo, Ceylon, India, Java, Labuan, Penang, Philippine Islands, Sarawak, Siam, Singapore, and Zanzibar, £2 1s. (on thin paper, 31s.).

To Dar Giarria and Madagascar (except St. Mary and Tamatave), £2 5s. (on thin paper, £1 16s. 4d.).

Subscribers are specially advised to order the thick paper edition, the appearance of the engravings on the thin paper copies being greatly injured by the print at the back showing through.

Newspapers for foreign parts must be *posted* within eight days of the date of publication, irrespective of the *departure* of the mails.

Subscriptions must be paid in advance, direct to the Publishing Office, 198, Strand, in English money; by cheque, crossed "The Union Bank of London"; or by Post-Office Order, payable at the East Strand Post Office, to INGRAM BROTHERS, of 198, Strand, London.

THE AUSTRIAN MILITARY MANŒUVRES.

The Emperor Francis Joseph of Austria, King of Hungary, entertaining his Royal guest the Prince of Wales, conducted him on Sept. 12 to Belovar, in Croatia, where he remained two days, to witness some manœuvres of a portion of the Austro-Hungarian Army. The Imperial Crown Prince Rudolph, and Archdukes Otto and William of Austria, accompanied his Majesty and the Prince of Wales, who arrived from Buda-Pesth, with the Hungarian Ministers, at the Kreutz railway station, and were escorted in carriages to Belovar, preceded by the Ban of Croatia, with a martial array of armed and mounted Croatian peasants. The Prince of Wales, wearing his Austrian Hussar uniform, sat with the Emperor in his carriage; his personal suite consisted of Major-General Ellis, C.S.I., the Hon. H. Tyrwhitt Wilson, Prince Louis Esterhazy, and Count Bredo, who is a Captain in the Austrian Army. Major-General Keith Fraser, Military Attaché, was also travelling with the Prince, by the Emperor of Austria's special invitation.

On the next morning the manœuvres were commenced. The general idea was that a western force—consisting of the Thirty-sixth Infantry Division and the Eighty-third Honved Infantry Brigade, making in all twenty battalions and ten squadrons, with eighteen guns—advancing from Agram to Brod, had detached one column, which was to reach Belovar. Meanwhile, an eastern force—consisting of the Seventh Infantry Division, with the Eighty-second Honved Infantry Brigade, in all seventeen battalions, six squadrons, and twenty guns—was marching up from Bosnia to the Croatian capital, and, with the advanced guard, reached the vicinity of Belovar. The two advance columns were to come into contact, and to fight for the strategical points defending the entrance to Bosnia. During part of the morning the Emperor, the Prince of Wales, and the Archdukes Rudolph, William, and Otto remained on a plateau whence they could descry all the manœuvres. Presently they moved away, with six squadrons of Uhlans and four of Honveds, or Landwehr Cavalry, to repulse an attack of the enemy. The charges were brilliantly executed; and the Emperor, noticing the Prince of Wales's admiration, introduced General Von Henesberg, Inspector-General of the Honved Cavalry, saying, "This is the man to whom we owe the efficiency of our Landwehr Cavalry."

Towards noon his Royal Highness dismounted at Bulinac, where four artillery batteries were stationed; and he was much interested in the rapid manœuvring of the field-pieces. From the moment when a battery rode up to its position to that when the first shot was fired only 1 min. 48 sec. elapsed.

The manœuvres were continued next day, Sept. 14, the Prince of Wales remaining on horseback till they were finished. The quarters at Belovar occupied by his Royal Highness were apartments on the first floor of the "County House," the largest building in the town, while the Emperor occupied the residence of the Lord Lieutenant of the county. In the street of the town, two triumphal arches had been erected, in welcome of the Emperor and his illustrious guest. In front of one of these there was an official reception by the Archduke Joseph, the popular Chief of the Hungarian and Croatian Honveds, supported by all the Croatian and local authorities, including Cardinal Michailovich, whom the Emperor especially distinguished. The Prince of Wales accompanied his Majesty to a popular fête at the neighbouring village, where he saw the peasants, clad in white, enlivened by bright-coloured scarfs and aprons, dancing the *kolo* to the melancholy strains of the bagpipes and tambura. He also spent some time in the camp of the gipsies. In the evening the natives surprised the Imperial visitors with a finely-performed serenade and a torchlight procession.

Our Illustrations are from Sketches by Mr. C. Drechsler.

CHELMSFORD AND ITS MUNICIPAL CHARTER.

The ancient town of Chelmsford, with a population exceeding 11,000, and with a rateable value of property to the amount of £41,869, though it is the place for holding the Assizes and the Quarter Sessions for Essex, and the head-quarters of the County Police, has only now obtained incorporation as a borough under the Municipal Corporations Act. We believe that Oakham, in Rutland, a place one-third the size of Chelmsford, is the only other English county town in that inferior position. At Chelmsford, the movement to get the town incorporated was opposed by many of the largest ratepayers, but an overwhelming majority of the inhabitant householders signed the petition in favour of incorporation. In February the Hon. T. H. W. Pelham held a three days' inquiry, and on Aug. 15 Mr. Furbank, the chief promoter of the project, received a communication from the Privy Council that the Queen had been pleased to grant the charter. On Sept. 19 a deputation of about twenty townsmen journeyed to London to receive the charter. They travelled back to Chelmsford in a saloon carriage specially provided by the Great Eastern Railway Company. The town had been gaily decorated with mottoes, flags, and greenery, and most of the inhabitants had turned out. The deputation was met at the railway-station by a procession nearly half a mile in length. It included three bands of music, 1500 school-children, two fire-engines and brigades, Volunteers, friendly societies in regalia, with banners, the Essex troop of Royal Suffolk Hussars, and the Mayors and other members of the Corporations of Colchester, West Ham, Maldon, Saffron Walden, and other Essex towns. After parading the main thoroughfares the procession returned to the Corn Exchange, where Mr. Furbank read the charter amid enthusiastic cheers. The National Anthem was then sung. In the evening a public dinner was held at the Corn Exchange.

The Rev. Dr. R. M. Comerford, of Monasterevan, has been selected by the Pope to fill the position of Coadjutor Bishop to the Bishop of Kildare and Leighlin.

The dedication of a new reredos in terra-cotta, the gift of Sir Henry Doulton, took place at the parish church of St. Mary's, Lambeth, adjoining the Archbishop's Palace, in conjunction with the Harvest Festival, on Sept. 28. The Bishop of Rochester preached. The design of the reredos is by Mr. J. Oldrid Scott, architect.

During the last few years a great reformation of habits has quietly taken place amongst seamen, fishermen, and bargemen. There have been 69,000 pledges of total abstinence taken by them of the Missions to Seamen chaplains and readers in nine years. But the Missions to Seamen has to follow up this pledge-taking by endeavouring to provide handsome mission-churches, with comfortable institutes under the same roof, for sailors ashore; mission-boats to board ships at anchor; and Divine worship and reading matter for crews at sea, so as to establish a brotherhood between the chaplains and the abstaining seamen and others. An appeal is made for supplies of disused books, pictures, and periodicals for outward-bound ships; and for Barnsley "crush" bags to contain them. They may be sent in boxes, hampers, or sacks, prepaid, to the Missions to Seamen, 11, Buckingham-street, Strand, London, W.C.; or to the nearest chaplain.

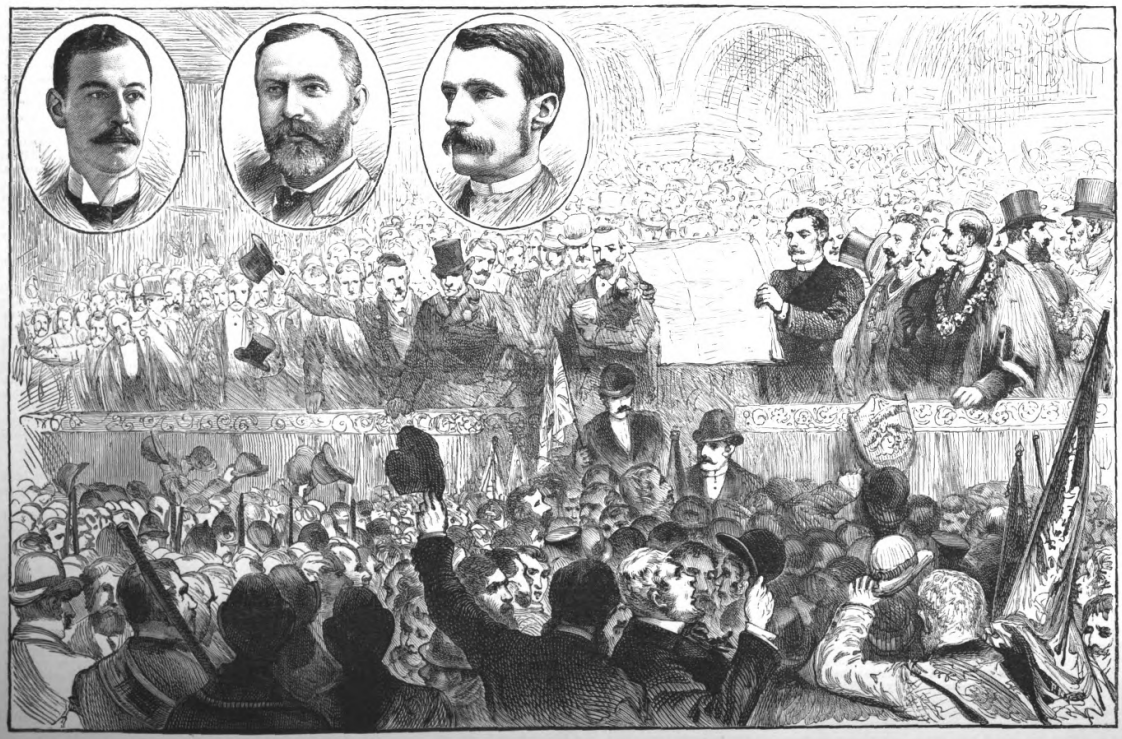
THE LATE MAJOR EDMUND MUSGRAVE BARTTELOT,
KILLED BY MUTINEERS, IN THE EMIN PASHA RELIEF EXPEDITION.

SUBAHDAR KISHAUBIR NAGAR KOTI,
A BRAVE NATIVE OFFICER OF A GHOORKA REGIMENT.

A BRAVE NATIVE INDIAN OFFICER.

The lamented death of Major Battye and Captain H. B. Urmston, of the Punjaub Infantry, who were killed on June 18 in a conflict with the revolted tribes of the Black Mountain, on British territory, near the Oghi outpost beyond Abbottabad, was noticed in this Journal at the time. Further accounts showed that the Ghoorkas behaved with great bravery; and the native officer, Subahdar Kishaubir, 1st Battalion 5th Ghoorkas, with heroic courage. It appears that on approaching Chitabad heavy firing was opened on the advanced guard, which was accompanied by Major Battye and Captain Urmston. On its being reported that a havildar with the rear-guard had been wounded Major Battye and Captain Urmston joined the rear and placed the wounded man in a dandy. The fire now became very heavy, and Major Battye ordered the Ghoorkas to retire on a village occupied by the advanced guard. The jungle here was very thick, and, while retiring, Captain Urmston was severely wounded with an axe in the left shoulder. Shortly after this Subahdar Kishaubir heard the bugler boy calling out for assistance, and exclaiming that the Major was attacked. On rushing up the Subahdar saw Major Battye, severely wounded, defending himself. The Subahdar dashed in and drove his sword with both hands through the chest of the assailant, who dropped dead. Seizing Major Battye's arm, Kishaubir led him off, but after a few steps Major Battye fell. Large numbers of tribesmen now surrounded the small party, cutting off retreat in every direction, save down a precipitous ravine. A dash was made upon Captain Urmston. The Subahdar shouted, "Fight bravely, my children; do not desert your English officers! If you must die, let some of these dogs die with you!" The Sepoys fought stanchly together until Major Battye and Captain Urmston were both dead. The Subahdar, who had exhausted his rifle ammunition, discharged his remaining revolver cartridges, and shouted, "Both the officers are dead; now you may save your own lives!" He then, with the two surviving Sepoys, jumped down the ravine, and eventually managed to rejoin the main force. He was badly wounded. A bullet had passed through his thigh, and he had a gash on the head and a disabled arm. Nevertheless, he insisted upon marching back with the force to recover the bodies of Major Battye and Captain Urmston. The Sepoys accordingly fought their way back, and eventually carried off their dead, and succeeded in returning, late in the evening, to Oghi Fort.

We are requested by Colonel H. B. Urmston, of Ardenlee, Maidstone, father of the gallant officer bearing that name whose loss is deplored, to publish the Portrait of Subahdar Kishaubir Nagar Koti, who has nearly recovered from his wounds, and is at present on sick leave at his home in Nepaul. The Subahdar has already been three times decorated with the Order of Merit for his conspicuous gallantry on different occasions. The Portrait is from a photograph by Messrs. H. Browning and Son, India.



With regard to Captain Urmston, there is a letter from Colonel John Haughton bearing testimony to a singular act of courage which he once performed alone, in passing among enemies in the dark at night, through the craggy hills at Bagh, when he was doing duty with the transport department of General Tytler's brigade, in the Zaimusht expedition of December, 1878. He died a worthy death, falling in the act of trying to save a wounded comrade.

Mr. Blane, M.P., was released on Sept. 24 from Londonderry Jail, where he had been imprisoned for some time for offences against the Crimes Act.—Two Roman Catholic priests have been sentenced by Mr. M'Leod at Arklow to six weeks' imprisonment for inciting persons to join in an illegal conspiracy.

MR. R. COOK,
Secretary, Reception Committee.

MR. FRANK WHITMORE,
First Mayor of Chelmsford.

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXIV.

THE CAMP IN THE COMB.

I awoke in the morning, I found to be near the head of a most beautiful comb or valley among the Black Down Hills. I knew it not at the time, but it was not far from that old Roman stronghold which we had passed on our way to Taunton, called Castle Ratch. The hills rose steep on either hand, their slopes hidden by trees. At our feet the brook took its rise in a green quagmire. The birds were singing, the sun was already high, and the air was warm, though there was a fresh breeze blowing. The warmth and sweetness filled my soul when I awoke, and I sat up with joy, until suddenly I remembered why we were here, and who were here with me. Then my heart sank like a lump of lead in water. I looked around. My father lay just as he had been lying all the day before, motionless, white of cheek, and as one dead, save for the slight motion of his chest and the twitching of his nostril. As I looked at him in the clear morning light, it was borne in upon me very strongly that he was indeed dead, inasmuch as his soul seemed to have fled. He saw nothing, he felt nothing. If the flies crawled over his eyelids he made no sign of disturbance; yet he breathed, and from time to time he murmured—but as one that dreameth. Beside him lay my mother sleeping, worn out by the fatigues of the night. Barnaby had spread his coat to cover her so that she should not take cold, and he had piled a little heap of dead leaves to make her a pillow. He was lying at her feet, head on arm, sleeping heavily. What should be done, I wondered, when next he woke?

First I went down the comb a little way till the stream was deep enough, and there I bathed my feet, which were swollen and bruised by the long walk up the comb. Though it was in the midst of so much misery, there was a pleasure of dabbling my feet in the cool water and afterwards of walking about barefoot in the grass. I disturbed an adder which was sleeping on a flat stone in the sun, and it lifted its venomous head and hissed, but did not spring upon me. Then I washed my face and hands and made my hair as smooth as without a comb it was possible. When I had done this I remembered that perhaps my father might be thirsty, or, at least, able to drink, though he seemed no more to feel hunger or thirst. So I filled the tin pannikin—it was Barnaby's—with water and tried to pour a little into his mouth. He seemed to swallow it, and I gave him a little more until he would swallow no more. Observe that he took no other nourishment than a little water, wine, or milk, or a few drops of broth, until the end. So I covered his face with a handkerchief to keep off the flies, and left him. Then I looked into the basket. All that there was in it would not be more than enough for Barnaby's breakfast, unless his appetite should fail him by reason of fear; though, in truth, he had no fear of being captured, or of anything else. There was in it a piece of bacon, a large loaf of bread, a lump of cheese, a bottle of cider; nothing more. When these provisions were gone, what next? Could we venture into the nearest village and buy food, or to the first farm-house? Then we might fall straight into the jaws of the enemy, who were probably running over the whole country in search of the fugitives. Could we buy without money? Could we beg without arousing suspicions? If the people were well-inclined to the Protestant cause we might trust them. But how could we tell that? So in my mind I turned over everything except the one thing which might have proved our salvation, and that you shall hear directly. Also, which was a very strange thing, I quite forgot that I had upon me, tied by a string round my waist and well concealed, Barnaby's bag of gold—two hundred and fifty pieces. Thus there was money enough and to spare. I discovered, next, that our pony had run away in the night. The cart was there, but no pony to drag it. Well, it was not much; but it seemed an additional burden to bear. I ventured a little way up the valley, following a sheep-track which mounted higher and higher. I saw no sign anywhere of man's presence; that, I take it, is marked in woods by circles of burnt cinders, by trees felled, by bundles of broom or fern tied up, or by shepherds' huts. Here there was nothing at all; you would have said that the place had never been visited by man. Presently I came to a place where the woods ceased, the last of the trees being much stunted and blown over from the west; and then the top of the hill began, not a sharp pico or point, but a great open plain, flat, or swelling out here and there with many of the little hillocks which people say are ancient tombs. And no trees at all, but only bare turf, so that one could see a great way off. But there was no sign of man anywhere: no smoke in the comb at my feet; no shepherd on the hill. At this juncture of our fortunes any stranger might be an enemy; therefore I returned, but so far well pleased.

Barnaby was now awake, and was inspecting the basket of provisions.

"Sister," he said, "we must go upon half rations for breakfast; but I hope, unless my skill fails, to bring you something better for supper. The bread you shall have, and mother. The bacon may keep till to-morrow. The cider you had better keep against such times as you feel worn out and want a cordial, though a glass of Nantz were better, if Nantz grew in the woods." He looked around as if to see whether a miracle would not provide him with a flask of strong drink, but, seeing none, shook his head.

"As for me," he went on, "I am a sailor, and I understand how to forage. Therefore, yesterday, foreseeing that the provisions might give out, I dropped the shank of the ham into my pocket. Now you shall see."

He produced this delicate morsel, and, sitting down, began to gnaw and to bite into the bone with his strong teeth, exactly like a dog. This he continued, with every sign of satisfaction, for a quarter of an hour or so, when he desisted, and replaced the bone in his pocket.

"We throw away the bones," he said. "The dogs gnaw them and devour them. Think you that it is for their amusement? Not so; but for the juices and the nourishment that are in and around the bone; for the marrow and for the meat that still will stick in odd corners." He went down to the stream with the pannikin and drank a cup or two of water to finish what they call a horse's meal—namely, the food first and the water afterwards.

"And now," he added, "I have breakfasted. It is true that I am still hungry, but I have eaten enough to carry me on for a while. Many a poor lad cast away on a desert shore would find the shank of a ham a meal fit for a king; aye, and a meal or two after that. I shall make a dinner presently off this bone; and I shall still keep it against a time when there may be no provision left."

Then he looked about him, shading his eyes with his hand. "Let us consider," he said. "The troopers, I take it, are riding along the roads. Whether they will ride over these hills, I know not; but I think they will not, because their horses cannot well get up these combs. Certainly, if they do, it will not be by the way we came. We are here, therefore, hidden away snug. Why should we budge? Nowhere is there a more deserted part of the country than Black Down, on whose side we are. And I do not think, further, that we should find anywhere a safer place to hide ourselves in than this comb, where, I dare to say, no one comes, unless it be the gipsies or the broom-squires, all the year round. And now they are all laden with the spoil of the army—for, after a battle, this gentry swoop down upon the field like the great birds which I have seen abroad upon the carcases of drowned beasts, and plunder the dead. Next they must go into town in order to sell their booty; then they will be fain to drink about till all is spent; so they will leave us undisturbed. Therefore, we will stay here, Sister. First, I will go try the old tricks by which I did often in the old time improve the fare at home. Next, I will devise some way of making a more comfortable resting-place. Thank the Lord for fine weather, so far."

He was gone a couple of hours. During that time my mother awoke. Her mind was broken by the suddenness of this trouble, and she cared no more to speak, sitting still by the side of her husband, and watching for any change in him. But I persuaded her to take a little bread and a cup of cider.

When Barnaby came back, he brought with him a blackbird, a thrush, and two wood-pigeons. He had not forgotten the tricks of his boyhood, when he would often bring home a rabbit, a hare, or a basket of trout. So that my chief terror, that we might be forced to abandon our hiding-place through sheer hunger, was removed. But Barnaby was full of all kinds of devices.

He then set to work with his great knife, cutting down a quantity of green branches, which he laid out side by side, with their leaves on, and then bound them together, cleverly interlacing the smaller shoots and branches with each other, so that he made a long kind of hurdle, about six feet high. This, which by reason of the leaves was almost impervious to the wind, he disposed round the trunks of three young trees growing near each other. Thus he made a small three-cornered inclosure. Again, he cut other and thicker branches, and laid them over and across this hurdle, and cut turf which he placed upon the branches, so that here was now a hut with a roof and walls complete. Said I not that Barnaby was full of devices?

"There," he said, when all was ready, "is a house for you. It will have to rain hard and long before the water begins to drop through the branches which make the roof and the slabs of turf. Well, 't is a shelter. Not so comfortable as the old cottage, perhaps, but nearly as commodious. If it is not a palace, it will serve us to keep off the sun by day and the dew by night."

Next he gathered a great quantity of dry fern, dead leaves, and heather, and these he disposed within the hut, so that they made a thick and warm carpet or covering. Nay, at night they even formed a covering for the feet and prevented one from feeling cold. When all was done, he lifted my father gently and laid him with great tenderness upon this carpet within the rude shelter.

"This shall be a warmer night for thee than the last, Dad," he said. "There shall be no jolting of thy poor bones. What, mother? We can live here till the cold weather comes. The wind will perhaps blow a bit through the leaves to-night, but not much, and to-morrow I will see to that. Be easy in your mind about the provisions"—Alas! my poor mother was thinking of anything in the world except the provisions—"There are rabbits and birds in plenty; we can catch them and eat them; bread we must do without when what we have is gone, and as for strong drink and tobacco"—he sighed heavily—"they will come again when better times are served out."

In these labours I helped as much as I was able, and particularly in twisting the branches together. And thus the whole day passed, not tediously, and without any alarms, the labour being cheered by the hopefulness of Barnaby's honest face. No one, to look at that face, could believe that he was flying for his life, and would be hanged if he was caught. After sunset we lit a fire, but a small one only, and well hidden by the woods, so that its light might not be seen from below. Then Barnaby dexterously plucked and trussed the birds and roasted them in the embers, so that had my heart been at rest I should have had a most delicious supper. And I confess that I did begin to pluck up a little courage, and to hope that we might yet escape, and that Robin might be living. After supper my mother prayed, and I could join with more of resignation and something of faith. Alas! in times of trial how easily doth the Christian fall from faith! The day before, prayer seemed to me a mockery; it was as if all prayer were addressed to a deaf God, or to One who will not hear; for our prayers had all been for safety and victory, and we were suddenly answered with disaster and defeat.

After supper, Barnaby sat beside the embers and began to talk in a low voice.

"'Twill be a sorrowful barley-mow song this year," he said: "a dozen brave lads from Bradford alone will be dead."

"Not all dead, Barnaby! Oh! not all!"

"I know not. Some are prisoners, some are dead, some are running away." Then he began to sing in a low voice,

"Here 's a health to the barley-mow——

I remember, Sister, when I would run a mile to hear that song, though my father flogged me for it in the morning. 'Tis the best song ever written." He went on singing in a kind of whisper—

"We 'll drink it out of the nipperkin, boys——

Robin—poor Robin! he is dead!—was a famous hand at singing it; but Humphrey found the words too rustical. Humphrey—who is now dead, too!—was ever for fine words, like Mr. Boscorel.

We'll drink it out of the jolly brown bowl——

"I think I see him now—poor Robin! Well; he is no more. He used to laugh in all our faces while he sang it:—

We 'll drink it out o' the river, my boys.
Here 's a health to the barley-mow!
The river, the well, the pipe, the hogshead, the half-Hogshead, the anker, the half-anker, the gallon, the Pottle, the quart, the pint, the half-pint, the quarter-Pint, the nipperkin, the jolly brown bowl, my boys,
Here's a health to the barley-mow!"

He trolled out the song in a melodious whisper. Oh! Barnaby, how didst thou love good companionship with singing and drinking!

"'Twill be lonely for thee, Sister, at Bradford when thou dost return; Sir Christopher, I take it, will not long hold up his head, and Madam will pine away for the loss of Robin, and mother looks as if she would follow after, so white and wan is she. If she would speak or complain or cry it would comfort her, poor soul! 'Twas a sad day for her when she married the poor old Dad. Poverty and hard work, and now a cruel end—poor mother!"

"Barnaby, you tear my heart!"

"Nay, Child, 'tis better to talk than to keep silence. Better have your heart torn than be choked with your pain. Thou art like unto a man who hath a wounded leg, and if he doth not consent to have it cut off, though the anguish be sharp, he will presently bleed to death. Say to thyself therefore, plain and clear, 'Robin is dead; I have lost my sweetheart.'"

"No—no—Barnaby—I cannot say those cruel words! Oh! I cannot say them; I cannot feel that Robin is truly dead!"

"Put the case that he is living. Then he is either a prisoner or he is in hiding. If a prisoner, he is as good as dead: because the Duke's officers and the gentlemen who joined him, they will never forgive—that is quite certain. If I were a prisoner I should feel my neck already tightened. If he is not a prisoner, where is he to hide?—whither betake himself? I can get sailors' duds and go abroad before the mast; and ten to one nobody will find me out, because, d'ye see, I can talk the sailors' language, and I know their manners and customs. But, Robin—what is Robin to do, if he is alive? And this, I say, is doubtful. Best say to thyself, 'I have lost my sweetheart.' So wilt thou all the sooner recover thy cheerfulness."

"Barnaby, you know not what you say! Alas! if my Robin is dead—if my boy is truly dead—then I ask for nothing more than swift death—speedy death—to join him and be with him!"

"If he escape he will make for Bradford Orcas and hide in the Corton woods. That is quite certain. They always make for home. I would that we were in that friendly place, so that you could go live in the cottage and bring provisions, with tobacco and drink, to us unsuspected and unseen. When we have rested here a while we will push across the hills and try to get there by night: but it is a weary way to drag that wounded man. However"—he broke off and said earnestly—"make up thy mind, Child, to the worst. 'Tis as if a shipwrecked man should hope that enough of the ship would float to carry him home withal. Make up thy mind. We are all ruined and lost—all—all—all. Thy father is dying—thy lover is dead—thou art thyself in great danger by reason of that affair at Taunton. Everything being gone, turn round therefore and make thyself as comfortable as possible. What will happen we know not. Therefore count every day of safety for gain, and every meal for a respite."

He was silent for a while, leaving me to think over what he had said. Here, indeed, was a philosopher. Things being all lost, and our affairs in a desperate condition, we were to turn round and make ourselves as comfortable as we could! This, I suppose, is what sailors are wont to do; certainly they are a folk more exposed to misfortune than others, and therefore, perhaps, more ready to make the best of whatever happens.

"Barnaby," I said presently, "how can I turn round and make myself comfortable?"

"The evening is still," he said, without replying. "See, there is a bat, and there another. If it were not for the trouble in there"—he pointed to the hut—"I should be easy in my mind and contented. I could willingly live here a twelvemonth. Why, compared with the lot of the poor devils who must now be in prison, what is ours? They get the foul and stinking Clink, with bad food, in the midst of wounded men whose hurts are putrifying, with jail fever, and with the whipping-post or the gallows to come. We breathe sweet air, we find sufficient food—to-morrow, if I know any of the signs, thou shalt taste a roasted hedgehog, dish fit for a king! I found at the bottom of the comb a pot left by some gipsies: thou shalt have boiled sorrel and mushrooms to thy supper. If we stay here long enough there will be nuts and blackberries and whortleberries. Pity, a thousand pities, there is not a drop of drink! I dream of punch and hipsy. Think upon what remains, even if thou canst not bear to think of what is lost. Hast ever seen a tall ship founder in the waves? They close over her as she sinks, and, in an instant, it is as if that tall ship with all her crew had never been in existence at all. The army of Monmouth is scattered and ruined. Well; it is, with us, amidst these woods, just as if there had been no army. It has been a dream perhaps. Who can tell? Sometimes all the past seems to have been a dream. It is all a dream—past and future. There is no past and there is no future: all is a dream. But the present we have. Let us be content therewith."

He spoke slowly and with measured accents, as one enchanted. Sometimes Barnaby was but a rough and rude sailor. At other times, as these, he betrayed signs of his early education and spoke as one who thought.

"It is ten years and more since last I breathed the air of the hills. I knew not that I loved so much the woods and valleys and the streams. Some day, if I survive this adventure, I will build me a hut and live here alone in the woods. Why, if I were alone I should have an easy heart. If I were driven out of one place I could find another. I am in no hurry to get down among men and towns. Let us all stay here and be happy. But there is Dad—who lives not, yet is not dead. Sister, be thankful for thy safety in the woods, and think not too much upon the dead."

We lived in this manner, the weather being for the most part fine and warm, but with showers now and then, for a fortnight or thereabouts, no one coming up the comb and there being still no sign of man's presence in the hills. Our daily fare consisted of the wild birds snared by Barnaby, such creatures as rabbits, hedgehogs, and the like, which he caught by ingenious ways, and trout from the brook, which he caught with a twisted pin or by tickling them with his hand. There were also mushrooms and edible leaves, such as the nettle, wild sorrel, and the like, of which he knew. These we boiled and ate. He also plucked the half-ripe blackberries and boiled them to make a sour drink, and one which, like the cider loved by our people, would grip his throat, because he could not endure plain cold water. And he made out of the bones of the birds a kind of thin broth for my father, of which he daily swallowed a teaspoonful or so. So that we fared well, if not sumptuously. The bread, to be sure, which Barnaby left for mother and me, was coming to the last crust, and I know not how we should have got more without venturing into the nearest village.

Now, as I talked every night with my brother, I found out what a brave and simple soul it was—always cheerful and hopeful, talking always as if we were the most fortunate people in the world, instead of the most miserable, and yet, by keeping the truth before me, preventing me from getting into another Fool's Paradise as to our safety and Robin's escape such as that into which I had fallen after the army marched out

DRAWN BY A. FORESTIER.

"Boys," I said, "beware! If you go higher up the comb you will certainly meet wild men, who always rob and beat boys."

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

of Taunton. I understand, now, that he was always thinking how to smoothe and soften things for us, so that we might not go distracted with anxiety and grief; finding work for me, talking about other things—in short, the most thoughtful and affectionate brother in all the world. As for my mother, he could do nothing to move her. She still sat beside her wounded husband, watching all day long for any sign of consciousness or change.

Seeing that Barnaby was so good and gentle a creature, I could not understand how it was that in the old days he used to get a flogging most days for some offence or other, so that I had grown up to believe him a very wicked boy indeed. I put this question to him one night.

He put it aside for a while, replying in his own fashion.

"I remember Dad," he said, "before thou canst, Sister. He was always thin and tall, and he always stooped as he walked. But his hair, which now is white, was brown, and fell in curls which he could not straighten. He was always mighty grave; no one, I am sure, ever saw him laugh; I have never seen him so much as smile, except sometimes when he dandled thee upon his knee, and thou wouldst amuse him with innocent prattle. All his life he hath spent in finding out the way to Heaven. He did find the way—I suppose he hath truly discovered it—and a mighty thorny and difficult way it is, so that I know not how any can succeed in reaching port by such navigation. The devil of it is, that he believes there is no other way; and he seemed never so happy as when he had found another trap or pitfall to catch the unwary, and send them straight to hell.

"For my part," Barnaby went on slowly, "I could never love such a life. Let others, if they will, find out rough and craggy ways that lead to heaven. For my part, I am content to jog along the plain and smooth high-road with the rest of mankind, though it brings us in the end to a lower place, inhabited by the baser sort. Well, I dare say I shall find mates there, and we will certainly make ourselves as comfortable as the place allows. Let my father, therefore, find out what awaits him in the other world; let me take what comes in this. Some of it is sweet and some is bitter; some of it makes us laugh and sing and dance; and some makes us curse and swear and bellow out, as when one is lashed to the hatches and the cat falls on his naked back. Sometimes, Sister, I think the naked negroes of the Guiney Coast the happiest people in world. Do they trouble their heads about the way to heaven? Not they. What comes they take, and they ask no more. Has it made Dad the happier to find out how few are those who will sit beside him when he hath his harp and crown? Not so. He would have been happier if he had been a jolly ploughboy whistling to his team, or a jolly sailor singing over his pannikin of drink of a Saturday night. He tried to make me follow in his footsteps; he flogged me daily in the hope of making me take, like himself, to the trade of proving out of the Holy Bible that most people are surely damned. The more he flogged, the less I yearned after that trade; till at last I resolved that, come what would, I would never thump a pulpit like him in conventicle or church. Then, if you will believe me, Sister, I grew tired of flogging, which, when it comes every day, wearies a boy at fourteen or fifteen more than you would think. Now, one day, while I was dancing to the pipe and tabor with some of the village girls, as bad luck would have it, Dad came by. 'Child of Satan!' he roared, seizing me by the ear, which I verily thought he would have pulled off. Then to the girls, 'Your laughter shall be turned into mourning,' and so lugged me home and sent me supperless to bed, with the promise of such a flogging in the morning as should make all previous floggings seem mere fleabites or joyous ticklings in comparison. This decided me. So in the dead of night I crept softly down the stairs, cut myself a great hunch of bread and cheese, and ran away and went to sea."

"Barnaby, was it well done—to run away?"

"Well, Sister, 'tis done; and if it was ill done, 't is by this time, no doubt, forgotten. Now, remember, I blame not my father. Before all things he would save my soul alive. That was why he flogged me. He knew but one way, and along that way he would drive me. So he flogged me the harder. I blame him not. Yet had I remained he would doubtless be flogging me still. Now, remember again, that ever since I understood anything I have always been enraged to think upon the monstrous oppression which silenced him and brought us all to poverty, and made my mother, a gentlewoman born, work her fingers to the bone, and caused me to choose between being a beggarly scholar, driven to teach brats and endure flouts and poverty, or to put on an apron and learn a trade. Wherefore, when I found that Monmouth was going to hoist his flag, I came with him in order to strike a blow, and I hoped a good blow, too, at the oppressors."

"You have struck that blow, Barnaby, and where are we?"

He laughed.

"We are in hiding. Some of the King's troopers did I make to bite the dust. They may hang me for it, if they will. They will not bring those troopers back to life. Well—— Sister, I am sleepy. Good-night!"

We might have continued this kind of life I know not how much longer. Certainly, till the cold nights came. The weather continued fine and warm; the hut kept off dews at night; we lay warm among the heather and the ferns; Barnaby found a sufficiency of food; my father grew no worse to outward seeming; and we seemed in safety.

Then an ill chance and my own foolishness marred all.

One day, in the afternoon, Barnaby being away looking after his snares and gins, I heard, lower down the comb, voices as of boys talking. This affrighted me terribly. The voices seemed to be drawing nearer. Now, if the children came up as high as our encampment, they could not fail to see the signs of habitation. There was the hut among the trees and the iron pot standing among the grey embers of last night's fire. The cart stood on one side. We could not possibly remain hidden. If they should come up so far and find us, they would certainly carry the report of us down to the village.

I considered, therefore, what to do, and then ran quickly down the comb, keeping among the trees so as not to be seen.

After a little I discovered, a little way off, a couple of boys about nine years of age. They were common village boys, rosy-faced and wholesome; they carried a basket, and they were slowly making their way up the stream, stopping now to throw a stone at a squirrel, and now to dam the running water, and now to find a nut or filbert ripe enough to be eaten. By the basket which they carried I knew that they were come in search of whortleberries, for which purpose they would have to get quite to the end of the comb and the top of the hill.

Therefore, I stepped out of the wood and asked them whence they came and whither they were going.

They told me in plain Somersetshire (the language which I love, and would willingly have written this book in it, but for the unfortunate people who cannot understand it) that they were sent by their parents to get whortleberries, and that they came from the little village of Corfe, two miles down the valley. This was all they had to say, and they stared at me as shyly as if they had never before encountered a stranger. I clearly perceive now that I ought to have engaged them in conversation and drawn them gently down the valley in the direction of their village until we reached the first appearance of a road, when I could have bidden them farewell or sent them up the hill by another comb. But I was so anxious that they should not come up any higher that I committed a great mistake, and warned them against going on.

"Boys," I said, "beware! If you go higher up the comb you will certainly meet wild men, who always rob and beat boys"; here they trembled, though they had not a penny in the world. "Ay, boys! and sometimes have been known to murder them. Turn back—turn back—and come no farther."

The boys were very much frightened, partly at the apparition of a stranger where they expected to find no one, and partly at the news of wild and murderous men in a place where they had never met with anyone at all, unless it might have been a gipsy camp. After gazing at me stupidly for a little while they turned and ran away, as fast as their legs could carry them, down the comb.

I watched them running, and when they were out of sight I went back again, still disquieted, because they might return.

When I told Barnaby in the evening, he, too, was uneasy. For, he said, the boys would spread abroad the report that there were people in the valley. What people could there be but fugitives?

"Sister," he said, "to-morrow morning must we change our quarters. On the other side of the hills looking south, or to the east in Neroche Forest, we may make another camp, and be still more secluded. For to-night I think we are in safety."

What happened was exactly as Barnaby thought. For the lads ran home and told everybody that up in the comb there were wild men who robbed and murdered people: that a lady had come out of the wood and warned them to go no further, lest they should be robbed and murdered. They were certain it was a lady, and not a country-woman; nor was it a witch; nor a fairy or elf, of whom there are many on Black Down. No; it was a lady.

This strange circumstance set the villagers a talking; they talked about it at the inn, whither they nightly repaired.

In ordinary times they might have talked about it to their hearts' content and no harm done; but in these times talk was dangerous. In every little village there are one or two whose wits are sharper than the rest, and, therefore, they do instigate whatever mischief is done in that village. At Corfe, the cobbler it was who did the mischief. For he sat thinking while the others talked, and he presently began to understand that there was more in this than his fellows imagined. He knew the hills; there were no wild men upon them who would rob and murder two simple village boys. Gipsies there were, and broom-squires sometimes, and hedge-tearers; but murderers of boys—none. And who was this gentlewoman? Then he guessed the whole truth: there were people lying hidden in the comb; if people hidden, they were Monmouth's rebels. A reward would be given for their capture. Fired with this thought he grasped his cudgel and walked off to the village of Orchard Portman, where, as he had heard, there was lying a company of Grenadiers sent out to scour the country. He laid his information, and received the promise of reward. He got that reward, in short; but nothing prospered with him afterwards. His neighbours, who were all for Monmouth, learned what he had done, and shunned him. He grew moody; he fell into poverty, who had been a thriving tradesman; and he died in a ditch. The judgments of the Lord are sometimes swift and sometimes slow, yet they are always sure. Who can forget the dreadful end of Tom Boilman, as he was called, the only wretch who could be found to cut up the limbs of the hanged men and dip them in the cauldrons of pitch? For he was struck dead by lightning—an awful instance of the wrath of God!

Early next morning, about five of the clock, I sat before the hut in the shade. Barnaby was up and had gone to look at his snares. Suddenly I heard steps below, and the sound as of weapons clashing against each other. Then a man came into sight—a fellow he was with a leathern apron, who stood gazing about him. There was no time for me to hide, because he immediately saw me and shouted to them behind to come on quickly. Then a dozen soldiers, all armed, ran out of the wood and made for the hut.

"Gentlemen," I cried, running to meet them, "whom seek you?"

"Who are you?" asked one, who seemed to be a Sergeant over them. "Why are you in hiding?"

Then a thought struck me. I know not if I was wise or foolish.

"Sir," I replied, "my father, it is true, was with the Duke of Monmouth. But he was wounded, and now lies dead in this hut. You will suffer us to bury our dead in peace."

"Dead, is he? That will we soon see."

So saying, he entered the hut and looked at the prostrate form. He lifted one hand and let it drop. It fell like the hand of one who is recently dead. He bent over the body and laid his hand upon the forehead. It was cold as death. The lips were pale as wax, and the cheeks were white. He opened an eye: there was no expression or light in it.

"Humph!" he said; "he seems dead. How did he come here?"

"My mother and I drove him here for safety in yonder cart. The pony hath run away."

"That may be so; that may be so. He is dressed in a cassock: what is his name?"

"He was Dr. Comfort Eykin, an ejected minister and preacher in the Duke's army."

"A prize, if he had been alive!" Then a sudden suspicion seized him. He had in his hand a drawn sword. He pointed it at the breast of the dead man. "If he be truly dead," he said, "another wound will do him no harm. Wherefore"——he made as if he would drive the sword through my father's breast, and my mother shrieked and threw herself across the body.

"So!" he said, with a horrid grin, "I find that he is not dead, but only wounded. My lads, here is one of Monmouth's preachers; but he is sore wounded."

"Oh!" I cried, "for the love of God suffer him to die in peace!"

"Ay, ay, he shall die in peace, I promise you so much. Meanwhile, Madam, we will take better care of him in Ilminster Jail than you can do here. The air is raw upon these hills." The fellow had a glib tongue and a mocking manner. "You have none of the comforts which a wounded man requires. They are all to be found in Ilminster prison, whither we shall carry him. There will he have nothing to think about, with everything found for him. Madam, your father will be well bestowed with us."

At that moment I heard the footsteps of Barnaby crunching among the brushwood.

"Fly! Barnaby, fly!" I shrieked. "The enemy is upon us!"

He did not fly. He came running. He rushed upon the soldiers and hurled this man one way and that man another, swinging his long arms like a pair of cudgels. Had he had a cudgel I believe he would have sent them all flying. But he had nothing except his arms and his fists; and in a minute or two the soldiers had surrounded him, each with a bayonet pointed, and such a look in every man's eye as meant murder had Barnaby moved.

"Surrender!" said the Sergeant.

Barnaby looked around leisurely.

"Well," he said, "I suppose I must. As for my name, it is Barnaby Eykin; and for my rank, I was Captain in the Green Regiment of the Duke's valiant army."

"Stop!" said the Sergeant, drawing a paper from his pocket. "'Captain Eykin,'" he began to read, "'has been a sailor. Rolls in his walk; height, about five foot five; very broad in the shoulders; long in the arms; of great strength.'"

"That is so," said Barnaby, complacently.

"Bandy legs."

"Brother," said Barnaby, "is that so writ?"

"It is so, Captain."

"I did not think," said Barnaby, "that the malignity of the enemy would be carried so far. Bandy legs! Yet you see—well—— fall in, Sergeant; we are your prisoners. Bandy legs!"

(To be continued.)

ASTRONOMICAL OCCURRENCES FOR OCTOBER.

The MOON will be to the right of Saturn on the morning of the 1st. She will be near to both Venus and Mercury on the 7th, and near to Jupiter on the 8th; she is near Mars on the 10th, and she is near Saturn during the morning hours of the 29th, the Moon being to the right of the planet till about 4h a.m., when the nearest approach will take place; after this the planet will be to the right of the Moon. Her phases or times of change are:—

New Moon on the	5th at 34 minutes	after	2	in the afternoon.
First Quarter	" 12th " 29	"	5	" morning.
Full Moon	" 19th " 9	"	9	" afternoon.
Last Quarter	" 28th " 56	"	1	" morning.

She is nearest the Earth on the 7th, and most distant from it on the 22nd.

MERCURY sets on the 5th at 5h 56m p.m., or 30 minutes after sunset; on the 10th at 5h 44m p.m., or 29 minutes after the Sun sets; on the 15th at 5h 31m p.m., or 27 minutes after sunset; on the 20th at 5h 15m p.m., or 21 minutes after the Sun sets; on the 25th at 4h 53m p.m., or 11 minutes after sunset; on the 29th at 4h 39m p.m., or 2 minutes after the Sun sets; and on the 30th at 4h 35m p.m., at about the same time as sunset. He is near the Moon on the 7th; at greatest eastern elongation (25 deg. 5 min.) on the 8th; near Venus on the 9th, and in inferior conjunction with the Sun on the last day.

VENUS sets on the 1st at 6h 18m p.m., or 42 minutes after the Sun; on the 9th at 6h 4m p.m., or 47 minutes after sunset; on the 19th at 5h 51m p.m., or 55 minutes after the Sun sets; and on the 31st at 5h 42m p.m., or 1h 8m, after sunset. She is near the Moon on the 7th; is near Mercury on the 9th, and in descending node on the 10th.

MARS sets on the 1st at 7h 57m p.m., on the 10th at 7h 44m p.m., on the 20th at 7h 34m p.m., and on the 30th at 7h 28m p.m. He is near the Moon on the 10th.

JUPITER sets on the 1st at 7h 35m p.m., or 1h 59m after sunset; on the 8th at 7h 11m p.m., or 1h 52m after the Sun sets; on the 18th at 6h 38m p.m., or 1h 40m after sunset; and on the 28th at 6h 5m p.m., or 1h 27m after sunset. He is near the Moon on the 8th.

SATURN rises on the 1st at 1h 7m a.m., on the 9th at 0h 40m a.m., on the 19th at 0h 5m a.m., and on the 28th at 11h 28m p.m. He is near the Moon on the 1st, and again on the 29th.

MUSIC.

London music has been well sustained by Mr. W. Freeman Thomas's attractive Promenade Concerts at Covent-Garden Theatre, the seventh season of which has been running a very successful career since the opening night on Aug. 11. The programmes of each night have offered abundant materials for the gratification of all varieties of tastes; while the special classical nights—on Wednesdays—a • devoted, in the first portion, to music of a more serious tone than that of which the second part of the concert consists. Many of our leading vocalists and several skilful instrumentalists have contributed brilliant solo performances, and Mr. Gwyllym Crowe has continued to fulfil the office of conductor with care and efficiency. His "Rose Queen Waltz," with its effective choral adjuncts (supplied by Mr. Stedman's juvenile choristers), has continued to maintain the success obtained on the opening night, already recorded. As we have previously announced, the concerts will soon close, and will be followed by a series of Italian operatic performances under the direction of Signor Lamperti. These will last until early in November, when the theatre will be required for the preparations necessary for the Christmas pantomime to be produced by Mr. Freeman Thomas.

The renowned Saturday afternoon concerts at the Crystal Palace will enter on their thirty-third season on Oct. 13, again under the conductorship of Mr. August Manns. Ten concerts will be given before Christmas, and ten afterwards; followed by the benefit concert of Mr. Manns on April 20. During the series, several interesting novelties will be produced, besides important works of established celebrity; and vocal and instrumental soloists will contribute to the programmes.

The Liverpool Philharmonic Society will enter on its fiftieth season on Tuesday, Oct. 2, when the first of a series of twelve concerts will be given, conducted by Sir Charles Hallé, with the co-operation of his fine orchestra. Many important works (some given for the first time at these concerts) will be included in the programmes. Eminent solo vocalists are engaged, and pianoforte concertos will be contributed by Miss Fanny Davies and Sir Charles Hallé, and violin solos by Madame Norman-Néruda (Lady Hallé), Miss M. Soldat, and Herr Ondricek.

The Russian National Opera Company will give six concerts at the Royal Albert Hall, beginning on Oct. 8. A numerous chorus will perform selections from national operas and other Russian compositions, and forty-eight pianists are to play on twenty-four pianofortes. Notwithstanding some past performances of Russian music in this country so little is still known here of the compositions of that nationality that the forthcoming performances can scarcely fail to prove highly interesting.

Signor Tito Ricordi, the eminent music-publisher of Milan, recently died at an advanced age. He was the son of the founder of the firm, Giovanni Ricordi, by whom and his successor the establishment was raised to a height of great importance and prosperity, their almost innumerable publications comprising a large number of popular and classical operas.

Another recent death of a musical celebrity was that of Mrs. Seguin, formerly Miss Childe, a pupil of our Royal Academy of Music, who married Mr. Edward Seguin, a basso, who gained deserved distinction both as an operatic and a concert vocalist. His wife also obtained much success in both those capacities.

BALDWIN'S BALLOON AND PARACHUTE.

On Thursday, Sept. 13, Professor Baldwin, the daring American aeronaut, whose balloon and parachute performances have attracted much attention, took his benefit at the Alexandra Palace. Mr. H. W. Hayward, the general manager of the Alexandra Palace and Park Company, had arranged a very attractive programme; but the chief entertainment was, of course, Professor Baldwin's wonderful feat of ascending to an immense height by means of a balloon and then descending with his patent parachute. The ascent was made with a new balloon containing about 12,000 ft. of gas, the parachute being the same one that Mr. Baldwin has always used at the palace, with the addition of a sail, though this he did not use. The arrangement was that the aeronaut should ascend to an altitude of two miles before leaving the balloon with his parachute, and that he should then demonstrate his power of steering the parachute by landing at a point to be decided on beforehand by the committee of the Balloon Society; but these details were not fully carried out, though Professor Baldwin accomplished sufficient to show the remarkable capabilities of his invention and to beat the record in parachute performances. The ascent was made from the north park. A sharp wind was blowing at the time, but Professor Baldwin went up, as usual, in his shirt sleeves and without a hat, sitting on a rope attached to the ring which takes the place of a car on the balloon when used by him. He was assisted by Mr. Farini in arranging the balloon. The parachute was hanging from the network of the balloon as he ascended amid the cheers of the spectators. The balloon speedily reached an altitude of between 6000 ft. and 7000 ft., as shown by a self-recording aneroid barometer specially made for and presented to Professor Baldwin by Messrs. Dollond and Co. When at that height Mr. Baldwin found that the gas was escaping from the balloon with such force, owing to the network not being large enough, that he gave up the idea of completing a two miles' ascent, and thereupon dropped away from it with his parachute, in full view of the thousands of spectators in the palace grounds and on the surrounding points of vantage. The balloon went some distance higher in the air and then collapsed. Meanwhile the aeronaut, travelling in a westerly direction, was gracefully descending with his parachute at an angle which made his descent much longer, and landed in Coldfall-wood, Muswell-hill, about a mile and a half from the spot where he started. Subsequently Professor Baldwin appeared on the stage in the central hall of the palace, where he was greeted with popular acclamation.

The foundation-stones of a memorial chapel to John Wesley, the founder of Methodism, were laid on Sept. 20, at Epworth, his birthplace. Several prominent members of the Wesleyan body took part in the proceedings.

A meeting of the Court of Common Council was held at Guildhall on Sept. 20, the Lord Mayor presiding, when a contract was sealed between the Corporation and Mr. W. Webster for the construction of the southern approach to the Tower Bridge for £38,383.

The annual congress of the homœopathic practitioners of the kingdom was held, on Sept. 20, at the Medical Institute, Birmingham, Mr. Dyce Brown (London) presiding. Papers were read by Mr. Gibbs Blake, Dr. Compton Burnett, and Dr. Walter T. P. Wolston. After the luncheon it was decided that the conference of next year should be held at Tunbridge Wells. Dr. Blackly was appointed president for the ensuing year, and Dr. Pope vice-president.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

G W (Instanter).—The problem to which you refer was inaccurate, as we subsequently stated. The White Kt at K 3rd ought to be a black one, and the solution given was subject to this alteration.

RUBY ROOK.—Your post-card has been duly forwarded.

ALPHA.—You must look at No. 2318 again, as your key move is wrong.

A NEWMAN.—Your problem is easy, but correct, and shows point enough to justify publication.

L DESANGES.—Problem shall appear if it stands test of examination.

J AMYGDALIS.—We hope to publish your last problem shortly.

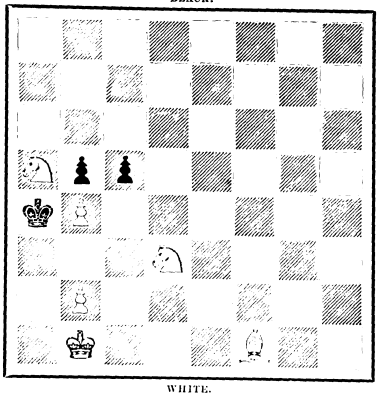
W BIDDLE (Stratford).—The first problem is the better of the two, and if quite sound shall be published. The second has, at least, one very serious fault.

J DIXON (Colchester).—We publish those most likely to interest the majority of our readers. Your criticism notwithstanding, we think the game a very fine one.

H J M (Surbiton).—A new work on the openings is in the press, for which you had better wait if you want to be posted in them right up to date.

CORRECT SOLUTIONS OF PROBLEM No. 2315 received from J W Shaw (Montreal), E St John Crane, W Evans (Bombay), and F Rutter; of No. 2316 from John G Grant, K Bohnstedt, W Evans, and W Wright; of No. 2317 from E Bohnstedt, W Wright, and F Rutter; of No. 2318 from Dr Walter Heidelberg, E Winfield Baildon, and W Wright.

CORRECT SOLUTIONS OF PROBLEM No. 2319 received from L Desanges, D M'Coy, T G (Ware), Peterhouse, R H Brooks, R Worters (Canterbury), T Roberts, Jupiter Junior, and A Newman.



SOLUTION OF PROBLEM NO. 2317.

WHITE.	BLACK.
1. Q to B 6th	Any move
2. Mates accordingly.	

PROBLEM NO. 2321.

By A. NEWMAN.

BLACK.

WHITE.

White to play, and mate in three moves.

BRITISH CHESS CONGRESS.

Game played between Mr. E. THORNOLD and Herr M. WEISS.

(*King's Bishop's Opening.*)

WHITE (Mr. T.)	BLACK (Herr W.)	WHITE (Mr. T.)	BLACK (Herr W.)
1. P to K 4th	P to K 4th	19. Kt takes Kt	B takes Kt
2. B to B 4th	B to B 4th	20. P to Kt 5th	

Kt to K B 3rd is now considered a better defence.

3. Q to K 2nd	Kt to K B 3rd		
4. P to Q 3rd	Kt to B 3rd		
5. P to Q B 3rd	Castles		
6. B to K Kt 5th	P to K R 3rd		
7. P to K R 4th			

A good rejoinder, for it is obvious Black cannot take the Bishop without losing the game.

7.	P to Q 3rd		
8. B takes Kt			

This is necessary, for Black can now capture the Bishop with impunity.

8.	Q takes B		
9. Kt to Q 2nd	P to R 3rd		
10. K Kt to B 3rd	B to K 3rd		
11. Castles (Q R)	P to Q Kt 4th		
12. B to Q 5th	B takes B		

We would rather have kept the two Bishops by playing B to Q 2nd. The move in the text also allows the White Knight to take up a powerful position at K 4th a little later on.

13. P takes B	Kt to K 2nd		
14. P to B 4th	P takes P		
15. P takes P	B to Kt 3rd		

Q to B 4th, too dam for herself greater freedom of action, is certainly preferable.

16. P to R 5th			

A simple look at move, but one that compels Black to regard the safety of his queen.

16.	Kt to B 4th		
17. Kt to K 4th	Q to K 2nd		
18. P to K Kt 4th	Kt to Q 5th		

Threatening, amongst other things, R takes B, and if P takes R, Kt to B 6th, &c.

20.	P takes P		
21. Q R to Kt sq	P to K R 3rd		
22. Q to Q 3rd	K to R sq		

Black's position is anything but an enviable one, and this hardly improves it.

23. R to Kt 2nd	B to Kt 3rd		

In order to advance the K P next move; a fruitless effort to escape the fate fast closing upon him.

24. Kt to Kt 3rd	P to K 5th		
25. Kt takes P	Q to K 4th		
26. Kt to Q 2nd			

Here the superiority of Kt over B in an end game is strikingly exemplified.

26.	Q to K sq		
27. Kt to B 3rd	Q to B 2nd		
28. Q to B 3rd			

An excellent move preparatory to the advance of R P, as also to attack Black with. White has played the game admirably, and never once relaxed his grip of his formidable opponent.

28.	K to Kt sq		
29. P to R 6th	P takes P		
30. R takes R P	Q to Kt 2nd		
31. R (Kt 2nd) to R 3rd	R takes P		
32. Q to Q 3rd	P to K B 4th		
33. Q to K 2nd	P to R 5th		
34. Q to K 6th (ch)	Q to B 2nd		
35. R to Kt 6th (ch), and wins.			

We have received from Mr. W. Morgan, jun., Book II. of "Morgan's Shilling Chess Library." It consists of a selection of games from the late British Chess Congress; neatly printed, and with an ample supply of illustrative diagrams. The compiler has taken some pains with the work, which will prove useful to anyone wishing to study the play of the various masters engaged at Bradford.

Now that the summer is over chess clubs are beginning work again. We have been asked to make the following announcements:

The Athenæum Chess Club has commenced its meetings at 110, Churchstreet, Stoke Newington. The members include some strong local players, and the programme comprises a tournament, matches with other clubs, and exhibition play. The secretary is Mr. Rix.

The Brixton Chess Club commences its meetings on Oct. 1, at the clubrooms, 322, Brixton-road, S.W.

The sixth session of the Exeter Hall Chess Club will commence on Oct. 2. Out of 182 games played in 21 matches last session, 121 were won, 21 drawn, and 40 lost, only 1 matches were lost.

In the City of London Club over one hundred members have already entered for the coming winter tournament. Among the strong players who are expected to take part in the contest are Messrs. Anger, Block, Chappell, Fenton, Gower, Heppell, Hooke, Jacobs, Knight, Leonard, Loman, Mocatta, Rose, Taylor, Tyer, and Woon.

Mr. Loman, *en passant*, has won the chief prize in the annual tourney of the Dutch Chess Association. He had to compete against all their strongest players, and did not lose a single game.

The Athenæum Chess Club has just issued its annual report, from which we learn that the past year has been one of the most successful it has yet experienced. Out of 15 matches played by its first team only 1 was lost and 1 drawn, a score which gains the first place amongst Metropolitan local clubs. In all 171 games were contested, of which 86 were won, 40 drawn, and 45 were lost. Games which, as the report remarks, "speak for themselves." Among the prominent individual players are mentioned Mr. E. Gibbs, who only lost once in 9 matches, and Mr. G. L. Brooks, who, for the third year in succession, took the Bronze Medal for the highest score in the whole series of meetings. Much enterprise is shown in the management of the club, which meets on Wednesday and Saturday evenings, all the year round, at the Athenæum, Camden-road, N.W.

The Committee of the Royal Humane Society have had under consideration an unusually large number of cases of saving life, to a great extent due to the incidence of the summer bathing-season, and have found the degree of danger incurred in seven instances sufficient to justify the award of silver medals.

WILLS AND BEQUESTS.

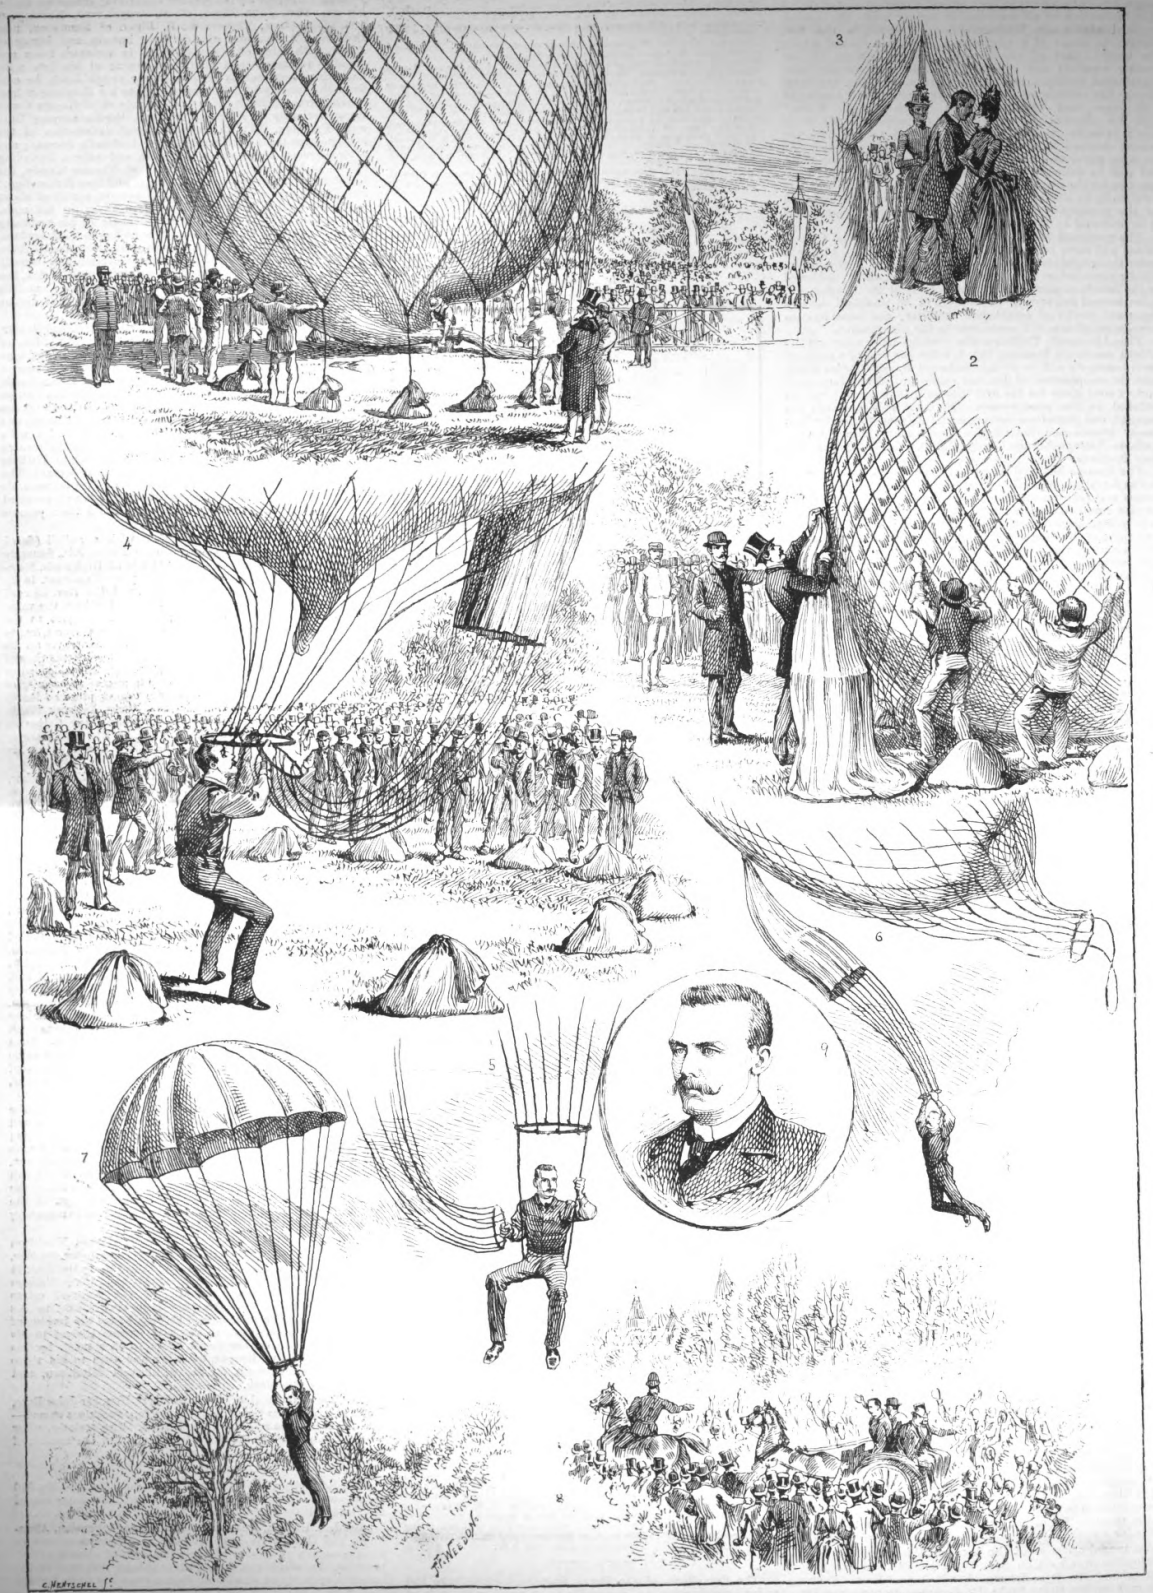
The will (dated Nov. 12, 1879), with three codicils thereto, of John Elger, late of Lewes-crescent, Brighton, and Queen's-gate, London, who died on Aug. 12 last, has been proved in the Principal Registry by the testator's surviving executors, viz.:—his grandson, John Elger, of 23, Argyll-road, Kensington, and his nephew, Thomas G. E. Elger, of Kempston, near Bedford. An annuity of £5000 per annum, and legacy of £1000, with life and other interests in testator's town and country residences and effects in favour of his late wife, Catherine Elger, having lapsed by her recent death, he confirms the annuity of £2200 per annum to his daughter-in-law, Sarah Elizabeth Elger, widow of his only child, George Gwyn Elger, formerly of Lincoln's Inn and Bricklehampton Hall, near Pershore, J.P., in pursuance and satisfaction of the arrangement made with her after her husband's decease; and after bequests to executors, servants, and others, including £3000 to his niece, Catherine, wife of Thomas Cundy, the testator leaves freehold ground-rents in and near Rutland-gate and Ennismore-gardens, producing a present rental of about £2000 per annum, to his grandson, John Elger, in tail male, to whom he also gives £25,000 and a share of his residuary estate. The testator's Bedford estates he leaves to his nephew, Thomas G. E. Elger, to whom he also gives the sum of £2000; and the residue of his real and personal estate goes equally between his six grandchildren on attaining twenty-five, but with allowances for education and maintenance, at his executors' discretion, prior to attaining that age. The value of his personalty is declared at £114,589.

The will (dated Aug. 25, 1887), with a codicil (dated May 22, 1888), of Mr. Thomas Tyrwhitt-Drake, J.P., D.L., late of No. 118, Eaton-square, and Shardeloes, Amersham, Bucks, who died on July 24 last, was proved on Sept. 19, by Guy Perceval Tyrwhitt-Drake, the son, and William Frederick Hicks-Beach, the son-in-law, the executors, the value of the personal estate amounting to upwards of £81,000. He bequeaths £1000, his furniture and household effects at Eaton-square, his horses and carriages at Shardeloes, and three racing cups, to his wife, Mrs. Dorothy Emma Tyrwhitt-Drake; the testimonial presented to him by the Oxfordshire Hunt, to his son, Thomas William Tyrwhitt-Drake; and a legacy of £100 to his man-servant. The residue of his real and personal estate he leaves between his children (except his son Thomas William, who is well provided for) and grandchildren, they taking the share their parents would have taken if they had been alive.

The will (dated March 2, 1871), with a codicil (dated July 8, 1888), of Mr. Benjamin Worthy Horne, J.P., formerly of St. John's College, Cambridge, but late of Highlands, Merewworth, Kent, who died on July 17, was proved on Sept. 13 by Mrs. Emily Marion Horne, the widow, and the Rev. Edward Larkin Horne and Henry Percy Horne, the brothers, the value of the personal estate exceeding £29,000. Subject to the bequest of £500 and his furniture, plate, glass, pictures, &c., to his wife, Mrs. Emily Marion Horne, the testator leaves all his real and personal estate, upon trust, to pay the income thereof to her for life, or so long as she shall continue his widow: but in the event of her re-marriage, she is to receive an annuity of £400. On either of the above events taking place he leaves £1000 London, Brighton, and South Coast Railway Stock, upon trust, to each of his nieces, Emily Mary Horne, Catherine Mary Horne, and Beatrice Ethel Horne, for life, with a power of appointment thereover, and the ultimate residue of his property between his issue in equal shares.

The will (dated Nov. 3, 1886) of Frederick William Docker, late of Scarsdale, The Avenue, Surbiton-hill, who died on Aug. 7 last, was proved on Sept. 13 by Frederick Charles Docker, Edwin Docker, and Alfred Docker, the sons and executors, the value of the personal estate exceeding £26,000. The testator bequeaths £400 per annum, and the use for life of his furniture, &c., to his wife, Mrs. Sophia Docker; and £500 each to his grandson, William Frederick Lloyd James, and grand-daughter, Mary Ellen James. The residue of his real and personal estate he leaves to his four children, Mrs. Mary Anna Hobbs, Frederick Charles Docker, Edwin Docker, and Alfred Docker, in equal shares.

The will (dated Nov. 19, 1875), with a codicil (dated April 21, 1884), of the Rev. Adam Henderson Fairbairn, formerly of Waltham St. Lawrence, near Twyford, Berks, but late of The Rectory, Fawley, Bucks, who died on July 21 last, was proved on Sept. 6 by the Rev. Thomas Archibald Fuller Maitland and the Rev. William Fairbairn La Trobe Bateman, the executors, the value of the personal estate exceeding £26,000. The testator bequeaths £100 and his household furniture, horses, carriages, &c., to his wife, Mrs. Anna Gertrude Fairbairn, and legacies to his executors. The residue of his property he leaves, upon trust, to pay the income thereof to his wife, for life, or so long as she shall remain his widow, and subject thereto between all his children in equal shares.



The Scotch Confirmation, under seal of the Office of the Commissariot of Lanarkshire, of the general disposition and settlements and codicils (dated, respectively, Sept. 14, 1880; Nov. 1, 1886; and Jan. 7, 1888) of Mr. Charles Edward Harris Edmondstoune-Cranstoun, late of Covehouse, Lesmahagow, Lanarkshire, who died on June 19 last, granted to Mrs. Edith Mary Jerningham Edmondstoune-Cranstoun, the widow, the executrix-nominate, was sealed in London on Sept. 14, the value of the personal estate in England and Scotland amounting to upwards of £24,000.

The will (dated April 8, 1885) of Mr. Henry Mitchison Trewhitt, late of No. 31, Grande Rue, Boulogne-sur-Mer, France, who died at Brighton on Aug. 2, was proved on Sept. 14 by William Anthony Mitchison, the uncle, and Saffery William Johnson, the executors, the value of the personal estate exceeding £19,000. The testator bequeaths £5000 to his consin, Ada Monro; and, subject thereto, leaves the residue of his property, upon trust, to pay the income thereof to his mother, for life; on her death, upon further trust, for his stepfather, Gustave Horeau, for life; and then to his three cousins, Richard Stovin Mitchison, Herbert Mitchison, and Arthur Maw Mitchison.

Probate of the will of the late Right Hon. Sir John Rose, Bart., G.C.M.G., has been granted to the four executors named—viz., his three sons and Mr. T. W. Bishoff. The testator, after giving sundry specific and trust legacies, leaves the residue of his property, in trust, for his five children.

Private Griggs, with a total of 258 out of a possible 310 points, won the champion's gold medal and challenge cup of the London Rifle Brigade, fired for at Rainham on Sept. 20.

Mr. J. S. Hodson, secretary to the Printer's Pension, Almshouse, and Orphan Asylum Corporation, writes enumerating the arguments in favour of the exemption of charities from taxation. He points out, among other things, that most of the invested property of charitable institutions has been derived from testamentary bequests, upon which a Parliamentary tax of 10 per cent has been paid, and that the voluntary contributions of the wealthy and benevolent have formed portions of the income of the donors, upon which income-tax has been previously levied.

PROFESSOR BALDWIN AT THE ALEXANDRA PALACE.

OUR NATIONAL DEFENCES.

THE LADIES' COLUMN.

Though we are in the midst of a burst of Indian summer, the shortening days warn us all too surely that the autumn is upon us, and that we must begin to think of costumes for the chilly weather that is near. It is the most sensible plan to purchase one or two nice dresses for the cold weather quite early in the autumn, because then the full beauty of the new costume is displayed and its very first freshness is fully enjoyed before the cold winds compel us to cover it partially or entirely with a mantle; and withal we have the advantage of the warmth which is so needful when the treacherous chills of autumnal evenings are upon us unawares, after days during which the brightness of the sun made us half suppose it to be summer. There is certainly no lack of new and handsome fabrics for this season, and the best London houses are offering certain decided novelties. Woollen materials are, of course, the most suitable ones for such gowns; but amongst new stuffs of that class there is the greatest variety of detail.

Leading goods, as the drapers call them, are bordered stuffs. These are double-width materials, with a pattern in contrasting colours forming an edge all along one side only. The width is sufficient to allow for the length of a skirt, so that when made up in that manner the bordering will constitute, as it were, a trimming round the edge of the draperies; and it will also, if cut off, serve to make a vest, panel, or revers. Directoire polonaises made out of these materials are arranged to have the border down either edge of the skirt of the coat where it falls open, and also turned back as the shaped revers, very broad towards the shoulder, of the bodice of the coat. Another favourite way of using these fabrics, specially suitable for tall and slender wearers, is to let the bordering come down on one side of the entire length of the figure, beginning on the left shoulder, draped in full folds towards the waist, and confined there by a buckle, and falling to the feet to the right side. In this case, the other half of the bodice is made perfectly plain and tight-fitting; the skirt is also quite plain from the waist to the feet; it is simply arranged in long, full folds, fuller at the back than at the sides, and edged all round with the border. Long tablier draperies, with the border passing round, are also being used. With these, a coat bodice that has a vest of the border on one half of it only, from shoulder to bust, is to be popular. These one-sided vests are balanced by a series of narrow folds or draperies of the plain material on the other side of the bust and continued down the middle of the figure from the bust to the waist.

Another new material that promises to be most fashionable is woollen brocade, where large patterns are thrown up in a slightly different tint from the plain ground. These make up effectively as quite plain dresses; and two materials, or very strongly-contrasted trimmings, have been so much used that really a gown of one striking fabric alone, made without revers, vest, or folds, has a distinction of its own. The wool brocades are made also into mantles, for which they are very suitable. Amazon and habit clothes, much braided, or trimmed as I described a few weeks back with appliqués of some contrasting colour in cloth, cut into patterns and stitched on with gold thread, are also to be well worn. These dresses are commonly deeply trimmed or braided round the bottom of the skirt in front, and in this case panels are not employed; loose fronted bodices, with vest of trimming, or plain habit bodices with simulated revers of braid or appliqué, are equally correct.

In long mantles, the Russian style carries all before it. The distinguishing mark of this is a long loose front from neck to feet, giving the mantle almost the appearance of a circular cloak; it is, however, in reality fitted closely to the figure beneath, even having sleeves very often, and the loose front is an addition. Many of these mantles are put at the neck into yokes; others are gathered on the shoulder and at the waist. The newest idea is to have the front wings quite sumptuously lined and hanging loose from the side seams of the skirt of the cloak, and to gather them up on the arm so that the lining shows in places. The shapes in short mantles present nothing new to describe at present. We must wait a few weeks longer for those. Short jackets, hanging loose from the throat, are in the ascendant as yet.

The Education Commissioners, in their report recently issued, advise that women shall be allowed to fill the office of sub-inspectors of schools. These officials are the assistants, who work under the inspector; they are generally chosen from the ranks of elementary schoolmasters, but the salary has been so low hitherto that the more capable teachers have refused to give up their posts in school to accept the worse-paid one of sub-inspector. There is now a proposal made that the sub-inspectors shall be eligible to proceed to the higher office of full inspector, with its salary of from five to fifteen hundred per annum; but it does not appear that it is thought of as possible that a woman should be an inspector. Nevertheless, it would be very desirable that there should be a certain number of these superior officers of the educational department of the female sex. There would be a much better chance of the special troubles and peculiar requirements of girls' and infants' schools being attended to if women had a share in their inspection; and teachers would be spared such an ordeal as I once saw undergone by half-a-dozen of them in an infant-school, when a young University man had them all gathered round him while he showed them how they ought to hold their knitting-needles—though some, at least, of those ladies had been able to knit when their young mentor was still in his cradle. It would be easy to find many cultivated and sympathetic women, University graduates and others, fit for the post of Inspectress of Infants' and Girls' Schools.

Jurists and students of psychology know that there is, as a well-established fact, an epidemic contagion in crime. The imitative instinct, which makes the lower minds among mankind little more individually self-reliant than a flock of sheep, acts in inciting to crimes, until a stronger impulse to resistance to the evil idea is given by the law. There has been a terrible outburst, within the last few months, of such an epidemic of crimes of violence toward women. What is the law doing to check it? Worse than nothing: the men who sit in judgment on such crimes practically encourage them, and are not, in their turn, punished by the public opinion of their equals and their superiors for doing so. Only about a year ago, the Assistant-Judge of the Middlesex Sessions caused a temporary outburst of indignation by his sentence of six months' imprisonment for a most vile and totally unprovoked attempt to murder a woman. But not only was he left on the bench, but last week the same Judge received—nominally from the gracious hands of the first lady of the land—the honour of knighthood. Thus encouraged, Mr. Justice Charles has this week sentenced to only nine months' imprisonment a man who attempted to murder his wife with a chopper; and on the same day a Scotch Judge was content to give a sentence of ten years' penal servitude for the crime of murder, which is nominally met by the fullest penalty of the law, and which, in this case, was accompanied by such atrocities that a juryman fainted at the tale. How long is this cruel and brutal acquiescence of "learned gentlemen" with cruel and brutal crimes against the weaker half of society to go on unchecked?

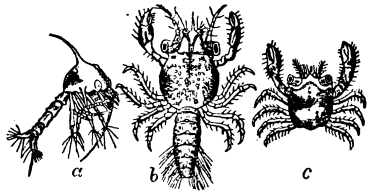
FLORENCE FENWICK-MILLER.

SCIENCE JOTTINGS.

TRANSFORMATIONS.

Down at Claygate, in Surrey, there is a cosy nook where a warm welcome awaits the friends who come to spend a quiet hour or two with the genial host of The Cottage. The dining-room opens on to a lawn, which has great firs ranked like a row of sentinels along one side, and bays and rhododendrons in clumps on the other side, shielding the grassy plot from the field beyond. In front of you, as you sit on the comfortable lounge at the dining-room door, there is the sweep of verdure which, even in the hottest of summer days, is green and cool and refreshing to the sight. Here one gathers in "the harvest of a quiet eye" in plenty. There are two tame magpies which dance and hop up and down the lawn, and there is "Jack," the jackdaw, who, albeit a suspicious bird and a knowing creature withal, has yet a kindly touch or two in his composition. There has been a squalling match to-day, wherein the magpies and the jackdaw have fully and successfully borne their respective parts. Things came to a head this afternoon when a big dragonfly careered across the lawn, and came within a hair's-breadth of the gentleman magpie's nose. Then, the insect flew off at a tangent and nearly fell a victim to the female representative of the race, as she sat in placid contemplation of the failure of her spouse to secure the dainty morsel. Finally, the jackdaw made a dash at the dragonfly, and missed it. These failures were speedily celebrated in plaintive chorus. Mrs. Magpie was the first to cease her song, and retired to her own particular larder, which is a hole in the ground, whence she extricated pieces of bread which had been carefully covered with turf and grass an hour or two before—so true is it that in deep sorrow there is sometimes found much consolation in the delights of the table. The jackdaw hopped off to his own particular domain, and speedily consoled himself with a nice worm, which possibly was more digestible than the dragonfly might have proved. Mr. Magpie, disgusted with the hollow and deceitful world, remained to brood over his defeat, and the dragonfly continued its flight all unharmed, and glorious in the purple sheen of its long, armoured body.

That dragonfly is in itself a study you may not despise.



DRAGONFLY.

Primarily, it is a very high type of insect life; but it sprang from a lowly egg, laid on the water-weeds by the parent-being. From this egg came forth the grub, in the guise of an active, crawling, jointed body. This larva is wingless, and fishlike breathes the air entangled in the water by means of a kind of gill-apparatus it bears on its tail. It propels itself forward by the jets of water which it ejects from its breathing-organs, and lives thus a thoroughly aquatic life. Then it moults and changes its skin, and with somewhat of growth becomes the chrysalis. Here you see the same water-life and the same activity. An apparatus of jaws is possessed by the young dragonfly. The jaws seem harmless enough when they lie folded on the head, but they are terrible things enough when they are extended to snap up the unwary larvæ which are co-tenants of the brook or pond with this dragonfly tyrant. Thus time passes, and development proceeds. Then comes the denouement of the dragonfly's early life. The chrysalis fixes itself to some water-plant. There is a period of apparent inactivity while within the chrysalis skin marvellous changes are being wrought out. Then the old skin cracks and splits, and there issues forth the winged insect, perfectly fitted for its aerial existence, and exulting in all the fullness of its new-born powers. You remember Tennyson's lines in his "Two Voices":—

> To-day I saw the dragon-fly
> Come from the wells where he did lie.
>
> An inner impulse rent the veil
> Of his old husk; from head to tail
> Came out clear plates of sapphire mail.
>
> He dried his wings; like gauze they grew;
> Thro' crofts and pastures wet with dew
> A living flash of light he flew.

There is the touch of a master-hand in these lines. Matthew Arnold has taught us that the poet is only great when he is true to nature. Tennyson teaches us a lesson in natural history in the lines I have quoted, and he is a great poet because he writes faithfully and truly as a student of the nature whose interpreter he is.

Such is the history of the insect which the Claygate aviary, in its collective strength and dexterity, failed to conquer. It is a different history, in truth, from that of the late butterflies and moths you see still twittering among the flower-beds by day and by night. In their history you begin with the grub, which is a crawling, gormandising caterpillar, that eats till it grows too big for its skin, and then moults and eats again and changes its investment, and so on until it has accumulated a store of nutriment or material sufficient for the requirements of its transformations. Then comes the butterfly's chrysalis-stage. Here you see rest and quiescence. It is inactive, and is thus unlike the dragonfly, with its carnivorous chrysalis and its masked jaws. It spins a cocoon or other investment, and finally comes forth from the cocoon, breaking through that covering as if it were a veritable prison-house, and appearing as the winged insect of the sunlight and the flowers. There is a marvellous difference betwixt the development of the dragonfly and the moth or butterfly, it is true; but there are also likenesses and analogies to be discovered beneath the apparent dissimilarities. The insect quits the egg at an earlier stage than do most higher animals. Those transformations you see passing under your eyes are not more remarkable than the changes which, in other animals, are passed within the egg, out of sight of all save the prying scientist. No living thing comes to the perfection of its life at "one fell swoop." In all there is transformation and change, of greater or less importance. The shore crab you saw on the beach a few days gone by began life as a tailed creature, with two great "gig-lamps" of eyes, and a curious head-spine (figured in our Illustration) that looked like the end of a nightcap long drawn out. By-and-by, it settled down somewhat from this free-swimming stage (that of the *Zoea*, as it is called), developed eyes of respectable size, and a crablike body. Still the tail remained, and in this state it resembled its near-cousin the lobster (Fig. *b*). Last of all, the crab-tail grew smaller, and ultimately became the "purse" which is tucked up under the crab's body (*c*), that thus represents its head and chest alone, while in the lobster the tail

METAMORPHOSIS OF CRAB.
a, Young form of crab, known as *Zoea pelagica*; *b*, more advanced stage of *a* (*Megalopa*); *c*, advanced stage of *b*.

remains to form an important part of the anatomy of the adult crustacean.

Throughout the whole of living nature, then, there is transformation witnessed, as each life grows from its infancy towards the perfection of its kind. Nothing is accomplished suddenly. What seems to our eyes to be a hasty putting on of new things in animal and plant developments, is in reality only a shortening of a once lengthy method of growth. The dragonfly is the type of all other kinds of lives in respect of its development by degrees; for in nature the race is not always to the swift, nor the battle to those strong of arm.
